Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feusrs, all legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without arable or pasture land". For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155.

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

2. As Park is part of Lochs Parish, these are the only statistics available.
3. Roots (negligible acreage), fallow.
4. Figures in brackets are breeding ewes.

/p. 8-b/

Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and over-stocking increase with the size of the croft, the units of 20 acres and over, on the basis of stock carry, would appear to be the most intensively worked. In all, just over half of the units take in their full souming. Table IV gives an analysis of employment ancillary to croft work. Of the 219 units and it would appear that neither ancillary employment nor age is significant, related to the intensity of croft working. Table V points to the fact that more full-time crofters are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural townships is nine acres; compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission made a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident that the number of cattle was much higher at that time and that the cattle-sheep ratio in the selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistics for the parish of Lochs as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; here (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36 per cent. Large areas of hay-beds, no longer cultivated, are visible landscape signs of these changes; seaweed, the sole quasi-manure for lazybed cultivation, is no longer carried to the upper parts of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

From the foregoing account, it is clear that there are two major agricultural problems in Park, the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing; these deficiences bring in their train the problem of overstocking, and the existence of uneconomic holdings.

The more progressive crofters, significantly, resident on the better crofts of the agricultural townships, have shown how croft land can be improved by re-seeding and sowing down to grass, practices which could be fruitfully extended throughout Park. In addition, several townships by co-operative effort, have reseeded small areas of the commons grazings with spiketail.

However it is clear that it is not possible for 219 viable agricultural units to be maintained on the present crofting area. The optimum size of croft which maintains a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

This problem was referred to a practical agriculturalist who was asked to state what size of croft and number of stock would be required to provide an annual income of £300, excluding croft benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil these conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

[Habost]

Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, barley was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cocks foot. On the hills heather predominates.

Habost is the oldest township in Park. In 1843 Maclennan came from Shieldersnish and took what are now Nos. 9, 10, 11, 12 and 13 and Alisan Tailear came from Toraisay, Harris, to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being there before 1886; in 1957, No. 11 which had been shared between two brothers since 1904, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and ploughed by tractor owned by one crofter who lease it out to Habost and Kershader. There are three 'Croftmasters' (hand-tractors) in the township but these are only heavy enough for bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed parks of about one acre. The tendency now is to increase the number of parks, cut the hay in June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in Park Deer Forest by arrers of the Habost tenants. Sales of cattle are held at Garyvard in November and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

The only cultivation on the common land belongs to the unofficial holdings. Behind Creigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since before 1852. There used to be shielings on the far side of the common on Beinn Bhuidhe and below Loch na Ciste but these have not been used since 1888. Habost is one of the agricultural townships and fishing is only for domestic use; lobsters are to be found on only four crofts and trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Lochs. There are two small stores.

Settlement is scattered, always on elevated ground, and in many cases the new houses have been built in close proximity to the old houses site. All have piped water either from the well or from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Kershader]

233 (b) From New Year to mid-April most sheep are kept on the common grazing. Practices,
911 however, are irregular; some flocks are usually hand fed, others only rarely. In the former
221 case they heft near the upper limit of their home croft and remain fairly close at hand.
231 Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

[432] There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

231 Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces
[236] about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average
[435] sheep carcase weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

241 Under-employment is a serious problem in Kershader. There are nine males classified as
161 full-time crofters, but probably only four of these (two on one croft) are in fact in this category,
162 and of the total of thirty males with their homes in Kershader, only fifteen of the insurable
167 population are permanently resident. There are twenty-eight females with their homes in this
166 township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption
464 only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The
[463] only resident professional worker is a nurse. Ancillary employment must be, and is, sought
[501] away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from the
[175] optimum. The school in Kershader, which had 80 pupils in 1873, reached a peak of 110 in 1907
[178] and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard,
[871] Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

182 It will thus be seen that the most serious problem facing Kershader is that of stabilizing the
241 population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in
[313] agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Kershader] [Garyvard]

182 common grazings - at present approximately correctly stocked - and cannot therefore provide
241 much employment. Hence it is the standard of agriculture that must be improved. Since the
[313] land does not permit striking extension or improvement of the cultivated area, development must be directed towards improving pasture, with more re-seeding and controlled grazing
400 similar to that already described. All this, however, is of little avail if prices for cattle, sheep and wool remain low, or at least lower than prices prevailing on the mainland. The first priority therefore, in the establishment of a prosperous agriculture is a guaranteed market-price. Given this, it might become worthwhile to take steps to increase the carrying capacity of the crofts. It may be assumed that this would involve an all-round improvement which could give a firm basis to the economic existence of the community; until this is achieved, stability and continuity are out of the question.

GARYVARD

Gwenyth R. Page, B. A.

131 The landscape of the south-east coast of Loch Erisort is a sombre and rugged one. The
133 Quaternary ice sheets left in their wake troughs now filled by the sea loch, innumerable lochs covered in water lilies, a massive area of indeterminate drainage and expanses of bare gneiss.

Garyvard is set on the fringe of this landscape on a 20 to 25° slope with the crofts aligned
551 from the moor to the sea, on a mantle of drift. Here is the home of the MacLeods, the Mackinnon
121 and the Montgomerys. Life beats out its regular pattern of existence during the winter months
231 on the croft, followed by an increasing tempo and variety of work during the rest of the year. In
241 January and February the animals must be fed on hay or lose the battle to survive. In February there are preparations for the year's tasks, making repairs and improvements to the croft. Next month will find the crofter on the land, making or clearing drains and putting fences and dykes in order. The tempo of life quickens with the year; April sees the first sheep dipping, the land turned over, potatoes and oats sown. From mid-May, the sheep leave the crofts to fend
[344] for themselves on the common grazing. The following three or four months are times of tremendous activity on the moors when the peats are cut, to be stacked later, first in fours, then in eights, so that the wind may dry them, till eventually bee-hive-shaped stacks - some four feet high - can be seen near the peat banks in August. Then begins the wearisome task of carrying the peats home, all too frequently in creels carried on the back, since the peat workings of Garyvard are on the moors up to half a mile from road. Altogether some two miles of roads are needed to prevent the villagers patronising the coal merchants of Stornoway. Two crofters, however, cut peat on their crofts, whilst others have permission to cut from Cromore or Caversta common grazings close to the road. All the while croft work continues, varying from hoeing, weeding and cutting hay to the gathering of sheep for shearing. As there are no fences between the various commons, crofters must travel from one township fank to another, seeking their own. In August the lambs are weaned. Hay making generally ends in August and is immediately followed by the oat harvest in September. By the time both oats and hay have been gathered in, the potatoes are lifted and the sheep are brought in from the common grazing about October 12th. The last sheep dipping takes place in November and is followed by tupping.

241 There are eleven crofts altogether, though one is divided, each portion having a legal tenant
423 who has a half share in the common grazing. Two crofts are 12 acres in extent, the half crofts 2.75 acres only, though the acre cultivated on the common grazing by one of the latter crofters since 1923, has recently been officially recognized. Most crofts are in strips running from the sea-shore up the slope some 500 yards to the township dyke, and are clearly demarcated by fences erected just after the last war. Three crofts have additional strips whilst one croft was
[175] an extra strip belonging to another croft. The additional strips date back about 100 years to a time when the township grew rapidly as a result of evictions in southern Park. One croft is divided and worked in three separate parts so in effect there are fourteen operative units in Garyva

[Garyvard] [Caversta]

532 At the moment Garyvard appears to be a go-ahead village, carrying out communal schemes
[62] which will benefit the township as a whole. However, the age structure of the population is abnormal
since 60 per cent of the population is over 45 years. The future in Garyvard offers young people
192 hard work, little money and no entertainment, making the attractions of the cities and industries
of the mainland quite irresistible. Unless some industry can be started the future bodes ill for the
area, since most crofters are of the opinion that a weekly wage packet would more than compensate
191 the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and
subsidies that man cares more for momentary rewards and the luxuries of life. This is well
understood by parents who encourage their children to leave the islands to seek employment either
in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditions
and a way of life. His present desires have been re-cast as a result of his increasing contact with
the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims
and purpose. Unless prosperity can be brought in by way of industry, tourism or increased croft
efficiency, possibly through co-operation in working and marketing, it is possible that we are
witnessing the end of a community.

CAVERSTA

Helen Mackenzie

131 Caversta lies along a southern inlet of Loch Erisort, five miles from the Minch and is partially
sheltered from east winds by the Cromore peninsula and Eilean Chaluim Chille.

133 The physical nature of the terrain is irregular, rising steeply from the water's edge to a level
of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it
361 is here that the settlement occurs. Particularly in the north-west, two marked breaks in slope are
visible at 75 feet and 100 feet above the loch, which is here bordered by a 25 foot rock face. The
resulting platforms are separated by faces of bare rock. The valley of the Caversta River is a
noteworthy feature. Below a small loch, the river follows an irregular course though a wide and
shallow moraine-strewn depression and a quarter-of-a-mile from its estuary, has cut through some
low hills rising about 30 feet above the depression. At this point, its course becomes steeper as
it passes through a small gorge, which is probably an overflow channel.

137 Trees are non-existent and the natural vegetation consists of Sphagnum on the peat bogs in the
hollows and grasses and sedges on the gentler slopes. The steeper, less waterlogged slopes, often
broken by rocky bluffs, have heather cover; bracken growth is kept in check by heavy grazing.
134 Forty-six acres of land have been reclaimed by clearing heather and removing peat to form the
311 crofts, but the soil, which varies in depth from a few inches to a few feet, is very acid.

The six legal crofts vary in acreage from 4.75 to 8.5 acres and a squatter has 5.5 acres of
129 enclosed land. The township is in two parts: Torista, with the two smallest crofts, lies at the east-
241 ern extremity, while the other five holdings, also bounded by a dyke, border Tob Caversta, an
632 inlet of Loch Erisort. The crofts, which run from the shore to the township dyke, were set prior
[175] to 1861; originally the township formed part of Crobeg Farm. The legal units are, in fact, operative
units except that one of the Torista crofts, now unoccupied, is used for wintering lambs by the
absentee's brother, a resident of Caversta.

542 There are no occupied black houses remaining in either Torista or Caversta, as during the
past fifty years new dwellings have been erected in dressed stone or corrugated iron, usually with
roofs of asbestos slate, tarred felt, or corrugated iron. Several old thatched houses are now used
as barns and byres.

[Marivig] [Calbost]

000 In conclusion, it may be said that the problem of Marivig's future, and that of other crofti
townships, is not only one of adverse aspect, soil and weather conditions, and of distance fro
markets, but a problem of the population finding a stable and viable level where agricultural u
are large enough to encourage the active and enterprising section of the population to remain,
a problem of finding capital to equip a modern fishing fleet.

CALBOST

Anne Cooper

131 Calbost is situated five miles to the north-east of Gravir on the Minch coast of Park. It o
133 a basin-like hollow in the centre of which is Loch Dubh, and is open to the sea on the east. T
361 croft houses are scattered over a shelf 50 feet above sea-level round the sides of the hollow a
along the valleys which enter the township to the north and south-west.

134 The cultivable soil, a mixture of peat and well-drained gravelly drift, is on the higher gro
137 although here the rock outcrops in many places. On land formerly cultivated, bracken is spr
rapidly and now covers a large proportion of the surface, although twenty to thirty years ago
was unknown. Heather dominates the common pasture and rushes are widespread in the low-
central area. There are a few willows and rowans round the old buildings, probably planted
wind-breaks.

175 Calbost was originally a single farm but the township was formed about 1820. The pattern
241 the crofts differs from the usual shore-to-dyke alignment, as six crofts were allotted extra la
311 in the valley which enters from the north, when a part of the common grazing was brought wit
361 the township dyke. There are now fourteen crofts of which four are worked by resident crofte
189 and two by squatters. The remainder are used only for hay and grazing and are sub-let to cr
in Calbost and other townships.

241 Cultivation is entirely by spade and of the 2.6 acres now in cultivation, potatoes account f
[240] 2.37 acres. The small acreage of oats reflects the greatly reduced cattle stock of only two c
[246] two calves. Approximately twelve acres of hay are cut as winter feed for the 225 sheep which
in the township.

311 The lazy-beds in natural hay and the outrun are being rapidly encroached on by bracken.
prevalence of bracken, and the amount of work needed to clear it, is likely to deter any attempt
renewed cultivation.

178 Calbost was originally a fishing township in spite of its harbour being so exposed: boats h
228 be taken up on the shore instead of being moored in the bay. The decline of the fishing indust
504 has prevailed in Lewis has contributed towards the almost complete desertion of Calbost, les
only a few boats now used only for leisure purposes. Croft income is supplemented by only t
434 the men in the township, one a weaver and the other in the Merchant Navy. Although there ar
563 productive gardens, no attempt is made to market any produce.

The township dyke is very close to the settlement and in the past shielings were not so wid
232 in Calbost as elsewhere. The cattle were instead brought near to the dyke for milking and al
361 to graze on the common unattended. There are ruins of shielings to be found on the hills aro
417 Calbost but a more interesting feature is the second dyke; enclosures were made adjoining th
dyke and in the late summer the cattle were brought to fresh pasture within these dykes befor
the opening of the township gates. Following the opening of the gates the stock are free to wa
[178] over all crofts but there seems today to be a move towards the complete enclosure of the cro

Whatever signs there were of social or cultural disorganization, or threatened disintegration, in the nineteenth century they have disappeared. Steward's theory that folk societies do not entirely disappear but are rather modified by way of a readaptation to the higher level of socio-cultural organization of which they become a part is borne out by the evidence from the Isle of Skye.[17] At the same time, on the basis of events in the culture history of the Sgiathanach, I would qualify his theory by introducing a new condition. Isolated, relatively simple, kinship oriented societies and cultures which must achieve a reintegration if they are to preserve their continuity readapt, not only to the higher socio-cultural level, but also to the older way of life.

In conclusion, I regard Skye as a community which has maintained a continuity of culture despite marked population change. The continued distinctiveness has been made possible by a reintegration of the culture and a restoration of the network of relationships which make for harmonious living together. As in any socio-cultural group which has passed through periods of threatened disintegration, the joints of repair may be weak. Conflicts are tending to appear. The crofter, who has refused to fully adapt to commercialism, is seasonally faced with a variety and succession of tasks which no agriculturalist in the wider society would tolerate. There is the desire of the youth, who are too few in numbers to form a sodality, for a share in the mundane pleasures of

241 here and there in small patches of less than a quarter acre and therefore do not appear in our summaries, appendices A (1) and C (1).

The amount of cultivation carried out depends on three factors:

(i) stock, particularly cattle, to be carried through the winter,
(ii) size of family, which influences the amount of potatoes grown,
(iii) available labour, because cultivation is mostly by hand, especially in South Uig and Bernera.

The size of the effective agricultural unit has little influence on the area cultivated although it may bear some relation to the amount of natural hay taken. This can hardly be regarded as 'cultivated' and the acreage is difficult to estimate; the custom is to cut as and when weather permits, and wherever there is a convenient stand of natural grass.

Hand labour is a necessity on most crofts in the Bernera district and on many elsewhere. The traditional 'lazy-bed' - a long narrow strip of cultivation bounded by deep ditches which may be half as wide as the bed - is a necessity on broken, rocky ground on which the only soil is peat which often has to be gathered into hollows in order to get sufficient depth. The small size and long narrow shape of most crofts do not lend themselves to tile drainage, which is almost unknown. If it could be extended it would be a great advantage but, in general, it would have to be organised by townships, or at least by groups of crofts, and the whole trend in management of croft land is towards individual occupation and use.

241 This may not always be a good thing. Fencing is a case in point. Until the last
417 ten years fenced crofts were rare altough small parts of crofts might be fenced and, in some cases, a group of crofts might be fenced off from the rest. But, in general, the crofts were common land in the winter and used individually only from May to October.
178 Fencing grants, and the encouragement of sown grass in rotation with oats, have changed this. A great rash of fencing is appearing. This may not be altogether a good
[233] thing, particularly for the sheep in winter and spring; even if gates are still left open, stock are deprived of the ability to move for shelter. There may also be watering difficulties. Co-operative draining, cultivation and grazing, of groups of crofts if not of townships, would be more efficient and more productive.

241 Finally, we may remark on the curious insistence on hand cultivation of oats and potatoes for consumption on the croft, whilst cash crops well suited to hand labour, and
[439] which would be far more rewarding, are neglected. Flowers, vegetables and potatoes are imported into Stornoway daily on the mail steamer and even by 'plane. Neither climate nor soil prevents their production in Lewis. Moreover such crops could provide a much needed source of additional income. A few croft gardens produce excellent soft fruit and as the local season differs slightly from that on the mainland
[176] there would seem to be possibilities here, too. There have been virtually no agricultural innovations since the potato.

Economic and Technical Factors.

434 The agricultural income of a croft arises from:

(i) the sale of livestock, mostly store stock at the spring and autumn sales,
(ii) the sale of the annual wool clip,
(iii) the receipt of certain annual subsidies and grants.

These are the main items; in addition some may sell small amounts of potatoes, eggs and standing hay; a very few sell a little milk although strictly this is illegal. Such an annual income comes in three or four annual instalments, uncertain as to date and amount. Moreover, a crofter may suddenly and unexpectedly find himself deprived of a large portion of his income due to casualties amongst his stock or poor demand at the seasonal sales. Unlike the mainland farmer, should an islander withdraw his store

231 Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and overstocking increase with the size of the croft; the units of ten acres and over, on the basis of stock carry, would appear to be the most intensiv
[469] worked. In all, just over half of the units take up their full souming. Table IV gives an
[561] analysis of employment ancillary to croft work for 141 of the 219 units and it would appear that
[887] neither ancillary employment nor age is significantly related to the intensity of croft working. Table V points to the fact that more full-time crofters are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables
[811] III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural townships is nine acres, compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

175 The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission m
178 a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident
241 that the number of cattle was much higher at that time and that the cattle-sheep ratio in the
231 selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistic for the parish of Lochs as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; bere (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36
[518] per cent. Large areas of lazy-beds, no longer cultivated, are visible landscape signs of these
[824] changes; seaweed, the sine quae non for lazybed cultivation, is no longer carried to the upper pa of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

233 From the foregoing account, it is clear that there are two major agricultural problems in Pa
241 the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing these deficiences bring in their train the problem of overstocking, and the existence of uneconom holdings.

241 The more progressive crofters, significantly resident on the better crofts of the agricultural
242 townships, have shown how croft land can be improved by re-seeding and sowing down to grass,
176 practices which could be fruitfully extended throughout Park. In addition, several townships by c operative effort, have reseeded small areas of the commons grazings with splendid results.

241 However it is clear that it is not possible for 219 viable agricultural units to be maintained a the present crofting area. The optimum size of croft which could maintain a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

231 This problem was referred to a practical agriculturalist who was asked to state what size of
241 croft and number of stock would be required to provide an annual income of £300, excluding croft
242 benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil the conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

Shawbost

175 Hamelts or clachans
241 (small clustered settlements) were broken up, and
361 houses were isolated on strips of land in linear,
178 single-street villages.

114 Gray (1952, 1957) argues that the main factor
178 behind the reorganization of land use in the Highl
was the progressive, individualistic, laissez-fair
ideology of the 18th century. Grant (1930: 97)
attributes the reorganization to the high demand f
cereals which existed during the Napoleonic wars.
• 177 Highland landlords, who were very much in contact
241 with the society of the Scottish Lowlands, were
influenced by agricultural practices there. The
trend to change run-rig, which had once dominated
whole of Scotland, to fixed, compact holdings bega
in the Lowlands.

423 According to the "progressive" ideology of th
425 time, the giving of land to individual farmers in
829 larger pieces than they had previously held would
serve to stimulate agricultural development and gi
rise to a class of capitalist farmers. To give la
to a relatively few people, however, meant the rem
of a large number of tenants who had hitherto been
able to survive under the system of run-rig.

[Calbost] [Gravir] [Glengravir]

The present situation in Calbost is best illustrated by reference to the population statistics. There are only 17 people living there at present, seven of whom are squatters and only eight houses are occupied within the dyke. Of the male population, there are three children under fourteen years, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly shows the lack of active men from 15-44 years, necessary for the continuing economic success of the community. However, even these figures are not so striking as the numbers of emigrants as no less than 39 men and 40 women have left Calbost since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger people have left to find employment in Stornoway and on the mainland. The present population structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

Gravir, the largest Park township numerically in population and crofts, lies astride the major east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the considerable population existing on slim resources, problems common to Park as a whole, are all epitomised in Gravir.

On the south-facing slope above the loch and the continuation of the trough in the valley to the west, the majority of the crofts have been carved from moor to sea, some before 1800, and some in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852. Originally, there appears to have been thirty crofts, but four were added during the nineteenth century, two at each end of the line, and in 1934 a further fifteen were cut out of the common grazing, a mile to the west of Gravir. On the south side of the loch, the 'clachan' of Tom an Fhuadain, established about 1800, has since developed into a further nine crofts. Thus there are forty-three legal crofts in Gravir and a further fifteen in Glengravir making fifty-eight in all.

The layout of Glengravir, a line of crofts from 3.6 to five acres, typifies the small post-1918 Department of Agriculture holdings. The arrangement of the Gravir crofts is illustrated in Figure 4, and it will be seen that not all the crofts are consolidated. There are three areas of former arable commons which have been lotted in unfenced strips and they may well be reclamations which were necessary to supplement the food producing capacity of the holdings. The method of division and allocation speaks of a period when a subsistence economy under severe pressure from over-population, necessitated fair shares for all. The last of these commons was in cultivation until 1891. Although subsistence crofting has been obsolete since then, there is as yet no move towards a regularisation of the layout.

178 The congestion which necessitated the reclamation of the arable commons developed mainly
145 as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there
228 were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars
[161] were tolerated and the population rose from 197 in 1830, to 368 in 1881 reaching a peak of 468
[162] in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not yet ceased. Gravir reverted from 1918 to a township of agriculturalists and a base for employment furth of Lewis, although there have been spasms of successful fishing activity since.

Stock raising is now the function of the township and the agricultural resources and conditions
241 are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts
[231] vary between 3.5 and 26.5 acres in size: no croft has more than four acres of 'old arable'. In the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds banked up with stones at the downward extremity on the steep slopes, was much more extensive. All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away
[324] Cromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is
[137] cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the laz

[Gr-vir] [Glengr-vir]

241 beds are now covered by sphagnum moss and heather. Other lazy-beds are permanently in natural
[197] hay; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If natural hay is added, one hundred and thirteen acres of crops are taken from an area greater than the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the old arable (ninety acres) after 1850-52. As in all the fishing townships the area of sown grass is infinitesimal for only four of the fifty-eight operative units actually sow grass. The wintering capacity of the crofts could be greatly increased by the general adoption of the practice of under-sowing.

241 There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives.
423 All the crofts are taken up and there is evident pressure of population on the land. In addition to the crofts, there are a further ten cottars, and squatters and feuars, besides the fifteen legal Glengravir crofts (ten operative units) which have no share in the Gravir common. The common
[532] has been encroached on by several feus for Gravir is the functional centre of Park: the Free
[346] Church of Scotland and Manse, the doctor, one of the two district nurses and two of the missionaries
[759] (assistant ministers) are all located in Gravir.
[795]

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-six operative units. Less than
233 half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of
311 the soum, including five without any stock. The common pasture of 2,652 acres is in general of poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957, a ten acre plot was fenced and re-seeded: only twelve of the operative units participated in this reclamation work, and the ages of the participants ranged between 27 and 58 years; this is significant as aged tenants are unable to carry out such work. This scheme could be extended annually; if potential improvements to the crofts are limited, pasture amelioration is virtually
[435] without limits. Re-seeding on a large scale would enable better stock to be kept rather than greater numbers; at present the sheep stock is over two hundred per cent of the sheep soum, and a ewe and lamb sell for as little as £2 10s to £3 10s, an indication of the consequences of over-stocking. The cattle stock is below the souming and this paucity of cattle is one of the notable changes in the agriculture since the 1930's for at that time as many as six cattle were kept on the larger crofts. The total stock kept in Gravir and Glengravir exceeds the souming by thirty-five per cent.

231 The great majority of the crofts can certainly not be considered economic units. Judging from
241 the souming of one cow and follower and eight sheep per pound sterling of rent in a township where
434 only seven crofts pay more than £2 rent, they were never intended to be self-supporting agricultural units. The produce of two cows and sixteen sheep, with potatoes, and in former days, bere or oats, locally milled by the three Gravir water mills, could scarcely ever have maintained a family. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and
[228] eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for lobsters.

463 If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and
288 service occupations a further ten males and five females, but neither weaving nor service occupation are sufficiently available or attractive to keep the insurable population in the district. Twelve of
[166] the males between fifteen and sixty-four years take seasonal employment and forty-six are in
[167] permanent employment furth of Lewis, in all sixty per cent of the potential male resident population.

175 The economic problem of Gravir, in common with the other 'fishing' townships, became acute
228 after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished
434 all the year round, locally and on the west and east coast of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sal of young cattle, and wool surplus to home spinning requirements, the fishing earnings constituted
[233] the bulk of the croft income. Today, on the basis of the souming, the income of the largest croft including subsidies could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

[Lemreway]

vulgaris is dominant. Ling, which can tolerate considerable soil water, often occurs with Nardus, Molinia, Scirpus caespitosus and Eriophorium. A few rowans, usually near the shore, and a few willows, usually within stone enclosures, are the only trees to be seen.

Of the thirty-three legal crofts in Lemreway, nine comprise less than five acres, while seventeen are between five and ten acres. Of the remainder, only two exceed fifteen acres and one of these is 30 acres. Six unoccupied crofts are worked by persons other than their tenants, so actually the 290 acres of croft land are shared by twenty-seven holdings. The seventeen-acre 'outend' was originally divided between fifteen tenants but confused sub-letting has resulted in four separate holdings directly occupying nine acres, and working another four acres. Thus the outend today must be regarded as the monopoly of four 'unofficial' holders.

Little more than a quarter of the croft land is cultivable and even less is actually cultivated today: Figure 9 illustrates the crofting year. The broken terrain and the stony nature of the soil has permitted the cultivation of tiny 'lazybeds' and the total cultivated area is now about 48 acres. Only the strips of land on the gentler slopes, where the soils are deeper, are now cultivated, but every croft shows signs of former, more extensive, lazybed cultivation, often covering at least two acres. For example, on the east side, natural hay is cut on the well-marked lazybeds at about 225 feet.

Oats and potatoes, 29.5 and 16 acres respectively,occupy almost all of the cultivated ground. Most crofts grow about half an acre of potatoes and one acre of oats; both acreages have declined, the former with a declining population and the latter with a reduction in the numbers of cattle; hay has increased in importance. No bere is now grown, though before 1900 it was preferred to oats. Ruins of the bere mill, which ceased to function at the beginning of the century, can still be seen. Fifty-nine acres of natural grass are cut for hay but only four crofters had sown grass for hay in 1958, about three acres in all. Few vegetables other than potatoes are grown though carrots are said to grow well, and formerly turnips and cabbages were grown. The soil needs careful preparatio to be productive and almost every crofter used some seaweed and at least twenty drew subsidies for l and artificial fertilisers in 1958.

Stock totals have declined recently but the township has 36 cows and 22 calves. Only one croft s without cattle and 22 of the 33 working units have a cow and a calf. The township has an Ayrshire bull on loan from the Department of Agriculture; one of the few remaining elements of the co-operati ownship system is that this animal is fed by the crofters, in rotation, during the winter.

All but two crofters keep sheep; stocks vary between ten and 120 per holding but the majority have about 23 ewes with ten lambs. Although numbers have declined recently, the 3,025 acres of very moderate common pasture support a flock of about 1,150 sheep, including about 650 breeding ewes and about 300 lambs.

The souming is not enforced in Lemreway and it is remarkable that the total stock tallies almost exactly to the souming. An examination of the sheep soum reveals that the stock of 917 (excluding lambs) considerably exceeds the sheep soum of 626. It is interesting that it is nearly always the working units of over 10 acres that are overstocked; of twelve such units, eight keep more sheep than they are entitled to. Most of these crofts are grouped on the eastern side of the township where the crofts have a larger outrun.

Thus, while overgrazing is not so severe as in many townships, it represents a potential threat, particularly if the common pasture is not improved. However, in 1958 ten acres of the common pasture have been enclosed and re-seeded. Six acres were sown with ordinary mixed grass seed, two acres with pelletted seed and two acres with pelletted and inoculated seed. The eleven crofters taking part in the scheme put on 100 tons of sand to help drain and aerate the peaty soil, 2½ tons of ground mineral phosphate and 2 tons of concentrated compound fertiliser, grades 1 and 2 - all of it by hand. The area was sown in May 1958: by the following August, there was a striking difference between it and the untreated pasture. Next Spring, eleven cows will be grazed on this area. With the success of this scheme, it is hoped that more of the crofters will co-operate in re-seeding further areas.

[Lemreway] [Orinsay]

228 The West Highland Survey Township Card[1] describes Lemreway as "predominan
196 township". The remains of an old curing station are visible today and until 1947 t

[Orinsay]

233 The future existence of the common pasture for grazing is being seriously endangered by overstocking. The souming is not enforced in Orinsay and the actual sheep stock exceeds the soum by 300 per cent. Peat-cutting is gradually destroying valuable grazing areas; in the last three years there has even been some peat cutting on the better grazing on the island. The dangers both of overstocking and of indiscriminate peat cutting cannot be overstressed.

[314]

311 No evidence was seen of attempts to improve the quality of the common pasture. The establish-
242 ment of shelter belts would provide not only shelter but a means of stopping the peat from 'slumping' down slopes if they were carefully sited. Much of the common pasture could be improved by a hill drainage scheme and by re-seeding, after sanding and liming, a project well within the capacity of the resident labour force.

241 Good crops on a few of the crofts suggest that the land is not inherently sterile, however, and it would seem that if the holdings were reduced to a maximum of four, an economic existence might be feasible on these crofts. The stony nature of the soil limits the possibilities of tractor cultivation but with an improvement in drainage, one might be used in the two valleys.

464 It is not so easy to be optimistic about the employment of surplus population resulting from such an enlargement of holdings, although a revival in the fishing industry could absorb most of the men. A present there are no looms in Orinsay and providing the Harris tweed industry can hold its own, there are possibilities in weaving. Seaweed is in plentiful supply, indeed Lemreway people also obtain supplies and should its quality prove adequate, the establishment of a processing plant would provide valuable employment.

[288]

[824]

000 Nevertheless it is becoming increasingly obvious that unless the holdings can be enlarged, whethe officially or by sub-letting, and some further employment created, Orinsay is liable to stagnate, and depopulation to continue. The township which was developed to relieve congestion is now itself congested.

SUMMARY AND CONCLUSIONS

121 The aim of the Glasgow University Department of Geography Crofting Survey is to record and analyse material relevant to the crofting districts, and in so doing provide a clear and impartial statement of the present situation. In inviting us to undertake a survey of Park, the Pairc Association hoped that a body of fact would be assembled and conclusions drawn which would assist the Association in their admirable aims of advancing the well-being of the area. Their two Progress Reports, of 1956 and 1957, indicate that they have already investigated many of the possibilities for development. This summary refers to Park alone, and, it must be emphasised that until the survey of crofting is completed, no final assessment of the Crofting Area as a whole can be made.

182 The district of Park is one of the more isolated and difficult crofting environments. The ruggedn of the terrain, the high proportion of land of very low agricultural value and sheer isolation make the
●175 existence of human communities precarious. In addition, many of the Park communities were first
311 established as a result of population pressure in more favourable areas of Lewis, and the original small settlements grew rapidly as a result of a change in land use which was a national trend - the conversion of poorer areas from subsistence farming to an extensive sheep-rearing economy. The impact of this change came to Park in the form of the eviction of a large body of small farmers in favour of an extension of the grazing area. Thus the present conditions are a legacy of the relatively recent past, and of legislation, particularly in the Crofters' Act of 1886, which accepted, and tacitly agreed to the maintenance of a larger population than the land could reasonable carry[1]. Two World
[141] Wars and fluctuating economic factors have had repercussions in Park and resulted in a change in
[142] economic and social values, and depopulation has resulted: the 1951 population was 60 per cent of the 1911 total.

1. The Commissioners proposed that only holdings rented at £6 and over should have security of tenure, with a view to discouraging the perpetuation of grossly uneconomic holdings; in the Act, all holdings were given security of tenure.

acceptance of the potato, a much more productive and dependable 161 175 178 241 464 subsistence item than grain on Skye, made it possible for more people to live on less land. The introduction of a new industry, kelping, provided many with employment and freed them from complete dependence on a subsistence economy. Vaccination reduced 757 165 the mortality rate, especially among infants whose chances of reaching maturity and procreating were thus enhanced. Another 514 important factor was the Skyeman's share in the general prosperity of British agriculturalists during the early years of the Industrial Revolution and during the Napoleonic Wars. An 423 592 especially important factor was the practice of subdividing the land which made early marriage possible, in particular after the installation of the crofting system. Finally, but by no 161 175 178 182 means least significant, there was the persistence of many typical features of the culture in the days of the clan. The sentimental ties of kinship and attachment to the soil had remained.

The population decrease, partially a result of the Skyeman's 161 175 178 184 involvement in the process of commercialization, was primarily a result of a failure to fully adjust to the higher, more heterogeneous socio-economic level. By the end of the second period of the modern epoch, 1845, the people had become hostages to the potato and their own fertility. When the potato failed them, they had nothing to fall back upon, except the generosity of their landlords. The cattle and kelp markets had collapsed at the end of the Wars, and the subdivided land could not produce sufficient grain. The belief of many that the population had over-run the limited local resources was confirmed.

conomic adaptation of the Sgiathanach

religious groups." As a result of urbanization almost all 171
rural areas have experienced the pangs of social mobility and 182
few have escaped unscathed from a clash with the economic 771
forces which impinge from the outside. This predisposes the 786
people to the appeal of an emotional religion, revivalism. 781
Frequently, the sect becomes uncompromising and rejects the
outside world in an attempt to bolster group security. The
sequence of events on Skye enables me to add that the sect
can also reject a great deal of the former content of the
culture. Be that as it may, the authors show how emotional [571]
religious movements restore or replace meaningful patterns
of interaction among groups whose social systems have deteri-
orated. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175
which the Sgiathanach experienced may be placed in the first 178
half of the nineteenth century, with a climax around 1840. 771
To paraphrase Loomis and Beegle, it was no mere coincidence 786
that an emotional religious movement should have appeared and 182
found so many converts. The closing years of the eighteenth
century had witnessed numerous changes in the content of the
culture and the collapse of the old social heirarchy. While
these events doubtlessly had an influence on all levels of
the society, it was not until the turn of the century that
they broke forth upon the masses. Within a decade a revival
had reached effective proportions. This was a time of estate
reorganization. The tacksmen, the traditional leaders, were
quickly disappearing. The runrig farm was being abolished.
Sheep were beginning to replace men in one parish (Bracadale).

161 Table XIX summarises the population structure and trends for the four districts. It is signific
162 that the two districts without service centres, which provide a range of ancillary employment, hav
166 experienced more severe depopulation since 1939. This table also underlines the fact that earning
167 from seasonal employment are insufficient: the incidence of permanent employment furth of the
434 districts is three times as great as the incidence of seasonal employment.

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

175 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (1850
233 to 1852) and from personal observations, it is clear that the shieling system was at one time an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the sites are close to lochs or streams. The majority are in loose groups of from two to nine buildings, although there are some in isolation; no site has as many as twenty-six buildings as found at Airidh na Gaolthe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10). All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Most of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around the
283 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shieling, although they no longer lived there. The sheep still use the mounds for shelter and grazing. These features of an obsolete economy are still easily recognisable from the luxuriant grass cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B.Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift for
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: inaccurate spellings even in modern times, and lack of any useful evidence from older sources, make almost all the derivations a matter of conjecture. Sometimes two or more ON equivalents are possible (e.g. for Calbost), sometimes no satisfactory solution can be found (e.g. for Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations not recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the first as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikely in meaning.

and 159-166.]

the fourth degree of relationship. Although the extended family is now rather amorphous compared to what it must have been a century or two ago, it is still very real to the Sgiathanach. Once, perhaps, the townships and their historic antecedents were patrilocal settlements. Then, of course, the question of the availibility of land and the legality of subdivision were of small importance. Now the rigid system of land use enforces neo-local post-marital residence, often at a great distance from the parents, and very often means that the younger generation must join the constant outward movement of the population. Thus, the extended family is seldom, if ever, found intact. Indeed, the only times its members come together as a group is at a funeral or a wedding. On these occasions the strong patrilineal emphasis becomes apparent, and the fact that the individual always remains a member of his or her family group is revealed. It is, then, a stem family.

In structure the extended family includes all males and females out to, and including, third cousins. The kinship terminology is descriptive. Excepting grandchildren, all relatives are distinguished by sex and generation. Members of the parental generation and lineal descendents of the parents collateral kin are distinguished by their relationship to the individual's parents. Members of the grandparental and great-grandparental generations and their lineal descendents are similarly distinguished. The same descriptive technique extends to kinsmen of the first and second descending generations.

Beginning with a population which is believed to have been relatively stable due to recurrent crises, including epidemic famines, and wars, the pendulum of population growth and decl for the Sgiathanach has been found to be highly responsive to cultural innovations and social adjustments. Between 1750 and 1841 the Skyemen increased in numbers from 10,671 to 23,0 an increase of more than 100 percent. From 1851 to 1951 the population has steadily decreased from 22,536 to 8,603, a decrease of 62 percent from maximum. Associated with the decline were changes in the age structure. In 1861 34 percen of the population was under fifteen and only seven percent was over sixty-five; today only 22 percent of the population is under fifteen while 19 percent is over sixty-five. How can we account for these changes, or, more correctly, how can we account for the changes in the birth, death, and emigration rates?

Broadly speaking, the increase was favored by the direct and indirect involvement of the Sgiathanach in the process of commercialization, with all of its associated consequences. One by one, the natural checks on population growth declined in importance. The pressure on the means of subsistence was eased. The former clan chiefs, preferring the society of Edinburgh and London, absented themselves. After converting rents from kind to money, they provoked the withdrawal of the tacksmen by resorting to rackrenting. The former clansmen, who became joint-tenants, received a larger share in the land and were freed from the obligation of feeding both their own families and those of the superiors. At the same time the

Fig. 10

/facing p. 39/

being determined by conditions of culture, such as political and economic conditions. Under conditions of gradual centralization of economic and political systems, the geographically isolated crofting areas have evolved strategies, some of which puzzle agencies concerned with development or other aspects of governmental processes.

Before the North of Scotland Hydro-Electric Board began to operate in the crofting counties, not more than one croft in every hundred had electricity; but by the end of 1955, one in every three croft holdings had been supplied (Taylor 1956: 20). "The light" came to Shawbost in 1951. Before then, the islanders used Tilley lamps, a Canadian invention, and before them double-wick paraffin lamps. Pipes water came a few years later, around 1955; it was brought from a nearby loch, and the community work gave urgency jobs to local people. The availability of these services facilitated the building of county council houses, which many welcomed as providing a relief on the congestion caused in part by rules against building more than one house on a croft. But, paradoxically, the "pattern" of consumption of all these services came a decrease in the advantages of living in a crofting township: property was assessed and people began paying rates or taxes.

In nation-wide conic strips and zones, the Highlander plays the role of the clown, the rustic country cousin. The comic strip "Gaston Gay" portrays a skilled Highlander, sly and canny behind his apparent simplicity, tricking the landlord and searching for the Loch Ness monster. Stories of the lazy, dour crofter abound.

When young men go away to the Army or Navy or to work on the mainland, they say that they feel like

"Kangaroos." "Thirty years ago the island was very isolated. It was difficult to get to Stornoway, and a few education grants available. I got my teaching certificate and wanted to get a post back on the island, but was told there was no vacancy. I waited for another fifteen years. So I went down to England, and found I had to be at least as good as an Englishman if not better in my job as I had to be here."

"When I went into the RAF, I had never seen light switches because we used paraffin lamps. An English man told me to turn the light on, and I didn't know which way meant on or off. They seemed still stuck in me."

* From a high official in the Highlands and Islands Development Board, 1970. Cf. Hunter (1974): "Highlanders are trained to be dependent, to be conditioned to accept what is given them, to be trained not to question, to be trained not to "don't do today what you can put off till tomorrow." Cf. Hunter (1974): "Highlanders live in a Gaelic, "no worries," "what's the hurry" culture. We need no word that conveys such a sense of urgency."

"I was in the Navy during the last war. We were in Norway, and got an invitation to visit the palace. I didn't go. I was afraid I'd make a mess of things."

"Stornoway is a dreary place. Crofting (Gaelic: IV'S, mainland-oriented) so you feel outsiders."

The new director of an association which promotes the speaking of Gaelic in a Lowland Scot town learned a little Gaelic when he was in England. He was working in England and, as a Scotsman, felt as much like a foreigner that he decided "to be a real foreigner"—to be another Gaelic. Motives which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

As Comas Carmichael, the leading spokesman for Comunn Eilean Leodhais (Lewis Island Association) which promotes the speaking of Gaelic, was founded in 1971 "I came on the mainland, and has always been interested. Eighty years ago (actually before the Association was established its headquarters in Stornoway) but the headquarters were relegated to bindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support. The organization is condemned by ministers on the island, who see it as an organization that encourages litigiousness and "rights." Its publications and books which it publishes or sponsors are seldom read by the ordinary islanders.

FLORA

Pursuing a 'scorched-earth' policy, a Norse leader, Magnus Barefoot, on a punitive expedition, came to 1098 destroying much of the island's natural surface resources. Trees were a particular target. Although the Norse settlements, the origins of which are lost in the island was accelerated by the requirements of the Scandinavian Crown. Cattle, particularly Cattle, Dutch, or Englishmen who visited Lewis in 1830 in connection with Charles II's history schemes, reported 'there are many eagles and hawks in the isle which breed in the clefts of rocks, for this place is so destitute of wood that there is not one tree growing in the island' Martin Martin almost confirmed this a generation later: 'I saw big roots of trees in the head of Loch Erisort, and there is about a hundred young birch and hazel trees on the southwest side of Loch Stornoway' and in 10 years time Dr. Johnson and Mr. Boswell Before Sir James and Lady Mackinnon came to Lewis in 1844, the Mackinnons had purchased the old Seaforth Lodge, Seaforth Lewis Castle now stands, had many floating apple trees.

The economy in 1600 of the Highlands and Islands is interesting, for it is here that today stands the greatest concentration of trees in the country. In 1600 the ground in Lewis (Pryde 1965) had some 100 acres of trees here, mostly conifers, but with some hardwoods and birch. Lewis was then a forest of 100 acres. Highlands and Islands Development Board, 1970 Lewis Island Association

4 COMMUNICATIONS

FROM the earliest times, the private or public communications between one form or another has been a matter full of incidents and of the hazards of crossing the important waters of the Minch. One of the most spectacular events in the history of the island was the 17th century, to do much to determine and stabilize shipping developments, both passenger and cargo service were to be based on the island Seaforth in Lewis; it is said that he was drowned through the workings of his own 'treasure' or farmer-crofter, who employed several famous witches to raise the tempest in which his ship foundered.

For well over a century the subject of adequate communication has occupied the attention of the island's people. The island community lies in its ability to live within itself, while accepting the need to maintain a link with the mainland, and to maintain its living or for work. A Lochmaddy once expressed uneasiment at the isolation of Scarp, in the Outer Hebrides, stating that in 1890 they would not know what was happening in London. The indispensable expiate the island, and the 'Lewis' Lewis Island Association, 1970 Lewis Island Association

SEA ROUTES

When in the early 1800s formal sea communications were being established between the island and ports on the west coast of Scotland, down as far as the Clyde, most of the islanders were of course land people, living in the interior, cultivating their inter-chaum, ministers and the like), they had little use for the sea links with the mainland. Sea communication was for the adventurous and travel was thus a luxury they could not afford. As the nature of local life began to change with the infiltration of some of the trappings of nineteenth-century civilization, however, they began to depend more and more on the mainland for supplies of essential domestic utensils and the like and to export their surplus produce in exchange. Sea communication, the change of sea port in return; then as now, any transport operator struggling with the law of the sea, and the law of the land. Freight charges must pay for the double voyage. Though the fishing industry and the Clyde, and its intermittent service of Lewis and Harris

Though the fishing industry and the Clyde, and its intermittent service of Lewis and Harris

The plough, which is used here, and in most places of the long island, is of a very peculiar construction. It is made of a piece of 7 inches, and is drawn by four horses abreast. It has but one handle, and a long beam, which is fastened to the handle by a long leather strap, and the sake and counter are bound together at the point by a strong piece of iron. There is little one takes which combine to make an islander must be found elsewhere than in the landscape. And as they are the islanders' people, their way of living, their economic patterns, their attitudes, and the moves connected with the island's development, the island and the moves connected with the island's development, the island and the moves of it and of tracks; or that a river or stream runs need not for the island's people. Harris, Harris, Harris, Harris, Harris, The island shade off the shores of Britain, and has been fortunate in its isolation, and has been fortunate in its isolation, and has been fortunate in its isolation

CH. II THE SEASONS

827 Islanders themselves sometimes talk of a lowered stamina and poorer health today than in the past. Inbreeding is widely held to account for this. Even if health 822 be really poorer, this explanation is unreasonable; since marriage outside the village has greatly increased in the last century. Everywhere there is movement along the roads; a school placed half-way between two villages 811 fosters early acquaintance; immigrants trickle in from the mainland, and emigration continually leaves the island. Moreover, the people of certain villages were transplanted in large numbers eighty years ago, as from 143 Valtos, Uig, mainland to Bernera. In any case, inbreeding itself does not produce degeneration; for though it may "fix" or bring out harmful tendencies where these 128 is already some poor or dangerous strain, it can also fix good characteristics in a healthy population.[1]

All these changes were hastened and reinforced by two 128 new, revolutionary means. First, the physical mobility 128 of the township was given a new impetus by the motor 128 car, van and light lorry-bus; then, towards the end of the 128 inter-war years, the penetration of the Gaelic-speaking 143 home by the cacophonous voices of broadcast.

ISLAND, WORK AND PEOPLE PT. I

2. From Black House to White House

197 Discontent with the old black house grew with the 198 knowledge and experience of better housing in Stornoway 198 and on the mainland. The congestion which developed 198 during the nineteenth century meant that often one house 198 was fouled by another above it, leading to typhoid epi- 198 demics. While the smoky atmosphere of the "black 198 houses" inflamed the eyes and irritated the respiratory 198 system, the roof was high and the fire kept the air in 198 motion by day, remaining in the house under the beds, and the lack of glass meant that it necessary to work with the 198 door open. The ravages of tuberculosis came towards the 198 end of the nineteenth century, when Islanders were too 198 crowded towns and, not being immunised, were dangerously infected. Returning home, too often to linger and 198 die in a house now provided with tiny, fixed panes which 198 permitted a closed door and made it stuffier than before, 198 patients spread infection. Right to a tiny, air-tight 198 wooden cabin or to a small white house of stone and lime 198 often followed. The availability for the first time of planks 198 and lumber, a certain practice in house-repairing, and 198 ably acquaintance at first- or second-hand with Canadian 198 wooden houses, may have influenced the choice of wood. 198 The early "white" houses, with an attic lit by skylight, 198 were airtight, for the windows were too often fixed or only 198 opened at the bottom. The door was left open in warm 198 weather, but it was not high enough to allow the escape 198 of the stale, upper layer of air which the women breathed 198 while cooking and baking.

198 In the inner-war period, particularly in its last decade, 198 the "black house" was being abandoned, not for something 198 worse, but for better. The Government-aided houses have

ISLAND, WORK AND PEOPLE PT. I

V. 198 manent shapes from the island, the chief being the Merchant 198 Service and hydro-electric contracts, and for the remain- 198 borel and domestic service, nursing and fish-curing. The 198 ultimate returns of many other, that links were forged in 198 tributes to the higher proportion of men of retired and 198 pensionable age (16 per cent in rural Lewis, 11 in Stornoway 198 and 10 in Scotland). What could not be shown on either 198 pyramid for Lewis is the high ratio of unmarried women, 198 owing to the loses of the war, to migration, and to the 198 need for a daughter to remain behind to keep a home on 198 the croft. The ratio of widows, with or without children, 198 is also considerable, for all three reasons, as well as a 198 fourth, the desirability for a man to bring home, rather than a 198 city, as a place in which to bring up fatherless children.

Turning now to Scotland (b) (d), the same tendencies 198 are seen as in Lewis, though in less extreme form. The 198 difference is of quantity rather than of kind: somewhat 198 in Lewis had lost her more to Scotland mainly, so Scotland 198 had lost to England and beyond. On an average, mothers 198 in Lewis have more children than mothers in Scotland, 198 and still more so than in England: Thus the face of 198 population in the Island do not suggest a voluntary extinction of its community, but rather the will to live.

COMMUNITY FROM PAST TO PRESENT PT. II

198 hostly rank: a working, equalitarian democracy dominated 198 by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand 198 out so sharply, and, second, that links were forged in 198 clanship which made its living chain, though heavy, a 198 thing that shone with pride, and beauty too.

CH. VI CLANSHIP

173 coming Viking chiefs, who often intermarried with women 173 of the older aristocracy, seem to have retained some elements of the aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand 173 out so sharply, and, second, that links were forged in clanship which made its living chain, though heavy, a 173 thing that shone with pride, and beauty too.

So, from history back to 'proto-history', there is 173 increasingly discerned the stages of superimposition, in 173 the Isles as elsewhere. In Central Europe archaeology has 173 recapitulated the stage by which peasant-villagers were raided, then conquered by desperate herdsmen, on horse- 173 back or bearing better arms, who had taken to the land 173 during prolonged bouts of warfare. In the Isles the later conquerors were the factor renders from the sea, sailing in from 173 the fjords of the North. An unbroken chain of tradition 173 from Viking to Gael is visibly conveyed in the stirring 173 saga of the Galley or Birlinn of Clanranald, composed 173 only a hundred years before the Clearances (optimized, Chapter VI (ii)).

173 The conqueror had won the submission of the 173 conquered and secured his livelihood, comfort and leisure 173 by their work, he came in time to bring their interests 173 nearer to his own. Yet whenever the ancient sacred lays 173 traditionally ascribed to Ossian, Oisean, son of Fionn or 173 Fingal—lays of which Macpherson's notorious prose gave 173 new rendering. The Fingalian tales differ from the lays, 173 being frankly fantastic. Lewis had its own cycle of 173 Fingalian tales; examples are given by W. C. Mackenzie 173 (1919). Both lays and legends tell of an aristocracy or 173 warrior class, the Fenians, of their enjoyment of the chase, 173 and of their relative comfort, with wealth in gold and silver, 173 in banners and flowing mantles. The chase combined with 173 tribute implies the existence of a community to feed 173 and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and 173 archaeological truth, tell the same tale. Historically, in-

COMMUNITY FROM PAST TO PRESENT PT. II

173 from the old chiefs' families, as in the genealogies of 173 MacDonald of the Isles and the MacLeods. A special 173 interest centuring with English history is that claims to 173 differences of descent, instead of being manufactured in 173 between the Saxon and the conqueror of Norman blood— 173 were faned. Even when the ancestor of the chief was always 173 to the locality, the people and the chiefs ultimately claimed 173 to be of one and the same descent. Neighbourhood 173 influenced the composition of the hunting, herding upon 173 his human herd, and the feeling of kinship brought 173 sentimentalism.

173 How far, then, can the family name, which proclaims 173 every 'son,' and 'daughter' of Leod to be of the *clan*, 173 the 'children' of the first Leod, imply the blood relationship? Both the differences of race to be found in clanship 173 and the ties it formed are well brought out in a tale of 173 Highland pride, still told in the Highlands and given 173 the Mitch in Kintail. A French skipper (an importer of 173 claret) touching at Kintail brought a cargo of claret, and 173 short, dark man and asked him of whose clan he was. 173 "The Clan Rae," was the reply, "but we are of two kinds, 173 the tall, fair MacRaes and the short, dark people." 173 "Then I 173 dark MacRaes." "And which are you?" "I," said the 173 *black fellow*, drawing himself up, "am one of the 173 tall, fair MacRaes!" "Then God help the short, dark 173 MacRaes!" said the skipper. Even one link with the 173 blood of the Clanchattan, Isaac and Jacob are named 173 in a hymn of the Lews, sung when going up with the flocks 173 and herds to the shielings; even this may be a Presbyterian 173 and Hyperborean tale, but it has the unverifiable weight

[1] Rev. Allan Macdonald, p. 81, *No Fictionism*. The omission of the Manx paternal precedence may be a courtesy to motherhood implying equality in sonhood.

CH. VIII SPIRITUAL LIFE OF COMMUNITY

888 be given by ear and learning come by heart. Hence elders 888 were the holders of an inheritance of treasures which must 888 be sought from them or be lost for ever. But no tradition 888 mistaken, the ancient tradition remains alive in the mind. Thus 888 both the faculty of memory and the fruit it bore in an 888 elder's mind brought respect, even veneration. Accuracy in retelling is still immensely valued, but so, too, were 888 thoughtful commentary and poetic enrichment. Respect 888 for elders, though general, was not given blindly, but 888 personally and by choice.

888 In Scottish Island, the Fifth Commandment runs: 888 Honour thy parents and hold them in loving regard "(*Strioichd dha do pharanton 'r thoir gràs dhabh*)." The 888 Commandment was interpreted by the Christian concept of a 888 Holy Family, rather than by that of a patriarchate. This 888 concept took root from the first missions to the Celtic 888 Christians, and was disciplined and which formed 888 fertile ground for this Christian seed. Hence there was 888 general assertion of paternal, not of patriarchal, authority at the expense of youth. Where equal honour 888 is due to both parents, the mother finds equal duty and 888 regard with the father. And, although "the man is home 888 is close at hand while the mother's may be a little distance 888 away, her parents are dear to her as the younger and the 888 more active and helpful to their grandchildren, and the 888 influence of all four grandparents fairly balanced.

888 Moses of the Pentateuch, Isaac and Jacob are named 888 in a hymn of the Lews, sung when going up with the flocks 888 and herds to the shielings; even this may be a Presbyterian 888 and Hyperborean tale, but it has the unverifiable weight

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that communality is the root of clanship, seems to be indicated by the Celtic evidence, and by the Celtic evidence. The Highlands, unlike the Lowlands, have had scores only in the writings of strangers such as Boas. Not only is the Celtic family not patriarchal, but it is not even patrilineal. Descent is bilateral, and the mother's side is of equal importance with the father's. Marriage is not a contract, but a sacrament, and not automatically enforced their position as patriarchal, and the woman's name is not automatically dropped. Nor is the woman's name is not automatically dropped. Nor is the woman's name is not automatically dropped. Nor is

As we shall see in the next chapter, there is hostility between the Portree dwellers and the crofters. One reason for this is the fact that the village pays more in property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "aye wantin', but never pays a cooper" (a penny in taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms of the standard of living it affords, it cannot be considered as satisfactory. There are persistent environmental obstacles, among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use has persisted. A new system has been superimposed. From this new system, however, the Sgiathanach has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical existence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

356

at which the youth can join together as a sodality; hence, they hardly ever have a chance to question the control of the "elect." Only once in recent years has the control of the old people been criticized. After World War II, the men who returned to the neighborhood wanted to erect a village hall. This threatened both family unity and the solidarity of the neighborhood. The young people were divided between the time honored obligation to honor their parents and their own desires for a fuller life. The parents were torn between religious beliefs and their affection for their children. The minister and his elders were faced with a situation which threatened the fundamental tenets of the faith and the continued ability of the religious expression to sanction the existing order. How strong are age controls? The youth did not get their village hall. Many of them left Skye for the Lowlands where social life is less restricted.

The difficulty is that until, say, forty years ago the traditional outlets were sufficient. Middle-aged people remember how the youth used to drop in on the old widow for a visit on an evening and then make their way off in couples for a bit of courting. Two World Wars and the continuing program of National Service, not to speak of the influence of the schools, have given the youth a new perspective. They have spent one or two years in an environment where recreational activities are considered not only innocent but also wholesome. The radio and magazines have contributed to the demands of the youth for amusements. As if this were not enough, there are

several agencies who have taken the task of bringing movies 178
to the remote crofters in the belief that the Highlander is 883
more likely to stay if he has a share in the life of the 177
Lowlander and the Englishman. These agencies want to "create" 52
a more adequate social organization."

Out of boredom, some young men try to add some spirit 273
to their lives by turning to "the drink." Although the 779
religion of the Skyeman is strikingly similar to that of the rural dweller in Wales, I found the Welshman and the Sgiathanach have quite different views on the subject of temperance.[26] All churches support temperance, from the pulpit and from the kirk collections, but abstinence or prohibition has never been accepted. Perhaps, their main reason for consistently rejecting the idea is their wont to base many of their decisions on Biblical directions. There can be nothing inherently wrong in the infallible Word of God. Then, too, to the Sgiathanach, whiskey is not Scotch; 273
it is the "water of life." The importance attached to the dram can be judged from its functions at birth, marriage, and death. It is also the means of thanking a man for doing a favor which cannot be repaid. Thus, while abstinence is a major religious tenet for the Welsh, temperance is the aim of the Skyeman.

The temperance movement has had an effect, all over 275
Scotland. The "pubs" are no more than a long bar set in a 185
bare room. Young men who have spent time in England, where the local "pub" is a closely knit club for the villagers, frequently

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world and rubbed shoulders with all sorts of men and women, from best to worst, their own homes and townships had remained inviolate. Now, however, there came men in numbers from distant homes, with little to do when off duty and with money to spend, either on tweeds, which were virtually free of controls, or on pleasures, if they could find them. The temptations offered to a community so unaccustomed to town ways were considerable.

729 Those who returned least changed in their outlook upon
178 rural life were ex-prisoners-of-war, from the 51st Highland Division. At their own wish, they had received instruction
[423] in modern small-holding; and the demand from prison camps for land when the Highlanders would come home was upheld. It is especially among these men that agencies such as *An Comunn Gaidhealach* kept Gaelic tradition alive, linking it to the Highlanders' long thoughts of home. Next to these come naval seamen, while those most subject to urban influences were those who worked in factories. But whatever their experiences, home exerted a strong attraction. If work and a fair wage can be found in the township and on the crofts, and if social life can be renewed, many who returned will stay.

726 As in the First World War, so in the Second: few communities in Britain have had so large a proportion of their men in the Forces, in the fighting line and at sea,
[177] from the outbreak of hostilities. The Island community is almost without the exemptions due to 'essential occu-
[167] pations' such as commercial agriculture in the country, or war industry and administration in the towns. The toll
[729] has been heavy, and the nation's debt to the Islanders should be remembered.

us journey over to the "Capital of Skye" which stands on 621
Portree Loch.

The village of Portree, as stated earlier, represents the only successful attempt to introduce a nucleated settlement to the island. It was created by a landlord in the [656] early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has disturbed the English and the Lowland Scots more 621 than the alien nature of town life in the cultural heritage 648 of the Sgiathanach. Ever since the sixteenth century the Hebrideans have been resisting the introduction of villages. The Scottish and, later, the British, government has been only slightly less adamant in its determination that the country people should have a town, if not a burgh, come what may.

Indicative of its calculated creation, Portree has been 621 built "on the square," like so many English villages. Around 368 the square are found the police station, courthouse, and jail; 177 two banks and one private home; two churches and the Masonic building; and a hotel and two boarding houses. Equally indicative of the alien nature of the village, the square is normally used only when the people are going to or coming from their place of worship or business, or when they are entering or leaving Portree by the road which cuts across the square. The exceptions are an occasional civil ceremony and performance put on for the benefit of the summer tourists.

In reality, the village might best be described as an 621 overgrown hamlet, even though it was planned. The main function 368 of the village as far as the whole island is concerned is that

175 632 241 In any case, the "town" or township was not the effective work unit, but rather was the larger neighborhood in which several joint farms existed. [233] The tenants of several joint farms grazed their stock on the surrounding moorland (i.e., on common grazing land).

D. From Run-rig to Crofting

175 233 241 311 Run-rig was an agricultural system suited to a pastoral people, who required the use of open, common pasture for grazing their livestock; the arable land was limited, and of varying quality (according to Day (1918: 12), 54% of the land in crofting counties was mountain and heath used for grazing, and only 5% was [423] arable land). Residents worked several strips of different quality, and the strips (in drained beds of earth a few feet wide and many feet long called lazy-beds or fiannagan) were usually re-allocated every few [625] years. A "constable" acting for the landlord ensured that proper husbandry was maintained.

175 241 178 427 The joint farm, and the stratification of tenants and subtenants within the farm, disappeared as "progressive" landlords began, in the second half of the 18th century, to substitute compact holdings for the "mingle-mangle of dispersed strips (Gray 1952: 46)" 000 which characterized run-rig. Hamlets or clachans

175 241 361 178 Hamelts or clachans (small clustered settlements) w houses were isolated on strips single-street villages.

114 178 Gray (1952, 1957) argues t behind the reorganization of la was the progressive, individual ideology of the 18th century. attributes the reorganization t cereals which existed during th 177 241 Highland landlords, who were ve with the society of the Scottis influenced by agricultural prac trend to change run-rig, which whole of Scotland, to fixed, co in the Lowlands.

wever, meant the removal
ho had hitherto been
em of run-rig.

175 Factors which led to further crowding were the
423 development of industry and an increased demand for
427 wool in the south, which occurred when traditional
[161] ties between laird and tenant had been loosened. The clans had been disbanded after the Jacobite rebellions of 1715 and 1745; those landlords who had not forfeited their estates received huge sums of money as compensation for the abolition of hereditary jurisdiction. They had experienced travel and the luxuries of other countries, and were not eager to remain on their estates. They accepted the huge rents offered to them by sheep farmers to the south, and turned vast amounts of land into sheep tracts. Tenants
[361] were crowded together along the seashore, or lived on tiny holdings dispersed among the larger farms or on moorland, earning their living by doing wage labor.

175 Despite the factors which encouraged a high level
423 of population to remain on the land, proprietors
241 attempted to destroy the joint farm with its small,
●178 dispersed holdings and collective rights. Run-rig
[656] agriculture was abolished in Argyll in 1776 (Day 1918: 180; Gray 1957: 49), and over the next 80 years it disappeared from the Highlands (cf. Gray 1952: 49-50), to be replaced by townships of compact holdings surrounded by undivided hill grazing lands.

175 178 241 423 Geddes (1948: 56) gives evidence that joint farms were abolished in Lewis early in the 19th century. Gray (1952: 50) says that by 1819 there was little run-rig left in Lewis. The factor's notebook for Breasclete, on the west side of the island, shows the destruction of clachans around 1850, and their replacement by linear townships.

175 423 427 632 178 In the Napier Commission's "Evidence" (1884) for the parish of Barvas, it was mentioned that the rent had been increased because of improvements made by the landlord, Sir James Matheson, between 1849 and 1852. Land had been drained and new townships created; and both old and new townships were lotted and rented in 1850 and 1851 (Napier 1884: 959). The Ordinance Survey map drawn up in 1852-53 reveals several interesting features of Shawbost: "New Shawbost" has recently been laid out; and in an area now incorporated by only a few separate crofts on "Carnan," a cluster of houses appears, perhaps the clachan in which joint tenants lived, and from which they went out to farm their various strips of land, before Matheson reorganized the land in linear strips with dispersed housing. The peat banks in the Carnan area are almost exhausted, indicating a long period of settlement in this area.

175 361 423 427 178 [314] [194]

175 423 427 178 It is ironic that the attempts by landlords to initiate agricultural reform and develop capitalist farmers led to a destruction of the differentiated tenantry on the joint farms (cf. Gray 1952: 51-56), and a proliferation of very small units, none of which was adequate to provide a reasonable subsistence. These small units became fixed as individual holdings by the 1886 Crofters Act, and the only important distinction thereafter was between smallholders with security of tenure (crofters), and non-crofters who built homes on the common grazing land but had no specified rights. Although various agencies were established after 1886 to enable holdings to be enlarged, only in the last fifteen years have such possibilities between officially developed in the form of official subletting and individual apportionments.

17 423 By the second half of the 19th century, a trend against laissez-faire was manifest in the writings of European scholars. As feudalism broke down, smallholders throughout Europe were being dispossessed of their land, which was then consolidated and enclosed. 171 In Denmark, legislation was passed as early as 1682 to prevent landlords from taking steps to increase the efficiency of their farm production by replacing the

175 423 656 stability and improvement; e.g., an executive officer, the Constable, was to be elected annually by the community, and he would oversee various improvements in the township (Napier 1884; Day 1918: 187-9).

175 423 671 However, the Crofters Act of 1886 did not make the township a unit of local government. It was more concerned with protecting the individual crofter's rights than with the creation of a self-sustaining, self-correcting economic unit. The Napier Commission had recommended the consolidation of crofts which were rented at less than L6 a year, and a policy of persuasion by which the excess population would be encouraged to emigrate or specialize as laborers, fishermen, and so on. [656] [168]

175 423 671 178 [656] Instead, the 1886 Act provided security of tenure for a large number of crofters, as well as a fixed fair rent and compensation for improvements if the crofter chose to leave the croft. These assurances, and the creation of a variety of agencies (such as the Congested Districts Board, the Crofters Commission, and the Board of Agriculture) whose purpose was to encourage agricultural improvement by providing funds, equipment, breeding animals, seeds, advice and so on, constituted a set of incentives. These incentives combined with a number of other factors including improved transportation and the spread of

175 423 671 178 [464] [457] information via the technology of mass society to affect the choices made by succeeding generations. For example, young people are able to leave the island and work in British cities or abroad, sending money home to sustain their aged parents who by law cannot be removed from the croft.

E. Changing Land Use

311 175 182 Darling (1955) described the previous Highland way of life as a well-adapted, ecologically balanced system, in which proper use of land was attempted by limiting the number of livestock, preserving a proper ratio between cattle and sheep, and regulating the flow of stock on the land throughout the year. Dikes (fences of turf or stone) and drains were communally repaired and cleaned. Although continuity with the previous way of life is evident today, the overall picture is one of partial use, and misuse, of natural resources. Various advisors from government organizations and colleges have been brought in to encourage effective husbandry and land use. 178 311 [182] [654]

1. Specialization and Individuation: The change from an ecologically adapted, internally regulated community in which land was used intensively for subsiste

178 311 purposes, to a community which, as an agricultural entity, requires transfusions from the larger society, is accompanied by patterns of specialization and individuation. The following table (Table III)[1] of agricultural statistics for the parish of Barvas demonstrates the change, over the past 100 years, from intensive subsistence agriculture to specialized production. From a broad-based subsistence use of the croft (as revealed by the number of acres cultivated for barley, potatoes and oats; and by the number of cattle, especially milk cows), there emerges a tendency [231] toward specialized production. The number of sheep, [236] which require less attention than cattle, has increased [241] since the late 1920's when the weaving of Harris Tweed [246] commenced in earnest; and around this time there also occurs a differentiation in cultivation, between the production of barley and potatoes (used largely for human consumption) and the production of oats (used largely for [231] feeding livestock). After 1931 agricultural returns began to distinguish between beef and dairy cattle. During the past ten years the number of beef cattle in the parish of Barvas has increased.

241 654 An important factor which crofters on Lewis now take into account when making decisions about their

1. [See p.ix--Analyst]

241 654 continuing investment in crofting activities is the availability of various subsidies which, in the form of fencing grants, calf subsidies, and so on, are available to other agriculturalists as well as to crofters. The certainty of support which subsidy offers is important in the decision-making of crofters because of their generally fluctuating, low-level income, in contrast to the decision-making of farmers who keep sheep or cattle on a large scale. The latter are likely to be more affected by market prices. Many Lewis crofters [648] indicate that they would hesitate to support Britain's entry into the European Economic Community, despite the higher level of prices for beef, because their subsidies might be jeopardized. Subsidies can be important as incentives for specialized production, but do not themselves sustain crofting as a socioeconomic pattern. [178] And in general, despite the incentives, all agricultural production is declining in the face of more appealing alternatives available to the emerging generations.

178 241 476 A decline in township communalism, or an increase in the individuation of agricultural practices, is another index of change in economic strategy. The fencing of individual land and purchase of personal farming machinery are everyday occurrences in the life

178 241 476 of the normal capitalist farmer in the West; but in crofting areas, these practices reveal a strain between communal and individual tendencies.

a. Fencing:

233 Although run-rig was replaced by fixed, compact [178] holdings, the method of animal husbandry was not affected [417] until the land began to be fenced. A single dry-stone [333] dike enclosed the township, keeping livestock on the moor and away from the arable land. In different parts [184] of the Hebrides, various types of herdsmen were hired to protect both the livestock and the growing crops (cf. Owen 1958-59 for a discussion of cattle, calf and sheep herdsmen in North Uist).

175 625 The township Constable had a great deal of power, which included the right to evict people from their crofts, to enforce rules of good husbandry. The last Constable of Shawbost, who died at the turn of the century, has been credited with a number of ignoble actions, such as forcing an old woman with a sore leg to take her cow to the moor along with all the others. Old widows who had no one going to the fishing and hence no means of paying their rent might be evicted in favor of other persuasive, land-hungry members of the village.

175 166 In the last half of the 19th century, many famil were "cleared" from the district of Uig and resettled Shawbost. According to a local version of village 173 625 history, the Constable evicted persons from North 166 Shawbost and resettled them in New Shawbost. "The people from Uig were fishermen, so they needed to be the sea. They wouldn't take a croft in New Shawbost all." According to another version, the crofts once extended all the way across from Carnan to the loch; when the Uig people came, the crofts were chopped in half, and the street called Baile Stigh was created.

175 625 Whatever effect the Constables had on land use animal husbandry, they are now referred to as "tyran who went mad or committed suicide after the Crofters of 1886.

175 311 233 Cattle and horses were tethered or herded withi easy walking distance from the township; sheep coul be left on the moor without much surveillance. At a much earlier time another dike existed out beyond th [178] township dike. The dikes were used according to pri [221] found in grazing schemes today: the sheep were kept out on the moor, beyond the second dike, until midsu when they were moved in closer to the village. At t point they were still out of the arable land of the

entex grazing for cattle, but by that time the cattle were already on the sea.

"The original idea was to provide an early hire for the cattle, because everyone had cattle then. Otherwise they would need to buy more baled hay to see them through the winter."

"Almost everyone in New Shawbost had a share in the 1959 schemes, about 26 altogether. Then it was mostly cattle. We took turns bringing them in at night, and I remember taking 31 home, with some left behind for the night. The cattle were grazed over the summer, and the lambs were put on from August 10 to October 10. Many dropped out after the first four or five years, when they stopped keeping so many cattle. When the number dropped to 13 or 14, they started using the schemes for sheep grazing, and then some took up their shares again. When we only had the cattle and lambs, we didn't need a scoutmig; but when the mixed grazing started, we had to keep down the number of sheep. Last year we had difficulty with disease."

A forty-acre scheme in North Shawbost started with about eighteen crofters and non-crofters participating; there were 37 cattle altogether. Now only four have cattle; the rest have sheep. The sheep-keepers say,

"The cattle give too much trouble." A smaller scheme is grazed only by sheep. On the schemes where mixed grazing is practiced, a number of conflicts arise between those who have only sheep, and those who have cattle as well. To accommodate different demands, one township scheme was divided with a fence; cattle were put in for a month in one part, and then shifted to the second part. The sheep were then brought into the first half. All stock had to be removed from the scheme a month before the lambs were weaned, so that all worm eggs and other harmful elements in the dung of animals previously present would have time to die. When was once used for a single purpose by everyone now has to be divided.

"I paid one pound a head to put cattle on the reseeding," says a man named Iain. "Now I have to move them off already. Those sheep people want it for their sheep. I won't use it if they're going to be like that. Next year I'll have the use of two crofts and my apportionment. And now that I have my own tractor I can put a load of sand at the bottom of the croft to make the grazing better."

According to another person, who also keeps cattle on the reseeding, "Some people want to move their livestock on and off the schemes when it suits them, like Iain,

who wanted to keep his bullock on the reseeding for another week because he wasn't ready to sell it; but he should have known the rules. Some people want to keep both cattle and sheep on at the same time, although the agricultural advisor says cattle should go on first, because sheep go for shorter grass. Other people want to put on twice as many sheep as those who have both cattle and sheep. When they stop keeping cattle, they think they're not getting a proper share of the reseedings.

"The Crofters Commission wanted communal township schemes. But people have different demands. It's better to go for an apportionment. You can do what you want with your own land."

The number of township members participating in the communal schemes is diminishing to the point where it is less expensive, and much less subject to conflict, to arranging over differences in stock-keeping, to invest in individual holdings of land rather than try to sustain communal practices.

Chapter 3

CHANGING ECONOMIC STRATEGIES:

LAND, SEA AND LOOM

In Lewis, the change from a relatively self-sufficient community in which land and sea provided the economic base occurred in the context of the phenomenal rise of the Harris Tweed industry. In the following pages, the history of Harris Tweed is discussed in relation to changing strategies involving exploitation of land, sea and loom. Associated features of social life are discussed. Social boundary systems are defined and discussed in Chapter 4.

A. The Sea

Around World War I, nine boats, as long as 27 to 30 feet, driven by sails, used to go out regularly from the Shawbost harbor. From five to seven men, usually neighbors, had "shares" in a boat. They would go out fishing during the night and return the next day. "We baited our lines with eel, for long. We would catch maybe two or three hundred. I remember once we caught 1300."

On one of the crofts along the strand are the ruins of two curing houses, where the fish were salted and dried. Ling, cod, skate and halibut were cured and sold to local merchants for export. "The same as they do in Iceland this very day. That was the main industry. Then the English came with their steam trawlers; they ruined the fishing here, and then went west to Iceland and the Faroes. In Iceland they got fined for poaching, but here the trawlers often ignore the three-mile limit. But the fishing was the mainstay here, before the Harris Tweed came along."

One man returned from sailing in 1932 and bought a boat for £12. He had 10 lobster pots, and made 12 one pounds by selling the lobsters at a shilling apiece. Another man, who returned from the United States in 1934 because of the depression, bought a share in a 16-foot boat. It was made in Ness, at the northern tip of Lewis, and cost about £12. He and his partners went out every night possible; the fish provided an important part of their income. The boat was sold in the 50's. "It wasn't being kept up anyway." Around World War II there were as many as twenty boats; sum fished at night, after a day's work. Today there are four 12-foot boats in Shawbost, each shared by four or five men. The boats are used intensively for fishing during certain times of the year,

but not as often as in the past. In the past boats were in danger of being smashed by the strong seas and winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the surf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Several surnames reflect this history. One family is known by the nickname "Stornaig," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

a crew member. "There were two fishing seasons. One season you went to Fraserburgh, Stornoway, Lerwick and Peterhead; and then the winter fishing was in England, at Yarmouth, Scarborough and Lowestoft.

I remember in Yarmouth we didn't like the English herring, it was such a dull color. We lived the pure white Scotch herring."

They lived in small huts, and the work was hard but full of fun. Neighborhood girls used to go together, bringing bedding and different items in large chests to share in the housekeeping. Three girls worked together in a crew, and there were as many as six sharing a room, in double bunks. Some of the huts were so small that there was barely enough room for the beds and the cupboards. At night the boys would come in off the boats. "You were so tired from being up since early morning; but you were always able to dance. You were treated with respect; the youngsters today aren't so good." The women who married non-islanders that they met at the fishing were not likely to return.

When the weaving started on a large scale, the girls "were glad enough to have work at home, even though the work was hard." But many continued their temporary absences from the island, working in hotels or as

the cattle
know their own shellings; sometimes
they came back before milking time and stuck their heads
in the door. Stay outside the shelling at night, and
that's how you can tell where a shelling once was, even
though the walls have fallen, by the rich green grass.
Calves were born during the summer. A hollow was scooped
out in the peat, and lined with turf and moss. People
had as many as four or five cows. It was like Switzerland,
only didn't have the bells on the cows. There was lots
of milk, fresh thick cream and crowdie (clotted sour
milk); the old people knew how to make cheese.

The women were very early at night, with the sound of
the birds. There were only a few hours of darkness
anyway, and I'm sure we didn't get much sleep, but somehow
we were always fresh. It was the air, the moor air is
very health-giving. This was the best milk that I
people benefited from the change. Sometimes a person
with TB would stay out there all summer. The air is heavy
by the sea.

"There was no sense of time the way there is today.
Life was not lost in the snow or fog, you followed the cows
home. You had all summer to take home the peats, to work
the croft, to harvest the corn. There wasn't a world,
there was only ourselves. That has changed since the war.

people kept several cattle, some of which were dry most
of the time. But because everyone was keeping cattle,
milk could be gotten from a neighbor. One man was
planting eight or nine hundredweights of potatoes before
the war, some of which would be used to feed the livestock.
"Now couldn't buy milk then, so you had to keep a cow.
And even though people were wanting, they weren't getting
so much money as they are now. It was the barter system
here for a long time. So they didn't have the money to
buy feeding stuff. It was better to spend the time
planting potatoes. Now of course there's more money in
the wearing."

After the war, an act was passed which provided free
milk for schoolchildren. Milk for the Shawbost school
was supplied by a farm near Stornoway, and villagers first
started buying milk from the school milk van. A little
bald by weavers during the war had increased the payments
for weaving, and the barter system had stopped. More
money was available. As the loom was more profitable,
more people stopped keeping cows, and relied on their
neighbors for milk, or got their milk from the van bringing
milk to the school. And as the cattle got fewer, the
market for bottled milk expanded. A dairy was started on
the west side of the island in the mid-1950's which carries
milk from Big to Ness.

The number of cattle diminished as milk became
available by other means; and when the township reseeding
schemes came into existence, the need to go to the
shellings for an "early hire" was removed. The shellings
that remain in use today are huts of tin, wood and
concrete within easy walking distance from the highway,
used on weekends and during summer holidays. Most of
these modern shellings are close to Stornoway, and serve
as summer retreats for the relatively harried urban
dwellers such as publicans. On the west side, the
shellings are no longer used, but remain as a theme of
songs and in nostalgic memories.

C. The Loom

Ula Mor, the big cloth, was woven in the Highlands
and Islands for hundreds of years. Martin Martin,
who travelled through the Outer Hebrides in the late 17th
century, describes the export of "plaiding," and the
practice of washing or shrinking the woven length of
cloth (Martin 1716). Weaving was done on wooden looms,
and produced only for local markets until the middle of
the 19th century.

By the middle of the 19th century, the failure of
the kelp industry, decline of fishing, and destruction

175 dyeing the wool it was spread out, dried and sent to
283 Stornoway to be made into yarn. The yarn was then sent
172 back, and the weaver wove and washed it. About six women
367 (462) were required to do the waulking (the process by which the cloth was washed and shrunk).

175 "In those days the weavers designed their own
286 patterns, and sold their own finished tweeds. I remember
432 going into town with my brother, we had two tweeds in the cart. We went into a shop to sell the tweed, and the man said it was poor weaving. He didn't want to pay the full price for it. I told my brother to roll it back up, we would take it somewhere else. As we left the shop, he told me I had 'good cheek.' In the next shop the merchant didn't say anything, and gave my brother the regular price. We went home with £60."

The great demand for tweed encouraged the development
286 of more efficient methods of production. One by one the
268 various processes of production were taken over by
178 specialists, and gradually these specialists were brought
453 together under one roof. Large boilers for dyeing wool
434 were supplied as a result of actions taken by the Congested
463 Districts Board, which was formed in 1897. The Scottish
396 Home Industries provided chemical dyes. The most
226 difficult and time-consuming processes were carding and
283 spinning, which small mills on the mainland began to do

286 on commission for weavers around the turn of the century.
283 By the early 1920's, four mills on the island were
178 carding and spinning wool on commission; and one mill
226 (283) brought looms into its premises. Lord Leverhulme, who bought Lewis in 1918, saw the value of concentrating weavers in one place and of improving the technology. He encouraged the introduction of Hattersley domestic
(463) looms, which eventually replaced the wooden looms. The individual weaver also did his own warping, but after World War II the mills began to hire warpers to work full time on mill premises. Transporting the tweeds, which used to be the responsibility of the weavers, is now the responsibility of the mills. Today all processes except the actual weaving are handled by mills, most of which are located in Stornoway.

Such steps in specialization and centralization made
175 sense to the weaver. One of the older weavers recalls,
286 "In the late 20's or 30's you could buy a yard of Harris
288 Tweed for about two shillings. It wasn't economical for
(435) any crofter to dye and spin the yarn, weave it and sell it for only two shillings a yard. As the mills enlarged, they could make it with the machinery because they could make it an economic proposition."

However, the tendency toward specialization and
175 centralization was in direct conflict with the reasons
286
288
324

175 behind the tweed's popularity. The tweed was more than
178 a cloth; it was peat smoke and windswept moorland, the
288 image of the free man who had escaped city life and
(324) machines and was the master of his own destiny. Steps had been taken all along the way to preserve the image of home-crafted goods, as when, in an effort to prevent machine-spinning, carding mills were built in Lewis and Harris at the turn of the century to prevent wool from being sent to mills on the mainland, where it was both carded and spun. As early as 1906, a man was convicted
(485) in London of selling power-loomed tweed under the name "Harris Tweed." Today power-driven looms can produce
288 double-width cloth 54 inches wide, a width much preferred
402 to the 28-inch cloth produced on the Hattersley looms because there is less waste when the cloth is cut. But because "Harris Tweed" must be hand-woven, new looms of light-weight metal are being designed on which double-
(435) width cloth can be hand-woven. The new looms will cost so much that many weavers may they would be unlikely to invest in them, especially given the uncertain future of the industry.

The Harris Tweed Association, formed in 1909, was
175 granted a certification mark by the Board of Trade which
286 was stamped on tweeds that were hand-spun and hand-woven
141 (424) in the islands. During World War I, hand-spinning died
226

175 out in Lewis, and the Harris Tweed Association was
178 ineffective in enforcing its standards. In 1934,
288 weavers were allowed to use yarn spun in island mills,
434 and production increased; but no weaving was allowed to be done in the mills. All looms were removed from those mills which had tried to centralize this stage of production. The actual process of weaving remained, by legal definition, decentralized, although the word "crofter" was changed to "islander," thus widening the category of persons who could weave "Harris Tweed," and paving the way for centralization of weavers in the town of Stornoway.

Any person can purchase his own yarn, weave his own tweeds, and sell them to tailors or summer tourists; but before a weaver can weave for the mills, he must be registered with the Weavers Union. The Weavers Union is a branch of the Transport and General Workers Union, which includes mill employees, hospital workers, lorry
288 drivers, and others. It is an anomaly of the Harris
467 Tweed industry that workers classed as self-employed should join a union of employees and is another indication of the centralization of control and power in the mills, with whom the weavers, along with the mill workers, bargain for higher wages. Weavers receive a basic sum in island mills,
288 £10 for each length of tweed, which is usually 38 weaver's
452
434
804

288 rotation to the weavers who are registered with
466 them.

Other factors also hinder equal distribution of
(402) tweeds. Personal considerations enter; for example, the managers of the Shawbost mills feel a responsibility for the weavers in their own village, who are usually kinsmen. Exclusive distribution to local weavers is rationalized by saying that the tweeds must be done urgently; hence they are distributed only to the weavers who are known to do tweeds quickly.

The major factor hindering equal distribution of
288 tweeds is the expense which derives from the decentrali-
466 zation of weavers, that is, the cost of petrol and upkeep of the vans, which is born by the mills. Before World
(195) War II, the weavers rather than the mills were responsible
(494) for transporting the tweeds, by cart and horse at first, and then by motorized transport.

288 During this period, independent entrepreneurs
195 carried tweeds in vans and buses at four shillings each,
492 a practice which stimulated the development of public
494 transportation. Although the number of passengers using much vans and buses for public transport fluctuated, the income derived from the cartage of tweeds was in itself large enough to be profitable and to maintain the
(178) enterprises. An efficient service existed, despite the

288 paucity of passengers, which provided rides to and
195 from town many times a day; but with the "development,"
• 178 that is, the centralization, of industry, public trans-
288 portation deteriorated. Visitors to the island unfamiliar
412 with this history are struck by practices which they
494 interpret as coming out of a clockless past, such as the present custom of stopping the bus midway in its journey to Stornoway so that the driver can eat dinner in his mother's house while all passengers wait on board. Such a custom is fairly recent, and indicates the deterioration of public services to populations which are marginal to the centralized source of these services.

During World War II, when the demand for tweed was
288 high and the number of weavers small, the weavers staged
(468) an effective strike by which they received an increase in pay and the burden of cartage was shifted from them
(195) to the mills. This did not affect the system of trans-
(178) portation until the mills realized it would be cheaper
(494) to run their own transport rather than to pay the independent drivers a "cartage fee." The mills then began to use
(493) their own vans to deliver yarn and collect tweeds directly
195 to and from the weavers. Once the mills took over trans-
288 portation, they tended to deliver tweeds to weavers
178 closest to the mills rather than to uphold the principle
(494) of equal distribution. This practice (made possible by
412
(341)

195 the 1934 decision to change the word "crofter" to
• 178 "islander") led to the weavers living in council
288 houses in town and working in loomsheds behind the
(341) houses. Unequal distribution has also contributed to Shawbost's relative prosperity, and to the decline of weaving in more remote parts of the island. The
(464) unequal distribution of tweeds has made it difficult to maintain a large labor force, which in turn limits the growth and development of the industry.

3. Instability of the industry: The Harris Tweed
288 industry has undergone a number of crises. Periods of
178 depression have alternated with periods of prosperity.
(494) (See Appendix B for the fluctuation in the number of yards stamped each year with the Harris Tweed trade-
mark.) The very conditions which give the tweed its
(435) market value--the decentralized, non-mechanized human
(464) element--also limit the possibilities of growth in the industry, and contribute to the industry's instability.

When a business remains small, it must collect
288 orders before it can provide work to have the orders
441 filled (except when demand for an item is strong, as occurred around the time of the previous world war; during the war and for a few years after, tweeds could be made first and then marketed, because any cloth
(491) could be sold). Only a large business can keep weavers

288 in Shawbost; a very small business, which until
441 recently did not even have its own transport but
452 hired facilities when they were needed and simply
434 went into hibernation when orders stopped coming;
a medium-sized business, which went into liquidation
in 1971; and a large business, which continues to survive despite a depression which has continued since the late 1960's.

Harris Tweed is sent to markets all over the
288 world; but because of the difficulty of maintaining
441 a large labor force, the filling of orders is sometimes
(434) slow. If large orders cannot be met, weaving as an island-wide occupation cannot be maintained. The number of weavers on the island fluctuates, as slack periods come and men adopt the time-tested strategy of temporary migration in search of other jobs. One
(452) of the factors which aided the weavers during their
(178) strike of 1941 was the fact that so many other jobs were available during the war that the future of the industry was jeopardized.

In the last five years the number of mill employees
288 has decreased from 800 to 500. The decrease is due in
• 178 part to the introduction of more efficient techniques and new equipment, but there is little room for improvement in the production of tweeds because the human element, the weaver, is essential to its production.

township, but on land which had been rested and which thus provided better grazing. During the winter the sheep were allowed past the township dike, to graze along with the other livestock on the stubble of corn and barley, and mineral-rich seaweed by the shore.

After World War II, the individual crofts began to be fenced, and the township dike was no longer repaired. The fact that sheep were still grazed communally on the moor meant that everyone had to go out together on a particular day rather than individually, but fencing of individual land facilitated variability in land use. Less use was made of crofts for raising crops, and they could be used for grazing sheep all year round.

b. Reseeding schemes and apportionments:

Another illustration of the individuation of land use is provided by comparing the number of apportionments granted by the Crofters Commission for Lewis in the last 10 years with the number of township reseeding schemes carried out during the same time (see Table IV).[1] A crofter may apply to the Commission for an area of land (apportionment) to be sliced out of the township's common grazing land and given to him for his own use; theoretically, his share in the township's common grazing land is reduced if his application is granted.

[See p.x--Analyst]

178 311 232 233 land is reduced if his application is granted. Also, a group of men in a township may apply to the Crofters Commission for permission to fence off a portion of the common grazing land and improve it as grazing for their mutual use. Grants are available for both schemes. The township reseeding schemes, adopted widely after their introduction, have been superseded by the number of individual apportionments.

The first township reseeding schemes in Lewis were tried as an experiment in Ness, Harris, Barras and Bragar. "The Department of Agriculture fellow [654] watched us every step because it was an experiment. Oh, there were times we cursed him and wanted him away." In Shawbost, a few interested crofters went around the village to see if others were interested. "We got a bad name for it; no one could see anything to it. But those people got the benefit of it." According to one man, initial reluctance to participate in the schemes was overcome when the agricultural advisor pointed out that if they overstated their costs, they would not have to pay much money themselves.

Between 1959 and 1962, seven township reseeding schemes were developed in North and New Shawbost, and four in South Shawbost. They were intended to give

288 Questions about the state of
57 "the tweed" permeate all discussions, and often
458 constitute an initial greeting. "Have you got a
521 tweed in the loom? How many do you have? Did you
576 see Stickey's tweed van going into Pairc? Did you hear that Newalls has an order for about 800 pieces.

"The mills brought me two tweeds, and I got two in town myself. I stuck those two in the attic so that anyone who came in would be none the wiser," sa one person in a whisper. Neighbors are in and out o each others' houses and loomsheds, observant and questioning, on the lookout for any indication that they have missed out on some transaction in the competition for scarce goods.

D. Weaving as Strategy

286 When weaving was done on a wooden hand loom, th
178 weaver required a longer period of apprenticeship.
402 Weaving was "more of an art," as some of the older weavers remember it today. Not only was the shuttle thrown back and forth by hand, but the lifting of different threads in the warp was done by manipulati four foot pedals in the correct order. Today, the
288 process of weaving is very much simplified: the wea
178 pushes only two foot pedals, and simply keeps an eye
402

the automatic shuttle; all other processes have been built into the design of the Hattersley loom (cf. Thomson 1969). In other words, weaving does not entail very specialized skills and is not difficult to learn. A caller can come home and learn to weave in a short period of time, or pick up the trade again with ease after having been absent from the loom for a long time. Others substitute for each other when someone is ill or a tweed is "urgent." Wives help their husbands, and young boys their fathers and uncles. Such low-level specialization and substitutability are complementary to crofting activities and the maintenance of neighborhood ties, and may be seen to favor continuance of the occupation of weaving.

The Lews Castle College in Stornoway, established in 1963 and accredited in 1971 is a building that was formerly the home of Sir James Matheson, offers training courses in weaving for adults which last for ten weeks and qualify a person for membership in the Weavers Union (cf. Stornoway Gazette, March 16, 1968). The College also sends weaving instructors to all the public schools on the island to instruct young boys in the rudiments of weaving. The Highlands and Islands Development Board have in the past offered loans and grants with which to purchase looms, and government aid has protected the mills.

241 The competition between the loom and the croft is
208 evident in the few communal township practices which
225 still exist. One of the rules of township organization is that all households must bring their sheep in from the moor on the same day. Other rules are that no one
231 should go out on the moor at any other time with a dog, and everyone who has sheep should go out on the day designated by the township grazings committee to collect them. The moor is extensive, and the sheep wander over a wide area. Only if a large number of men go out together and come in with their dogs like a wide net can the sheep be brought in with a minimum of effort over the stream-cut, uneven ground. Anyone who goes out alone disturbs the grazing animals and probably drives them farther away from the village.

These rules have strong ethical import and are
233 much more in the nature of procedural rules prescribed
185 by the Crofters Commission. "There is a code of ethics which you learn as you grow up, as you go with your
578 elders out to the moor. You can fight with a man over a woman and make it up next week; but if you fight with a man over a sheep, you won't make it up for thirty years." These rules are weakening in importance
198 is indicated by situations in which only two or three men have gone out in the early morning to bring in the

233 sheep. These can arrive back in the village hours
18 later to find the moor lined with the cars of men who
178 have come to look for their own sheep among the flock but who had not bothered to spend the time collecting them. Many have gotten rid of their sheep to "concentrate on the weaving."

2. Sheep vs. Cattle: As mentioned in the section
233 entitled "Changing Land Use" (cf. Chapter 2), a split
518 has emerged between those who keep cattle, and those who keep only sheep. Cattle now are the predominant, but the number of sheep has greatly increased. The conflict between raisers of sheep and of cattle extends beyond the use of the reseeding schemes (see Chapter 2).

Cattle are usually brought in from the reseedings or from the common grazing lands where they are tethered, and put on the unfenced, arable inner grazing land of the township. At the same time that the sheep are brought in from the moor. In one township on the west side of Lewis, the cattle were released a few days before the fank,[1] which resulted in the formation of two groups, sheep-only people and sheep-and-cattle people, which opposed each other. At the fank held a few days later,

[1] The word "fank" refers to the process of bringing the sheep in from the moor, and to the wooden pen in which the sheep are gathered and claimed by their owners.

233 sheep were let out of the pens, and a fight broke out
18 between the two groups of people.
578

241 2. Crofters vs. Non-crofters: Another division
167 within the township has developed largely because of
575 the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them
195 a protected, privileged status. In fact, very little
691 distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had huckle, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's huckle, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

241 grazing land and he could not transfer such property in
115 a will. Similarly a crofter had no right to his huckle,
423 and could not formally protest if another crofter sought
423 to apportion this land for his own use (see Chapter 2 for a discussion of apportionments). But in both
620 situations, informal understandings superseded legal rights.

241 Various legislative acts which followed the 1886
167 act focussed attention on the crofter. Various matters
575 associated with crofting are handled by a Crofters Commission. Crofters have access to grants and loans
654 to improve land and build fences and homes. They may
174 buy goods at low prices in a nearby cooperative store. As crofts were fenced, land around the townships became scarce and non-crofters found it difficult to keep large numbers of cattle and sheep.

241 Within recent years it has become possible for non-
178 crofters to gain title to the small plots of land on
423 which their houses are built. Some loans are available
423 to them for building houses. Non-crofters have access
654 to the various subsidies available to all agriculturalists, such as the subsidies for raising hill sheep and beef cattle. There is still the huckle, however, that crofters have rights which non-crofters do not have and that in conflicts over scarce goods crofters have

241 the edge over non-crofters. "Squatters can do what
167 they like, cut peats, put sheep and cattle on the common
423 grazing, but this is a privilege, not a right."

The clerk of a grazings committee says, "When it comes to an argument between a crofter and a squatter, the crofter always wins. A squatter has rights only with the grazing committee's permission. If one crofter disagrees, the squatter is out."

A squatter muses bitterly, "I wanted crofting status because I wanted to get a Department of Agriculture
241 grant to build a house. I work on the peat road; I go
578 to all the ceilidhs. But at a township meeting, they didn't want me to get crofting status. They were afraid I would start grabbing peat banks or opportunismesis in the common grazing or something. There's your brotherly love for you."

4. Subsidies: In the section entitled "Changing
311 Land Use" I suggested that the availability of subsidies
654 has encouraged a more specialized investment in agricultural activities.

654 The villagers are keenly aware of outside institutions
229 which give money. They speak to each other about forms
241 which they receive from the Department of Agriculture and the Crofters Commission, in much the same way as they are curious about the number of tweeds which another

654 person has. The gigantic bureaucracy of government
423 agencies is mysterious and unpredictable. One can
224 never be certain when or for what reason another economic increment may come. "I used to throw away a form from the Department of Agriculture until I found out from somebody that you could get money with it. You may you're planting so much of your land in oats, and later you fill out another form saying you didn't get a very good return, and they send you a deficiency payment."

For some crofters, the requirements of the subsidies
241 have affected the extent and techniques of agricultural
654 activity. For example, one man used to work his land
178 in the way that his ancestors learned would bring best results: lazybeds were aligned in strips that would drain well and catch the sun, and stones were left in the soil to capture the sun's warmth and thereby facilitate the growth of potatoes. Now he has merged the separate strips, cleared the stones, and divided the land into units that allow him easily to calculate how much he has used for what crops, because to be eligible for a particular grant, a certain percentage of arable land must be ploughed with grass seed and rotated with other crops.

241 The Department of Agriculture and the Crofters
654 Commission often overlap in their subsidy-giving functions.

443 One of his
326 apprentices was his sister's son, who built another
192 smithy not far away. "This was the center of gossip.
423 People gathered there while he shoed horses that came
521 from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At one time they numbered six altogether. These shops also ran the first buses between the village and
444 Stornoway. Gradually these businesses disappeared
443 because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local businesses. Income from weaving had already weakened self-sufficiency derived from the intensive use of land and
423 sea and also weakened the formerly heavy reliance on
521 local ties and mutual aid. Today an army of, town-
44 dwelling entrepreneurs and employees constitute a major
743 proportion of the traffic on the island roads. Grocers,
178 fish dealers, bakers, sellers of soft drinks, garbage
423 collectors, insurance salesmen, mobile banks, coal
521 dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

The township constitutes a relatively firmly bounded
632 system, although its boundaries are weaker than formerly
178 when the township was relatively self-sufficient
494 economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 Relatives were expected to give priority to helping
178 each other. According to one proverb, "A relative is
605 your best friend." First and second cousins were considered especially close, but knowledge of one's
605 kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
164 At weddings the onus was on the members of the bridal
638 party to remember their relatives. "You have to sit and calculate who is closely related, and all those

people will be doing the same. If they think they're close enough to be invited, they'll be annoyed if you don't include them." At funerals, relatives of the deceased to about third cousins were expected to participate.

When a population has lived in a small area for generations, a dense network of kinship develops. This fact, and the importance placed on mutual aid among fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

The nuclear family did not, according to Cohen's criteria, constitute a firmly bounded system. Then as now, women preferred the company of their "own kind," that is, the company of other women. The men worked and spent periods of recreation with other men. Children spent about as much time in the homes of grandparents, uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

common practice, when she was young, for children from large families to live for as long as six weeks with other families who were relatively better off. They would help harvest the hay or the potatoes or bring in the peat in return for food, lodging and perhaps some clothing. "They usually ate better than they did at home." The children were not necessarily relatives of the families with which they lived.

Strong friendship, that is, the kind of friendship associated with mobile urban life in which persons confide in each other and share secrets and build up an individual relationship based on extensive knowledge of one another, was nonexistent. A "friend" was a relative, or someone who gave aid when it was needed.

Today it is sometimes said, "It used to be that if your relatives were your best friends; now your best friends are better than your relatives." An old man will meet another on the road and say, "I used to see more of you when you needed me." Neighbors used to share sheep that were killed; now households kill and consume their own sheep, and freeze the meat which they cannot use immediately. Groups that walked out together to the peat to finish the job in a single day are being replaced by individual family units that can gather out and do the job in stages. People prefer to give money

with the decision which they know is to be made usually do not attend the meeting. Thus, apparent consensus is always maintained.

Changes in the character of the township as social boundary systems are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

A. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which unmarried girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (nuith na b-uaidhean): the male visitor was called gearaid na b-uaidhe, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her braogar (sweetheart) into the house after the old people had gone to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

in exchange for car rides or other help, including peat-cutting, because "than you're independent." Friendships are still weak, relative to friendships in urban settings. Most information which is shared between individuals rapidly enters the pool of communal gossip. Although many persons emphasize the importance of mutual aid in defining a friend, some emphasize the ability to confide and keep secrets.

Today many of the younger villagers do not know their relatives to the extent that their elders did. In one family, a girl who was about to get married had to ask her brother, who was the only one of the siblings interested in kinship ceremonies, how to invite to the wedding. It is still useful to retain an inventory of one's relatives. "I have cousins in Glasgow and Australia that I've never met, but if I ever go there I'll have a place to stay." With the increase in transportation and income, more islanders are taking brief trips away from the island. During these trips, they almost always stay with relatives.

It is frequently said that children are now "cheekier," less inclined to run errands and obey orders meekly, and that they prefer to watch television or read books by themselves to playing with each other.

child may come to spend nights or longer periods of time with them.

To some extent villagers are still dependent on each other for various kinds of help. It is considered extremely bad manners to refuse labor, a tool, or food to anyone who requests them. If someone refuses to aid another, people say, "What will he do when he needs help?" This attitude has made the island a paradise for the few salesmen who, in the last few prosperous years, have started to visit its communities; villagers find it difficult to say no to anyone who comes to their door with a request, including the request that they buy something.

A woman in childbirth was formerly attended by a local midwife, and kept in bed for two or three weeks. Neighbors and relatives, both relatives and friends, came and stayed with them at night, fixing them warm tea and milk, whispering bhronne bochd (poor soul), how awful you look..." Just as today the neighbors gather at times of illness and death. It is more difficult for neighbors to come to the bedsides of young mothers of today, who are all taken to the hospital in Stornoway to have their babies; but the neighbors manage to visit the hospital, which has no choice but to ignore its rule of only two visitors per bed at a time.

groups on the shellings or within the village as they were growing up, and even during courtship maintained a joking, somewhat rude interaction. "If he says he wouldn't touch her with a barge pole, he's obviously smitten." Someone considering the dangers of marrying an outsider* commented, "A devil you know is better than a devil you don't know."

Now that facilities for transportation have increased, couples tend to pair off in cars rather than go in groups. They may even be seen together on a date in town. Activities such as dances still begin late in the night, lasting from about 12:30 a.m. until early morning. The seriousness of a relationship is kept secret for as long as possible, but weddings today require long-term planning because wedding dinners are held in hotels rather than within the village. At an earlier time, serious intentions were announced only a few weeks before the wedding, at a rainteach or dinner party which signified a betrothal. Rainteach also means "disentangling" or "reconciling," and was described by one person as a means of "pouring oil

*The term "outsider" usually connotes non-Gaelic-speaking, but may also refer to someone from outside the village.

on these occasions. At some point during the night the bride and groom were prepared for their wedding night together. The bride's female companions undressed her, prepared her for bed, and put her into the bed with a hot water bottle. The shared some sherry with them, and they went out, whereupon the groom was brought in by his male companions. After much joking the couple were left together.

On the third night, a dinner was given for the older persons who had not been able to come to the "big" wedding.

For some time after the wedding, the married couple visited relatives and neighbors who had been unable to come to the wedding, taking a bottle of whiskey with them.

House weddings declined in number during the war when food was rationed, and as more persons changed from the "black house" to the less easily cleaned and more elaborately furnished "white house." Most weddings are now held in hotels, and consist of a single wedding dinner and dance; they are often held on Thursdays, the day of the hamsie in the past. The emphasis on community participation still exists: even though the practice of holding hotel weddings has limited the number of guests, an effort is made to invite someone from each household in the neighborhood. In part to avoid disappointing the

In part to avoid disappointing the vast number of relatives who by custom must be invited but for whom there is now not enough room, many weddings are held away from the island in places such as Inverness and Glasgow. Gifts are still given in great numbers and displayed, despite the decrease in numbers attending the wedding dinner and the feeling that only those who are invited to the wedding should give presents. The custom still exists of neighborhoods or entire villages placing flags outside their homes on the day of a villager's wedding (except when the wedding is held away from the village), and of a distant lass within a village signify that the household is related to someone in a neighboring village who is getting married. And when the wedding car has picked up the bride and is leaving for the hotel in town, the road is often littered with barrels and other barriers.

Couples now often leave the wedding dinner and dance and go to undisclosed destinations for their honeymoon. But when they return to the community they must undergo a simple rite of passage that gives assistance to their new social status. On the first Sunday following their return, they are expected to come to church with the other members of the bridal party, a process called airisaidh (a slightly Gaelicized rendition of Scottish "airing").

For some weeks after returning, the couple goes visiting with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned. The bride usually mails pieces of bridal cake to relatives who were unable to attend the wedding.

D. Death: At a time of illness or injury, an individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's caller and movement. The room is usually occupied by visitors when a person breathes his last.

In the past, work ceased in every house in the surrounding neighborhood when a person died. This no longer occurs, but a story is told of a weaver who called a mill in Stornoway to say that he could not finish an urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the weaver dies." However, dances in the village are cancelled, and the bothan (an isolated hut in which liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

Word of the death spreads throughout the village and beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

CONTINUED ON NEXT FICHE

CONTINUED FROM PRECEDING FICHE

763 relived and shared. The person's exact age and the
764 identity of his closest kin are discussed. A van is
764 immediately dispatched to bring benches from the church,
764 which are set up throughout the house of the deceased,
764 and every one each few days a constant stream of visitors
764 fills the benches. The visitors bring tea, sugar,
764 biscuits and other provisions for the days and nights
764 of communal trial. The high Chairs, "house of watching,"
764 as this wake is called, continues until the day of the
764 funeral.

764 In the past, persons sat up all night with the body.
764 "It took so long to get a coffin. You didn't want to
764 go in and find half the face eaten away by rats." This
764 practice is dying out, but lights are usually left on in
764 the room in which the coffin is placed. When an all-night
764 wake occurs, the atmosphere is one of relaxed story-telling
764 and the laughter of reminiscence.

764 At least two nights of "waking" usually precede the
764 funeral. During this time, hundreds of villagers stand
764 the high Chairs. Grief is expressed throughout the vast
764 network in which the dead person was enmeshed. On rare
764 occasions when a single night precedes burial, the house
764 is filled to overflowing.

764 Throughout the day and evening, waves of newcomers
764 enter, and other sitters slip quietly away. Kinswomen of

764 funeral procession in which the coffin is carried for
764 about half a mile from the house to the waiting hearse.
764 Over 100 men usually walk in these processions. The
764 more well-known the person or unexpected the death,
764 the larger the procession is likely to be. Relatives
764 of the deceased walk at the head of the procession,
764 at the head and foot of the coffin, while other villagers
764 take turns carrying the bier. The pallbearers serve in
764 relays. Eight men carry the coffin. Four on each side,
764 and are replaced frequently by pairs of men who assume
764 the rear positions. The two who have been displaced at
764 the head of the coffin stand outside the line, facing
764 outward, until the procession has filed past them,
764 whereupon they join the end of the procession.

764 In the past, coffins were carried for miles from
764 the house to the cemetery. The procession rested period-
764 ically, and the men usually carried an earthenware jug
764 of whisky (ciaar uisge beatha) "to ward off the cold."
764 The custom of giving a glass of whisky to men as they
764 left the house to carry the coffin was still recently
764 followed in Skyes; and in some areas a funeral is still
764 evaluated by the amount of whisky available for consumption
764 ("that was a good funeral"). Taxis are sold of
764 coffins buried without bodies.

764 Today coffins are brought to the cemetery in a
764 hearse, but the procession still carries the coffin
764 for a half mile or so to the hearse. The women gather
764 outside the house in the biting wind, huddled together,
764 beginning to sob as the heavy line of dark-coated,
764 slowly-moving men bear part of themselves away. In one
764 village on the west side, the women circled the coffin
764 as it left the house, chanting, "You are leaving us, you
764 are leaving us."

764 Graveyards are maintained by members of the community.
764 A cemetery committee collects dues of five shillings a
764 year from all households for the upkeep of the cemetery.
764 Relatives and neighbors dig the graves of their fellow
764 villagers.

767 In 1911, a funeral society called the West of Lewis
767 Funeral Association was founded with the original
767 intension of bringing back the bodies of men and women
767 who had died when they were away from the island "on the
767 fishing." Persons from Borve to Barnaray pay two
767 shillings a year to the Association, which at present
767 has about 14,000 invested in bonds. A similar association
767 exists in other parts of the island. A person may join
767 between the ages of 12 and 40, after which he is not
767 eligible for membership. A member who has left the
767 island must continue to send in his dues, or members of

121 being determined by conditions of culture, such as
121 political and economic conditions. Under conditions
121 of stagnant economic and political
122 systems, the geographically marginal crofting areas
122 have evolved strategies, some of which puzzle agencies
122 concerned with development or other aspects of
122 governmental process.

178 Before the North of Scotland Hydro-Electric Board
365 began to operate in the crofting counties, not more
511 than one croft in every hundred had electricity; but
511 by the end of 1971, one in every six holdings had been
511 supplied (Taylor 1974: 20). "The lights came to
354 Shawbost in 1951. Before then, the islanders used
194 Tilley lamps, a Canadian invention; and before then,
312 double-wick paraffin lamps. Piped water came a few
344 years later, around 1955; it was brought from a nearby
344 loch, and the construction work gave temporary jobs to
344 local people. The availability of these services
344 facilitated the building of county council houses,
344 which many welcomed as providing a relief to the
344 congestion caused in part by rules against building
344 more than one house on a croft. But, paradoxically,
651 with larger, better homes and all these services came
a decrease in the advantages of living in a crofting
township: property was assessed and people began paying
rates or taxes.

651 which official records are kept by the mills. If you
439 may jokingly to a fisherman who has brought in a large
catch than he should put some money aside for the
rainy day, he is likely to reply, "Well have to
catch me first." A tradesman may be earning large sums
of money doing local work as a skilled specialist at
the same time he is collecting social security.

A man may serve in and out of a number of different jobs,
and never report his income. "Occupational pluralism"
(cf. Brox 1966) rather than economic specialization has
developed as a strategy in various countries along the
North Atlantic fringe, such as Iceland, the Faroes,
northern Norway and Scandinavia, as well as the west
coast and islands of Scotland. In these marginal areas,
income from specialized occupations is, in the long run,
unpredictable and inconsistent.

In times of national economic depression, strikes,
shifts between socialist and conservative governments,
and other crises, crofting provides an alternative
strategy. During the last war, many islanders who had
left the island (including some who had been quite
prosperous in the cities) returned to spend the duration
of the war in the village, glad of the relative security
provided by the relative abundance of food and less strict
rationing. During a huge snow-fall that occurred on

233 mostly, that the Commun Market will soon drive up milk
233 prices, and that income from the weaving has become too
248 unpredictable.

412 Many tools and techniques associated with crofting
176 have disappeared: the flail for threshing oats (two
pieces of wood joined with leather); the sheepskin
strawbed over wood with holes burned into it, to separate
chaff and grain; rope made of plaited heather and straw.
Each spring the byre was cleaned of its accumulated dung
and urine, and this was turned into the ground along
with seaweed. Such tools and techniques remain among
the older villagers as a "memory culture" which may be
mobilized under changed conditions, as when alternatives
to crofting are no longer available or are too costly.
However, the longer crofting is neglected, the less it
can provide a viable alternative strategy. The artificial
fertilizers are ruining the land; that's why the
turnips are full of maggots and the potatoes turn to
water." As the rushes grow and clog the drains and
streams—rushes that used to be eaten by the horses and
cattle and which are now left untouched by the sheep—
the land becomes unfit even for grazing. "I'd rather
work the land than the blinkin' loom, but we tried the
potatoes, turnips and cabbage last year, and lost them
all to the maggots. You lose heart after that."

241 Crofting constitutes a dormant strategy which can
176 be mobilized if deterioration of land has not proceeded
too far, and if the skills of land use are not lost by
succeeding generations who have grown up in an
environment which presented them with more appealing
strategies.

B. Social Marginality

166 1. Linguistic Distinctiveness: Social marginality
166 began when the Highlander had to leave his place of
origin and go to the cities of the south in search of
191 employment. The feature which most distinguished him
191 was his Gaelic speech.

In Glasgow the common word for Highlander is
101 "Geuchter," a slang word with derogatory implications
101 which, according to one theory, developed when Gaelic
1965) speakers coming into English-speaking cities mispronounced
the word "sagar" so that it sounded like "teuchter."
329 Glasgow Highlanders have developed their own defensive
explanation: when the civilized Highlanders came down
among the uneducated barbarians of the south, they came
as tutors, a word which their uneducated Lowland pupils
mispronounced.) According to a university student from
the islands, the word was once used by the English to
refer to the Scottish Lowlanders.

469 on the island who had spoken English in school and had
197 not given much thought to which language she was speaking.
178 "I remember the first time I met the other girls couldn't under-
197 stand me. They always used to shout at me, making sure
197 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
language is lost. Village children attending school in
197 Stornoway often prefer talking to their Gaelic-speaking
197 counterpart in English. A young island woman, married and
167 living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

English is the language of the larger society, the
197 language in school and the language required in
197 most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
554 status. If an English speaker mispronounces Gaelic words
676 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is treated merciless
151 Many nicknames derive from such mistakes; for example,
"Water Squash" got his name by mispronouncing the word
"picturesque." People "win points" by competing with
324 each other in speaking English. "See how good you are!"

154 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
(522) development of sympathy.

Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are
culturally prescribed opportunities for relatively
uninhibited expressiveness. Such opportunities include
the ceilidh ("visit"), the drinking situation (mainly
for men), the role of clown or "character," and holidays
(144) such as New Year's. Although young villagers and
(484) emigrants often describe the village as "dull" and "dead,"
(181) the emigrants are happy enough to return to the island
for short periods of time, during which they participate
in these situations in which expressiveness and limited
license are accepted.

154 1. Ceilidh, Clown, and New Year's Festivities: Only
on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the
township, and even then the form which this expressiveness
takes is fairly narrowly circumscribed. The traditional
(170) ceilidh was such an occasion. In the past, people gathered
(170) regularly at night in the high ceilidh (the ceilidh house,
538 or home of someone in which a genial atmosphere existed;
(533) the high ceilidh was often the home of someone who lived
alone), where stories were endlessly repeated and elaborated,

154 genealogies told, and old songs were sung or new ones
154 composed. The concentration of expressiveness in these
(170) forms resulted in a well-developed, oral repertoire of
(533) literature and music.

The ceilidh still exists today in the form of less
(538) regular gatherings. Stories and genealogies are seldom
(533) recited, but songs are still sung. A few new songs are
being composed. The word ceilidh is used as both a noun
and a verb to mean "a visit" or "to visit," but implies
(144) a casual, relaxed atmosphere rather than a formal visit.
(484) A formal visit is made by relatives living in Stornoway,
(181) government officials or businessmen, and is characterized
by more constrained behavior.

154 The ceilidh of today is often accompanied by the
154 drinking of beer or whiskey, but a distinction may be
574 made between a gathering which includes both males and
females, and a drinking situation at which only males are
present. In the past, men often gathered in barns or
weaving sheds to share beer made locally from barley or
(273) brought from town in a large keg. The drinking of whiskey
(178) was reserved for special occasions, such as births, weddings,
(178) funerals, and the festivities surrounding the New Year, but
(538) increased income has resulted in the consumption of whiskey
(533) on an almost daily occasion. Heavy drinking is still an
(249) activity engaged in largely by males, and occurs in extra-
village locations such as hotels and bothans (see
Chapter 6).

74 given at Christmas; in Lewis, Christmas is identified
(48) with Catholicism, and is an insignificant event in
187 comparison with New Year. To give two examples, a New
527 Year's dance is given, but not a Christmas dance; and
74 the mills continue working on Christmas if it occurs
187 on a week day, but close for at least two days at New
Year's. In Shawbost, bannag is defined as a party
associated with Hogmanay (New Year's eve).

In the recent past, until about ten years ago,
527 the boys dressed in women's clothes or wore masks. They
• 172 took turns wearing a cow's skin as they went from house
to house. In each house, the boy wearing the skin was
(538) hit by the others as he chanted the rann na bannag (rhyme
of the bannag):

Here I come again renewing Christmas.
(In another version: This is the New Year's night.)
I'll take the bread without the butter,
I'll take the butter without the bread,
Then we won't be empty-handed.
Then we won't be empty-handed.
One thing I refuse is a mangy potato.
It gives a heavy feeling.
It's not healthy.
Everyone can't give me my bit of butter and my lump of
cheese.
Everyone can possess will be gotten by the crows
on St. Patrick's Day.

527 As the heinich na bannagan left the house in which
43 they had received gifts, they blessed it. All food and
(538) money was given to the woman who prepared the bannag.
(269)

Today children tend to receive money more often than
food, and use some of the money to buy sweets at the post
takes her with him on his all-night visiting.

527 office or general store, preferring to divide the prot
• 178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag
like we used to. They get this kind of rich food all
the time." The practices of wearing costumes and speaking
527 the rhyme are disappearing. Children used to have the
178 bannag until they left school at age 14 or 15; now only
the younger children go. "Children grow up more quickly
today."

New Year's is celebrated perhaps most intensively
527 by the men, who after seeing the New Year in by watching
(178) a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
custom of "first-footing" on New Year's eve is held
throughout Scotland; but in the Hebrides much visiting
and heavy drinking may last from New Year's eve until
the following Sunday. During this time, the woman of the
house, who usually refrains from drinking and to some
extent controls the drinking done by the males in her
house, relaxes her attitude, and may even participate.
The comment, "It's only once a year," is often heard.
(538) During this time, the shyest and most retiring bachelor
becomes a Romeo; this is the only time of year he may
be heard to mention the word marriage. For example, one
bachelor in his 60's chooses a "bride" each New Year, and
takes her with him on his all-night visiting.

203 while. It would be an insult not to take a drink with
571 them; you mustn't miss your round."
(504)

The usual practice when drinking with friends is
203 for one person to buy the drinks; everyone drinks
571 together, and then someone else buys the next round. To
431 drink slowly is to indicate that you intend to miss your
round. A relative who returns to the island for a holiday
usually pays for more rounds than he receives, and may
spend as much as L80 in a single week.

If a man wants more drink than his fellows, he has
203 to buy more rounds. He may step up the pace of drinking by
571 buying more rounds, which means that he is likely to pay
a larger share than the others during the evening as they
will be ready to quit before he is; or he may keep a bottle
hidden outside the room, and disappear periodically for a
private nip, after which he returns to the group.

203 Drinking occurs at night behind the grey, concrete
571 shield of the bothan or in hotels. Drinking situations
154 provide opportunities, rare in the repressive arena of the
154 village, to express emotions and ideas. These expressions
can always be retracted in the cold, sober light of day.

"I want to be an alcoholic. Now I spend most of my
weekends feeding my brother lager so he won't get the DT's.
When something good happens, I wish like hell I could get

[Page 159 is blank; text continues on p.160
--Admlyst]

203 differentiation and differentiation in personal experience,
571 but to use it in the community, as social coin. The few
154 people who refuse to get involved in drinking episodes that
154 would deplete their available funds are called "mean"
and "tight-fisted."

"If I had a wish, I'd choose to live the same life all
over again, maybe a wee bit rougher. We don't get a chance
here. The poverty keeps us down. But what does it matter
to be a schoolteacher or a minister? What good does it do
you? If I have a shilling in my pocket, I've got to spend
it. I remember ten years ago, I went into town with L60
in tweed payments to buy a new stove. I met some of my
(435) pals, so I put down on a L50 stove and spent the rest.
What a time we had."

"I went for a holiday on the mainland and came back
with nothing in my pocket because it's no use drinking in a
place where you don't know people. You want a yarn."

Drinking occurs at night behind the grey, concrete
203 shield of the bothan or in hotels. Drinking situations
571 provide opportunities, rare in the repressive arena of the
154 village, to express emotions and ideas. These expressions
can always be retracted in the cold, sober light of day.

When something good happens, I wish like hell I could get

B. The Bible

701 1. The Free Church: "A man in my great-grandfather's
195 time," said a 65-year-old man, "talked about the great
(195) change within his generation, from the days when fanks
were held on Sundays to such strict observance on the
Sabbath that not even a cow could be tethered."

195 The first evangelical minister on Lewis came to the
783 parish of Uig in 1824. The Rev. Alexander Macleod belonged
(783) to the Church of Scotland, but joined the Free Church when
it broke away from the Church of Scotland in the "Disruption"
of 1843. When he came in 1824, he found "superstition,"
"spiritual darkness," and "polluted remains of Popery,
since it was the religion in this place...the only notion
they had of Christianity (Beaton 1925: 7-8)." The southern
195 tales of the Outer Hebrides are still Catholic, but in the
783 Protestant isles of the north, holidays associated with
(783) Catholicism are avoided, and stories are still told of the
burning of Protestant martyrs by Catholics. Catholics are
disliked "because they believe that they can buy their
way out of sin," or that the bread and wine of Communion
is really the blood and body of Christ. "A Catholic is
anointed with oil and left to die without food or water.
We are privileged that we are not like them."

195 In the Disruption of 1843, about two-third of the
783 people and 39% of the ministers left the established church

795 collected, and an annual report on morals, which usually
condemns drinking and "the decline in moral standards."
Ministers are trained in a college in Edinburgh. Many
(199) are Gaelic speakers, although the number is said to be
declining.

When a congregation loses a minister because of death
783 or other reasons, it issues a "call" to some other minister.
The congregation is familiar with the names and preaching
styles of a number of ministers, who have in the past
visited the community as guest preachers. The congregation
votes for a minister from a list made by the lay officers
of the church. The minister may or may not accept the call.

The Free Church and the Free Presbyterian Church, two
(783) fundamentalist Protestant sects which have nuptured the
tendencies toward unification evident since the turn of
the century, are strongest in the Highlands and Islands.
Shawbost contains a few people who belong to the Church of
Scotland, but most villagers belong to the Free Church.
The only church (in the sense of a building in which sermons
795 are preached) is a Free Church which was built in 1883,
346 supposedly after men from Shawbost helping to repair the
(193) fence at the minister's manse in Carloway, where they then
attended church, were refused holiday water for their oatmeal
"brose" by the minister's wife. A building in which
members of the Church of Scotland worshipped was built

786 miscarriage occurring before marriage also requires
(48) standing even when the child to be baptised was conceived
849 by the couple after marriage. A marriage was also
(337) imperfect unless a woman who is not his wife must undergo
this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to
ensure that this punishment is carried out. On one occasion
the minister forgot to lecture a couple, and afterwards
(203) the community was upset that they would have to stand; but
they insisted, afraid that people would say that they
were getting special treatment.

According to one minister, the manse is a kind of
(203) "research center" to which all gossip is reported. Some
(520) ministers use this information in the pulpit, chiding
(504) people and calling attention to wrong-doings in front of
the congregation. In contrast, a different minister
(184) in parts of Stornoway, where villagers have approached

in church does not exist in Stornoway. In 1971 a person
• (194) in Shawbost was accidentally scooped from this ordeal
and his exemption was seen by some as providing an
opportunity to stop what is considered by many to be an
archaic custom.

871 875 771 [465] Education in the local school has included a great deal of religious instruction; in other words, religious and educational spheres commingle. Because of the relative prestige which the teaching profession offers to persons from the island, and because the islands are considered "isolated" by most persons looking for jobs (teaching posts on the island include an added sum which is designated as "isolation payment"), most of the island's teachers are themselves islanders. Education [554] is one method by which one's position in the community is elevated. The high status derived from having advanced education also reflects favorably on the parents and position of the family. But teachers and others who return to the island are expected not to deviate from island norms in important matters, such as fundamentalist religious beliefs; hence teachers tend to perpetuate fundamentalist religious beliefs within the classroom.

871 771 773 178 Formerly the minister visited the school once each year to examine the children on their catechism, thus testing the state of religious instruction in the school. Several years ago this practice was stopped by the education authorities of the County Council, and the minister now gives a sermon in the school about once a month but is not allowed to examine the children. Many ministers are dissatisfied with the arrangement, as they are afraid that

871
791 the children might not receive proper
793 instruction.

called on an awful lot to give prayers in church, and it's hard for some of them to get up and speak." The Reverend Macleod notes in his diary that private meetings were initiated on the island in 1826.

A quarterly meeting (coinne raith) is held in Stornoway, to which many of the converted from the villages go. The Communions are held twice a year. "Special services," or "small communions," held soon after the Communions, are intended as evangelical services for young people, that is, services enjoining people to convert. These services, which last from Monday through Friday, were started in Ness after the first world war.

4. The Communions (Orduighean): Communions are given twice a year, during autumn and late winter. They are scheduled for different weeks in different parts of the island, and neighboring congregations close their churches when Communions are being held nearby, so that during the Communion season some persons may attend a number of services at different churches.

In the days when transportation was limited, visitors coming from a distance away stayed for an entire weekend. All households prepared food and made ready for any overnight visitors who might arrive without prior warning. Guests often slept on mattresses laid on the floor. After facilities of transportation improved, it became common for people to drive down for the day in private cars and return to their own homes at night.

service, believers remain in the church where they receive tokens given to them by the elder of their street. These are pieces of metal on which is printed the name of the church and village, and a verse from Corinthians, "Do this in remembrance of me." Communicants planning to take Communion in other villages take with them tokens which they have received from their own minister, or ask the local minister for one.

The Communion Services begin on Sunday morning at about 11:30. Persons not taking Communion sit in the back of the church or in the balcony. Communicants give their tokens to the elders who stand in the aisles, and are allowed to sit in seats in the front section of the church, which are marked off from the other seats by white tableclothes. The service lasts for three to four hours. Many communicants also spend a half hour to an hour in informal prayer before the ministers arrive to begin the service. In the past, a prayer meeting was also held at 8:00 in the morning, a custom still practiced in some places, such as the island of Scalpay.

Sunday is the only day of Communion on which standardized selections of Biblical verses are spoken and psalms are sung. On other days the ministers are allowed wide variation in the contents of their services. On Sunday, Psalm 22 is followed by the reading of Isaiah 53, and

into tiny squares. The ministers and the elders partake first. A final hymn is full of rejoicing, and the minister then exhorts the communicants to return to the world and give witness and to live exemplary lives.

The evening service on Sunday is evangelical, intended for non-believers. After this service the communicants conduct a brief prayer meeting to give thanks.

On Monday, the minister again tells the communicants to go out into the world and declare publically their experiences of the preceding day; and to demonstrate in everything they do and say that they are believers. In the past, only a morning service was given, as most people had a long journey ahead of them to return home; but now that cars are available, a similar evening service is also conducted.

2. The Process of Conversion: The process of conversion may be slow or sudden, but conversion is most common at middle age and among women. One informant wryly observed, "Only recently women were allowed to have socks. But from the looks of the Communion table, mostly women are going to heaven." Many of the women taking Communion are dressed from head to foot in black, a color which indicates their widowed status.

The first sign that a person is "following" (leanntail) the church is that he begins to attend the weekly prayer

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

Crofting townships of the Highlands and Islands of Scotland are within a few hours' travel of the major cities of Britain. An extremely high percentage of the young people in the crofting counties attend universities and other institutions of higher education. Politically, administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

Despite this participation, the township-qua-village-community is a relatively strongly bounded system. This thesis investigates factors contributing to the strong boundedness. From a relatively self-sufficient economic unit using agricultural practices suited to the extensive cultivation of marginal land by smallholders, the township has during recent decades changed to one dependent on goods and services provided by the larger society.

Crofting activities nevertheless persist, in part because of the incentives offered by government bodies such as the Crofters Commission and the Department of Agriculture. The

of the converted, who occasionally neglect township and neighborly duties in favor of religious activities. The increase in private transportation during the past 25 years has facilitated the maintenance of closer ties within the clique. The existence of such a strongly bounded subsystem is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserve the township as a bounded system.

People come and go from the township, but this appears to maintain rather than weaken township boundaries because behavior different from that prescribed within the township can be performed outside it, and conformist behavior reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

Township members who have settled away from the island come back periodically for recreation and a sense of belonging. They increase the value of the township and its way of life in the eyes of the inhabitants, and provide them with subject matter for conversation until the next holiday season, when the exiles again return.

The boundedness of the township is thus a qualified boundedness that, over the past 100 years and especially since the second world war, has decreased in strength but is nevertheless strong today.

LAND USE AND CROFTING

agrarian order. Crofting townships were created which contained holdings of a uniform size, often fit to provide only a bare subsistence living. This is still so today. There were and are no means of achieving ambition through some kind of agricultural promotion. no ladder to climb to prove one's ability to win the land over to one's side to increase its yield. And as each family increased, the progeny demanded land. The family acres were divided, subdivided and fragmented to a vicious mathematical system: more people, less land.

In the nineteenth century, many estates were sold. The newcomers, with no kinship ties with the small tenantry, saw that the only way to make their estates economic was to establish large farms, which meant the eviction, by force if necessary, of the small tenants. This is what happened. For those who did not emigrate, it was a life of huddling around a weak fire, whose flame itself could hardly stand, and thinking of the prospect of starvation and the 'old days'. Thoughts nourished on these old days became the root of action; and a fierce agitation for land reform started. The Minutes of Evidence of the Napier Commission (1882-4), of the Deer Forest Commission (1894-6) and the several official reports on the conditions of the crofters and cottars, give ample evidence of bitterness and despair as the result of poverty and lack of opportunity. About 1870, unrest in the congested areas of crofting townships became a political issue. The flames of ideals were burning high and bright. Ideals were transformed into action: take the land!

By 1880, the ripples from the stone flung into the agrarian pond were reaching the general public. Sides were taken: one stood either on the economic touchline, or on that dangerous thin red line of sentiment based on high feelings and a deep sense of wrongs being perpetrated on fellow humans. The landowners naturally insisted on the right to move into an era of land use in which management was not hampered by affairs of sentiment or philanthropy. Governed by the cold principles of business, they hardened themselves in the face of their attackers. And though they pointed to arrears in rent, and their inability to improve their land agriculturally while they had tenants not of their own choosing, they faced mounting antagonism.

HISTORY

was made in the Crofters (Scotland) Bill of 1961; this had a mixed reception. In general, today, small crofts predominate in most areas. Out of some 18,000 (the number is decreasing annually) about 15 per cent exceed 20 acres (see Chapter 5). But size has little to do with the type of land; whether arable or rough grazing. In fact, the proportion indicates that some 85 per cent of all crofts in Scotland, and this applies to Harris and Lewis, cannot be considered as full-time now or as potentially full-time.

EDUCATION

In general, the Highlands and Islands of Scotland owe their introduction to letters to the early Christian missionaries. One of the main provisions in the early monastic Church in Ireland and Scotland was for the cultivation of learning and the training of its members in sacred and profane literature. Associated as they were so closely with the common folk on the one hand and the aristocracy on the other, something of this learning and desire for learning rubbed off to advantage on to willing recipients. Literacy however, has had many ups and downs since the dawning of the Christian era in the Hebrides. Though it is impossible to ascertain to what extent the common folk participated in the knowledge imparted by the early Celtic monasteries, there are many references to a class of cleric called 'scoloca', whose learning was accessible to the poorer classes of the emergent Highland society. The 'scoloc' is still retained in Gaelic as 'sgalag', a farm servant, the poor searcher after knowledge who received education in the monasteries in return for services as labourer on the church lands, and who appears in monastic records as late as the fourteenth century.

As late as the sixteenth century, however, after the influence of the Church had diminished, the inhabitants were almost wholly illiterate. When the Fife Adventurers came to Lewis in 1598, they brought a schoolmaster with them; though it can be taken that his services were intended for the improvement of the incomers rather than the islesfolk. Old Roderic MacLeod, doughty chief of the MacLeods of Lewis at the time of the Fifers' arrival, was unable to sign his name. Two of his sons, on the other hand, were

CROFTING CHANGES

The removal of crofters from good to poorer ground was a significant factor in the destitution years of the nineteenth century, with the self-sufficiency factor becoming smaller and the dependence on imports (when there was money to buy these) increasing. Today, the crofter is of course not self-supporting, his economy being based on fishing and weaving with the produce of the croft yielding an annual average of some £2000.

Acreages under certain crops show this trend to dependence on the produce of mainland farmers. In the island in 1911 some 3,673 acres were under potatoes, the present acreage being about one-third of that. The number of people per acre of potatoes for Scotland as a whole is 22:1. In the island it is about 15:1, indicating a heavy domestic consumption. Yet substantial imports of this crop are required to satisfy demand; a relevant point is that the milking cow commonly shares the potatoes. The barley crop, once much used in Lewis's former small distilleries, has been reduced to some 10 per cent during the past fifty years. On the other hand, the acreage of sheaf crops, oats, rye and mixed corn, generally fed to cattle, has about doubled. Oats in particular are in favour for cattle fodder; even before the turn of the present century oats were not widely used for human food, and oatmeal has for centuries been imported into the region. The turnip acreage has halved over the past fifty years, perhaps the result of the gradual disappearance of the horse, its steady labour and its dung being required to put good heart in to the land.

As the crofters' cropping policy has changed over the past half century, so has their animal husbandry. Animals are a main selling product, particularly cows and sheep. Horses, of course, have been drastically reduced from their total of 1,672 in 1911, as tractor, lorry and van have taken over their work. And though some cattle are raised, the numbers are now about 60 per cent below those of 1911. At that time the density of cattle per 1,000 acres was heavy (46-60) in the north-east of Lewis, less (31-45) in the north-west, and still less further south. The present average is around 18 beasts per 1,000 acres. This decline, in particular in the milk-yielding animals, has compelled Lewis to import 1,000 gallons of milk a day from the mainland.

It is sheep which today claim pride of place on the croft, valued

AGRICULTURE AND FISHING

for mutton and for wool, the right type for translation into Harris Tweed; the predominant breed is the blackface, whose fleece is hard, wiry and long-lasting. The demand for raw wool has also encouraged larger flocks among crofters in such places as Barra, where virtually no weaving is done in the immediate locality. In general there has been since 1911 a 40 per cent increase in the livestock carried on the island's crofts, about twice as big a rise as found anywhere in the seven crofting counties of Scotland.

In an attempt to reduce Lewis's milk imports, in 1962 three crofters at Garrabost on the Eye Peninsula combined to set up a small dairy farm using the lands of their three crofts. A new dairy byre and dairy premises were built and equipped with the necessary electrical equipment. Grants were given by the Department of Agriculture & Fisheries for Scotland, the Crofters Commission, and the Highland Fund Limited. The first year of operation was closely supervised by the Lands staff of the Department at Stornoway and guidance given as necessary. The milk is retailed in Stornoway and district and amounts to about 5 per cent of Lewis's daily consumption. This little scheme has shown that the island could with some organised effort become independent of milk imports, which have been estimated at upwards of £100,000 worth per annum. Over £70,000 per annum is also spent on imported butter and cheese.

In 1947 the number of crofts in Harris and Lewis was 4,020. In 1971 the figure was 4,146 (3,592 being in Lewis), representing a slight increase in a quarter of a decade. Thus, crofting as a land use activity in the island provides a fairly stable element in the economy, although it is subsidised by the crofters' participation in the fishing and tweed industries. A crofter, it should be mentioned, is often a tenant of more than one croft, working them together as a unit. These units vary in size, the greatest bulk of them (about 60 per cent) having up to 5 acres of arable land. About 2 per cent contain over 30 acres of arable land. In recent years there have been proposals for the better use of the reclaimed moorland, particularly for cattle-raising, which would offer the crofter an increased cash yield from his interests. The annual reports of the Crofters Commission indicate, indeed, that the trend to the small croft obtained from the fragmentation

CROFTING CHANGES

of larger and more economic working units of over 30 acres of arable land is also apparent in the southern Hebrides, the west mainland of Ross & Cromarty, Argyll (mainland and islands) and Caithness.

The acreage of common grazings held per holding varies from under 50 to some 200. The crofts, as already mentioned, are in townships, of which the island has 168, half being fenced and half consisting of individually fenced crofts. During the winter most of the crofts are laid open for winter grazing by sheep of general ownership. Manure resources are mainly dung, seaweed, shell sand and of course artificials where necessary.

A new aspect of crofting in Lewis is its extension into forestry. A recent survey by the Forestry Commission indicated that under 400 acres of the land not being used for crofting were suitable for afforestation, and that these acres were made up from twenty-three different plots. At Garynahine Estate can be seen the beginnings of a real afforestation unit of some 500 acres, a scheme of the utmost significance for the economic future of Lewis and for the relationship between crofter and landlord. Too often in the past this relationship has been biting, hard and inflexible; in particular the crofter was understandably unwilling to release good land for planting trees. But the crofters of Callernish agreed that the right of usage of 285 acres of the common grazings belonging to their township should revert to the landlord, this land being thrown in with 220 acres of the Garynahine Estate. Labour comes from the affected township and others in the area.

FISHING

Early beginnings

It is the humble herring that has contributed so much to the island's economy and its history. At a very early date in history, the Hebridean fishings were worked by Frenchmen and Spaniards who must have found them rich enough to repay the long journey and weeks away from home in the cold Minch waters. It was not, however, until the end of the sixteenth century that the wealth of the Minch was really discovered, this time by the fishermen on the mainland of Scotland who copied the tricks of their trade

SINCE THE SECOND WAR

furnished less than 1 per cent of Scottish landings. The war's aftermath brought too many changes for the island to cope with. Markets had disappeared; food habits had changed; capital was scarce; and many ex-servicemen saw the writing on the wall for fishing as a full-time activity. Also, many sea-going crofters of the pre-war fishing fleet were now dead, memories on fading photographs. Nor had the Western Isles fisheries ever fully caught up with those of the main fishing bases of Britain and the east coast of Scotland. Hence the decline of the herring fishing hit them hardest of all. Today, Stornoway District is handicapped geographically, by distance from the markets; historically, by its late entry into the industry; and economically, in that it failed to participate in the trend towards the centralisation of the industry in share-holding companies within easy reach of London.

In the old days of sail it was easy for men to combine the two occupations of crofting and fishing. When in the early years of this century power replaced sail (the first motor fishing boats went to work in 1907) and the steam drifter took over from the sail-boat, the whole nature of the fishing industry changed. Modern boats and gear had to be acquired if the work was to be profitable. But the islesmen, partly because of lack of capital, partly because of the lack of suitable anchorages and harbours, and partly because the combination of crofting and fishing had created a seasonal tradition incompatible with the use of expensive boats (which needed to be kept continually at sea if they were to pay at all), were unable to adjust themselves to meet the new challenges. In the inter-war years they had no option but to carry on as best they could in their old traditional role. The resultant decline meant that when opportunities did arise for fishermen generally in the form of grants and loan schemes (introduced in 1945 by the Fisheries Division of the Scottish Home Department and subsequently by the White Fish Authority and the Herring Industry Board), the bulk of the men living in the isles were unable to take advantage of them: they lacked the necessary qualifying experience in handling modern boats and equipment, as well as confidence in fishing as a full-time occupation. By 1959 there were only twenty-five boats of 40 ft or more in length based on Hebridean ports. Lewis had only six full-time crews; Harris had five.

This lack of a local fleet fishing in the Minch and associated waters on a full-time basis has inevitably brought reluctance on the part of Government bodies to invest capital in, say, harbour improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

The first vital step to do just this was taken in January 1959 when the MacAulay (Rhodesia) Trust announced the introduction of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an energetic and successful fisherman'. This pioneering venture directly assisted three young men in Kirkibost, Bernera, to acquire one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

[TEXT CONTINUED ON PAGE 109]

6 TRADE AND INDUSTRY

IN the earliest times, the folk of the island of Harris and Lewis were self-supporting; all that they needed for life as it was lived in those days was available at near hand; their existence was self-contained, the economy virtually self-sufficient. By and large, the only commodities often imported were salt, iron, and, to a certain extent, wood. Rents were paid largely in kind: the produce of agriculture, fishing and labour. Surplus produce was directed to southern markets to bring in the odd shilling or two for which there was really very little need in the island. But once money became important in the national economy, it was not long before it was required in the island economy too. By 1790, if not well before, two or three open boats set out each year from Uig to Glasgow, laden with salt beef and dried salt fish. At about this time, too, changes were making their slow appearance in the island way of life and living. Specialists were being required: smiths, tinkers, shipwrights, netmakers, boatbuilders, weavers, tailors and millers. Each of these craftsmen generally held some cornland, either individually or in shares, and also had some rights in the common ground of the township in which he lived.

CROFTER INDUSTRIES

From the pure crofter class there emerged the crofter-craftsmen. In Lochs, for instance, by the turn of the seventeenth century 80 per cent were registered as fishers and netmakers. In the west, in the parish of Barvas, some 70 per cent were also fishers, with kelp-making as a seasonal occupation. In Stornoway parish, where sub-tenants paid 30s to 60s in rent, with twelve days' service, they sold ling to their tacksmen at 5d each, earned 20s a month on herring boats, made kelp at 30s a ton, and worked on roads for 8d per day.

In Harris in 1895, the eight trained male weavers worked for the gentry only. Weaving for the populace was done by the

found in a warehouse in Leith some years ago; a few found their way back to Stornoway, where one can be seen in the Public Library.

HARRIS TWEED

Today, with kelp long forgotten and fishing of minor importance, it is the Harris Tweed industry which supports many of the island people, either directly or indirectly; an island cottage industry with exports earnings exceeding £2,500,000 a year. Harris Tweed is exported to some thirty countries, including America, Canada, Australia, New Zealand, Japan and all the European nations. The industry is in fact the basis of prosperity in the area, both dependent upon and supporting the crofter-weaver working at the handloom in his home. Seven million yards of tweed are woven annually by the independent weavers 'on the books' of the various mills. The weavers must finance themselves, buying their own looms and bobbins, equipping and maintaining their workshops. Though they receive their supplies of yarn from the mills, they are graded as self-employed persons and as such are not entitled to unemployment benefit—a subject which has caused much argument.

One of the most outstanding facts about the cloth is that its essential qualities have remained unchanged since the industry's early formative years. But it has astonishing versatility and over 5,000 patterns are available, including the crotal browns and the heather colours.

A weaver on average can produce about 2½ webs, or tweeds, each week, a web measuring about 80 yd by 28½ in, and gets a reward of some £8 per web, according to the intricacies of the design or the number of colours involved. The money is paid out by a mobile bank making the rounds of the townships throughout the island. It is reckoned that the mills, for their part, make 1d to 6d a yard profit, depending on turnover; the total annual value of the industry's output is in the region of £4,000,000.

Between them, the five mills in Stornoway and the one in Shawbost consume two-thirds of the Scottish wool clip—the native Western Islands' crop is sufficient for less than a month's production. A thousand pounds of raw wool end up as 885 yards of finished cloth.

sary. In the end, an application was made in 1909 to that body for a trade mark defining Harris Tweed as 'tweed, hand-spun, hand-woven and dyed and finished by hand in the Outer Hebrides', with 'made in Harris' or 'made in Lewis' added as appropriate. The Harris merchants had to join forces with their former rivals in the tweed-marketing business, the voluntary non-profit-making Associations. To inspect the cloth and stamp it with a trade mark—an orb surmounted by a cross—a Harris Tweed Association was formed, consisting of representatives of each of the Harris merchants, the Crofters Agency and the Scottish Home Industries Association. Cloth was first stamped in 1911. In 1912, some Stornoway merchants were granted representation in the Harris Tweed Association, which still exists for the benefit of the industry.

In 1934, the definition of 'Harris Tweed' was eased to include any cloth 'made from pure virgin wool, produced in Scotland, spun, dyed and finished in the Outer Hebrides and hand-woven by the Islanders at their own homes in the islands of Lewis, Harris, Uist, Barra and their several purtenances and all known as the Outer Hebrides'. It was further provided that 'Woven in Harris', 'Woven in Lewis', etc, could be added, and also 'Handspun' in the case of tweeds made entirely from hand-spun yarns.

Today, a few Harris families maintain the old tradition, hand-dyeing and carding, spinning on the wheel, hand-weaving and finishing, producing a high-quality article mainly for individual customers. These tweeds rightly command up to three times the price for the general run of tweed.

OTHER INDUSTRIES

It was not until the era of Sir James Matheson that anything like a truly industrial activity was attempted. Matheson, a native of Shinness in the parish of Lairg, Sutherland, was born in 1796. Aged seventeen, he decided on a commercial career and took himself to London. After two years in a mercantile house, he went to Calcutta, where he worked in the counting-house of MacKintosh

178 Most of the outward changes which have occurred in the island
262 took place in the two decades just after the first world war. Food, for instance, now tends to be better balanced and contains more nutrients. Staple diets in the past were mostly confined to a few items, and based on the potato. Fish, particularly those with essential oils (eg cod) were, of course, available; but only if the fishermen were lucky in the catch. As for vegetables and fresh fruit, it was not until after the 1920s that these became generally available all the year round.

178 Another outward change has been in dress. Until the beginning
291 of the twenties, the women wore a black petticoat striped with colours, a dark blouse, often with stays, and a knitted muffler round the neck and over the head. In summer, the tartan shawl was more typical of Sunday-wear than of weekdays. Men's clothes tended to be of the homespun type, rich in water-resisting oil. Later these were replaced, so far as the fishermen were concerned, with oilskins, waterproofs and rubber boots. Dress nowadays of course tends to conform to what is displayed in magazines, on the film screen and on television.

178 The changes in the mental characteristics of a people are not
181 so obvious. Centuries of generations of long-dead forbears have contributed their accretions to the character of the island people today. It is a complex one. Impressions of the island people as such are few, mainly because observers looked for those economic aspects which gave the society its *raison d'être*. That islandfolk of
175 former times were fond of music and dancing was the observa-
181 tion of the Rev John Lane Buchanan, who was 'Missionary Minister to the Isles from the Church of Scotland' from 1782 to 1790. In a volume published in 1793, in which he describes his Hebridean experiences, he says that the British laws had been introduced to the Island of Lewis by the Seaforth of that period.
[535] The Lewis people, he says, 'since their late happy change from servitude to freedom, by the present noble-minded proprietor, are animated with such life as to meet in companies, regularly each week, at stated places, where both old and young take their turn in this agreeable past-time [dancing], when they exercise themselves with amazing alertness and spirit.' Martin Martin mentions that in his time (*c* 1695) the Lewis people were 'very dextrous in the exercises of swimming, archery, vaulting,
134 or leaping'.

*175 centre of the mud floor through tons and tons of decomposing
165 organic matter or manure.'
164 The island, for all its ills and chills, had a high birth-rate and
*175 a low death-rate. Martin Martin (1695) declared: 'It is a general
163 observation of such as live on the sea coast that they are more
165 prolific than any other people whatsoever.' In some areas of the island the birth-rate was as high as 35 per cent with a death-rate of about 12 per cent. The longevity of the islanders is well known, a fact confirmed by a glance any week at the Deaths columns of the *Stornoway Gazette*, regularly recording the decease of octogenarians, nonagenarians and some reaching their century.

*175 In 1795 the island had only one surgeon. In Stornoway, 'In-
759 oculation is performed here with success by the skill and atten-
[951] tion of Mr Robert Millar, Surgeon.' Later, another doctor came to Stornoway, who attended to the sick in all parts of the island. By the turn of the century there were resident medical officers in each parish, with five doctors in practice in Stornoway.

*175 Just after the turn of the century, there was a medical club
759 in the north of Harris. This had been formed by the proprietor,
743 Sir Samuel Scott, whose crofters were supposed to pay 5s per annum and cottars 2s 6d; this subscription covered dependents. In return, Scott guaranteed the salary of a medical officer, thus securing the services of a resident doctor in the district. But there was apparently considerable reluctance to call a doctor, whether
*175 the patient belonged to the club or not. The salary of the district
759 Medical Officer of Health was £35 per annum, and from the
465 North Harris Club he received some £200. Scott also provided
• 178 him with a home. Dr Fletcher reported in 1906 that a complete
262 change had taken place in the diet of the people within the memory of the older inhabitants, whose accounts of what they called new diseases and lowered virility he found very interesting. Good, plain wholesome diet 'has been replaced by cheap stuff, of
[212] questionable quality and purity. To this change there is another nondescript article which goes by the name of tea, in the use, or rather abuse, of which they are quite intemperate and from which they extract the last dregs by boiling. The result is disastrous to the strongest digestive system.'

*175 In 1892 'a well-equipped medical and surgical hospital was
743

an urgent necessity for the island of Lewis', and a co
appointed to collect funds, the subscription list bein

SOCIAL LIFE

571 In common with other aspects of island life, the social side has
• 178 undergone considerable change. The world has been brought nearer the crofter's home by radio, television and film screen, reducing the social need for meeting with neighbours and friends
574 for the ceilidh. The ceilidh was once the principal means of re-
178 creation and instruction. There is no precise English equivalent for it, and it may be loosely described as an 'at home' to which all are welcome. It may be held in any house; in the past, the favourite resort was a home where the head (*fear an tigh*—man of the house) was an intelligent, communicative man; and if he had a number of eligible daughters so much the better. Ceilidhean were held after nightfall. Old tales were told, and songs sung, and public questions of the day were discussed. All women attending took with them an ample amount of work, sewing or knitting, to see them through the evening. Ceilidhean nowadays tend to be
[545] more organised, taking the form of popular 'concerts' which did not take root in the island until the turn of the century, though they were a common way of entertainment on the mainland at the time. Social life in the past was thus very intense, and was a natural evolution from the basic desire to forget the day's work and to have some pleasure of a kind.

546 The pattern of recreation facilities has since become fairly varied. Films came early to Lewis, or rather Stornoway; the first Picture House was located in Keith Street, and presented both
[536] films and stage turns. A new Playhouse was opened in 1934 with *The Good Companions* and *Falling for You*, starring Jack Hulbert and Cicely Courtnedge. Films in the rural districts were a rarity, however, until in 1946 the Highlands & Islands Film Guild came into existence to bring the magic of the screen to
[207] scattered communities. This body ran several mobile cinema outfits in the deep crofting areas, until the advent of television in the region killed it off in 1971. While it existed, however, the Guild provided an essential service to remote communities and brought not only the world to their doorstep but ensured that they felt part and parcel of a much larger scheme of things.

207 The first television service in Lewis began in 1959, 'piped' by

an enterprising radio firm in Stornoway; its customers receive 207
both BBC and Grampian Television programmes.

Some youth organisations are represented on the island. The 883
first troop of Boy Scouts was connected with the Stornoway 575
YMCA and was founded by forty boys in 1921. Founded (in 883
1912) on the island's close association with the sea was the Boys' 708
Brigade (Naval), later to become the Stornoway Naval Corps and 575
the Stornoway Boys' Naval Brigade. Its objects were to provide instruction in drilling, signalling, seamanship and first aid; and to foster a spirit of manliness and comradeship among its members. The founder was Canon H. Anderson Meaden, of the Episcopal Church in Stornoway (St Peter's). During the first war the boys acted as signallers at the Stornoway Battery.

But the provision of some organised recreational facilities for 529
young people on the island has long been a thorny question. After the first world war, the Rector of the Nicolson Institute, Stornoway, proposed that village halls be built for village education and recreation. This scheme was never fully realised—except at Sandwick, just outside Stornoway—mainly because of the strength of puritanical opposition. This attitude has been breaking down, [178
however, and it is now generally realised that the wealth of any community is based on its youth. Most of the efforts to set afoot activities for young people began after the second war; the work was hard and challenging with not a few failures on the way; perseverance has won to the extent that there is now a full-time youth leader. Most of the cultural and recreational activities are to be found in Stornoway, with a full range of interests. Evening non-vocational classes during the winter are also widely attended for a variety of subjects.

In 1965, an excellent Youth Hostel was established at Stock- 485
inish, Harris, with the help of the Inverness-shire Education Department. In its first season it recorded between 600 and 700 visitors (1,070 bed-nights). Also involved in the establishment of [57
the hostel was the Harris Society of Social Service; practical help was given by the 2nd Stornoway Boy Scouts, who made a wall map, cleared up grounds and shifted furniture. A group of English enthusiasts have in previous years arranged a hotel at Rhenigidale, Harris (see Chapter 9), which provides for some fifty to

PREFACE

121 It was after the end of the First World War and the
[101] home-coming of the men—all too few in number after
heavy losses—that I first came to know Lewis-and-
Harris. Later, in the years between the two World Wars
and during the Second World War, I returned to study the
people's heritage and survey the Island problems and, if
it might be, find solutions. Work on a West Highland
farm had already made me aware of the hardships and
potentialities of land and sea; of the meaning of life in
field and home for farm-team and family; of the reality
of the Gaelic heritage—communal, bardic and religious.
121 Wider surveys made me aware of common elements
171 throughout Scotland and the North and West of the British
Isles, despite the historic contrasts from the Hebrides to
• [178] the Lowlands, and beyond. In the Hebrides are found an
elemental simplicity of environment; an early crystallisa-
tion of culture and religion, with continuity; a recent and
contemporary coming of revolutionary change. These
form an interpretative chain of evidence—geographical,
traditional and historical—unique in the British Isles.
Hence throughout this book, from the basic maps and
explanatory text to the later chapters, an interpretation of
the Island and its community is linked to that of the
Highlands, Scotland and the British Isles as a whole.
121 As many a Scot of crofting stock has found, when he
181 shares in the work of a glen by day—on the low ground and
the hill, alone or with others of a team—and joins in the
fireside talk and Gaelic song when night has fallen, he

PREFACE

121 discovers the strength of community life. And by his
[181] renewal of 'racial' experience he may rediscover sides of
his own nature untouched by an urban task or a rural
[128] holiday. Hence a book such as this inevitably, and I think
rightly, contains much that has been felt in a personal way.
Yet to offset personal limitations, there is needed objective
survey, geographical and social, applied with an open mind
and submitted to searching criticism. These two sides,
personal and impersonal, I have tried to combine.
114 The initiation of this work owes much to others, in
ways of which they were never to know: to the chieftain,
farmer and scholar, James Archibald Campbell of Barbreck,
to my brother Alasdair, to my father, Patrick Geddes, who
suggested in 1919 to the first Lord Leverhulme that
Marcel Hardy, scientist and farmer, should survey the land
in Lewis-and-Harris; to Lord Leverhulme, and to Dr.
Hardy himself, whom I then assisted. To Mr. T. B.
Macaulay, LL.D., was due the suggestion and the plea,
made ten years later, that I should bring up to date Dr.
Hardy's MS. report.
121 It was because of Dr. Macaulay's faith in the Island's
future and the aid he generously gave to experiments in the
reclamation of peat, and also because of the Islanders' own
response to his lead, that I accepted this voluntary task.
Acceptance, as it proved, was rash. Except for certain
valuable findings included under Dr. Hardy's name, a new
[101] work had to be written. These circumstances led to the
making of the book, stretched over thirty-five years. Certain
• [178] early hopes recorded here have been frustrated. On the
other hand, developments have taken place which few
could have foreseen but for their faith in the future of the
Island and its people. I trust that in this book the advan-
tages of slow growth outweigh the drawbacks, for time

PREFACE

121 allows one to revise judgments in a way not possible in a
• 178 short-term study. And only by prolonged knowledge of
the Island can one hope to appreciate the changes which
have been taking place, and the trends of today.
123 My chief debts are the hardest of all to acknowledge,
namely the patient guidance, information and hospitality
so freely given, as I tramped from end to end of the Island
or stayed in chosen townships. Indeed, my debt extends
beyond the Island, from glens in the mainland to the
southern Hebrides. The debt for specific information
received is the harder to acknowledge since, again and
again, I was invited to utilise information on condition of
silence as to its source. Many statements given here
would gain in authority if their source, whether private or
semi-official, could be given; but this has frequently been
impossible without violation of confidence. Hence my
thanks go out to many anonymous crofters, schoolmasters
and residents and also to officials, particularly of the
Boards or Departments of Agriculture, Fisheries, Labour
000 and the Post Office. There are also those whom I cannot
leave unnamed, particularly the late Mr. W. J. Gibson,
C.B.E., Mr. Angus MacLeod, B.Sc. (Agric.), Dr. R. M. Craig,
Miss Bruce of the Highland Home Industries, Mr. J. S.
Grant of the *Stornoway Gazette*, Mr. Malcolm MacLeod,
D.Litt., Mr. A. M. Macmillan, C.I.E., Mr. John Forbes and
Professor A. C. O'Dell. The late Professor Alan G. Ogilvie,
Professor H. J. Fleure, LL.D., F.R.S., Professor W. Croft
Dickinson, M.C., and the late Mr. Adam Collier also
advised me most helpfully.
For the loan of blocks I am indebted to Professor A.
Stevens and Dr. R. M. Craig, and to the Editors of the
Scottish Geographical Magazine and of the *Transactions of
the Royal Society of Edinburgh*.

133 line; and there can be no doubt of the contrast found at
131 the extremes. How strikingly different from any view
over the English Plain is this, from the air or a mountain-
top! It overlooks the ice-scraped rock of the fells; the
drift-heaped, ill-drained hollows studded with gleaming
lochs and deeply overgrown with peat; and the indented,
insular coastline with its widely spaced crofting townships
looking seaward, where a few fishers' sails may dot the
161 vast expanse of ocean. In 1951 the population of Lewis-
162 and-Harris numbered only 28,000 persons, and that of the
entire Outer Hebrides some 36,000; but the small num-
182 bers need not lessen the geographical significance of the
community.
18 Men have long recognised the homogeneity of the
English 'Plain', with its recurring vale and wold, compact
within a rounded coastline. In spite of the local variety
of landscape, history or dialect, which enriched its heritage
and compose its grandeur and charm, men have sensed the
unity inherent in this land of a single tongue, centred upon
a single capital. By contrast, the diversities in landscape,
life and tongues of the lands far-flung to north and west
have obscured the elements of a profound, underlying
unity in geographic origins and in historic and social
(121) evolution. To understand the civilisation of the British
Isles, it is vital first to perceive the complementary qualities
found in the two great regions, and face their corresponding
• [178] weaknesses or limitations. Second, within the less under-
stood of the two regions, 'the North and West', it is vital
to study the almost bewildering variety in regional types
of life—distinguishing, for instance, the uprooted popu-
lations all too typical of the rural Lowlands of Scotland
or Northumberland from the still deep-rooted communi-
ties of the Highlands and Isles.

121 From prehistory to the present day, these geographic
• 178 zones have played their parts as factors in evolution,
although the border-lines have changed at different historic
178 crises, and have been modified by economic and social
182 phase. At times the Hebrides have been more closely
184 linked to Ulster or to Norway than to Central Scotland.
In viewing these zones, we shall not find simultaneity in
historic events, but comparability in stage and transition,
even at differing periods. From the evolutionary point of
view, the revealing character of Island life lies not only in
static survivals, in what Sir Arthur Mitchell found in the
Isles and vividly described as "the Past in the Present",
Island life is characterised still more by the dynamic
strength of its continuity—notably of early or primitive
Christianity—and also by the late occurrence of changes
when, at last, they came.
18 The social consequences of these regional differences
in evolution are profound. In the 'Plain', to the south-
62 east of the Severn-Tees line, large village communities
174 with 'common fields' prevailed, forming the later manor
[173] villages. To the north and west, the more varied, hillier
[197] lands encouraged the continuance of hamlets. These
hamlets housed close-knit groups of families, often of no
more than four or five to a dozen relations or 'friends'—
—in Scots even today (much as in Gaelic) the word
'friend' frequently implies kinship. Each small group
[462] formed a team. Together the men ploughed their mingled
476 rigs (or ridges) and herded their stock in common, and
[247] on the coast they rowed their boat as its crew. The
[286] women, too, did much together, as when they spun their
[423] yarn, and fulled or 'waulked' the cloth that one of them
had woven, helping by turn in childbirth and child-care.
Usually several of these teams were linked in a larger

18 pastoral group, the germ (in the Hebrides) of the present
62 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
[423] These 'sociable hamlets', or 'little commonwealths', as
they were called by understanding writers on the High-
lands, lived on in the Hebrides almost until a century ago.
Features of their form and life have long been known, but
their life has not yet been envisaged in its full dynamic
significance.
127 The homesteads, informally grouped in these small
361 hamlets, have been mistakenly described as solitary or
174 'dispersed' by scholars accustomed to larger and more
compact grouping. The mistake was made by geographers
of the nineteenth century, such as Meitzen with reference
[173] to the hamlets of Brittany. Similarly, because of the
[476] small number composing a typical joint team, the vital
fact of team-work and joint holding has frequently been
overlooked; yet a fundamental mistake is made when such
close-knit team-work and joint tenure are described as
174 'individualistic'. Moreover, these teams were linked to-
62 gether in larger, more loosely bound pastoral communities
63 of township and district. In Scotland and elsewhere, it is
true, such hamlets came historically to be split up in various
[241] ways, into smaller farms and scattered cottages. The
larger link of common life was also superseded by the
• [178] proprietor's estate. Indeed, the twofold revolution in-
volved caused a fundamental regional cleavage within 'the
North and West'.
[182] Partly as a result of their small size, the tenure of farm-
[184] hamlets was frequently informal. In northern England,
the hamlets and their lands were not entered in Domesday
Book; still less are early entries complete in Scotland.
[178] For this and other reasons, jurist and historian may fail

to notice the absorption or suppression of rights held in common in 'the North and West', together with the abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the former existence of common rights and fellowship duties, the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

Indeed, the profound character of that revolution makes it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the long succession from father to son, found from end to end of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago. And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

Comparisons at the present day are most illuminating. In the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively recent divergence in religion is marked. Such Island evidence, present and past, forces one to re-examine conclusions upon life in the Lowlands accepted until recently, and to seek for the truth upon earlier forms of life in common and for their meaning today throughout 'the North and West'.

Ancient elements of unity, and later ways in which these were broken, adapted or remade, region by region, are being unravelled. The Old Estate Plans, made at the outset of the agricultural revolution, show these immediately before the re-planning of fields and farms (*circa* 1750–90). These plans also reveal the existence of still earlier types, not otherwise recognisable even on the spot. With their rentals (when available) they reveal the ways in which old joint farms were placed under a single tenant, as in Lothian, or were split up among several tenants, as in Ayrshire.[1] From such geographical data, both the economic and the deeper social aspects of rural life emerge with new clarity. Such data may be linked to Planning Surveys of land and rural life for tomorrow.

Now, although so fundamentally equalitarian within themselves, these hamlet communities of the Gael were subjected to the overlordship of a chief or laird, either directly or through an intermediate gentleman-tenant, a 'tacksman'. History, with archaeology read in history's

[1] For Lothian, see Arthur Geddes (1938 and 1951); for Ayrshire, see J. H. G. Lebon, *Scot. Geog. Mag.*, Vols. 62, 1945 (pp. 7-13); 63, 1946 (pp. 100-110). Further references in Bibliography.

democratic reorganisation, with loyalty to one's fellows and to a leader.

Here again, Lewis-and-Harris may have something to teach, as one of the last communities in Britain in which much of ancient common right over land and sea has been upheld. Trust ownership of Stornoway estate has strengthened the possibilities of rural planning there, while the fisheries are a public resource which are partially protected for local fishermen inshore and farther out are closed to none. The useful Lewis Association has published models of local survey for social and economic planning. At a time when democracy is struggling to see its way towards economic and social freedom, such communal initiatives have more than local significance.

This sketch of comparisons and questions in rural life raised by Hebridean evidence, through a wide and varied region of the British Isles, must serve to indicate the geographic setting of the Island and relate the historic and contemporary problems of its own community to wider fields. This book is not directly concerned with the urban and industrial problems of the firth-sides and 'included plains' within the varied land of 'the North and West' of Britain, deeply though they affect the hard-hit fishermen of the Isles and the Island migrants—seamen or labourers, tradesmen or factory workers, nurses, teachers or clergy. Even for the migrants' sake, it is vital to maintain the economic balance, and restore the cultural and spiritual life within each industrial region, in order to maintain that of Britain as a whole. It was not enough to schedule 'the murdered towns' of Tyneside, Wales, Lancashire or Clydeside as 'Distressed', 'Special or Development Areas'. The balance of Britain as a whole must be restored.

cannot be changed, as for the future which can—lies in the intensity of its communal traditions, extinguished elsewhere. Much has gone—many of the fishing crews are disbanded and team-work has weakened—but much lives on, and much has been learned. The Gaels have still to make their full offering to English-speaking civilisation. To do so, they must find their own fulfilment within the framework of the Highlands of Scotland.[1]

2. *Scottish Crofts, Farms and Labour-teams: the Rural Unit Today*

When, in thinking of Scots countrymen, we differentiate between the men of the Highlands and Isles, the Lowlands and the Borders, what stamp of occupation, society and economic class best characterises the three regional types? The differences we note between them are due not only to their place of birth and region, but to their occupational discipline and social ways. Imagine, for example, a Gael, a Lowlander and a Borderer, all three of whom follow the same calling—say, a trio of farmers, of shepherds or farm servants, or of independent, full-time small-holders. When brought together each trio would find they shared similar interests and aims in their work, and all that follows from it. In fact, they might have more in common than three Gaelic-speaking men who differed from one another in vocation, although, as Gaels, the latter group would find a bond in culture and kinship. But a fourth type of Scot, the crofter of the North-west townships with whom this book is concerned, would stand out, distinctively, from any other, whether his home were Zetland or the Hebrides. Thus not only their home or region differentiates Scots countrymen, but their calling or class; and their families

[1] A. Geddes and F. D. N. Spaven, *The Highlands and Isles* (1949).

the township; and to each were allotted the rights of the common grazing and the fishing grounds. For more than a century the croft has been held individually, though in the townships the common grazing is still held in common. Beyond these 'homely' limits lie wider horizons, in the past those of seafaring and of droving or the chase, and today of fishing and gillieing at home, or of ocean journeys, urban occupations or colonisation.

In the Lowland regions each symbol represents 100 holdings. For (A)$_{16}$ 'mixed and dairy farming', the particular type of symbol shows the average number of workers employed on a farm-holding in each county. On each farm the employed workers form what may be called the 'Labour-Team'. A team may be 'small', 'medium' or 'large'. The Scottish averages of these three types (indicated in the inset key to the map) are roughly three, five and seven workers per team. Four 'casual' workers are counted as equivalent to one 'permanent' worker, but farmers' wives are excluded. Under (B), for the same Lowland counties and areas, full-time small-holdings are shown separately. The Scottish average of less than one full-time worker employed, most often a son or daughter of the small-holder, is typical of all the counties.

As to the relative importance of the different classes of farms and small-holdings in Scotland, true agricultural land-holders number 68,000, of which fully one-third hold part-time holdings (like the Island crofters), one-third 'full-time farms', and rather fewer (one-fifth) hold 'full-time small-holdings'. The remainder accounts for other types of less importance. The farms predominate in terms of improved land, full-time employment, and of course of production. As to area, farms cover 80 per cent of agricultural land. The farmers employ nearly 90,000 workers,

[1] A [refer to map p. 16 -- analyst]

with its tied cottages and frequently a 'bothy' for the unmarried. Next to this comes the full-time small-holding, important in the North-east and the Southern Highlands of Scotland. Great as are the differences between these types of unit today, they go back, to a considerable extent, to common origins. The sites of the farms are ancient. And their people, though since divided into masters and men, are the successors to those who were once the 'kindly co-operators' of older 'farm groups', of Lowland *ferm-toun* and Gaelic *baile* (pronounced like 'ballie'). The island counterpart of these, and their life, will be described in Part Two. Hence, before we turn to further analysis of the Highlands and Isles, a word more should be said of Lowland types.

An important social index in the Lowlands of Scotland is the number composing the farm labour-team, averaged for each county. Villages and even hamlets are few, largely because farmers and farm servants live on the farms. Compared to those of most of England, Scots labour-teams are small. Yet, as the map indicates, there is a wide range from the 'large' teams of South-east Scotland, through the 'medium' teams of adjacent areas, to the 'small' teams of the West and North-east. Not only do the contacts of employer with employees partly depend upon the number in the team, but so do the farm servants' relations to one another. On the whole, the larger the team, the more formal its organisation; and the smaller the team, the greater a worker's own responsibility. The 'family farmer' of the West and North-east is often an ex-farm servant. From Burns's time, his character and enterprise have been recognised in Scotland, and in the last forty years have become well known in South-east England. But the isolation of these little farms brought its problems and its hardships.

Lewis and Harris

going concern to a trust which was set up to receive the gift and whose first object is to assist aged and infirm residents in the burgh. In effect, all profits earned by the shop are passed to the trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local authority. The Town Council has never been afraid of rooting out unfit houses. By 1937, under the 1930 Slum Clearance Act, one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed areas of other towns and cities. The Council also supports private housing by taking up sites, clearing and servicing them and then feuing them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100 per cent. A vigorous housing policy is important to the town, as its population is now over 5,300 and still growing, mainly at the expense of the rural areas. Development plans at present envisage a 1981 population of about 9,100 persons within the parish boundary and including the burgh.

Stornoway is an island town and is an island's town: its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban outlook. In this context, Gaelic is the language, though English is the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

Apart from its industrial opportunities, Stornoway has many of the more sophisticated urban facilities that people everywhere seem to crave, particularly with regard to education. The senior

A HARRIS VIGNETTE

vision of adequate educational facilities in remote spots becomes increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size. The last of the native Scarp population left the island in November 1971 : two families totalling seven people. The island has now attracted the attentions of a hippie community.

Scalpay

Scalpay Island, on the east side of Harris, was formerly occupied by two or three tacksmen in succession before being 'crofted out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some subdivision of the available land. The 1861 population was 388, but the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

Island Scalpay is in fact one of the few places in the Highlands and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its smallness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours. Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-three boats, twelve of which are ringnetters of over 40 ft. Native enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

10 THE OTHER ISLANDS

361 162 175 178 182 THE continued evacuation of islands is a problem peculiar to Scotland. In the eighteenth century some 8 per cent of Scots lived on islands; today the figure is less than 2 per cent. Island populations today account for about 30 per cent of the total Highland (crofting counties) population. The difficulty for most islands is the relationship between population density and potential for economic development.

As though reflecting the relationship of man to man on Lewis-with-Harris—keeping together in community for survival—the other islands round the larger island mass have played some role at one time or another in recorded history. Most of the socially-significant islands of Harris have been described in Chapter 9. Lewis has very few, and these are mostly far-flung oceanic outliers.

North Rona

133 131 To begin at the northern point of the Lewis parish, about 45 miles NNE of the Butt of Lewis is North Rona, a block of horne-blende schist with pegmatite intrusions. Though the island has [361] never figured in any Census reports, since the Census began, it has been inhabited from time to time. Of about 300 acres in extent, it is cliff-bound and reaches 355 ft at its highest point. It lies in a part of the Atlantic where a deep swell seems perpetual, and landings can be difficult.

361 175 Dean Monro comments: 'Towards the north northeist from Lewis, three score myles of sea, lyes and little ile callit Roney, laiche maine land, inhabit and manurit be simple people, scant of ony religione.' The Dean's 'simple people' were no recent settlers. They were in fact the continuation of a community which had inhabited North Rona for at least 700 years previously. Tradition has it that the first inhabitant was St Ronan, who built a [712] small monastic cell or hermitage there some time during the eighth century, but there may have been earlier inhabitants.

361 162 *175 [262] [427] The flesh of puffins, gannets and fulmars was the staple diet of the St Kildans; the oil and feathers were the vital exports that paid the island rent to MacLeod of Harris, the owner of the group. These exports also helped to pay for the purchase of such foodstuffs as salt, sugar and tea, and other items which the island could not itself supply. The St Kildans owned some hundreds of sheep, the wool being spun and woven into [236] tweed, and a few cattle were also kept. But the seabirds were the foundation of the island economy.

The factor which led ultimately to the desertion of the island group was isolation. The community there was throughout its history undoubtedly the most isolated in the British Isles, though until the present century this mattered little to the St Kildans. All that was deemed necessary for the continuation of the com- [438] munity was that, once a year, MacLeod of Harris should send his factor over from Skye to collect the island goods that were to be sold, and to bring with him those provisions which would see them through another twelvemonth. However, as the demand for • [178] the island's products declined, communications became more im- [464] portant: to support the family a man had to leave to find work on the Scottish mainland. Large-scale emigration began in 1852 [167] when thirty-six islanders (with State aid) left for Australia. Island life was punctuated by loss of life; boating disasters and cliff-falls in particular deprived the community of the vital male elements needed for survival. Tetanus infantus, known on St Kilda as the [164] 'eight-days' sickness', strangled two of every three babies born; [165] this disease ravaged the island for almost a century and again struck harder at the male sex. About 1810 the population was about 200, a definite overcrowding. By 1861 it had fallen to 78; in 1911 it was 80, and in 1921, 73. A decade later it was nil.

484 361 *175 Isolation tended to make the St Kildans a human menagerie. With the improvement in boat services, St Kilda became a 'must' on tourist itineraries. The tourist trade took on an economic importance for the population after July 1877, when the *Dunera Castle* steamed north and west for a voyage to the 'romantic Western Isles and lone St Kilda'. The steamers continued to call throughout the three summer months annually for sixty years, their passengers eager to buy souvenirs: tweed, quern stones, spinning wheels, stuffed birds and eggs; indeed, anything to remind them,

and to show their friends at home, that they had braved the 484 hazardous Atlantic seas to visit St Kilda on the very edge of the 361 world. The tourists were charitable, but this brought a psycho- 175* logical evil in its wake. In 1886, Robert Connel wrote: 'One [155] cannot be long on the island without discovering the great moral injury that tourists and sentimentalists and yachtsmen, with pocketsful of money, are working upon a kindly and simple people.' It was estimated that the islanders collectively derived a [434] profit of 5s from each of the 200 or more tourists who arrived during the short summer.

The new influx of cash into a community which required 436 money as an exchange commodity because the original native 178 • produce was becoming less saleable, hastened the decline of effort to be self-supporting. The numbers of seabirds slaughtered [232] steadily fell; paraffin oil replaced the traditional bird oil in St [364] Kildan lamps. The need for daily work, to toil in fellowship with [461] others, was dissipated; the islanders could purchase most of the food they required, provided communications with the mainland were maintained. The population was in any case dwindling, as [161] St Kildans became more aware of 'the other life' available on the mainland of Britain.

Finally, on a misty summer's day in August 1930, at a cost to 166 the nation of little under £1,000, St Kilda was left to the care and keeping of the changeless Atlantic. It is now preserved by the National Trust for Scotland as a crumbling monument to a small human tragedy of a kind that has been repeated, and will be repeated, in other small communities who cannot argue out the case for their survival in terms of economic viability. The island [712] is now occupied by military personnel in connection with the Hebridean rocket range on South Uist.

St Kildans were described by Dean Monro, in 1549, as 'simple, 175* poor folk, scarece learned in any religion'. In 1698, Martin Martin 181 published *A Late Voyage to St Kilda*. He went there in the company of a minister who had been summoned to the island to denounce a certain false prophet who had risen among the 180 inhabitants (pretending he was an emissary of St John the Baptist). Martin found, as did later visitors, that the island economy [825] and the quality of its life were closely dependent upon its birds,

LIFE TODAY

LIFE TODAY

As in other Highland areas, some of the island's problems have 114
become so deeply entrenched as to be intractable. They have been
the *raison d'être* of so many commissions and committees of in-
quiry that their existence is now almost forgotten by the islander
—if indeed he ever understood their nature. Some results have [671]
been seen, such as the Crofters Act of 1886 which gave High- [175] *
land crofters security of tenure, perhaps the most valuable [429]
measure of the last century or two. But somehow all things have
not progressed so well since that date; at any rate not so fast that
crofting, for instance, is now seen to be an economic form of
land use of benefit to both local community and nation at large.
Many problems have been virtually ignored by successive central 657
Governments; at least, remoteness seems to qualify a topic for
the office 'pending' tray. It has yet to be fully realised that the
island, with other Highland communities, is part and parcel of
the area generally administered from London and Edinburgh,
and merits as much attention to its welfare as other European
governments, such as Norway, give to their remote mainland and
island communities.

As usual, charity and self-help begin at home, and one of the 178 •
most dramatic changes in island life has been the result of the [241]
agricultural revolution of recent years which is changing once-
brown moors to lush green pastures: reclamation by re-seeding.
This revolution is still going on. Lewis crofters in particular are
showing the way, with other Highland crofting areas following
suit. The change in the Lewis scene is being emphasised by the [245]
planting of shelter-belts of hardy trees and the first of the new [313]
plantations of timber-producing trees. These show the promise of
the future: a lively future for a lively community. The fishing in- [228]
dustry also has a future, brighter on the horizon than it has been
for many a poor year. The Harris Tweed industry, the staple em- [288]
ployment-source in Lewis, is maintaining its ability to retain the
interest of the market. And tourism, once a perfunctory and [484]
casual affair, promises to emerge as a useful sector in the
economy. There are, in addition, many small pockets of native
initiative and enterprise which, given sufficient encouragement

ISLAND LIFE

• 178 and practical support, could win through to make marks on the island scene.

185 A significant event occurred in 1964: the establishment of
654 the Highlands & Islands Development Board. This was Britain's
433 first regional development authority run by members who are
either full- or part-time. The Board is grant-aided and has two
broad functions: to improve the social and economic condition
of the Highland people and assist in making the region more
significant in a national context. The Board's attention in the
Western Isles has been concentrated in the expansion of the
[184] fishing industry and the development of tourism. In both these
[505] fields there has been a considerable success: upwards of 100,000
visitors per annum visit the islands; and a fleet of over thirty
boats, equipped with the latest gear, operate out of Stornoway.

433 Also in 1964 was produced the Development Plan for the
County of Ross & Cromarty. So far as Lewis was concerned, the
185 Plan was based on an average decrease in population of some
[167] 1,500 persons for every year in the future of the island. This, if
carried to its logical conclusion, will see complete desertion in
fifteen years or so! However, even if nothing further is done to
halt emigration, particularly in the landward areas of the island,
the population will remain around a stable 15,000. The
County Development Plan contains much food for thought, but
as with most county plans, does not indicate actual development
projects. Rather, it lists all the resources of the island for the
attention of those concerned. Potential developments include the
setting up and exploitation of predominantly-fulltime crofts,
shell-fishing, and inshore white fishing, herring and offshore white
fishing, forestry, tourism and holiday accommodation, minerals,
peat utilisation, hill-land improvement, marine reclamation and
seaweed resources. This list is significant and merits the attention
of the Highlands & Islands Development Board.

Harris, on the other hand, presents possibilities on a much
smaller and limited scale. However, there are expansion potentials
in tweed, knitwear, and craft industries, with tourism promising
to be a good base for the island's economy. As the age-structure
of the crofting population changes, there will be a useful re-
organisation and enlargement of existing holdings to make for

• 178
668

[For information on the Reformation and its effect upon the church in Scotland, see category 798, pp. 193-198.]

174 The historical aspect of these regional facts is extremely
184 significant to the evolution of Scots social life, and to
179 developments of Presbyterian worship led by Elders in
55 ferm-toun and Kirk; although suggested by comparisons
178 throughout this book, they have still to be seriously followed
121 out. As to the future, regrouping of our somewhat
185 scattered agricultural population has been strongly urged in planning for post-war housing and community life. But sound planning must be based on survey, long overdue; though elementary, this key map appears to be the first of its kind for Scotland (Fig. 2). It is from these units of farm-team and township that Scots rural society must be rebuilt, region by region.

184 One further contrast between the farming and the
241 crofting communities demands attention: it lies in the
361 types of migration—one is tempted to say, of semi-
166 nomadism. Crofters, though they move to and from their croft and township—to the city, the sea, or the New World—return home to their native township when they can, and to no other. Many farm servants, on the other hand, though they usually spend their lives in the county or region of their birth, have been on the move from farm to farm, year after year. What is true of Lowland Scotland seems rather true of North-east England, but not of 'the
(464) English Plain'. Unmarried Scots farm servants were hired for the half-year, and frequently moved after each new hiring, the married once a year. Families were annually uprooted—if indeed they could be said to strike root at all!
[922] The war-time 'Standstill' Order for Scotland began to
[178] check this migratory life; but its effects remain. Hence many men have few ties, their wives still fewer. The children could not grow up with their schoolmates: they could look back to no "Auld Lang Syne", of which the

i [see p. 16 -- analyst]

verses would ring false to them! Before 1939, two-fifths of the rural pupils of most non-crofting counties came or went in the school year—most of them the children of farm servants. Their schooling suffered, and their teachers might be reduced to despair; indeed it is to educationists, rather than to agriculturists, that we owe a survey of these facts. When they leave home to be 'hired', the young folk learn to fend for themselves but may suffer in the learning: stability of character and endurance in attachment are hard to form.

It would be difficult to overstress the tragedy of the long-continued break-up of rural communities in the Lowlands. From the later years of the English invasions, as when Major wrote with his knowledge of Scotland in 1500, this break-up continued through the early, largely unrecorded phases of the agricultural revolution, down to the later phases from 1750 or 1800 to the present day. No one who has worked with fellow-servants on Scots farms will under-estimate their sterling qualities. But the break-up, the tragedy, happened. It was boldly sketched by the Rt. Hon. Thomas Johnston (to 1929) and verified by Miss I. F. Grant (1924 onward). Beginning from intimate study of well recorded and surviving ways in the Highlands and the Hebrides, Miss Grant realised the significance of earlier Lowland life in the farm-hamlet or ferm-toun, as Lowlanders themselves could hardly have done. Comprehension of this break-up of community brings out the value of the enduring elements of communal life still recorded, remembered and surviving in the 'Outermost' Hebrides, at the core of 'the North and West'.[1]

[1] Ideas outlined in this section are developed in A. Geddes (1938–54). Detailed references will be found in the Bibliography.

3. *The Significance of Lewis-and-Harris*

181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
101 from the Lowlands—the other mainly of farming, living
[197] nearer to the Lowlands and in touch with them. Through-
[178] out the North-west, Gaelic is still the common speech, even of the children. The old community feeling is strong; it is that, indeed, which keeps the people attached to the villages.

101 From the plains and cities of the South it is a far cry
131 to *Ultima Thule*, as Lewis, like Zetland, is sometimes called even by its own people. Lying some twenty-five to thirty miles across the Minch from the mainland, its nearest links
[496] with the South lie even farther away. From Stornoway it is some seventy-five miles to Kyle of Lochalsh, the railhead for Inverness and North-east Scotland, and 100 miles to Mallaig, the railhead for Fort William and Glasgow. To reach Stornoway over the moors from the west coast
[504] townships is itself a journey. Stornoway is the Island's only port, though passengers are put off at Tarbert, at
[177] Stockinish and at Rodel in Harris. Isolation has always been a dominant factor in the Island's life. From pre-
[178] history through the Middle Ages to modern times, that factor played its changing part.

178 In Lewis, conditions had changed less than elsewhere during the last century; for example, the *New Statistical Account* of South-west Argyll in 1830-35 reads like a description of conditions in Lewis as they were until after 1914! Hence, as already said, the contrasts are very great indeed in the aspect of the country, its fields and houses, and in the number, character and ways of the people. It

178 follows that as the descendants of the crofters of the South-
west and East Highlands could and did change their ways within the space of a lifetime, so those of the North-west
114 Highlands and the Isles can change too. Given the co-
178 operative leadership which is arising in the twentieth century and was totally lacking in the ideals and training
185 typical of the nineteenth, that change may be not only for the better in the development of 'individual' qualities, such as the power to do hard work for 'success'; change may also maintain and develop what still remains of the old characteristics which gave the community life of the Gael, with all its faults, elements of beauty and sanctity.

In an article on "The Human Geography of Lewis", A. Stevens (1925) described the Island and people. His comparison of the cold, wet 'desert' of Lewis and its corn-patch 'oases' with the desert of heat and drought
[182] and its oases of palms, is ingenious and suggestive. One
[241] might follow up the analogy and compare irrigation to the drainage of moorland and its fertilisation, which form the means of reclamation at home, and draw parallels between their immediate results on the land and the ultimate effects on work and social life.

174 Until the agricultural revolution, the unwritten story
241 of Scotland was in great part that of a long, uneven struggle
134 to make sour soils fit for cultivation and productive of a livelihood. Most of all is this true for North-west Scot-
178 land; moreover, there, for eighty years past, the struggle has been a losing one, in the sense that arable land has been
241 decreasing and rough pasture deteriorating. In spite of
134 subsidies, the 'marginal farms' of Scotland have a tough fight. Yet lands from Scandinavia to Finland and North
178 Germany are giving a lead in peat-reclamation, where
[654]

241 Scotland had begun to lag since her pioneering ef
134 1750 to 1880.

178 Fortunately, Scotland is now recognising tha
[654] reclamation, on the one hand, and the improv
rough grazing, or at least its maintenance, on t
[185] there lies a problem of national importance. M

Hebrides has the sanction of traditional usage, as Alexander
noted in his Introduction to *Carmina Gadelica* (vol. i, 1900; an

38 Geddes K-4.5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

Before the making of roads, it was ease of sailing which united island peoples and their territories. One can wade or drive, at low tide, over the fords that unite the Isle of Benbecula with the two Uists, North and South: in fact, a bridge now connects Benbecula with South Uist. But only the roughest of hill tracks led through the hills of North Harris from the 'Tarbert' or Isthmus of Harris to the nearest habitation at the head of Loch Seaforth or Loch Erisort, in the Lews. This is a distance of some twenty miles, or a fair day's tramp for an unloaded man, and far too much for a return journey in one day. Hence separation of territory and name was natural. This separation no longer exists as there is now a good 'bus service from Rodel via Tarbert to Stornoway which links Harris with the daily Kyle to Stornoway steamer. In this book, the Island, or the Islanders, refers to Lewis-and-Harris with its people, as one.

Lewis is included in Ross-shire (of which the county town is Dingwall, north of Inverness) and Harris in Inverness-shire, together with the rest of the 'Long Island'. The county boundary cuts across the six-mile isthmus north of the hills of North Harris, from the in-reaching Loch Seaforth WNW. to Loch Resort (Fig. 8). All the Outer Hebrides are now included in the Parliamentary constituency of the Western Isles. Proposals to unite the Island under one District Council, or the Outer Hebrides under one County Council, are more favourably viewed in Stornoway than in Harris or the Southern Isles. Harris forms one civil parish, while Lewis is divided into four: Stornoway, Barvas, Uig and Lochs. The Lewis parish boundaries traversing the moors are inset in Fig. 8 so that their trends can be readily grasped, and the inhabited portions of the parishes quickly located (p. 50).

these communities of 'fisher-crofters' settled at the meeting of sea and land, yet differences of topography and situation are still accompanied by differences of emphasis in their dual way of life. Although insularity might lead one to presuppose homogeneity, actually the seaways by which an island may be reached may bring groups of different race to land at different spots, each spot appropriate to their way of life. Differing social economies may develop there, and differences of race may be maintained; divergences are found along with the convergence due to the elements common to the whole island and to its history. From prehistory to the coming of Leverhulme we shall find this crossing of influences in the Island microcosm, the Island drama.

2. *Structure and Rock-types of the Western Highlands and Isles*

In Fig. 3 are sketched those features of structure and rock-type which have guided the work of ages of erosion, influencing both the 'plan' and coastlines of Western Scotland and the surfaces and scenery of the land. In their turn, both surface and mineral composition have influenced the life of plants and animals. This sketch map should be compared to an atlas map of relief, settlements and routes. This less familiar aspect has been selected both because rock-type is a factor in the causation of land-forms and soils, and because rock structure is basic to the forms and coasts of the mainland and the Isles.

The parallelism of the main trends on either side of the Minch is seen in the structural boundaries of its coasts, which are of Archaean rock or Archaean foundation (A on Fig. 3), as are Coll and Tiree, and South-west Islay.

133 most northerly outlier, yet, in the main, one is struck
not by the variety of rocks (except for the 'Stornoway
Beds') but by their homogeneity. It is structure, causing
the uplift of certain masses relatively to others, more than
differences in rock-type, which has guided the work of
erosion, in sculpturing both the Island's plan and the
details of its forms. Submergence of the land has fretted
the coastline into a zigzag line of ridge-capes alternating
with valley-mouths flooded or 'drowned' by the sea, as
inlet and loch.

316 Historically the gneisses were of little value. The fact
[174] that they tend to split still helps the Islander in building,
as it helped his ancestors when they raised the great stone
[172] circles at Callanish on East Loch Roag. Except where
they are very basic (non-acid) in composition, they make
[135] poor road metal. Yet the gneisses are not quite devoid
of economic minerals, which include masses of pegmatite,
and the only large body of anorthosite or lime-feldspar
[439] rock in Britain, conceivably a source of alumina for glass
manufacture.[2] Two feldspar quarries opened at Lingarbay
and Northton in South Harris in 1941 employed sixty men
during the war, the material being despatched from Loverburgh for use in the Staffordshire Potteries in the manu-
• [178] facture of porcelain insulators. The higher grade mineral
in Scandinavia and the better transport facilities there led
to closing the quarries, with little hope of their reopening.[3]

4. *Land-forms and Sea Floor*

133 To the faulted structure is due not only the Island
plan, but the highland in middle and south, uplifted rela-

133 clay is exposed, leaving what is vividly called 'skinned'
314 land. And where drift is exposed, the mineral constituents
134 are leached out, and a hard 'moor pan' is left a few inches
[352] below the surface.

Seen from the edge of the crofts, the typical 'skinned
134 lands' of bare, blue or brownish clay, littered with stones,
131 suggest a desert. Often, only a few blades of grass or tufts
of heather grow on them. Indeed, 'skinned land' seems
at first too mild a term, for on it the stones—thickest on
top when undisturbed, and bleached by the acids of the
peat that overlay them—suggest the prophet's 'field of
bones'. One can only ask, is the rest of his vision ever
to be fulfilled and life to spring again? In some hilly parts
to south and west, not only the 'skin', the topmost layer
of peat, but the very soil, the flesh as it were, is still being
[144] stripped bare to the bone, the actual rock. The evacuation
of the inlet of Bernera Beag (Uig) was largely due to this
stripping. In the more level parts to the north, however,
roadside pits show sections of clay with few stones, covered
with perhaps six inches of clay with many stones. It is
this top layer which gives the skinned land such a hopelessly
stony appearance, and shows that reclamation is less
miraculous than it seems.

134 With the coming of carts and lorries the increasing use
of shell sand has become possible, whether for spreading
242 on the land or for slipping into pockets, together with
• [178] fertilizers, for potato seed. As to soils, shell sand and
[493] boulder clay possess complementary qualities in texture
and chemical composition. The shell sand of the machars
provided an early home for man, the light soil allowing
rye, a poor variety of oats, and herbage, to ripen early
and mature in late, wet seasons when the clays are sodden
with rain. Yet the sand itself is so light that drought is

175 reclamation, which Dean Monro has described as he saw it.
311 Technique and economic return must be balanced against
185 the factors of nature. Although natural conditions are
[182] difficult, they may not form a complete explanation of the
relative arrest of reclamation in the nineteenth century;
for here separation from the agricultural advances of the
Lowlands by barriers of mountain and sea caused the re-
tention of unprogressive methods until the wave of agri-
cultural improvement had spent itself by the middle of
• [178] last century. To this cause must be added other influences
[171] contrasted to those leading to peasant advance in the rest of
Western Europe: the political history of the Gaeldom
after 1745, the revolution in land tenure and in the social
life of the upper classes, the commercial, industrial and
imperial development of Great Britain. All these factors
help to explain the contrast offered to the Lews by western
Denmark and western Norway, lands in which the soil
and climate are comparable to those of the Island. Yet
reclamation is proceeding, as on skinned land at Ness,
where plots of ground have been steadily broken in by
pick and by spade or plough.

226 Settlement and agricultural land are placed around
[361] the coasts with their fishing grounds. In spite of what
311 was often said—that the Lewisman is and has always been
[241] primarily a fisherman—fishing alone is not enough to
account for this distribution, for the agricultural conditions
on the whole are also best along the coasts, or were so for
early settlers. As Stevens remarked, the light sandy
'machar' lands are there, and the fringe of partially im-
proved soil close by; drainage is, on the whole, better,
while shell-sand and sea-ware are to be had for manure.
241 The sea-ware also serves still as fodder, while one or two
824 sorts are sometimes cooked for human food; carragheen

103 Harris; South Harris is ringed by a road, extended
639 recently to take in the more isolated 'Bays' townships.

2. *The Crofts and Crofting Ways*

241 The prevailing modern unit of cultivation and tenure
in the Islands is the croft, the land held individually by
each small landholder or 'crofter'. The Anglo-Scottish
term croft (Gaelicised as *croit*) meant steadily cropped,
infield land, manured and never left fallow, and distin-
guished from the unmanured outfield with its long fallows
[175] and poor out-turn. This term came into common use in
the Highlands and Isles in the eighteenth and nineteenth
[827] centuries with the splitting up of the older unit of cultiva-
tion and tenure, the small joint farm, with its little team of
[423] fellow-workers or 'small tenants'. By 1830 group tenure
had been replaced by individual holding of crofts, but with
the pasture still held in common, as it is to the present day,
and an allotted strip of the machar.

The Lewis croft consists of a nominal five acres of
crops, of oats, barley (or bere) and potatoes, sometimes
with recent additions of turnips, and more often a small
175 hay crop. The word 'nominal' is used because during
426 the nineteenth century the croft had often been subdivided
between two or more sons, without addition by reclamation
to bring each subdivision up to the acreage of the original
croft. Moreover, in the hilly southern part of the Island,
cultivation is in little patches instead of in continuous fields.
There, narrow ditches have been dug and the soil heaped
up to form little ridges about ten feet by four, banked up
• [178] by turf. These are known as *feannagan* in Gaelic, or in
English, 'lazy-beds'—a term in use as early as the time
of Burt, two hundred years ago. Thus only about two-

241 thirds of an area nominally under crops actually grows
them. It need hardly be said that such crofts do not
support a family.

The means of cultivation have been either pony-drawn
ploughs in the smoother north, or else the foot-plough
[407] (*cas chrom*), and the straight spade in the hilly south. I saw
the almost obsolete foot-plough used on hilly ground near
Rodel, Harris, in 1919. In the smoother lands from Stornoway and Barvas northward, however, the crofts then were
already laid out in parallel strips, no more than twelve to
fifteen feet wide, divided by open drains. Open drains have
increasingly been converted into underground drains over
which pony and plough can pass. The cattle feed on the
rough pasture or on the grass about the crofts, supple-
mented by hay cut with a sickle from the grassy edges of
• [178] the 'lazy-beds'. Quite recently, rotation grass has been
[407] grown on the arable strips, and mown for hay by the scythe.
Tractors were introduced in war-time, in 1942.

233 In many of the villages, cattle are still taken to the
221 summer pastures out on the moors some miles from the
311 crofts. Those who herd the cattle live in huts or shiel-
ings, annually re-roofed. In the congested 'Point dis-
trict' (the Eye Peninsula), the cattle must go to the moor
on the main island, or be taken on to their owners' crofts
from late May or early June to about the 10th of August,
in order to clear the common grazing and allow the grass
to recover. This migration takes place, of course, because
233 of the restricted area of common pasture. On the other
311 hand, pasture is plentiful in the parish of Lochs, lying all
round some of the villages, and here the use of the shieling
has been practically abandoned. In almost all villages,
with the exception of those of the Eye Peninsula, there is
less summer pasturing than formerly; fewer cattle are sent

233 away, and for a shorter period. The sheep wander over
311 the moors all the year round, though they hang about the
crofts when the winter is severe.

221 A comparison with mountainous Norway or the Alps
132 and their high summer pastures suggests itself; but in
171 Lewis altitude is almost negligible, and the shielings may
lie only two to five hundred feet above that of the crofts
133 beside the shore. The difference between winter and
311 summer is in any case less, snow being rare and the condi-
tions being such that even in summer the shieling pasture
remains poor. Hence it is that while modern Norse and
Alpine economy still maintain the summer pasture, the
shielings have died out in the Highlands and are slowly
decaying in Lewis. Seasonally, stock are transported over
longer distances, from Highland to Lowland pastures.

181 Reasons for the continuance of these and other crofting
• [178] ways, or for their abandonment, are not of an economic
[461] order alone: not only the remuneration received for labour,
but the feeling for the work counts enormously. Visiting
a couple of distant shielings in the summer of 1919, I
found that two lads newly home from the Navy had come
up from their village 'for a holiday', bringing rods for
trout-fishing and high spirits for play. By day they fished
or flirted. By night they slept in one of the two shielings,
while the two laughing lasses they had come to visit shared
the none too wide couch of the other shieling with the
two older women there. One of these was a matron with a
motherly twinkle in her eye, the other was a spinster in
whose eyes there shone a memorably vivid light; she was
the sister (as I found later) of a noted minister on the main-
land. The bare simplicity of shieling life is traditionally
softened by fellowship and a gaiety that is not beyond
[538] control. A Lowland poet once coined a famous phrase,

181 "the lone shieling of the misty island". Traditional
[539] Gaelic songs tell rather of shielings grouped within hail,
[533] with their sweetheating and good cheer!

3. *Crops and Stock*, circa 1938

• 178 As the thirties mark a transition between early condi-
241 tions prevailing until 1939 and those of 1947–53 (Appendix I),
the present tense is used.

311 Of the Island's 528,000 acres, including deer forests
632 on the Harris border partly grazed, there are 24,000
acres of arable and grass land. Barvas parish leads with
6500 acres, then come Stornoway, Uig and Lochs, Harris
being last with 3300 acres. Roughly one-third of the
Island's arable and grass land, or 32 per cent, is per-
manent grass, chiefly machar, with a maximum of 39
per cent in Uig, but a minimum of 9 per cent in rocky
311 Lochs, most of this on one small farm. About 10 per
242 cent of the arable and grass land area is given to hay
production; of this, rather less than one-third is rotation
hay grown on the plough rigs or parks, and rather more
than two-thirds is hay from permanent grass. Lochs,
lacking machar, has 20 per cent hay, while Barvas, better
[632] off for machar, has only 4 per cent. Even this proportion
of rotation hay shows an increase on the crofts since 1919.
Stornoway parish, it will be noted, occupies an inter-
mediate place, but if the facts for Point (Eye) district were
contrasted with those for the villages along the machar,
the differences between them would emerge clearly. As
it is, they can be guessed from the vegetation map showing
311 the machar. Oats is the chief crop, and occupies 33 per
242 cent or just one-third of the arable and grass of the Island;
excluding the permanent grass, it constitutes half the crop.

311 In Lochs it occupies only one-quarter of arable and grass.
243 Barley, mostly four-row, or bere, is less important as a food today than formerly, and now occupies only 6 per cent, and, though it reaches 13 per cent in Barvas, with its
[632] machar, hardly any is grown in Lochs. Rye (*seagal*), still found in the machars of the Uists, is little grown in the Lews. Potatoes grow well everywhere, occupying about 15 per cent of the area, though townships with plentiful machar land grow most. Turnips are being gradually introduced, and though their liability to disease has somewhat discouraged the crofters, the proportion is now about
311 2·3 per cent. Cabbages occupy a small area (1 per cent),
244 latterly along with lettuces, carrots and the like.

Rotation hay and turnips being almost unused up to
241 1919, oats was grown repeatedly before rotation with barley or potatoes, and with no bare fallow. While heavy manuring maintaining the fertility, the crop by July was ablaze with corn marigold (and other weeds) through which the thin oats struggled to rear its head. Thickly sown, the return was exceedingly small. Except for the machar (if any) there was no 'out-field' as elsewhere in old Scotland.

The smallness of the crofts and the poorness of the crops explain the very small total return. Hence little oats is now ground for meal and the potatoes do not last
[198] through the year, though few are sold. The low out-turn
[244] also explains why even fodder is scarce, though much more of the crop is secured for wintering than formerly. Summing up, a croft of 6 acres—though a little too large to be quite typical—includes a couple of acres of grass and hay, almost as much of oats, and the remainder bears potatoes and barley, with turnips, cabbages and garden produce.

[194] In the past, the cropped land was unfenced and un-
[178] walled. At present, the rule is to encourage the con-

241 struction of a single ring fence round the croft land, which also circumscribes a good deal of rough grass, the ground
[178] being generally rough in parts. Individual crofts are fenced only where exceptionally large, or when the pos-
[654] sessor is unusually enterprising or is isolated. Depart-
[632] mental help is given in the provision of fencing materials for a township, the crofters supplying labour. As the
233 animals are allowed to graze freely in winter, this limits crops to those sown and harvested in the summer half-year
241 —a serious matter for any man of enterprise who cannot afford a fence of his own. Cattle kept on the croft when the fields are under crops have to be either tethered or driven to a common pasture. A drystone dyke may enclose a small patch of garden, rarely well tended, the school gardens providing a laudable exception.

233 Shortly before 1939, the stock included under 1000 agricultural horses and well over 10,000 cattle (of which more than 6500 were milch-cows), but practically no pigs. Sheep number 42,000 ewes, or 94,000 ewes and followers in June. Thus there are 2·5 cattle on an average holding, of which more than 1·5 are milch cows; and there are
233 half a score ewes or about a score of sheep in June. The
178 size and the quality of the cattle have greatly improved since first I visited the island in 1919; at that time the mongrel Highland breed must have been the very poorest in Britain. The Blackface sheep are small, either through underfeeding or because of traces left from the old, smaller Hebridean breed, or from both causes. On an average there is, or was, one horse, or pony, to every five or six
231 crofter holdings, but their number is much reduced.
235 Actually, such Island averages for horses and sheep are somewhat misleading. In particular, either there are more
[182] horses than the average in a given district, or almost none,

511 coat, was thought to be supernatural. The fishing, too, is
226 of good standard: a typical annual catch including 1700
511 salmon, 5000 sea-trout and 1800 brown trout; and it was for this, as well as for the shootings, that the moors pertaining to the different shooting or fishing lodges and hotels
137 were bought at Lord Leverhulme's sale. The absence of
233 foxes was important to sheep-rearing before the introduction of guns, and is still a favourable factor.

5. *Sea-fishing*

226 Fish have always contributed to the diet of the Islesfolk,
198 whether they fished from coracles or boats, or with 'lang wands' from the shore as they still do, and as they did in
[262] the days of Dean Monro and, no doubt, right back to
[433] neolithic times. The relative importance of fishing and
[241] agriculture, however, has always varied according to place and time.

182 Fishing in modern and historic, and also in prehistoric,
226 times—to judge from the kitchen middens of Uig—has always flourished more where there were deep sea-lochs;
241 and settlement resulted, even though rocky hillsides made
[178] ploughing difficult or impossible. Conversely, agriculture
[192] has offered better opportunity on smooth coasts with a variety of soils, though fishing was poorer there. Thus the men of Stornoway Bay and Eye, of eastern lochs and of the Harris bays, like those of Loch Roag on the west, have long been partly fishermen. In the extreme north, too, men of Ness—with the chance of choosing their fishing grounds on the north, west or east of the island and with their little rocky port giving shelter, of a sort, from south-
[461] west gales—were good fishermen; they are good seamen
[829] still. "The fishing of the Barvas folk" is an old gibe,

182 meaning that the men of that village, and its immediate
226 neighbourhood, were the last to put to sea and the first to
241 return. The Barvas folk could retort that they would have been fools to do anything else on a straight exposed
[829] coast; and that anyway their pony-drawn ploughs were
[461] of more use than the foot ploughs of the rocky south. A form of provender taken indirectly from the sea was the sea-birds and eggs from the sea-cliffs and islets like Rona, north-west of the Butt. This helped to support a few families in St. Kilda and on the rocky Shiant Islands south-east of Harris.

195 Fishing remained backward and primitive, however,
226 until the nineteenth century. After developing in a promising way, it was checked before the First World
[178] War, and fell into decay during and after it. Decay has,
504 of course, been widespread. In 1935 the chief ports of
501 the East Coast, from Leith with Granton northward by Fraserburgh to Wick—a round dozen—had still an average of 250 to 300 vessels, 3000 in all. These were chiefly of steam or motor auxiliary power and valued (with fishing gear) at £2,750,000. Orkney and Zetland, too, had each their 300 boats. The whole West Coast, however, from Stornoway to Ballantrae, had only 2000 boats, valued at less than one-tenth of the fleet of the East, and worth only a fraction of this, to judge from prices in the open market. Nearly 400 boats were still on the register for Lewis and Harris (Stornoway district) and another 300 for the rest of the Outer Isles. But fewer put to sea each year, even from Stornoway itself.

182 A major drawback to herring fishing in the Stornoway
226 district is the uncertainty in the movements of the herring shoals. On the Clyde, moreover, herring can be sent fresh to the city but further north they must be cured. Whereas

182 on the East Coast and in Orkney and Zetland there are
226 comparatively well-marked seasons at which the herring can be expected, Stornoway appears to lie marginally to their main migrations. Thus the amount of the catch varies and curers have been disinclined to set up large curing stations such as those which deal with the enormous influx at the height of the season on the East Coast. A partial compensation is found in the continuance of herring fishing in winter.

226 While fishing from rowing boats for saith, lythe and
[178] mackerel still supplies food for home in summer, fishing with long lines in winter and spring brought cod and other white fish, sun-dried and salted, which became an important export though declining sharply after 1900 and of no importance since 1919. Lobster fishing is undertaken in small boats with two or three men from many townships, and two ponds have been reopened, one on Bernera, Lewis, and the other at Stockinish in Harris to store the lobsters. Conditions in 1935 and 1951–53 are compared in Appendix I (iii) and II (iii).

6. *The Annual Rhythm of Life*

221 It is appropriate here to show how fishing and crofting fitted together into the seasonal calendar a hundred years ago, and shortly before and after the war of 1914–18.
[182] The Lewisman's year shows its relationship to the seasons,
[175] with their temperature, rainfall and wind (Fig. 9). A
[178] century wrought changes: cod fishing declined as the herring fishing grew in importance; but the latter fell
[286] away again after the war. Partly as a result, weaving has become important, the men fitting into the idle periods between the brief peaks of spring and harvest work.

461 Men's work can be roughly estimated as either light,
462

462 calve. For peat-cutting, the men took advantage of the
221 driest months, with a peak in May–June; and after the
peat stacked on the moor had dried through the midsummer
175 months, the women set out to creel it in, before the autumn rain should have made the bogs too soft, and stacked it near their doors. The fishing season usually closed with some herring fishing in August–September. The clipping, or rather pulling off, of the wool as it began to be shed, was done chiefly by men, in July–August. Then, too, the absence of fences made herding doubly necessary to protect the growing crops.

Some relief was given by the departure of many of the cattle to the shielings, where a few girls and women would stay through July and August, once men and women together had driven the cattle there. Cows kept at home were, and still are, tethered, or herded close at hand.
[178] Even now the hay harvest is insignificant, and until this century it hardly existed, except for a little put by in a
221 tiny barn. Towards the end of the summer, roofs were
175 stripped of their thin thatch, and fresh turf was laid on the light rafters and covered with barley straw. Then as now, harvest came in September–October, all helping in reaping the oats with the scythe or the sickle, and pulling up the barley by the root. With the onset of winter winds, rain and cold, the chief outdoor tasks of the year were over.

Throughout the year there were small jobs to be done, and in the past, owing to the imperfection of implements,
[462] constant small repairs were necessary. Indoors in winter
[286] the women prepared the wool together and wove it. Baskets were also made then, the coarser types by men. By all these means the essentials of subsistence were largely met, so long as the seasons were reasonably good. Except for salt for the housewife and iron for the smith, the food

178 The dress of the people has changed. The men com-
291 monly wear overalls instead of the fisherman's blue jersey. Till 1919 every woman and girl wore the black petticoat striped with colours, dark blouse, often with stays, and a knitted muffler round her neck and over her head. In summer the tartan shawl was more typical of Sundays than week days (Plate IX). In clothing, a change for the worse preceded a change for the better. The abandonment of homespun, rich in wet-resisting oil, for machine-made cloth was at first a loss; but oilskins, waterproofs, and rubber boots are a surer protection to all on land or sea. For much of the year the women went barefoot but for the *osanan*, worn except in warm weather; these are stockings leaving the sole bare and kept over the foot by a band passing under the middle toes. In a wet climate with much soft ground this was a sensible custom, for wet feet, easily washed, were warm and dry as soon as the women came indoors. They moved hardily, yet a little warily, for fear of stones and, when not fatigued, with a short, springing step which was a pleasure to watch. At the same time their feet were sorely tried by rough heather or stony ground, especially when they were carrying a laden creel. Now nearly all except elderly women wear shoes (or rubbers) and stockings. They have given up the dark, striped full skirt and petticoat worn till 1919 and adopted the skirt and blouse or jumper of the towns, or the short frock so much simplified since Edwardian times. In fine weather the head is bare, though often netted because of the wind.

[369] As dress changes, it is often said that the country copies the town; the reverse were truer, in essentials. By 1914 the townswoman had begun to copy her sister in the country, seeking for common sense and simplicity; and what is true of dress may be true of other things.

827 Islanders themselves sometimes talk of a lowered stamina and poorer health today than in the past. In-
178 breeding is widely held to account for this. Even if health
582 be really poorer, this explanation is untenable, since marriage outside the village has greatly increased in the
166 last century. Everywhere there is movement along the roads; a school placed half-way between two villages
[871] fosters early acquaintance; immigrants trickle in from the mainland, and emigrants occasionally marry beyond the Island. Moreover, the people of certain villages were transplanted in large numbers eighty years ago, as from
143 Valtos, Uig, northward to Shawbost. In any case, inbreeding itself does not produce degeneration; for though it may "fix" or bring out harmful tendencies where there is already some poor or dangerous strain, it can also fix good characteristics in a healthy population.[1]

178 All these changes were hastened and reinforced by two
177 new, revolutionary means. First, the physical mobility suddenly brought to an area with no railway by the motor-
166 car, van and light lorry-bus; then, towards the end of the inter-war years, the penetration of the Gaelic-speaking home by the ceaseless voices of broadcasting.

[113] [1] J. A. Thomson and P. Geddes, *Life: Outlines of General Biology*, 1931, vol. i, p. 473.

342 maintained—once an important aid to the surviv
343 starved cattle. A slope from the dwelling-quart to the byre facilitates drainage: normally the len
[178] homestead follows the slope. The separation from byre took place in Harris and Uist over seve ago by County Council decision, but in most even in 1947, about 40 per cent of the homest
342 of the primitive type, outwardly but little change separate cottage, as in Harris, is a shapely little roughly symmetrical and particularly pleasing walls are whitewashed below the pale-gold thatch

342 The surviving 'black house' is a stone struc
343 Stevens has written, "the rock of the island is
[314] work, and hard to win", and may be covered Undressed stones are collected and sometimes c
[324] long distances. Before dynamite came into us large stone could be broken up by lighting a pe it, then dashing cold water over it. By an o custom, the bachelors of a township used to help the house for one of their friends who was about
[333] Lime for mortar being absent from the island, are built dry. The wall is double, the space being filled with earth. Hence it may be six f
[354] at the base, though barely six feet high. Typical houses lacked windows, only a little light entering the smoke vent and through a piece of oiled skin, latterly by a pane of glass let into the thatch of or by a deep window aperture in the wall.

342 Roof building is a difficult problem in cons
343 on account of the scarcity of timber and the str the winds, and explains the narrow plan. Woo
313 scarce that when a house was abandoned the fram
[182] roof was removed, the spars being the tenant's

[361]

later times the landlord might supply timber. Long ago a main source of timber was the shore. The length of the house may be fifty to sixty feet, and the inside breadth ten to twelve feet, spanned by ten or a dozen pairs of couples on which are laid transverse 'cabers', which may be tree trunks, branches, odd wood, old oars, or, exceptionally, sawn timber. The tops of the walls are finished with turf, to keep the filling from being washed out, and to provide a smooth bearing for the couples, the ends of which are pushed into the turf so as to bear on the inner half of the wall; the rounded form and absence of overhanging eaves prevent a gale obtaining purchase on the roof, but a gable with chimney is now usual on the end wall of the inner room. The rafters are annually covered with turf, and the roof is thatched with thin, short barley straw, which was pulled up, not cut, after the ears were picked off, the roots gripping well, and the stem hanging outward and down.

The door gives direct access to the byre (*bathach*), through which one reaches the middle part, or living-room, 'at the fire' (*aig an teine*), from which there opens the inmost part, the 'room' with bed-closets. There is no ceiling to the primitive house, the row of box beds having tops to keep off the drips of rain water. In the middle of the earthen, sanded floor of the living-room is the circular hearth, built of stones with clay between, and raised a few inches, with no chimney.

In the byre, the manure accumulates from spring to spring, and a breach is made in the end of the house for the annual removal of the manure. There are no privies. Where there is fodder and straw in any quantity a barn is added. Stacks are rare because of wind. A low wall, continuous with the house and barn, may enclose the kale-

yard and occasionally a barley-kiln in which to dry grain before malting it for home-brewed beer. A 'black mill', with its primitive horizontal water-wheel, stands apart by some burnside.

Round the circular hearth, a large company can assemble in very social fashion for talk, story and song, the meeting *together* (*ceilidh*). By the transfer of the hearth from the centre and the substitution of a gable fireplace and regular chimney, the social circle is halved, while meantime the tales of the *ceilidh* are forbidden or forgotten. Happily the bench still stands against the wall, near to the open door, through which neighbours slip in with a word of greeting to find a customary welcome.

The dwellings on the summer pastures out on the moors show great variety, illustrated in Fig. 10(B). A simple type in use is built of turf and stones, lightly roofed with turf placed on spars. A more primitive 'beehive' type (which fell out of use before 1900) was stone-built and corbelled, probably for lack of timber. And whereas the lighter type always stands by itself, the corbelled type was added to until a dozen cells formed a single mass, suggestive of ancient 'neolithic' hamlets as at Skara Brae in Orkney, described by Childe, and of the domed, corbelled huts of the ancient East.

A further type was the 'spring house' of Tolsta, NE. Lewis, in which both cattle and folk sheltered in spring a little way from the village, before going out to the more distant moor. Mr. Donald Macdonald, F.R.S.G.S., a native of Tolsta, informs me that the spring house was in use until 1936. He remembers vividly how life in the shieling restored health and colour after the winter.

2. *From Black House to White House*

Discontent with the old black house grew with the knowledge and experience of better housing in Stornoway and on the mainland. The congestion which developed during the nineteenth century meant that often one house was fouled by another above it, leading to typhoid epidemics. While the smoky atmosphere of the 'black houses' inflamed the eyes and irritated the respiratory system, the roof was high and the fire kept the air in motion by day, ventilating it to the chimney hole, while the lack of glass often made it necessary to work with the door open. The ravages of tuberculosis came towards the end of the nineteenth century, when Islanders went to our crowded towns and, not being immunised, were dangerously infected. Returning home, too often to linger and die in a house now provided with tiny, fixed panes which permitted a closed door and made it stuffier than before, patients spread infection. Flight to a tiny, air-tight wooden cabin or to a small white house of stone and lime often followed. The availability for the first time of planks and timber, a certain practice in boat-repairing, and possibly acquaintance at first- or second-hand with Canadian wooden houses, may have influenced the choice of wood. The early 'white' houses, with an attic lit by skylight, were airtight, for the windows were too often fixed or only opened at the bottom. The door was left open in warm weather, but it was not high enough to allow the escape of the stale, upper layer of air which the women breathed as they did their cooking and baking.

In the inter-war period, particularly in its last decade, the 'black house' was being abandoned, not for something worse, but far better. The Government-aided houses have

adequate air-space, and windows opening at the top and usually kept open by day, in which a woman can work at ease. The Department of Agriculture aided the building of a good standard type. The quality of joinery and masonry or concrete work improved, one fairly skilled workman usually directing the householder and friends as amateur builders. The cost of materials was met by a grant, generally of £250, half being repayable by an annual rent of £6: 10s. for twenty years. Repayments proceeded satisfactorily. No scheme organised by the Department of Agriculture for Scotland won so general a commendation as this of house improvement. It made good use of family initiative and responsibility, with neighbourly co-operation not called for upon a large scale, a township at a time, but in quite a small, personal way. Nevertheless, had more guidance been provided to the builders, the houses could have been really well built. For lack of this, perhaps, crofters increasingly prefer to pay for skilled work, though helping actively. Appendices I (ii) and II (ii) gives pre-War and post-War statistics.

3. *The Township and its Changing Plan*

Where absence of rock and boulder permits ploughing, the village land is laid out in a series of parallel strips, aligned with the slope. The road runs either parallel with shore or river, or at right angles to it. The intermixed possession of strips by 'run-rig' characterised the Lowlands before the Enclosures, and is frequent in the Highlands and Isles. The apparent regularisation of field lines may conceal the fact that an individual holder's plots may be scattered amongst those of others in fixed run-rig. This is an advantage where quality of land is so patchy, and each man thus gets his share of good and bad

361 luck in land, but a disadvantage where control of a single
[423] area is desired by one man. Regularisation of roads,
[182] houses and holdings is relatively modern, for crofts and
dwellings were once grouped in hamlets usually close to
(172) the seashore. The early hamlets can still be made out
from their ruins among the rocks, sometimes sketched in
the 'six inch to mile' Ordnance Survey plans. They were
without formal order or arrangement, each homestead
within its boundary wall. Where ploughing was and is too
difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 Shawbost, on a rocky part of the west coast (six miles
491 south of Barvas) consists of three main sections: a scatter
of houses and ruins by the enclosed loch, two main streets
linking the loch to the main coastal road, and inland another
short street. The three can be made out on a 'quarter-
(175) inch' map. The two main streets were laid out by the
[311] Estate Officers following removals in the mid-nineteenth
century from another part of the island, Uig, and the third
running inland was laid out still later, when population was
growing and land was needed. When the third street was
laid out, the landlord, Matheson, lent good plough-horses
for preliminary reclamation. The irregularly placed black
houses near the sea are tending to be rebuilt close to the
main road.

361 In addition to this type of movement, farms 'broken
• 178 up' once more into crofts have been laid out on a regular
311 grid plan, each house placed on a corner of its five, ten,
or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned'
[654] land may also be reclaimed for crofts by squatters tolerated
by the community, or on a regular grid by agreement of the
assembled crofters, guided by the Department of Agri-
(491) culture. Thus two distinct tendencies are seen: the grid
plan in new settlements, road alinement in existing ones.

361 The chief advantage of moving uphill to the road has been
• 178 ease of communication and access to grocers' vans and mill-
311 spinners' lorries; but the disadvantage proves to be the
491 laying on of running water. A much-needed scheme for
water supply is now being applied by the Department of
[654] Health for Scotland. Scrutiny of a 'quarter-inch' map
will indicate the chief facts and tendencies and the condi-
tions they involve.

4. *Distribution of Population*

162 The distribution of rural population can be closely
311 estimated by inspection of a 'quarter-inch' map, where
both the area of cultivation and the house dots are noted.
Comparison with parish populations shows that on an
average one dot represents seven or eight houses or families
and thirty to thirty-five persons. Since there are now no
large farms, cultivation indicates crofting, and, therefore,
a typical density of one person to a little over half an acre,
or 1000–1200 per square mile. Rural numbers over the
whole Island show a density of about twenty-five persons
per square mile. If the fishing grounds, with a sail here
and there on the wide sea, were added, the density would
be lower still! A single dot found with cultivation indi-
cates crofts, which are hardly ever found singly. Where
no cultivation is shown around a single dot, this generally
indicates an isolated stalker's house, a shooting lodge by a
road, or a shieling (*airigh*) out on the moor.

(B) STORNOWAY

1. *Site, Plan and Development*

361 The plan of Stornoway and its harbour shows three
stages in the growth of the town, the first two picked out

[TEXT CONTINUED ON PAGE 89]

162 weaving and fishing, the fall in population would probably
(167) be small, if any, in 1941. This fall in the total figure was
not so much a decrease in the number of families as in the
[168] number per family. The Island was only then following
the restriction of population begun half a century before
in the rest of Protestant Britain, though the causes, social
and economic, are very dissimilar. Actually, little did
occur to change either the rural situation or that of
Stornoway, until the outbreak of war in 1939.

162 Since 1931 there had been no real decrease: Lewis is
• 178 a land of house-building, not of ruin and abandonment;
369 of increase of holdings, not diminution, and even of agri-
(659) cultural improvement. No doubt 'artificial' causes were
at work: first, loans, grants and unemployment insurance
[593] and assistance—once known as 'the dole'—and, secondly,
the money sent to elderly parents and dependants at home
[888] by young folk in Glasgow or abroad, or savings brought
back by the young people themselves. Yet there is some
[226] fishing and agriculture still. Above all, 'hand-weaving'
has grown, even if this be partly 'artificial'. Recently it
[241] was not only the elders who had returned to the Island, but
[286] men and women in the prime of life, so that the question
of resources, livelihood and population in Lewis needs to
be re-examined afresh.

167 The emigration which took place from 1949 to 1951
(464) followed directly upon the losses and the unemployment
[651] in the Island's Harris tweed industry. This crisis resulted
from the imposition in 1949 of a Purchase Tax on hand-
[162] woven Harris tweed of 666 per cent. If the tax had been
maintained and no adequate adjustment made, the effects
on population would have been far-reaching.

141 little sign of Norse blood, can hold their own as fishers with
144 the men of Ness.
172

174 Third, it is still commonly stated not only that the
"great majority" under the clan system were "without
174 any legal status", but that their tenure "depended on the
[613] good will of the chief or tacksman".[1]

As the last lawbooks of the Gael were taken from Lewis
174 by its first mainland lord in 1611—never to be heard of
675 again—it may well be that, as recognised in the Northern
[175] Isles, so in the Western Isles, peasant tenure was perma-
nent according to regional law. In practice, mere 'good-
will' is so uncertain a quantity that if this statement had
been true, it is hardly credible that communities could
have remained so stably rooted as their race-types show
them to be. Evictions of groups or individuals at the
whim of chief or tacksman would have broken down their
• [178] homogeneity of race. In the Lowlands, where eviction
[184] had become so frequent by 1500 and insecurity for the
mass of the country people has prevailed ever since, such
localisations of race would be unthinkable and do not exist
except in certain fishing communities who possess a pride,
almost a caste-code, of their own: the Newhaven fishers
within Edinburgh remain apart, with a dialect and a dress
of their own. Great stability of tenure—in fact as in
customary claim—is shown by the racial homogeneity of
Gaelic communities.

174 Lastly, it is common to state that the nobility and
gentry of a countryside constitute its 'old' or 'original'
families. It is true that some land-owning families seem
'old' compared to recent purchasers—successively the
merchants and lawyers, venturers and planters of the

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 THE family, the 'conjoint' or 'farm group' of
593 four or five families, and the larger group clustered
476 in a glen or along a shoreland, are, in ascending
632 order, the three concentric units whose mutual relation-
621 ships we must visualise to understand the past. Enduring
elements of life in family and neighbourhood today, with
their own special qualities and limitations, can only be
understood in terms of past needs and the relationships
they evoked.

121 Having seen their relationships in family, team and
613 township, we can next turn to the reciprocal relations of
the people to their chief or lord, whose position dominates
621 European, indeed world, history and prehistory. Here
[171] our concern must be the meaning of 'clanship' to the
chiefs, the joint farm-groups (or 'small tenantry') and,
latterly, the tacksmen placed above them.

121 We may find, throughout this study, that features and
174 functions which at first sight seem peculiar to the Island
are really local variants, more perfectly crystallised, of
• 178 forms which we know existed at earlier periods in Scotland
[184] and in much of northern and western Britain. In the Isles,

St Geddes K-4, 3 (1919-1932) 1953 ES10 Highland Scots
Lewis and Harris

221 and clothing, firing and shelter produced met local needs.
175 Further questions of early economy belong to Part Two, as do those of the festivals by which the seasons were initiated and closed, along with the phases of human life.

221 A century later (as indicated in the lower graph), agri-
[178] cultural tasks were much the same, but the character of
[433] fishing had altered greatly. Herring fishing was at its height in the Island for some fifteen years, or half a generation, before 1914; but it never recovered from the difficulties of the war and after-war periods. The curves of the summer, autumn and winter fishing indicate the 'full-time' activity of summer, and the 'part-time' work of
[462] early winter. Not only the men, but the women participated, the women being employed in gutting and kippering. Boats and men fished further afield. Women were employed in gutting in early summer in the Scots East Coast fishing, which preceded that of the West Coast and was followed by the East Anglian autumn fishing. Some line-fishing continued locally in summer, but it has now almost ceased. The building and repair of roads increased after the middle of the century. The carting of peats, stacked by the roadsides, lessened 'creeling'; but it is particularly haulage by lorry which has replaced carrying by the creel, so lightening women's labour.

178 Indoors, primitive crafts tended to be superseded as
571 machine-made articles replaced those of native material and manufacture; but the *ceilidh* ('*cailey*'), the meeting 'together', continued, though the arts of song and poetic
462 improvisation declined. In Harris the women had woven
283 and spun for centuries and have continued to do so for home
286 use and sale; in Lewis the women gave up weaving in the last
178 century, few spinning since then and none weaving. Thirty years ago only an occasional weaver, always a man, could be

found in a Lewis village; but in the ten to twenty years before 1939, the so-called 'Harris' tweed industry spread enormously in Lewis, accompanied by the construction of large spinning mills in Stornoway which supply yarn to male weavers. One further activity, kelp-making, was important for a time, although—not being strictly a traditional task—it is not represented in the upper graph, nor yet in the lower one, having declined after 1825 and disappeared (in the Island) long before the present century. Such was the annual rhythm of seasonal labour prevalent during the last generation, and a hundred years before.

7. *Rural Changes in Diet, Dress and Inter-marriage, and in Mobility: 1919–39*

Many outward changes occurred in the twenty years after the close of the First World War. Till the Island was able to benefit from the commercial advances of the mainland, it had no adequate relief from the famines of early times; in recent years the quantity of food has been rather more adequate. With the import of new foods, the consumption of vitamins at first declined; there was greater consumption of white bread from Glasgow and less of fresh vegetables (as ruined garden walls bear witness), and less, too, of cod-liver oil with the cessation of cod-fishing. Latterly, fenced gardens with vegetables and lettuce are providing vitamins, and fresh fruit (unobtainable even after 1919) is commonly on sale all the year round, so that a more rational dieting, when it can be afforded, is tending to recover lost ground and perhaps more.[1]

[1] E. P. Cathcart (*et al.*), *Studies in Nutrition: an Enquiry into the Diet of Families in the Highlands and Isles: III, Lewis* (Medical Research Council, Special Reports, Series 242. H.M.S.O.), London, 1940.

121 by help of oral tradition and of the living witness of con-
174 tinuing usage, we can reconstitute Gaelic life from the
view-points of both people and chief. Elsewhere, even in
• 178 Scotland, only fragments of early life are recorded, in
175 parchments written by the lawyers of landlord and king,
and almost always from the privileged side. History is
814 indebted to modern lawyers who have deciphered and
127 published the faded documents of their predecessors. But
the very training as solicitor-factors which fitted them for
this specialised task, in no way prepared them to view life
as seen, experienced and felt by the men and women of the
past, or even by the elders or youth of the townships today,
with whom they have rarely laboured and whose mother
tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

621 We have seen that until the nineteenth century the
632 township in the main was self-contained. Its people grew,
175 reared or caught their food, and also found the raw materials
[433] for their clothing; they built their own shelter, and cut
their own firing. As a result, both men and women had
174 each to develop "a wide range of simple skills", in the
175 apt phrase of a Lewisman, Mr. Donald MacLean, M.A.
Beyond the co-operative effort within a family, a farm
462 group, or a body of 'fellow-townsmen'—in which each
was competent to take a share according to sex and age—
aptitude and family tradition initiated some local division
[463] of labour. The resident smith and the 'caird' (usually
a wandering craftsman or tinker) appear in the oldest tales
and in the first rent-rolls. In addition there were honorary
[759] tasks. The smith might act as the village surgeon, ready

175 and still more to pay arrears, was "the rugged Hag,
241 Poverty, that would resist both King and Government".
427 We may guess that MacAulay passed a hint to the tenantry
451 that (in a good Gaelic idiom) they had better 'disremember'
details of arrears: and this they did.

175 Of the four names on the deposition quoted, one or
two may have been surnames, others the patronymics of
551 kinsmen. As is still the custom, clansmen knew one another
613 by names of many kinds. Stature or colour was used to
• [178] distinguish a big John from a little one, a fair from a dark,
or a pale from a swarthy; occupations such as smith or
caird (artificer, not necessarily travelling tinker as now) were
[241] used, and also mere nicknames. Of the eighty-one crofters
[726] or fisher-burghers in Stornoway, fourteen were Mac-
Kenzies; and other mainland surnames, such as Fraser and
Gunn, Matheson and MacLennan, also showed their
descent from the immigrants brought in when MacKenzie
of Kintail founded the burgh to encourage fisheries after
1611. Each held a single holding, usually rented at two
shillings sterling.

175 To conclude, rentals about 1715 show (1) the character-
istic equalitarian grouping of small peasants as fellow-
241 workers in the hamlet-farms still held directly from the
427 superior, Seaforth; (2) the eighty-one small burghers of
631 Stornoway; and (3) tacksmen, responsible for the larger
part of the Island rent, but under whom we know that the
labouring peasantry, though without the local independence
of the others, also continued to dwell and to work together.
The tacksmen were to pass away, as many of them had
originally come, at the desire of a mainland lord, and the
lord, in his turn, was to leave; but the small peasantry of
immemorial stock still hold and work their land.

175 couple advancing one on either side of it—many other
476 tasks were definitely team-work. Such was peat-cutting.
"When they are making peats, five people are employed.
175 One cuts the peat, another places it on the brink of the
476 ditch where it is dug; a third spreads it on the field, a
314 fourth pares and cleans the moss; and a fifth man is resting,
ready to relieve the man that cuts. The women are seldom
[462] at this work, but the men help one another alternately;
sometimes they must rest satisfied with fewer hands; but
the above is the full complement of men required to per-
[127] form the work, according to their tastes." Buchanan's
[178] description was written 160 years ago (1793); it remained
true till recently and generally it is so still. There was thus
a normal team practice for work—even a man to rest was not
[538] forgotten! As the Gaelic proverb puts it: "They won't
make power (add strength) without a threesome and they'll
limp without a foursome!" (*Cha deanar treine gun triuir,*
[802] *'s bidh iad crubach gun cheathrar*). In Gaelic, as in Scots,
one speaks of a team according to its number, as "a pair,
a threesome, foursome" and so on, up to a tensome
(*deichnear*). In Lewis the farm-team was usually a foursome
or fivesome.

175 Only in exceptional cases was land worked and held
473 singly—as when a smith was kept busy at his anvil in
ploughing-time and harvest. Thus in 1715 one or two
241 rural smiths had single holdings of average value or more
[326] (£1), and one artificer or tin-smith (caird) a holding of
minimum value (5s.); and in the burgh all the small plots
[286] were held singly. As the women wove, at home mostly,
[462] no male rural weaver held a single plot; his weaving could
be done at slack times, so long as there was light; at busy
times he worked on the land with the rest of his team.

000 On the mainland, both Lowland and Highland, an

593 On the mainland, both Lowland and Highland, an
outlying reclaimable patch of arable, lying near distant, little-
423 used pasture, frequently gave a single family the chance
[241] of a living. Such a site meant solitary toil for the man
[311] and his family; but there might be advantages such as
an occasional deer from the forest, or a post as hunting
[184] 'forester' such as was held by many a Gaelic hunter-
[224] bard. In the Eastern Highlands such a high-lying croft was
known as *Ruigh* (anglicised to Ry-). Traditions of poverty
[823] with individuality in isolation were handed down, for
example, from one of my forebears who held such a *ruigh*,
175 Rycorrach, one of several strung out along the 1250-feet
361 contour in a small, high valley off Strath Spey; the last
[511] of them was abandoned only recently. Such a *ruigh* may
have originally been a summer shieling, only occupied
when shortage of corn-land below, coupled with new
possibilities of a little profit from sheep-shearing, led to
settlement there.

• 178 At the fringe of the Island's deer 'forests' of North
361 Harris and Park, stalkers are still found in lonely lodges
224 and dwellings, individuals often of character and worth, as
they need to be; and a few isolated shepherds, such as
233 one finds on mainland sheep farms, dwell on small islets.
But in the Isles, isolated, high-lying spots for single crofts
361 are rare. And the clearest distinction must be drawn
621 between the true solitude of a single, isolated cottage or
184 croft and the sociability of a group of four or five, or even
two or three, crofts, such as those of lobster fishers; for
even a few families form the germ of a community, in work
and in leisure.

175 The potentialities of co-operative practice were over-
178 looked by agricultural reformers, excusably enough. For
when new methods were required, run-rig kept back the
654 pace to that of the slowest, virtually arresting reform. Soon
476

175 after 1800, John Walker wrote that run-rig, "formerly very
• 178 general in Scotland, was abolished with improvements but
241 still subsists in many parts of the North. A number of
476 tenants of the same farm have a common pasture for their
654 cattle, and the arable is divided among them, by ridge
423 and ridge alternately, which each cultivates for his own
behoof. This gives them all a common interest in the
crop and, when there was no inclosure by dyke or hedge,
might be of some advantage" in giving each person some
protection "against the encroachments of his neighbour's
cattle". Speaking of joint possession this time, though
without reference to survivals, Walker wrote that in the
Lowlands "in old times a large farm might be occupied
by a number of conjoint tenants who cultivated the farm
in common and divided the produce. In this way the
interest of each became the interest of the whole. They
were ready, and were frequently called upon, to defend
the common crop and cattle against depredations. There
was then a necessity for such an allotment of land, especially
in the Border country and in the Highlands." The team,
in other words, was a unit of defence. But "nothing like
improvement can be expected from farmers placed in this
situation . . . [and] no community can ever equal the
carefulness and industry of an individual in the manage-
ment of his affairs".[1]

[127] So far as it goes, such an analysis is incontrovertible;
for Walker was one of many contemporary observers
[181] who could contrast both the "improvement, industry and
carefulness" of the best individuals under a vigorous land-
lord, with the sluggishness of old-fashioned ways on backward
estates. The fundamental reason for sluggishness was that

[113] [1] John Walker, *Oeconomical History* [descriptive account] *of the Hebrides*, 1808.

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

621 embracing several hamlets. Yet the strength of com-
476 munity life sprang from co-operation in the farm-team and
632 in the boat's crew.

178 With the passing of the joint farm the greatest dis-
461 ciplinary factor for work in common passed away from
476 agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(E) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

621 As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the
622 fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

175 Of the crofters' manner of deciding communal affairs
621 in Uist, Carmichael wrote, in 1884, that these meetings
181 "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy
175 towards one another. There was one regular official known
622 as the constable on whom there lay the chief executive
[782] responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

his bonnet in his hand and bowing low and reverently, he declares on honour in presence of earth and heaven, in presence of God and men—*Am fianuis uir agus adhair, am fianuis Dia agus daoine*—that he shall be faithful to his trust. This simple declaration of office is extremely impressive, though now, alas, becoming obsolete from the fears of the shallow thoughtless and the scoffs of the severely wise. The duties of the constables were to divide a new peat-moss into banks for which lots are cast, to see that every crofter does his share of free labour in road building and repair, to engage herds and the like." (*Napier Crofters' Commission*, 1884.)

Naturally such duties called not only for tact, firmness and authority, temporal and spiritual, on the part of the constable, but for strong backing by the crofters, as a body, of the man they had freely elected. But hence too, the advantage to a covetous landlord of superseding free election by appointing his own nominee. Martin found that this had been done in St. Kilda shortly before his visit (about 1695) and the people complained bitterly, as well they might. We shall see that the same suppression of liberty was resented in Lewis less than a century ago. As a mere estate employee, moreover, the constable's position between the landlord's factor (or ground officer) and his fellow-crofters, was always difficult; and it might be cruelly hard, as when he was forced to help in destroying a neighbour's house at an eviction. Neighbourly union in a township was damaged by this duality of function, when he who should have been their own impartial executive was in the landlord's pay. When affairs got too bad in a Lewis township the people would appoint their own constable in addition to the landlord's; even so, rivalry and dual functions weakened the community. Such weakness

COMMUNIFY FROM PAST TO PRESENT PT. II

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
[214] wrong. Of all the desperate alternatives before the Gael
—famine at home, semi-slavery in the factory towns, death—
stricken sea voyages, pioneering in the forested hills of
Eastern North America, or war, it was this last which
offered the men not only the trappings and glamour of
clanship but continuing fellowship. In the regiment a
Gael was among friends. Modern civilisation offered him
no other life promising social continuity and the hope of a
return to croft and township, "if death should spare him".

It would be wrong to suggest that only the gentry could
175 rise to command, for as English and literacy were acquired,
701 the sons of small tenants received commissions. British
565 military discipline has too often driven a breach between
554 the men and the non-commissioned officers, spoiling the
[103] latter's fitness for higher leadership. But among High-
landers "the bond of faith and affection" led naturally to
commissioned rank. For generations, historic precedent
• [108] was carried on in living tradition.[1] Given education, the
[811] sons of Island crofters have risen to command on land and
sea; but education came late.

CONCLUSION

175 Thus in the 'little commonwealths' of the farm-hamlets
621 grouped within the township, personal right and equal
[631] shares were balanced by common duty, summed up in the
[1] The Highland Society of London, composed of descendants of his neighbours in South Spey told
[illegible] Highlanders, speaking Gaelic and

COMMUNIFY FROM PAST TO PRESENT PT. II

788 facing the sun, he cut a handful of corn. Putting the
241 handful three times round his head, the man raised the
'*Iollach Buana*', reaping salutation,—and the whole family
[175] then took up the strain.[1] While these notes by Carmichael
• [178] describe the custom after the abolition of the farm-team,
he also tells of "all the people of the Townland going
together to reap" (*Carmina*, No. 89, cf. Note to No. 90).
In the days of close partnership this was no doubt a team
blessing, said by the chief reaper among his neighbours in
mutual aid.

782 Grace before meals survives in Presbyterian house-
264 holds; and ancient graces are recorded in *Carmina*, vol. iii.
[114] The unpublished examples given here are from Miss Annie
Johnston (or NicIain), Barra, to whose knowledge Gaelic
lore owes so much:

1. O God, bless our portion, and our people.
2. O God, be about the beginning of our life (for food) and
   about the end of our life (*lit.* of our world).
3. O God, let nothing enter our bodies that may harm our
   souls.

A Dhia, beannaich ar cuid 'us ar cuideachd.
A Dhia, bi mu thus ar bithe (or *bidhe*)
'us mu dheireadh ar saoghail.
A Dhia, na leig dad 'n ar coluinn a ni lochd do'r n-anam.[1]

[1] The reader will note the meaning in translation; but he should also
[114] scan the Gaelic, and the assonance of the vowels. In the first and shortest
[192] there is a simple play upon colour and meaning: *ar cuid 'ar cuideachd*—"our
share (of things) and our (share of) people, friends and family". In the
second, Miss Johnston thinks there may be a play upon the words 'life'
and 'food' (of which the sound is almost the same), reminding one that
food is the means of life and of all that life means. In the third the opposition
of ideas is characteristically emphasised in the pattern of the accented vowels
in the words "*dad 'n ar coluinn a ni lochd do'r n-anam*"; here again the
[illegible] by means of which it sank through the senses into the heart, marks its
[illegible] tradition into Gaelic of a common

CH. VII SPIRITUAL LIFE OF COMMUNITY

782 The care of cattle was accompanied by prayer. As an
233 Eriskay housewife said to me, she would never leave her
cow tethered without a mummured, "Saint Columba be
herding you" (*Buachaille a'Chaluim-cille ort*). The curing
of animal sickness, as of human ailments, was accompanied
by prayers. And prayer was used to avert the evil eye,
symbol of suspicions born of unreasoning fear which,
psychologists tell us, beset the modern but little less than
the ancient! The thought or act of prayer which links
a man to his fellow-men links him to the dumb beasts.
"The man who is merciful to a soul will not be merciless
to a brute" (*Am fear a bhitheas trocaireach ri anam, cha
bhith e milbrocaireach ri bhruid*).

796 Throughout Christendom each task of the annual
191 rhythm was marked, at its start and close, by a day of
779 seasonal festival (*Lá Feill*). These Christian festivals re-
placed earlier celebrations and continued some of their
features, often in play. Yet concerted seasonal activities
could not be related to the supreme festival of the Christian
Church, Easter, owing to its movable date. This is one
reason for the great importance of other, fixed Festivals to
[114] rural community life. This point, not always appreciated
by latter-day individualism, is made clear by M. M. Banks
in describing *British Calendar Customs*, vol. i, *Scotland*
175 (1937). Remembering that the Old Style Calendar dates
• 176 were ten days later than the New Style (when officially
adopted in Scotland in 1600), they may be compared with
796 the annual rhythm of climate and labour (Fig. 9). Until
1600, the New Year began in spring on 25th March. After
the Reformation and the abolition of Christmas or Noel,
Nollaig, New Year's Day on 1st January took its place as
the day which, in the Protestant Highlands and Lowlands,
[illegible] some of the old friendly visiting and

[1] No. 89 is set to an Eriskay chant in *Songs of the Hebrides*, vol. i, p. 159.

COMMUNIFY FROM PAST TO PRESENT PT. II

175 'first-footing'. In the past the lads came in bands singing
796 carols, and once admitted—refusal of hospitality being out
• 176 of the question—any misunderstandings and quarrels of
the past year had to be forgiven and forgotten. With
individual visits this is no longer possible, for though these
maintain friendship, they cannot easily and naturally heal
a quarrel.

175 From Lewis three fine carols once sung by youths are
796 recorded, of which the fidelity of Carmichael's translation
533 goes far to render both sense and feeling (Nos. 55-57).[1]
In Ness I have sought in vain for the old wedding
[127] the descendants of Angus Gunn. Born about 1800, Gunn
had lived for many years as a shepherd on the islet of North
Rona, unreached by the burning zeal of the Evangelists, so
that his traditional piety survived. Could they be found,
these melodies would enrich the remnant of authentic
Christian lore in Britain, for even the well-known English
carols are mostly of modern reconstruction.

The first Christmas Hail opens, "*Ho Ri*, Hail to the
King. Blessed is He. . . . Blessed be the house and all
therein. . . . Lasting . . . and healthy round the hearth
be ye. . . ." It goes on, "This night is the eve of the
great Nativity, the great Noel [*Nochd uidhche Nollaige
moire* . . .]; Born is the Son. . . ." It closes, "Shone
the mountains . . . earth, and land, Heard was the wave
upon the strand. . . . Blessed be the King . . . to all
ages, to all time." A fragment from Tolsta, Lewis, sung
by boys on New Year's Eve as they begged for a Noel
bannock from house to house, latterly began and ended
with playful nonsense, yet it retained its traditional climax:
"[On the first day of the New Year] I saw the Threesome
[The Trinity] going to the shore. The land shone, the
[113]

[1] In a song, 'Father Allan' may have been restoring a pious service
[108] of an older school of Gaelic priests trained upon the College of Lismore,
an island in Loch Linnhe. Lismore was the birthplace of Carmichael, and
in the home of his Protestant parents the young priests were hospitably
received.

2 *Fairs was Urnaighthe* (ed. M'Lauchlan), 240, and Martin, 1703
(edition of 1934, pp. 186-189). A new text of Carswell is in preparation by
the Scottish Gaelic Texts Society.

175 at midsummer came joyous departure to the shielings.
796 Michaelmas at the end of September was a festival of
horsemanship, when the processions paraded and well fed, could
race madly along the machar. As long nights brought in
the winter, Hallowe'en came on 31st October, and on the
morrow the solemnity of All Hallows (*Samhain*). On
11th November came St. Martin's Day, and in December
Christmas once again.

175 When the Islesmen put out to sea, prayers were chanted
787 to Father, Son and Holy Spirit and to the Disciples, "the
Fishers of Men". While some of these might be individual
(*Carmina*, Nos. 117-120), others were chanted by the
skipper at the helm, as celebrant, the crew giving the
• [178] responses (No. 121). As self-sustained community life
[779] weakened and customs were endangered, this prayer was
encouraged by a few clergy, Catholic and Protestant. At
175 the start of the season's fishing in Eriskay, Fr. Allan
796 Macdonald went out in the boats and chanted a rune taught
to him by elders, the men responding.[1] One of the "Ocean
788 Blessings" or prayers recorded by Carmichael (No. 119)
is found in Bishop Carswell's *Liturgy in Gaelic*, of 1569,
and is quoted by Martin as "a form of prayer used by
many of the islanders at sea after the sails are set".[2] Most
of Carswell's liturgy was translated from that of John
Knox, but not this prayer, of which the earlier and later-
recorded version are the same, except for one revealing
difference.

175 warfare—destroyed its intimate tie with the home, with
28/ peace. The web the women had dyed, spun, woven and
533 waulked together ceased to be a sacrament when the tartan
614 was proscribed to men except when worn as a uniform with
• 614 "England's cruel red".

The framers of this law, which stood on the statute
[648] book for over forty years, took full cognisance of what they
175 did. Appended to the Act of 1747 was an oath which
648 reversed every benediction said by the women at their
786 work: "I . . . do swear, as I shall answer to God at
21 the great day of judgment, I have not, nor shall have, any
782 plaid or any part of the Highland garb; and if I do,
641 may I be cursed in my undertaking, family and property—
relations—may I be killed in battle as a coward and be
without Christian burial in a strange land, far from the
graves of my forebears and kindred; may this come across
me if I break my oath". This Act, as law and symbol,
struck fatal at the sacramental life of family, neighbour-team
and clan community, in which labour and prayer had been
indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 Little remains of the tradition of worship in the tiny
71 oratories, chapels or 'temples' whose ruins stud the shores
34/ [illegible] collaboration of friends in Lewis may allow mention of the Gaelic
172 version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English
172 Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edin-
burgh, 1931). In this the spirit of this labour sequence embodied in its
[113] songs and runes is dramatised in its setting of customs and history. The Gaelic
version was prepared by the generous labours of James Thomson, M.A.,
Baylde, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

172 of the Isles, and in which the people met, though far from
• 178 any clergy. On the southern mainland most trace of
34/ shrines and chapels seems to have been lost, so small are
[illegible] the rings of unhewn stone that marked their sites. Little
175 was recorded by salaried clergy about the services conducted
814 there; those who approved tended to let well alone. Hence
were out of touch with rural needs or ignorant of the
language spoken in intimacy, and whose alien training had
[219] removed them from sympathy.[1] As for those whose private
interests, stipend or subservience to patrons bound them
to prelate, lord or king, they roundly condemned free
congregations.

175 Nevertheless, fragmentary records have come down,
814 such as those of Martin, who visited St. Kilda in 1697 and
described the little church where the people still kept a
771 fine brass crucifix and worshipped together, without the
[184] presence of a clergyman. Naturally, the curiosity stimu-
lated by St. Kilda's fabulous isolation led Martin to de-
scribe its little community more fully than any other; but
he mentions similar worship elsewhere. Thus in lonely
North Rona, inhabited by only five families, Martin had
[133]

[1] The difficulty of initiation to intimate usages of language is exemplified
in a scholarly and patriotic work, the *Dictionary of the Gaelic Language*
[illegible] (English-Gaelic) by Malcolm MacLennan, D.D., 1925.
This standard work incorporates all the words of three previous dictionaries,
[192] with many additions. Yet key words of the people's religious heritage, of
[illegible] ages, of living usage, and recorded a generation or so before in
the collections cited here, are either absent, or are given the more prosaic
or debased shades of meaning (not the higher). See "*naiss*, a cave,
shaft" or *skeine*; "*nionagaess*, a beginning" (*a dedication*); *earna*,
Hail or salutation; "*ard*, arse, or orbs, a charm . . . amulet . . . or
impostures of any kind . . . Irish . . . prayer or verse—from Latin,
oratio" (why prayer in 'Irish' only?); and other strange words. According
to the modern dictionary, the title of the supreme Scottish collection of
Gaelic religious tradition, Carmichael's *Carmina Gadelica* (Latin, *Carmina
Gadelica*), is to be translated, not *Prayers*, but "*Charms* . . . or Impostures
. . . of the Gael."

539 And so, after every good wish for days, years and life,
867 the Invocation closes: "Peter has come and Paul" . . .
869 the Disciples and the Archangels. . . . Jesus the mild and
the Spirit of guidance have come,

And the King of kings has come on the helm,
To bestow on thee their affection and their love,
A bhaireadh duit-se gráidh as ruin.

The ideal of choice maidenliness which this Invocation
portrays, culminates in the thought of the loveliness that
867 was Christ. It rises, too, to stirring virility: "the island
[539] at sea, the fortress on land", or "the step of the steed on
the plain". Yet when all is said, it is a womanly image
which prevails: after the fortress comes the well in the
desert, and after the charger's step, the gracious calm of a
floating swan. It is all the more significant that the Invo-
cation was addressed both 'to boys and girls' in one ale,
and 'to youths and maidens' in another. Not simply
was boyhood taught to honour girlhood: ideal womanhood
was invoked to raise manhood itself to fullness.

885 Upon marriage, the husband replaced the maiden's
[242] snood or *stiom* that bound her uncovered hair by the wifely
[585] kerchief, *am breid*. Folded diagonally, its three-cornered
[539] shape came to symbolise the Trinity, in benediction on
her dual course[1], commences, "A thousand hails to thee
[538] the bride's head.[2] A poem to a bride, "now beginning
[142] likeness. The short second stanza given stands out alone: the poem, having attained in climax by a rhythm sustaining the upward, sonorous movement, is hushed by its few simple words. *In Praise the Hebridder*, Mrs. Kennedy-Fraser rearranged one or two of these lovely stanzas, as one of her lyrics with refrain'. *Cf.* A. Geddes, *The Bagpipe Group and Bire*, vol. ii, 1955.

[1] The kertch is spoken of in many songs, in which a lover hopes to plait his wife. When first I knew the Lews, the kertch was still commonly worn under the more recent Lowland mutch, and either framed a young face, or an
● [198] old one, charmingly. The two have not quite vanished, though memories of what the kertch once symbolised are hard to find.

[2] For contemporary record, descriptions of sunsets have appeared in the *Stornoway Gazette* from the pen of a crofter in retirement, N. Morrison.

[3] *Carmina*, vol. ii, Notes, *Neid Fire*.

114 dwell in them—to a sun or moon spirit. If the people once
776 believed in a 'moon-spirit', nothing is left to show it.
Either the moon is addressed as if she could hear her
praise, or—more commonly—"The King of the Ele-
ments" or "of life" is thanked for sending her light.
The Archangel Michael is associated with the sun's rays;
but symbolism only in relation to heart and mind, rather than
as literal belief. The response to sunrise and sunset was
real; and it is not lost among the people, as a watcher
may see.[1]

● 198 It remains true that pre-Christian rites were re-enacted,
791 sometimes in fear and desperation when things had gone
788 wrong, and sometimes in mere play. A Lewisman in
Carmichael's hearing spoke of 'going between the two
great fires of Baul" (or Baal), his phrase expressing no
more than a faded memory. But in Reay, in hard times
bordering on famine, a fishing skipper was seen by his
small son, supposed to be asleep, to assemble his crew and,
after putting out the fire on the hearth, kindle the *neid*
fire by rubbing two pieces of wood vigorously together.
Each man then carried a kindling back to his own home.[2]
121 Was this a religious ritual of human energy, heat and light,
symbolic of forces held to be under Divine control but to
be used as they used wind and tide by strenuous effort
at the oars? Or was it magic, pure and simple? When
men are shaken by failures and the fear of famine, prayer
in word and ritual may restore hope for better things—for
safety in storm and for fish in abundance as in a miraculous
draught—and confidence in their powers for their work.
But the same can be true of magic. And neither prayer nor

[113] [1] For contemporary record, descriptions of sunsets have appeared in the *Stornoway Gazette* from the pen of a crofter in retirement, N. Morrison.

[2] *Carmina*, vol. ii, Notes, *Neid Fire*.

121 magic is always efficacious—however desperate the need,
however pure the motives of those who ask. These men
791 were said to be the most successful fishers in the place;
788 they were also Elders of the Kirk, who saw no wrong in
what they did. They did not inform the minister; but
the good man was not a fisherman and did not understand
either the mysterious ways of fish or the incitement of a
crew!

While this *neid fire* was kindled in all earnestness, a
miming song-dance I have seen in Eriskay is pure fun:
'the Carline or Witch-wife of the Mill-dust' (*Cailleach an*
Dudain), who falls down dead and is brought to life again!
[194] Once, perhaps, a half-remembered symbolic 'play' of the
● [198] seasonal fall and resurrection of seed, it is certainly in
form and spirit a thing of happy laughter now! Tales were
retold by Martin and a seventeenth-century English skipper,
of offerings made to a sea-god, Shony, at Eoropie, Ness,
for the sake of seaweed, followed by feasting and drinking
[194] in the chapel there.[1] The story may be garbled or, if true,
may record a pre-Christian survival turned to merriment
and of no more significance to the people of the time than
[241] 'the Carline of the Mill-dust'. The prayers for the sea-
weed scenery for agriculture and daily bread are Christian
in spirit.

791 When the people were at the mercy of periodic famines,
731 diseases and sudden death, there were ample grounds for
fears. Hence a word must be said of a belief widespread
171 and ancient in the Old World, 'the evil eye' (*droch shuil*).
791 In the absence of clinical diagnosis, a malady, or the mis-
fortune to oneself or a valued possession, might cast
suspicion on someone present when it occurred; and

[1] W. C. Mackenzie, 1919, pp. 143-208. Contrast *Carmina*, vol. iv, pp. 23-25.

171 trouble. "Everything seems to go wrong"; and the
776 peasant falls asleep at night in fear of ills to come. First
in his dreams and next in his day-dreams, these take shape
171 as an offended, hostile 'spirit'. The spirit of the place
776 —of the place-work—has become angry. So also, if the
787 peasant's wife pursues her household work 'in the right
spirit', then in her dreams and reveries she is helped by
kindly presences; but if not, things go wrong, objects
malaid have been taken by 'antmone' and a tormenting
house-imp plays havoc with her home. These figures of
day-dreams were involuntary and 'shady', without the
clarity either of earthly things or of heavenly visions.
Yet they personified moods of real significance.

776 The Uruisg of the Gael helped about the farm and
household—like the Tonte of Sweden and the Lubber-
fiend of Merrie England in Milton's *L'Allegro*. Each
task may have its own symbol. Of one of these, the cattle-
trading *Glaistic* of the Highlands and Isles, Brock quotes
from Mrs. E. Carmichael Watson: "Harmless and
lovable as a rule—especially in the older stories—in a few
stories it is represented as irritable. . . .
776 The more recent stories depict the Glaistic are rather
● 178 unpleasant. She no longer plays with the children or
sings rhymes—she has degenerated into a kind of female
ruffian. Probably it would be nearer the truth to say that
the change has been in 'the Highlands rather than in the
Glaistic." Brock comments, "This last remark is signifi-
[155] cant. The increasing irritability of tutelary nature-deities
means that the spirit of the old economic life—the equi-
librium between Highlanders and Highlands—is being
upset"; and so too is that between Highlander and High-
lander! In Lewis *Ni Chlach Urlar* (She Ior Ie) of the
Hearth Stone), who personified domestic strife, makes
trouble; and neighbours come to suffer too!

121 to the world within. Above all, harmony of relations, at
771 every stage of life, in man and woman, was felt to pre-
figure relations with the Divine. The religious poetry of
181 which the Gael were the creators and heirs, promoted
courage and calm. True, its very power could lead to
superstitious respect for mere forms of words, debased as
'magical' charms. Such misuse was 'superstitious',
being false in itself and falling short of the clearest thought,
the highest aspiration, of the time and the community.
Worse still, to use with evil intent could concentrate ill-will
and evoke mutual fears. Yet at its best, thought was
clearer, less confused, than is commonly imagined. To
the aspiration and attainment of the Gael—in congregation
or solitude, in meditation or labour, in love and faith or in
works—the fragments of their oral heritage bear witness.

(c) LITERACY AND EVANGELISM: 'THE MEN' AND THE DISRUPTION

175 From before 1680 "a school for the gentlemen's sons
● 178 and daughters" was open in Stornoway. Latin and
871 English were taught, and a century later even Greek had
been added, as recorded by W. J. Gibson, for many years
Rector of Stornoway's high school, the Nicolson Institute,
in his *Education in Scotland*, 1912 (chap. v). Particularly
towards the end of the eighteenth century, the Gaelic School
Society and other bodies, like the Society for the Propaga-
tion of Christian Knowledge, sent out schoolmasters to
teach the reading of the Scriptures. Industrial schools were
set up at the same time by Lady Seaforth, to teach spinning
[671] by the wheel, replacing the slow distaff. It was not till
nearly a century later that teaching of English was widely
taken advantage of—partly by the compulsion of the

175 Education Act of 1872, for the people "did not want to
● 178 give their children wings to leave them".[1]
871 The reading of Gaelic progressed fairly rapidly after
[671] 1800, in order that the Bible might be read. By 1833
something like one in three or four of the population, or
more than half of the younger people, could read Gaelic.
The Hon. Mrs. Stewart-Mackenzie of Seaforth, it seems,
175 had a 'warm sympathy' both with teaching to read the
Scriptures and with evangelical preaching. The coming
114 to Lewis in 1824 of the first evangelical minister, the Rev.
Alexander MacLeod, an Assynt man, is described in his
173 memoir in a striking volume, *Disruption Worthies of the*
Highlands, edited by J. Greig (1877).

175 "At the distance of more than half a century it is not
791 easy to form a conception of the religious and moral
condition of Lewis previous to the year 1824. The present
173 writer has heard a still living minister of the Free Church,
who is a native of Uig, declare publicly that only two or
three copies of the Bible could be found within the wide
extent of the parish, and that he himself travelled a journey
in search of a copy of the blessed book, and all in vain. . . .
The densest intellectual and spiritual darkness held uni-
versal sway. Notwithstanding the pleasing features that
characterise Highlanders, even in their most primitive con-
dition, this state of things could not fail to be attended
with baleful fruits. Despite their constitutional warmth
of heart and loyalty of nature, unbending fidelity to what
they esteemed to be honour, and their unbounded kindness
and hospitality, many gross vices were found commingling
in the characters and lives of the Lewis people. For,
however strange it may appear, at the first prayer-meeting

175 manner that he had in hand business of eternal momen-
791 to his hearers. That business was to warn them of the
178 wrath to come, which impended over unpardoned Christless
sinners, and to proclaim the way of escape by the open
● [198] door of a crucified and risen Saviour. Not more than
two months had elapsed since Mr. Macleod's admission
when the 'stupid attention' and vacant stare passed into
the wistful anxious listening, the suffused eye, the tender
subdued manner, and in some cases the heart-wringing
[283] enquiry, 'What must I do to be saved?'

"For something like two years this minister refused
to dispense the Lord's Supper'. . . . A very early effect
of his work was the extinction of various worldly and
pernicious customs and amusements to which the people
had been previously addicted, and the substitution of
meetings for prayer, diets of catechising, day and evening
schools, family worship, and other spiritual exercises in
their room. Many at the outset felt grievously at
the new order of things. Meanwhile the Lord stood by
his servant, and the word mightily prevailed against all
opposition. Incredible efforts were made by earnest souls
in all parts of the island to be present at the preaching of
the Word, even on ordinary Sabbaths." By 1828 "the
whole island seemed to be moved by one powerful spiritual
impulse" and Gospel people flocked from all parts to the
Uig communion. "When the memorable 18th of May
1843 dawned"—that of the Disruption—"no part of the
country was readier to rally round the banner then dis-
played, because of the truth, that the island
almost to

3: Geddes K-4.5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 the cultivable land and pasture having been shared out to
178 minimal fractions, they called for a minimum of labour by
241 the men—though housewives and mothers had always
476 plenty to do. The morrow's tryst for work might prove
654 a tryst with no work done. The men might foregather
423 on the moor to cut peats, for instance, but if one of their
181] number was late, become so absorbed by telling stories of the Fenians that, ere work had begun, it was time to go home—resolved to meet for work some other day! As a result, reformers advocated breaking-up the joint-holdings; and this was done in Lewis by 1830, as noted in the Brand Report. But mere division of the land did not increase its total amount.

175 Yet while noting the progress made by the liberation
178 of individual initiative, we can see the drawbacks of
654 individualism: the evictions made with no provision for
362 new homes, and later the monotony and the loneliness of modern farm life, the mutual distrust of employer and employee, and the general inability of farmers, as yet, to
423 co-operate. At the present, when planning, purchase and
476 sale are required on a large scale, particularly among small-
829 holders, the interest of each is still "the interest of the whole". The team-spirit must be recovered from the work (not simply the play) of school onwards to further education and communal effort.

175 To sum up, every farm-hamlet was held jointly and on
241 equal terms, each joint holder being responsible for an
427 equal share of the rent, and the movable run-rig system ensuring equal quality, as well as equal quantity, of land.
476 Common interest was assured, and there was mutual sup-
423 port in distress or sickness, as when one member, named in a deposition of 1718, was 'valetudinary'. Lastly, work was done in common not only when it led to efficiency

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

241 through division of labour or united effort, but simply for
423 the sake of mutual stimulus and pleasure!
427
476

(D) THE SHARING OF MACHAR, MOOR AND SEA

175 Embracing several joint-farms, each with its team or
632 crew, came the township. The township had not only its
241 common pasture, it had a special extensive system of
423 run-rig on sandy, coastal machars, as in parts of the Island and in Uist—a system continued to this day.

632 On the machar of Barvas, cultivation strips are still
241 re-allotted periodically, as they were annually on all the
423 Island machars. The machars behind the 'storm-beach' dunes of the Outer Hebrides closely resemble one another, from the Butt of Lewis to Barra Head. The immemorial
[178] system was noted by Walker and more fully by Carmichael,
[127] who called it 'intermediate run-rig' to distinguish it from the run-rig of older joint farms on boulder clay, and it persists at the present day.[1] In North Uist the machar land is laid off in large scatts or fields. Each scatt is divided into as many rigs as there are crofts in the township. There may be a dozen scatts in all, and usually half the number are lying out in natural pasture, but they are put under crop in rotation, so that each year one or two scatts will be brought into cultivation, and the others left out after a
[625] course of cropping. When a scatt is to be brought into cultivation the township 'constable' (who holds sway under the district ground officer) appoints a day for allocating the rigs.

[113] [1] Walker (1808); Alexander Carmichael, appendix xlviii and xcix, pp. 213 ff. and 451 ff., Report of the Crofters' Commission, 1884. Socially these form the most significant evidence in this great Report. See also "Grazing and Agrestic Customs", *Celtic Review*, 1905. Ct. C. Macdonald, *Scot. J. Agric.*, 1919. reach their shielings. From Point district (Eye Peninsula) the cattle are still brought inland to the moors south-west of Stornoway. And from Bernera on the west the cattle are swum to the hills of the main island, just as they once were swum from Bute to the hill-pastures of Cowal in Argyllshire across the Kyle at the 'Strait of the Swimming', Colintraive (Caol-an-t-snaimh). Nothing could be more natural, indeed inevitable, than pasture in common where large, open moors were to be found. The number of animals allowed to each holding was duly apportioned and then, as now, was known as the summing or 'souming', still checked at the annual gathering (*cosgoradh*).

Thus a cluster of conjoint farms shared "the grass on the Ben and the tillage on the machar" (*Fiar air beinn agus peighinn air machair*). Along the shore, sea-ware, driftwood and the like were allotted, too. And, as Carmichael put it, there was even "run-rig at sea", for the fishing banks were allotted among the available crews. Most of these rights are still shared by the members of a township. But any crew can now fish freely where they choose, and no township can legally keep away strange boats, nor even steamers beyond the three-mile limit. This loss of communal rights stands in the way of remunerative fish-farming and its promise.

Profound social implications distinguished these three concentric circles of community: the family; the farm-team and boat's crew; and the larger, township group. These implications concerned labour, duty and right. The labour of reclamation gave a 'right' to the land thus won from the moor; and the duty of labour together, for fruits equally shared, gave the farm-team and fishing crew cohesion on land or sea—team and crew working for a common purpose. On the other hand, as individual sharers in the common

did another Zacharias, closer than Thomas to the Lewis tree, who worked nobly with Wilberforce for the emancipation of the slaves.[1] Still another connection was a Canadian emigrant, grandfather of the late T. B. Macaulay, LL.D. Alexander Mackenzie, the explorer of the Mackenzie River, was a descendant of Lewis tacksmen. MacIvers and Morisons also distinguished themselves. But the sons and daughters of crofters had to await the provision of education in English before they could rise in trade, learning or war; hence few Lewismen of the greatest Lewis name, MacLeod, achieved eminence until the twentieth century.

As for the peasantry, the interposition of a new or enlarged class of tenantry between themselves and the superior must have meant that they had to labour on the tacksman's home farm, and no doubt pay more in produce or cash. Hence the Gaelic saying that if the position of the small (joint) tenants was bad, that of the subtenants was worse, "the Evil One itself". Following the long fight with the Fife Adventurers, hardship may have been greatest where mainland tacksmen were placed above the joint tenants; but even under MacAulays and MacIvers rents may have been raised and some of the joint freedom lost which was still enjoyed in Ness. Whatever adjustments had been made in an earlier period had to be re-made with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of lairds, factors and tacksmen are given by contemporary observers. Certain of these insisted that, given the poverty of the lands as a whole, the chiefs and landlords, factors and tacksmen, were the saviours of their people. Yet even among those who supported authority in general, there was

Lewis and Harris

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
228 curers were best fitted to take action not only in marketing but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of a community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

175 Looking beyond the Island to the mainland, the time is
621 approaching for a fair assessment to be made of the historic
622 parts of chief and landlord, factor and tacksman. Not only
427 is there an enlarging body of documentation, but a growing
184 understanding of communal strands in tradition and of changing social economy seen in relation to geographic factors of place and region. And in the Gaeldom, condi-
[178] tions varied greatly between bordering areas from Mar to
[182] Kintyre,[1] and the heartland of tradition in the Hebrides. In the Island, one must remember the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of
[113]

[1] A. McKerral, *Scot. Hist. Rev.*, 1947.

795 The Evangelicals, so insistent in condemning the beliefs
771 and worship of ancient Christianity as 'vice' and 'super-
stition', comparatively rarely condemned words and rites
designed to bring punishment upon a person believed to
have wronged one—that is upon a person one hated! Of
such was the practice, widespread in the Old World, of
moulding a clay figure representing the person to be harmed,
and either sticking pins into it, exposing it to fire, or leaving
it in a stream, with a prayer that as the figure wasted away
so would the object of hatred. An educated Lewisman
I knew, Dr. Norman Morrison, stated that an aunt of
his own performed this rite. No doubt she persuaded
herself that if the desired injury took place, natural or
Divine law was at work and she herself was therefore
• [178] innocent or actually just. What is striking is that in the
twentieth century, long after the healing beauty and
Christian calm of runes and rites had been banished and the
healthy laughter of gay custom silenced, this pre-Christian
rite of ill-will had lived on. One hardly knows whom to
pity the more: the hated, for the fear they would feel if
they knew the rite was at work, or the hater. The extreme
Evangelicals made so little appeal to reason based on fact,
that the irrational element in superstition was not firmly
[829] replaced by a sane, scientific outlook. Indeed 'science'
was condemned as 'unbelief'. The constant evocation of
wrath, anger and "the punishment of just and unjust"
played havoc with the emotions.

Those brought up on the precepts of Presbyterianism
—especially in its milder forms—and familiar from infancy
with a selection of Old Testament readings, can hardly
appreciate the shock to a sensitive heart of first hearing
[776] the whole of the Old Testament read Book by Book. The
shock is due not only to the acts of vengeance or massacre,

795 but still more to their repeated justification in the name
771 of the Lord 'God'. 'God' the universal (*Elohim*) came
[776] to be identified with the tribal god Jahveh or Yahweh,
altered, late in Jewish history, to "the LORD God", the
000 term still used in Bibles. The war cry of the Jewish tribes,
as they swept in from the desert or tightened their hold
upon citizens and cultivators, was that of many wild
wanderers, before and since, who have cried upon their
God of Battles, upon Jahveh, or Allah. Magnificent in its
affirmations of righteousness, the Old Testament can be
terrible in its denials of pity.

795 The Bible (literally *Biblia*, the Books) reflects the search
771 of a people through centuries towards the idea of God;
but the tragedy of the Bible, or rather of its historic misuse,
538 came with the acceptance of all 'Scripture' as equal in
inspiration and truth. The early and the late were accepted
together, the mixed or false with the true. The custom of
seeking Divine guidance by simply opening a page of 'the
blessed Book'—that is, any text on any page of any one
of its books—was an example of such acceptance; and it
[175] was only possible for the literate. In Lewis, Macfarlane
records the custom, practised by 'The Men', late in the
nineteenth century.

175 Reading came late to the Islanders, but its effects were
as direct as among the Puritans or Covenanters at an earlier
• 178 period. The people, whose hearts had long since been
771 wrung with pity at the Crucifixion and who were steeped
[538] in reverence for the Gospels, became 'changed' indeed.
Once their minds had been crushed by the Old Testa-
[212] ment's massive weight, the 'change' was reinforced by the
vision of a world to come, limned by fevered imagination
[795] in the New Testament's finale, the Apocalypse. The
'change' was brought by Evangelicals who had themselves

175 undergone the same crushing experience, at a time wh
• 178 communal life was being overthrown by the Indust
Revolution. "Terrible old men!" exclaimed a wise Le
771 schoolmaster, of these 'Disruption Worthies'. It was
795 that they were inhuman—that is clear from the warm
felt for them by so many of the people, who would ne
have taken kindly to the unkind.

175 Nor were the first Evangelicals invariably severe.
the Rev. Mr. Macrae, long in Lewis, it is told that, wh
178 young he had rebuked an older fellow-minister for lev
771 at a ministers' supper on Communion Monday. Leap
795 up, the minister seized Macrae by the shoulders and danc
behind him, till Macrae was forced to join in the laug
181 Macrae never forgot the sane and kindly words spok
to him after: and he saw he had been wrong to ident
cheerfulness with irreligion. Yet much joy was ext
guished or found illicit vent. To such ruthless zeal, th
came inevitably reaction, noted even by 1877, and s
more notable during the war of 1914–18 and after. Co
flict or compromise was inevitable where Churchmen e
phasised terror and inveighed against the calm heritage
their forebears and the happiness for which human natu
178 asks. The days of emotional 'Revival' are by no mea
771 over and from them the pendulum may swing from exc
back to relieved but wearied unconcern. Moreover, w
the emigration of so many of the men, the balance of fam
life was upset. Some thoughtful men and women feel th
the 'Revival' which swept their Island (with the rest of t
Presbyterian Hebrides) before 1939 and during the w
was partly due to the excessive influence of spinsters,
whom strict Presbyterianism offered little outlet
motherly emotion or sisterly service.

Lewis and Harris

(2) SOCIAL CUSTOMS IN CHANGE

178 In spite of 'the wrath to come', life had to go on, work
181 be done, and natural affection find an outlet in youth.
183 How could the women waulk the cloth without a chorus to keep their beating hands in time? Songs had to be allowed by the sternest for this work in common. In a land where marriage was not an affair of dowries, but chiefly of love choice among the young folk, the old courting customs could not wholly be denied. Curiously enough, drinking was not severely looked upon by Scots rural Evangelists; in one story in the Old Testament, it is not the drunkard, but his mocker whom the Lord punished! In a city, a drunk man is a prey to thieves and harpies; but in a township none will do him harm. But today there are Evangelical ministers who think that drink should be frowned on at weddings and *ceilidhs*, while song and dance might be tolerated.

175 Not all the people gave in willingly to the severity of
771 the new creed. In Uig there is a cave, the 'Piper's Cave',
795 to which a crofter was wont to resort on dark nights, his pipes in his oxter, when the wind blew *from* the manse and
183 out to sea! Ultimately the least willing were forced to give in, first, by the appalling threat of the refusal of communion, and secondly, by denunciation from the pulpit
(178) and the ostracism of the Elders. Much was destroyed that can never be recovered now, and many a fine heart saddened or broken. It was the most intimate expression of their lives, their religious lore, which suffered most.[1]

178 Yet something remains, preserved by the good sense,
181

[1] Carmichael gives an infinitely pathetic account of a conversation in a home in Ness about 1880–85. *Carmina*, pp. xxvii-xxxii.

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

178 intuitive and traditional, of the people, and their love for
(181) the good and beautiful. Song collectors from outside the Island have found little and assumed that song had been
(114) swept away. Discretion is certainly needed for song col-
(533) lection! Years ago in Bernera I had been told of a pretty love lament I had not heard. Calling with my hosts to
125 invite him to their house that evening, we found the singer,
533 a burly crofter of fifty or so. We had been about to
183 mention the word 'song', when the word was checked on our lips by a swift, warning glance. The singer lived with his old mother and she must not be told that her son went
533 out on such an errand! Nevertheless, Islanders them-
178 selves are collecting many unpublished songs, where strangers failed. The Laxdale School choir wins prizes at
(814) many a national gathering or *Mod*, for their spirited singing of songs, many of them unpublished. Owing in part to their very isolation, these songs have remained as pure in form as in the Catholic Isles, whether in time and rhythm or in scale and mode. Thus the sub-intervals or 'quarter-tones' of the modal scale add subtlety to the melodic line of an air, as in the melodies of Wales or of distant India.[1] These intervals are rarely heard on concert platforms, being unrecognised by many 'Mod medallists'. They are rarely known to professional musicians trained to the mechanical scale of the piano, and who are asked, as adjudicators, to award praise or criticism by alien standards.

181 Courtesy and modesty are noticeable among the young

[1] M. Kennedy-Fraser, Preface, *Songs of the Hebrides*, vol. i. Cf. Glyn-Williams, *Welsh Song and Dance* (Curwen, 1936). For India see A. H. Fox Strangways, *The Music of Hindustan* (1914), pp. 104 ff., and H. A. Popley, *The Music of India* (1921); cf. A. Geddes in A. Karpelès (ed.), *L'Inde et son âme*, Paris, 1927. While published phonographic records of Indian singing normally illustrate these intervals, those of Gaelic Hebridean singers rarely do, as they are accustomed to alter to suit a piano.

ing was lacking, and the minister of the parish remained in the Establishment, the popular movement inclined unanimously towards the cause of the suffering and protesting Church of Scotland, with the exception of a small handful of people in Stornoway."

The part of elder folk in religious life continued to be important, but in new ways. Masculine influence now dominated the family and the congregation. The 'Men' in the Highlands were Elders of the Church who often spoke as lay preachers and who rose to speak on 'Question Day' —that is on the Friday of the Communion Services, which extended, and still do, from Thursday, the Fast Day, to Monday, the Thanksgiving Day. The presiding minister, after opening devotions, invited any Elder of the Parish to rise and propose the Question; the Elder having read a text from Scripture, would say he wished to hear the 'marks' of the true Believer, drawn from the text. After the minister had himself "opened out the text", he would name visiting Elders, calling upon them in turn to speak. One by one, each would rise and give his picture of the real Christian in terms of the qualities suggested by the text. "And so the hour sped under the pleasing and helpful variety of a dozen speakers or more. The 'Men' spoke out of rich experience. . . . 'Question Day' was a self-searching season, when every hearer examined his heart by the 'marks' adduced . . . and as this went on there was a sweet glow on the face of the Congregation as the presiding Minister summed up and closed the holy Convocation." [1]

The 'Men' had long been a recognised Order in the Highlands, and their foundation is traced to Thomas Hog, the famous minister of Killearn, "born in Tain in the

[1] Rev. N. C. Macfarlane, *The 'Men' in the Lewis* (1924).

State were in the wrong: the people were with God and, most of all when they suffered, God was with them! The sense of liberation brought to the Highlanders and Islesmen encouraged them to press their claim to the land they worked, strengthening the agrarian movement of 1880–86. The moral victory of 1843 contributed to legal victory in 1886.

The influence of Evangelism continued for some time at fever heat. "Even down to the present time (1877) there are tokens of the gracious working of the Spirit on men's minds, although it is a day of small things compared with the past and, in the case of some, a day of stumbling and instability. How humbling to behold the first reaction in favour of worldly and Erastian [1] principles, manifesting itself on the spot where the gospel banner was first unfurled in Lewis! But there is a God that judgeth in the earth, and his time to vindicate his cause shall come. 'Offences must come, but woe unto that man by whom they shall come!'" [2]

What comment can be made on this? One shudders at first, to hear of 'gross vices' among the people, only to find that by these 'vices' was meant fidelity to the religious past. It may seem strange that Highlanders such as these writers on the 'Disruption Worthies', who were almost as proud of Columba as of the Covenanters, were blinded to the enduring values in Columban tradition. They were certainly unable to foresee the effects of their preaching.

[1] 'Erastianism' is the doctrine of the supremacy of the State in ecclesiastical causes, a term which came into use in Britain in the seventeenth century. Actually the problem is one which Erastus, 1524–83, nowhere entered upon; none the less, the name is established, and it denotes a major issue of principles.

[2] J. Greig (ed.), *Disruption Worthies of the Highlands* (1877).

(e) A CHANGING CHURCH: 1820–1943

Underneath the doctrinal severity of the Presbyterian
195 Gael, there has continued some of the cheerful faith in
795 living, the belief in mutual aid, the tolerance and calm,
(198) breathed in our native religious lore. The sternest Presby-
terianism, which swept the North-west after 1820, still
makes the Gaelic North its fortress in Scotland. Yet the
maintenance in the Scottish Church of a doctrine of uni-
versal love was due, no less, to Gaelic ministers, and seems
to have owed its rebirth to Gaelic tradition through these
men. The question of continuity is important: for this
doctrine, embracing all mankind, not only the predestined
few, has profoundly influenced the attitude to life in all
Protestant lands, throughout a century crucial to human
development.

195 The most notable of the Scots ministers concerned
795 with the doctrine of the Atonement were John McLeod
793 Campbell and his younger friend, Norman Macleod. Born
in Argyllshire in 1800, McLeod Campbell was ordained
in 1825, and preached the assurance that God loved, and
Christ died, for all men. For this he was charged with
heresy by the Church of Scotland, and deposed in 1831,
a trial he bore "with saintly charity and patience", re-
fusing to found a new sect. In 1832 he went through
the Highlands and Skye, preaching everywhere in Gaelic.
A Moderate minister, John Maciver, who attended his
services, said to him: "I never understood so much of
your views before; now in the strength of God I will
enquire more into them". It was very different when he
met his own cousin, Roderick McLeod, who eight years
later swept the island of Skye into the Free Church and
led the Evangelicals in the Hebrides. To his sister

175 saint, a character so eminently Christ-like",[1] and to his
793 intimate beliefs, doctrine and wide influence. The same
159 Highland roots and deep charity characterised Dr. Norman
Macleod, author of the popular classic, *The Friend of the
Gael* (*Caraid nan Gaidhal*).

121 If a student of community ventures upon an interpreta-
tion of theology, it is because, to him, any attempt to under-
stand "the relations of God to mankind" must take account
of men's relations to one another. Ideas are transformed
by human experience during economic and social revolu-
tions, and in their turn they transform society. To make
contact with reality, theology must regard mankind: it
175 must be integrated with sociology. Because of its close
• 178 bond with communal life, the religious spirit, recorded in
182 Gaelic lore, was jarred, almost overwhelmed, when com-
munity was shaken to its foundations by the commercial,
agricultural and industrial revolution. Happily, the value
178 of communal Christianity has been acknowledged both by
79 Roman Catholics—notably (among Gaels) by the Rev.
Allan Macdonald of Eriskay—and by Protestants.[2] In
the Scottish Presbyterian Church today, the movement
which seems most deeply aware of the need for a new
society has acknowledged its debt to communal tradition
where this has been best maintained, that is, in the Isles.
Seeking to aid Christian endeavour, international and
national, this movement has turned for inspiration to Iona.
(177) Iona, of which the noble cathedral belongs to the Church
of Scotland but is open for service to all denominations,
Presbyterians have found a new symbol.

(113) [1] Canon Vaughan, cited by the Rev. Norman Macleod (*Scotsman*, 21st Aug. 1943).
[2] "The Church should interpret the Love of God by a flaming zeal for the redress of the social order." (The Very Rev. Prof. John Baillie, Moderator of the Church of Scotland, at St. Andrews, 1943.)

CONCLUSION
(CHAPTERS V TO VIII)

Manifestly, prevailing views of the relationships of chief
175 • 178 and people, and above all, of the people to one another, must
105 be revised, even reversed. So must widespread views of the
relation of clerical to 'lay' members in the living, though
unseen, Church. The enduring character of the people's
primitive faith, from its early arrival to our time, may be
almost unique in Western Christendom; distance and
sheer physical poverty proved to be its protection. Had
they been better preserved, the temporal and spiritual
traditions of the Eastern Gael, and also of Scots Low-
landers, might well justify a revision of views. In the Isles
again and again the people were placed under 'Authority'
—under laird and soldier, legislator and official, priest and
pastor, orthodox cleric and unorthodox 'intellectual'.
Should not each of these ask with humility whether they
and their predecessors have not often misled those who
might have led them, mistaught those from whom they
might have learned?

175 as some Indian pedlar one meets on the road may seem
133 now. An older packman's tale of his long tramps, of the
132 people's poverty and hospitality, must have resembled
the mingled plaints and praise one hears from an Indian
143 pedlar today! But in the past only a speaker of Gaelic
(191) could find his way among the people. Almost until 1900,
(197) if not still later, Gaelic speech was to prove a social bond,
but ignorance of English speech an economic barrier.

The transition to increased exchanges, with migration,
175 permanent and temporary, tended to make for specialisa-
133 tion. About 1795, *Statistical Accounts* enumerated, for
463 every hundred families, two or three smiths, wrights (or
carpenters), a shipwright or some boat-makers, a few
• (178) weavers, tailors, and perhaps a miller. Each of these held
some corn land, individually or in shares, with rights on
the common. The line between plain crofters (to use a
later term) and crofter-craftsmen was not easily drawn, and
different writers wrote as they judged best. In Lochs,
80 per cent were fishers and net-makers. On the open
shores of the west, in Barvas parish (in which three-fourths
of the men were also 'fishers'), kelp-making was a seasonal
(470) occupation. In Stornoway parish, where sub-tenants paid
30s. to 60s. in rent, with twelve days' service, they sold ling
to their tacksmen at 5d. each, earned £1 a month on herring
boats, made kelp at 30s. per ton, and roads at 8d. a day.

In Harris in 1795 the eight 'bred' (or trained male)
175 weavers worked only for 'the gentry': the laird, the
284 tacksmen and their families. The rest of the weaving
462 was done by the women, giving a ratio of only one male
weaver to fifty-five families. But in Lewis male weavers
were commoner—one to every twenty to thirty families
It would also seem as if it had not been in the interests of
landlords to improve passages (quays) at sea-lochs,
(113) [1] Brand Report, 1902, p. xiv.
[2] *Scotland's Shifting Population, 1750–1850* (1941).

175 growth followed the increases in potato-growing and fish-
• 178 ing, rises in income and food production, and the introduction
431 of vaccination against smallpox, which had formerly taken
a heavy toll of child life.[1] This increase found an outlet
433 in emigration to the Colonies, often led by departing tack-
men though discouraged at first by the Island lairds. For
(761) example, in July 1773, 840 people sailed from Lewis.
175 "Alarmed by this, their master . . . came down from
431 London to treat with the remainder of his tenants. What
167 are the terms asked, think you? 'The land at the old
rents, the augmentation paid few three years back to be
refunded, and his Factor to be immediately dismissed!'"
(214) Although the *Edinburgh Evening Courant*, from which this
quotation is taken, went on to say that it was expected that
the demands would be acceded to, or the Island would
become a desert, the Factor was retained.

175 The pressure of population can be imagined when the
167 appalling conditions of transport overseas are remembered.
505 A case is known of 700 Gaelic emigrants setting out from
the Clyde across the Atlantic in a vessel for which the
maximum human cargo of negro slaves permissible was
400. The regulations governing the transport of slaves
did not apply to the transport of 'freemen'. In quoting
this case, D. F. Macdonald suggests that while it was in
the interest of slave-owners that their slaves should arrive
in the Plantations alive, it was rather in the interest of
manufacturers to discourage emigration so as to keep a
supply of labour at home with which to meet their growing
demands and fill the gaps due to a high mortality, par-
ticularly among workers newly arrived from the country.[2]
It would also seem as if it had not been in the interests of
landlords to improve passages (quays) at sea-lochs, time,

175 real hopes that prosperity could be maintained. In 1914
228 war came, followed by sweeping changes in international
178 trade. These changes left the Island fishermen workless,
• 176 and with wrecked and rotting boats. In twenty years the
(430) number of Scotland's fishermen was halved, and the re-
458 mainder all but ruined. For guidance, past progress and
past losses should be reviewed, in order to see what
measures can be taken to restore prosperity.

121 For the slow growth of a native fishing industry, two
175 factors were to blame: the poverty of environment, to-
182 gether with the unsettled state of the Isles, and also, it
seems, the jealousy of urban interests. These were repre-
228 sented, in 1603 and even after, by the Royal Burghs, and
from 1707 by the British Parliament. The Royal Burghs
certainly developed Scottish trade and industry through
their own ports, but they feared competition, and opposed
any direct contact of other ports, such as Stornoway, with
foreign fishers and traders. From the days of the MacLeods
(648) this difficulty had hampered regional development. It
was in spite of royal prohibition that Seaforth encouraged
Dutch curers to settle, an arrangement interrupted by war
with Holland in 1653 and 1665. Curers from Caithness
and the East Coast were encouraged to replace the Dutch-
• (198) men, and from time to time through the succeeding century
efforts were made from the south to form fishing com-
panies, and in the Island to encourage local fishers to profit
175 from example in the catching of herring and of ling, hake
236 and cod.[1] The people fished for food, with fishing-rods
427 from the shore, and in frail boats in the lochs, and if they
(648) could, they also sold a surplus. Fish were not only taken
direct to Glasgow, but sold at home, first to Scots and foreign
and later to British boats, of which ninety visited Lochs in

[1] W. C. Mackenzie, 1919, p. 65 ff.

175 though also by State loans. The efforts of the Island
228 fishermen in the sixty years from 1880 to 1939 can be
471 summed up in the values of their boats. From 1880 to
1900 values rose by one-half, but had fallen somewhat
458 before the war of 1914–18 (to £20,000). Immediately after,
the purchase of steam drifters at Stornoway and the fitting
their herring boats with motors by the fishermen had
tripled the value (close on £70,000 in 1920). But markets
fell almost at once, and losses continued. By 1938 the
Island fishing fleet was valued (or overvalued) at a quarter
that figure, and was worth less than the fleet of sixty years
before.[1]

(f) THE CROFTERS ACTS, 1886–1919: TOWNSHIP, LAND LORD AND STATE

175 Centuries of cattle-keeping having left the grass moors
236 in good condition, the profits of sheep-farming rose after
1770 with the price of wool for manufacture. Protected
from foxes by modern guns, and handled in large flocks,
the newly introduced Cheviot and Blackface sheep and
• (198) lambs could graze in their thousands. In many estates the
introduction of additional sheep, with the crofters' cattle,
175 was tried and worked; but in others the people were
236 ruthlessly evicted. Although offset by many acts of wise
economy and generous aid, evictions were too frequent
during the next half-century, and they engendered growing
427 bitterness.

Whereas in other Isles, and on the machar of Harris,
the small joint tenantry and subtenantry were evicted in

(113) [1] Figures 1848–53 quoted from J. P. Day, *Public Administration*, 1918; 1888–1900 from Appendix K, Report, 1902; 1912–1938 from *Fishery Board for Scotland* Tables (Table E-IR, 1912–21, and Table 15 and A.I., 1938).

429 croft by subdivision, he would pay little, indirectly and by
656 arrangement; while if he simply built a hut or house on
a vacant spot he paid neither rates nor rent. Either course
was illegal; yet it was too expensive for the landlord,
however 'hard-hearted', to take legal proceedings to turn
off a squatter. As for wholesale expropriation the suffering
caused and the odium incurred would have involved—and
would still involve—both landlord and State in insurmount-
able difficulties by starting fresh agitation, perhaps with
outbreaks of law-breaking, repression and bad blood. Yet
these anomalies still discourage, and the normal illegalities
demoralise, all concerned.

656 Because of the provision by State and local authorities
• 178 of a growing range of services in other regions, and also
511 because of the special reasons of Insular poverty, State
action was increasingly taken in the Isles. To what extent
12 have the Islanders responded, it may be asked; or how
far may they have failed, in return for aid offered and
(1162) benefits received? Let us begin with mutual aid practised
among the people up to 1900, and then consider the repay-
ment of loans and grants under different conditions. Ob-
servations by those in touch with the Island for many
years, officially or privately, allow one to read between the
lines and attempt an impartial judgment.

As to the strength of independent mutual aid there
175 could be no doubt. Up to the beginning of this century,
176 the amounts expended on parish relief were 'almost
(652) nothing', and had shown no increase in preceding years.
General poverty, anomalies in the rating system, and the
mistakes such as the erection of poorhouses by the central
administration, diminished resources; but the people
generously gave help to their poorer neighbours in work
and gifts. Except for a year of overwhelming crisis,

181 grants, then, in the absence of an immediate goal, the
combination of the corporate interest in bad work with
natural inclination to an easy time proved overwhelming!
The problem of assuring good work and prompt repay-
ment is real: it calls for the right appeal to team-spirit
coupled with personal responsibility. Many short roads
to small new settlements have been economically built.

175 With regard to loans for settlement and housing, similar
(257) contrasts are found. Near Stornoway the farm of Aignish
(Eye) was divided in 1905 into thirty-two fishermen's
476 holdings (rented at £3). The Congested Districts Board
lent £3600 for housing and spent £1600 on fencing and
£450 on administrative expenses, a total of about £160
per holding; but in seven years the holders had paid only
one-seventh of the annuities due, and were in arrears with
the rent.[1] Yet on the housing loans made on a wide scale
since 1919, there was mutual aid among neighbours and
the repayment has been satisfactory.

SUMMARY: 1750–1914–1919

175 The transition from the old economy of mutual aid in
• 178 self-support, little changed down to the 'Forty-five, to the
433 development of production for sale had proceeded far
by 1914. Yet change had not continued steadily. There
had been fluctuations, from the land and back again, or
towards individualism with returns to common action.
Kelp-making, migration, and commercial fishing alternated
in importance as means to earn a living without losing the
(931) anchorage of home. After the potato famine, a century
(166) ago, the people tended to move away from the outlying
(167) townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

175 for a firmer hold upon the land and for a return to aban-
• 178 doned sites. The communal possession of joint farms, held
433 directly or under tacksmen, gave place to individual pos-
(731) session of crofts. Yet the legal recognition of perpetual
(162) tenure in 1886 gave not only the crofter's home but the
(167) crofting neighbourhood a security unequalled in Britain.
The use of moor and machar in common was retained;
but its control for improvement or reclamation by the
175 estate or the township was weakened, rather than strength-
(257) ened, by the Crofters' Acts. Confusion grew—both upon
178 the arable land, subdivided, unenlarged and unimproved,
423 and also upon the common grazing, sorely overstocked in
427 spite of ever diminishing 'soumings' (or family shares) of
cattle. Rating difficulties and anomalies appeared. Com-
munal discipline, maintained at sea by fishing, was weak-
ened on land after the abolition of the joint farm-group,
and almost nullified in the townships by subdivision and
squatting.

175 A year before the potato famine of 1845, a new landlord
178 had brought good-will, capital and pioneering effort to
433 Lewis. These had been directed to experiments in the
(427) reclamation and the industrial utilisation of deep peat.
311 Helped by employment on these and other works, the
(161) population of Lewis continued to increase, when increase
in Harris was arrested for a generation. Yet while neither
experiment with peat met with success, little aid had been
given to develop fisheries. In both parts of the Island a
growing population was supported from the 'seventies
onwards by help of earnings derived from the seasonal
herring fishing on the East Coast and from inshore line
fishing at home. Women added to the Island income by
(167) seasonal 'gutting' and, in Harris, by their spinning and
weaving. Money was earned by work on the mainland,

175 and savings were sent by emigrants who remained faithful
• 178 to parents and home.
433 If it be asked why most of the people kept to their
167 Island home in spite of its poverty and earned so little
away from it, one answer must be that their native tongue
175 formed a barrier encircling them as a community at home
178 and cutting them off from the rest of the nation. Seventy-
197 five years ago the new Education Acts were not yet in
(671) full operation. Comparing the relative well-being in the
(871) Shetlands with the extreme poverty in the Hebrides at that
511 time, a northern agriculturist wrote that in Scotland, only
(184) in the Hebrides "is the food obtained by the peasant
occasionally so scanty" as to be unable "to maintain a
175 labouring man in vigorous health". Inquiring why there
178 should be so great a difference between the Shetlanders
197 and the Hebrideans, living in similar, distant isles, he
182 wrote, "We think the answer may be given in one word—
language. . . . The population of the Hebrides cling to
their ancient Gaelic with consequences most disastrous to
themselves. . . . It handicaps them in the race for life . . . .
is a hindrance in the cities and a check to the emigration
of both sexes to those world-wide regions where all who
speak the English tongue find themselves at home."[1] He
concurred with the Census Report of 1871, which stated:
"The Gaelic language may be what it likes, both as to
antiquity and beauty, but it decidedly stands in the way
of the civilisation of the natives making use of it, and shuts
them out from the paths open to their fellow-countrymen
who speak the English tongue". The Report concludes:
"It ought therefore to cease being taught in all our national
schools. We are one people and we ought to have but one

[1] James Mollison, in the Highland and Agricultural Society's *Report on the Present State of the Agriculture of Scotland* (Edinburgh, 1878), pp. 136-38.

175 language." Many Islanders would agree with the state-
• 178 ment that Gaelic was a barrier to economic progress.
197 It was not only Lowland schoolmasters, ignorant of Gaelic
182 but an educated, sensible class of men in their day, who
used the strap on the palms of the little children "for
(511) their good" because they could not understand English.
An active Lewis country schoolmaster, who had considerable
175 rural knowledge and experience, said to me: "I know what
197 I have suffered through life from being brought up on
(671) Gaelic. If I had my way, I would *punish* [with the strap]
871 every child I heard speaking Gaelic in the playground!"
Had the Island School Boards wished Gaelic to be con-
sistently taught with English, they could have prevailed.

114 One may not only disagree strongly with the means—
197 the strap—but hold that enlightened bilingual teaching is
871 both worth while culturally and also of assistance to
intelligence without interfering with use in English of the
153 three Rs, and of secondary and higher education. Yet in
Lewis recent non-verbal tests in English and Gaelic show
a mean intelligence quotient depressed by about 15 points.[1]
153 The conclusion seems to be that under the present system
197 the Gaelic school child is still at a disadvantage compared
182 to other school children. But even more important to the
(71) child's development would seem to be the expression of
his response to his rural environment in his own tongue.
For this the school tests and the educational code do not
fully provide; nor do the tests of life when the adolescent
Islander suddenly finds himself at work in a Glasgow
175 factory or abroad in city streets. What concerns us here
197 is the economic drawback of a lack of ready English among

[1] Christina A. Smith, M.A., B.Ed., *Mental Testing of Hebridean Children in Gaelic and English*. (Scot. Council on Research in Education, vol. xxvii (London, 1948); J. L. Campbell, *Gaelic in Scotland* (and ed.) (Edinburgh, 1948).

159 stubborn and suspicious; he never believed it. He realised
473 that the backwardness of the Island arose from lack of
opportunity, and that opportunity he would do his best
433 to provide. Wherever he went he found the same story
—things half attempted, nothing done." Leverhulme, one
felt in 1919, wanted to do all he could for the Islanders.
A greater man would have wanted to work not only for,
but with, the Islanders. Then, even if the fisheries had
been ruined, as they were, by forces outside his control,
he would have shared a moral victory, not shared and
suffered economic loss, with moral defeat.

174 In the Isles for centuries before, a family and well-tried
183 friends were valued above all other things. What was more,
this was still true in the lifetime both of the elder men and
• (178) the women he found at home, and of the absent men, at
war. The foundation for this friendly life was a plot of
159 land and work to do, a home and the leisure to enjoy it.
433 Leverhulme, too, valued these things in his own way. He
cared for human homes and gardens, and had proved it at
461 Port Sunlight and elsewhere. A pioneer of industry and
efficiency, he pled for 'a six-hour day' and leisure after-
wards, and he had done much to realise the ideal in his
own works. Moreover, he was not without respect for
spiritual values, freedom, and a congregation's right to
choose their pastor.[1] All these things should have helped
to put him into sympathy with Island life, and up to a
point they did so.

159 It is clear that Leverhulme had considered the possi-
433 bilities of improving the local fisheries, village by village;
and an engineer had reported on possible harbour improve-
228 ments at Ness, Barvas, and elsewhere. But he came to the

[1] Leverhulme (1927), p. 211; and Leverhulme (1st Baron), *The Six-Hour Day and Other Industrial Questions*, 1919.

159 in the country, and foreseeing that the only sure way to
473 avoid irritation, friction and law-breaking was to grant
the farms and have done with it, the Secretary of State for
433 Scotland and the Board felt that they could not withdraw
the Government's promise of land. The Secretary for
Scotland, Mr. Munro (later Lord Alness), spoke with
knowledge as a Highlander. A general promise of small-
holdings had been made to all Scotsmen in the Services,
and could not easily be set aside at the wish of one man,
then approaching the age of seventy, however well-inten-
tioned, wealthy and in earnest. Yet Leverhulme declared
that while he would relinquish farms on the west side of
Lewis, his schemes could not go on unless he retained
the farms on Broad Bay to supply fresh milk for Stornoway.
If the farms were divided, he said, he must close the whole
scheme forthwith.

159 Of his earnestness Leverhulme left no doubt. He not
473 only planned but set up a retail agency, Mac Fisheries, and
433 he purchased drifters and trawlers, the Mac Line, to fish
far afield and bring the catch to Stornoway, there to be
228 transhipped by his own carrying service. He set about
building model dwellings in Stornoway itself, each with
its quarter-acre allotment. 'Work and Wages' from
capitalised fisheries were his offer, in further token of
which, road-making and other wage-providing work was
• (178) begun. Until 1920 the farms remained undivided. The
farmers, for their part, could only wait for the expiry of
159 their leases, or for the transactions by which their leases
473 would be foreclosed and compensation awarded. Prices
433 of stock were high at the time, and the valuation would
correspond to these. Hence tenants felt they could afford
427 to wait. Meantime crofters' stock wandered over their
farms—whether because of the wilfulness of the stock or

The Trustees of the Stornoway Trust have not found it easy to meet the cost of keeping up the valuable property of the Castle and Park, nor to carry the burden of its rates, no adequate income being available for the purpose. Today, however, Lewerhulme's gift is being put to good use as a Technical College, opened in September 1952.

Division of the available farms, after providing about 200 small crofts (of 10 acres or so), still left the problem of finding legal homes on legal tenure for the remaining crofters and squatters.[1] The Department of Agriculture managed to fix plots of 'allotted land' on the estate not far certain townships, including one in the extreme north and others in Lochs. About 200 of these little holdings with potato ground were provided. On the holders' behalf the Department feued land from the owner, after obtaining the consent of the Common Grazing Committee of the township and permission from the Land Court for 'resumption', i.e. for enclosure of a portion of the common. The legal and administrative procedure involved may seem disproportionate to the economic value of the holdings. Yet definition of land and custom had been allowed to go from bad to worse during the past eighty years; and these difficulties were overcome.

To encourage better housing in the crofting counties, loans are made to crofters and fishermen feuers' personally. Local stone, or cheaply concrete, is used, and much of the building is done by the 'man of the house' himself, and his friends. From 1920 to 1940, nearly 1400 loans were made in Lewis and Harris for the erection (or improvement) of houses, and in a few cases for the erection

[1] Estimated at 1200 to 1300 shortly before, the open question was whether subdivision during the previous eighty years was to be recognized and accepted.

illustrates the narrow margin of habitality on these fragmented holdings.

Now, in Lewis precisely peeling and exchange, or the practice of annual re-allotment on the small joint-tenants' farms, was abolished early in the nineteenth century, except upon the machar, where it still continues. Apparently the strips were simply fixed where they had last been approximated by lot. Subdivision of the little crofts among sons and daughters, or their descendants, is still the problem of finding legal homes on legal tenure for the remaining outsters and squatters.[1] The Department of Agriculture managed to fix plots of 'allotted land' on the estate not far certain townships, including one in the extreme north and others in Lochs. About 200 of these little holdings with potato ground were provided. On the holders' behalf the Department feued land from the owner, after obtaining the consent of the Common Grazing Committee of the township and permission from the Land Court for 'resumption', i.e. for enclosure of a portion of the common. The legal and administrative procedure involved may seem disproportionate to the economic value of the holdings. Yet definition of land and custom had been allowed to go from bad to worse during the past eighty years; and these difficulties were overcome.

To encourage better housing in the crofting counties, loans are made to crofters and fishermen feuers' personally. Local stone, or cheaply concrete, is used, and much of the building is done by the 'man of the house' himself, and his friends. From 1920 to 1940, nearly 1400 loans were made in Lewis and Harris for the erection (or improvement) of houses, and in a few cases for the erection

[1] Approximately 200 such holdings in the Lewis estate are described, and the principle discussed, in *Scottish Land Court Reports*. (See *Scottish Law Rev.* vol. 58, p. 240; 1942, p. 51-54.) At the same time 'mechanization', or the co-operative utilization of tractors had led to plans for 'collective farming'. (*Stornoway Gazette*, February 1944.)

left the Island. Yet after 1931 many returned, owing to losses and unemployment both in British towns and overseas. When emigrants began to come home the 'Harris' tweed industry had spread to Lewis and offered increasing employment. Some men still fished in family-owned Island boats, and others as paid hands (the owners being the East Coast), though losses and unemployment were suffered.

Post-war changes were hastened not only by movement beyond the Island—an influence at work for three or four generations before—but by mobility within it. In 1939 a small mail car made its way daily from Stornoway along each of the five main roads, with an occasional passenger. Where motors crossed the Island by Stornoway roads, on foot or took the pony and cart at a slow walk; it was a day's journey. Ten years later, Ford vans, bought second-hand, ran daily to Stornoway, with some passenging. Frequency, ease and relative cheapness of movement came about in an Island where hardly the necessities of life were the same maintenance of a tradition, the pooling of resources.[1]

In 1924-25, widespread distress in the Isles, the failure of the Leverhulme endeavour, the crofters' land agitation, gave to the women, and the emigration which followed, caused many considers to formulate a new social organization. It was all the more interesting to note the confidence in the Island's future shown by buyers of the great estate, all of whom knew what they were about, for they were men with experience of the Island, of its rates and rentals and of its people. To a wealthy man who repurchased a sporting

[1] Approximately 200 such holdings in the Lewis estate are described, and the principle discussed, in *Scottish Land Court Reports*. (See *Scottish Law Rev.* vol. 58, p. 240; 1942, p. 51-54.) At the same time 'mechanization', or the co-operative utilization of tractors had led to plans for 'collective farming'. (*Stornoway Gazette*, February 1944.)

exists at Tarbert and another was erected in 'the Bays' district by Lord Leverhulme. Agricultural experts have introduced 'Automatic' hand-looms into Lewis. Today as in the past, the weavers possess a little croft or few, a cow, and a few sheep on the outrun, and perhaps a small boat.

Commercial fishing and weaving cannot, however, be satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with economic efficiency. The poverty of Island, Lewis (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but not of the same kind as the fishing boats (still represented in 1930) had been fitted with motors after 1918; they were idle and rotting, and by 1938 only one was still regular. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to Stornoway. Light passenger cars bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, improvement at home and young men, on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

(c) THE OUTLOOK: 1939-54 AND SINCE

How then did the situation be assessed, as it was before the outbreak of war and since then? By 1939 tweeds had been partly lost; for the after-war years of the 'Leverhulme boom' were followed by discouragement and poverty. During that time many people have hoped for half a generation of reconstruction and progress. On the other hand the core question of dividing the farm lands was settled, as bringing nothing to an end. Congestion on the existing crofts is less than it was, owing to this fact, and to the emigration of the young. The poverty of many Islanders who had migrated to the cities first cut down the amounts remitted to their Island dependents, and then (in consequence) A croft, or even a garden site, and the opportunity of building a good house there made life still worth while, when other employment had failed. Unemployment relief, though tempting some to idleness, gave a respite which many utilized to make a fresh start. As fishing gear was lost, men took advantage of any new beginning offered to learn a new trade—weaving. This has made many feel that the Island may be found on the labour market, given alternation of 'wage-earning' with unemployment, in Glasgow or abroad. They believe the situation in the Island improved, and weaving in Gaelic has remains little better than before, many, even of the younger people, still care for the Island life among their own kin. Given a clear lead, these could reorganize themselves, and undertake the developments needed in fishing, weaving and reclamation. The homes are sound, 'good neighbourhood' endures, and given fresh opportunity, the community could awaken to new life.

During and since the war, co-operative marketing was

developed through the township Grazing Committee, the Crofters' Agricultural Organisation Society and its associated Crofters' Agency. Lime and fertilizers were purchased, and wool and other products sold, co-operatively. The co-operative marketing of lobsters, taking advantage of fluctuating London prices, has led to the reconstruction of ponds for storage. By these and other means, government assistance is utilized but not squandered; earlier initiative and self-reliance, encouraged in reinforced; and communal tradition is revived, linked to personal responsibility through the crofters' lifelong knowledge of one another.

As to the future, all agreed that unless the Harris Tweed industry flourished, there was little prospect for Lewis. The work would be abandoned by the young, perhaps with no return such as hatherto on 'retirement'. Many young people are content with the Island life, provided they can get a living there, though not all, for they are somewhat divided; and work elsewhere, even in the mills of Stornoway, is not unpleasant.

Social life is undergoing changes which operate both against and in favour of the retention of Gaelic. On one hand, household interchange of conversation, song and story, the *ceilidh*, has declined. On the other hand, one found that, as regards religious prohibitions, and in spite of the nervous tension expressed in 'Revivals', the young have won greater freedom. Near one village a Nissen hut, handed over to the Home Guard, was also used by young people for monthly dances. When I asked a young crofter who resided from the Navy whether the Elders of the Kirk would put a stop to such, he replied that they had, but had to give it up: 'They see that we aren't stand for it'[1] This would have been unthinkable during the First World War.

[1] W. J. Gibson, "Social Amenities in the Western Isles", *Dunedipedia* Rev. (Jan. 1950).

so creating a small leak in the purse and in the mind, by serving little amusement, and little, in consequence, to make a man's home attractive. The Elders, in the main, are not unsympathetic to the dances, in the main. The reports of the B.B.C., on the other hand, emphasise their cultural endeavours, and the lightening of house-work and of rural monotony or solitude. Every effort is needed to aid a happy selection in home and neighbourhood.

Improvements are taking place in war were of very differing types. Many men spent the war years in the Navy, without being transferred to other work, or from the Merchant Marine. Of combatants in the land forces, the Territorials of the original 51st Highland Division experienced a few months of training, and then went home on leave, then of a brief but bitter campaign, followed by long years in prison camps, while other soldiers underwent a prolonged training in Britain, followed by severe fighting for long periods, far afield. Lastly, a limited number of men served in engineering or other units, for the most part in Britain, though labouring, at high wages, kept many of the older men employed at home. Of the women called up for service, one has to remember that, if it would be a pity if it can be renewed, many were transferred to other work.

As in the First World War, so in the Second: few communities in Britain have had so large a proportion of their men in the Forces, in the fighting line and at sea, during the outbreak of hostilities. The Island community is almost without the exemptions due to 'essential occupations' such as commercial agriculture in the country, or heavy industry and administration in the towns. The toll has been heavy, and the nation's debt to the Islanders should be remembered.

For a year or two after the war many men and women returning from the Services, the sea or the factories found, though people from the Island had gone out into the world and rubbed shoulders with all sections, that life was hard, but some—not all—made a fresh start, with help from the family in jobs such as bobbin winding. Few fishermen dared to sink capital in new boats and gear, and the fishing industry was stagnant for years. Few women wished to return to the hard, uncertain weekly getting. The whaling station, lost to the Island in 1939, remained idle, and open for a short time between the wars, was reopened in 1950, and employed some 30 men for 18 months before it closed. Yet the Island's fishing industry, in 1950, was in better condition. The war-time construction of air-fields had ceased, though some harbour-work and road-making was undertaken by contractors.

In 1949 the Harris Tweed industry, now the Islanders' main source for earnings, was crippled by the imposition of a 66 per cent purchase tax on hand-woven Harris Tweeds. Parliament decided that as a non-utility product, its export to urban clothing was a luxury, and taxable. Vesting the position of the tweed industry in Britain as a whole, there was some sympathetic understanding of the plight of the Harris Tweeds: the high-grade industry of the Scottish Border or the manufactures of the West Riding should not be subjected to unfair handicap. At the same time the crippling of a handicraft practised by peasant or artisan favours mass-production to the loss or ruin of traditional and experimental workmanship or design to which, in the end, the mass-production is an unacknowledging debtor. The obvious economic handicaps of hand hand-weaving may surely permit some latitude. The export trade in Harris Tweed, in which the imponderable 'sentimental

APPENDIX I

128 An effort has been made to separate crofting from other income, and also to average the income from the sources given of the total rural households, numbering 4,990, composed of those on the 36,500 acreage crofts plus an estimated 1030 others, namely, cottars and squatters, and ' feuars '—i.e. holding land in fee.

431 Finally, to the productive income earned on the Island there should be added that received by earnings sent or brought home by dependants, together with pensions, unemployment relief and the like. I am greatly indebted to the appropriate officials for the figures cited for 1937-38 or the year immediately preceding. These sources average £45 per rural household.

128 The figures tabled all apply to Lewis alone; but many figures have been obtained for Harris also, conclusions are similar there. The concluding Table (pp. 314-315) bears a note on other sources of income, with a similar table for 1953.

(i) *Tweed Industry*

176 After deducting the cost of wool imported from the mainland and certain other costs, the net productive income was taken to be £307,000. The estimate may still err on the high side but it indicates the prime importance of the industry in the Lews. For 1938 the quantity of tweed stamped, and certified as hand-woven by the Harris Tweed Association Ltd., was 2,850,000 imperial yards, rising in 1939 and 1940 to 4,000,000 yards, though falling thereafter. The value of the tweed produced in 1938 was approximately £500,000. The total wages paid in 1938 amounted to £140,000 (£139,600), rather more than half of which was paid to the weavers working at home. In 1940 this had risen to nearly £200,000, a slightly higher proportion falling to the weavers.

345 In addition to the wages paid and the price paid for local wool, the industry is a valuable customer of the Electricity Company and directly or indirectly provides much other employment

651 in the Island. The industry also provided a market for a large quantity of Scottish wool and contributed to taxation.

1158 The productivity and earnings of the industry continued to

APPENDIX I

176 be high until 1948. The year 1947 was the peak year for the production of Harris Tweed, with over 5,000,000 yards (of which 3,765,000 yards were stamped, and some 1,500,000 unstamped). In 1948 the production of unstamped tweed had fallen to 500,000 yards but stamped tweed came to 4,380,000 yards.

Then, in the year 1948 the imposition of a 66½ per cent purchase tax struck the industry a crippling blow. The rise in prices of wool increased difficulties, and by 1950 few orders were being booked and tweed was being paid off. A few small men who had relatively large stocks frozen by the purchase tax were able to pay them off, but this minor compensation for losses was short-lived. The outlook is disquieting.

(ii) *Agriculture, Peat-making and House-building.*

131 (a) *Revenue.*—The estimated agricultural output shows

131 a total value of £189,000, and of this total the quantity fed to animals was valued at £103,000. This leaves £86,000 as the value of the net output of crop produce consumed on the Island. Adding this figure to the gross livestock output we arrive at a total income of the agricultural productions of Lewis of approximately £194,100. To arrive at the average output per croft there was deducted the fodder production, estimated at £8,100 by calculation from known crop and stock returns. This gives a figure for crofts alone of £184,400. By dividing by 3730, we obtain an average value of the gross annual production by crofters as £49, or say £50. The inclusion of squatters' produce would add so slightly to the total figure as hardly to affect the average for rural households. Outlays being small, most of this net output may be regarded as ' net earnings '.

(b) *Peat.*—To the sum must be added firing and some share

431 in housing. The peat cut has been valued at £50,000, an

431 average of £14 per croft; it demands much labour. As peat is freely cut by cottars and squatters, etc. (estimated at 1030 or so), the average value might be given as £19 per rural household. In Stornoway the chief fuel is coal.

(c) *House-building.*—From 1920 to 1940 the Department of

APPENDIX I

228 boats; value, £15,400. Of this, the greater part came into

130 Lewis creels (Table 17), making £10,000 for Lewis.

Finally, we may add a round figure for whole or part-time occupations associated with the fisheries, including what accrues by the visiting fleet and its business, of, say, £20,000. This gives a total net output approaching £80,000 from fisheries for a typical year just before 1939.

462 We now turn to an estimate of the earnings of fishermen and of the women engaged in curing. To some extent these figures overlap, for the value of the net output includes the value of fishermen's earnings; but the sums included 'other' (*i.e.* 'stranger' vessels—reduced now to some £3000—and the Stornoway Trawler earnings averaged £16 in the local summer fishing but only £15 at the East Anglia fishing. The latter is a small return, but allowance must be made for the wear and the discomfort she endures. The women work in small groups together, and their efficiency is partly due to their comradeship.

228 The figures for cured herring have already been the conclusion of

228 £30,000 for herring and £10,000 for white fish and shell-fish.

When the net earnings derived, after subtracting the working expenses of boats and outlays for gear, were very much less than this gross sum, a substantial part should be counted as earnings of fishermen (see Statistical Table 21).

Summing up the total net earnings, we arrive at the following for Lewis proper. The women's total net earnings are taken as £25,000. We add to the probable earnings of the men at the herring fishing an allowance for their profits from other catches, making a total of £130,000.

The industry was still declining here as elsewhere in Scotland. About 1930 the earnings of hired hands alone reached £30,000 and that of women twice as much, say £60,000. Besides this was the important sum earned by men with share of boats. The local white fish and shell-fish catches were also considerably higher at that period. As to the future, much will depend on what can be done to rehabilitate the industry by compensation for losses incurred in war, and by assurance that government policy will encourage local fishermen to embark on their enterprise without the risk of the

APPENDIX I

176 crippling losses suffered after 1914-18. A beginning has

228 certainly been made. The Herring Industry Board's scheme for

228 'Queen of Scots' kippers will help the Minch fishing. It will

not necessarily help the ports of Stornoway or Tarbert, because herring can be landed at mainland ports and transted there or else taken by road to the Moray Firth, kippered there, and still qualify under the scheme. The Scottish Agricultural Organisation Society has aided the marketing of lobsters to good purpose.

(iv) *Other Sources of Income earned in the Island*

It is to be hoped that members of the Lewis community may ascertain these figures, perhaps with University research workers. This, in turn, might instructively be related with the imports and exports of the Island, which are recorded and ascertainable with a precision approximate to a similar area on the mainland. Thus the facts would throw light on the economics of other crofting districts.

(v) *Allowances, Pensions, Unemployment Assistance and Insurance*

With regard to money received by the crofting communities of Lewis from other than ' productive ' sources, figures have been given in the preceding Appendix and Statistical Table 21. Allowances made to members of the Forces and their dependents, and Pensions, (b) Unemployment Insurance and Money Orders and Postal Orders. The yearly periods for which figures are available are close enough to permit of reasonable comparisons. Among other sources, Bank Drafts form an insignificant fraction of monies received by crofters from outside

608 Besides this was the important sum earned by men with share

144 of boats. The local white fish and shell-fish catches were also

654 considerably higher at that period. As to the future, much

will depend on what can be done to rehabilitate the industry by compensation for losses incurred in war, and by assurance that government policy will encourage local fishermen to embark on their enterprise without the risk of the

APPENDIX I

434 The significant figure here is the average total payment per

434 head in the rural or ' landward ' area, a sum of ten pounds

sterling, the complexity of urban conditions, even in a small town, making the total for the Burgh less significant. To put it differently, an average rural household of 4·5 persons thus received a sum of £44·5 a year from these sources.

All these figures—pointers to the complete facts, unascertained as yet—show that even with the help of these sources the average income of the rural Islanders was small. Comparisons of such figures with those for the rest of Britain would, of course, be misleading. To have to supplement their working lives outside their native isle, Lewis is no more than a home; and for them is absolutely necessary to remit to some urban suburb or ' dormitory ', rather than to an urban centre of production or a typical agricultural district in the Lowlands.

434 Any help to compare the conditions of life with those

171 of 1951 if, say, average weekly wage earnings for all British

171 workers in employment are taken for October of both years.

Thus, taking the 1938 earnings of 53s. 3d. as 100, those of 1951 were 141·1; or, if 25 per cent of the first, a figure to be related to the 1951 figure, the 1938 figure would be raised from 100 to 202 per cent. The total wage-bill gave a still higher increase for Britain, from 100 in 1938 to 298 per cent in 1951. As food formed a much smaller proportion of living to people in poverty or near it, the crofters' own food does not affect the comparison. The loss of amenities following the close of the mills left little for them but to seek employment beyond the Island.

434 Summing up the facts of this Appendix, it may be said

311 that the Island furnishes (1) means for partial subsistence for most; (2) means of earning a livelihood, for some; and (3) a home from which many go forth to earn a living for themselves (and their families) elsewhere—steamine contributing to national and local revenue. Of these, some return later, either to found a home, to pay visits on holiday or during periods of ill-health or unemployment, or to retire upon the Island.

APPENDIX II

RECENT STATISTICS (1953-54)

128 In brief form, the basic economic data can now be reviewed,

135 in the same order, for 1953, or the period April 1952 to March

135 1954, as available. The results are shown on the second pair

of Tables, pp. 318-319.

(i) *Tweed Industry* (1953-54)

434 Taking 5,000,000 yards as the 1952-54 total, and accepting

434 an estimate of 12. 2d. paid to weavers per finished, mill-shrunk

434 yard, payments to weavers in Lewis-and-Harris (and a few in

434 the northern Hebrides) would amount to some £292,700. After

434 subtracting the output from Harris, this corresponds to an

434 informal estimate by the Lewis Association for Lewis proper,

434 of well over £250,000 and more, probably £275,000 for the

434 period. Adding the wages of spinners in Stornoway mills,

434 and also of carters, dockers, etc., it is thought safe to double

434 the figure, with £550,000, for Lewis, rural and urban. Most

434 of the wages go to the rural population, and the rural population allows rural dwellers to come to Stornoway daily to earn and so has increased the ratio of rural to urban wages by spinning and other labour. For rural carriers and mill-

434 employees, a fifth of £275,000 is taken here, making £55,000.

434 As no estimate for the ' net earnings ' in Lewis is available,

434 the same ratio to wages is taken as in 1938, making £1,200,000.

(ii) *Agriculture, Peat-making and House Building* (1953)

176 (a) *Agriculture.*—First, the trend of crop and stock pro-

176 duction can be indicated by selected figures for the Island for

1918, 1939 and 1953. The areas both of oats and rotation

434 grass increased, the three successes totals in acres were: for

434 oats: 4460, 5020, 5440; and for rotation grass: 3390, 1385,

APPENDIX II

176 8110. The acreage under potatoes declined steadily: 3940,

434 3730, 1650. Barley dwindled from 2330 acres to 1340, and

130 1320. Turnips reached a maximum of 510 acres in 1939, but

241 were not worth noting by 1953. These crop acreages reflect

the change in stock-rearing, with the decline in the number of

176 cattle to the great increase in the number of sheep. Taking

the three successive totals for 1918, 1939 and 1953, we

434 numbered 13,600, 9060 and 6540 head; but this diminution

434 by more than half was chiefly due to the small number of

241 bullocks reared. Cows and heifers, 7650 in 1918, still stood at

about 4500 in 1953, and they are now of far better quality in

weight and milk production. The totals of sheep were successively, 78,150, 114,350, 185,860; by use of mainland rams their average weight has increased, while the wool is much more abundant but coarser. Taking the Lewis Association's equivalent of 1 cattle beast to 8 sheep, the stock-units were increased by nearly 25 per cent; and if we add the increased value of the cattle the livestock increase counts for very much more. Horses, 1 to 12 in 1918, fell to 1 to 30 in 1951; before, most had been bought in from Uist, not bred. Hence a new charge on agriculture, the purchase and use of the 63 tractors owned by farmers and crofters, and their running costs, is relatively not heavy that is would be in a horse-breeding area. The poultry are still deplorably neglected, or, or about 20 per cent.

The Table on p. 316 sums up the conditions, apparently well established for the time being, produced by peat, and previous comparison with Chapter II, pp. 67-68.

(b) and (c) *Peat-making and House-building.*—While *peat-cutting* is still important, more coal is used than formerly, and hence the peat is valued here much as in 1938. *Housing* is

241 most important: Local Authority housing by the Burgh

222 struggles to meet the need of a growing urban and ' suburban '

138 population as in other towns in Britain, but with an additional

342 ' remote area subsidy ' to meet mainland contractors' extra

costs. There is little truly rural housing by the County Council

241 and was in the high for the houses in fully occupied. The

figures for Stornoway Burgh for the ten years 1945-54 exceed

162

233 change in area, then the amount of stock allowed, per pound sterling of rent, ought to be
427 changed, too.
656
175 This does not appear to have been done in Uig although in Stornoway parish the sum per pound was increased after rents were reduced in the late nineteenth century. More recently, the Crofters Commission, in re-stating soumings for some townships, has generally (but not invariably) applied the soum to the 1886 rent, regardless of the wording of the 1912 regulations. This may appear to have the merit of consistency and, insofar as crofters pay any attention to the Regulations, it satisfies them because the greater (1886) rent gives them a larger soum and less likelihood of being criticised or penalised for overstocking. However, it perpetuates inconsistencies which originated during the nineteenth century when the stock allowed per pound sterling rent was not reduced although total rentals were increasing as squatters' and cottars' holdings were added (see page above). Moreover, the old souming referred to the old type of highland cattle which were much smaller beasts than those kept today, and it assumed that the shieling pastures would be in full use. A further complication arises because about 1920 some townships acquired substantial enlargements but the soumings do not appear to have been adjusted. Although it is little wonder that the Grazing Regulations are seldom observed, for they seldom bear any close relationship to the grazing capacity of township lands. Proper observance of carefully revised Regulations, in which unlimited substitution of sheep in place of cattle was specifically forbidden, would be of considerable benefit to the crofters.

241 The inbye, or croft, land is invariably separated from the common pasture by a ring
233 fence, the gates of which are generally closed for protection of crops from May to
412 November. Progressive townships are installing grids to obviate the twin nuisances of
• 178 traffic interference and straying stock. The fencing of individual crofts was rare until the 1930's and is still by no means general. The inbye land is, in many townships, the best winter grazing and its division into innumerable tiny fenced patches, whilst advantageous for cultivation, would restrict the movement of stock in search of water and shelter; in a predominantly pastoral economy complete enclosure of individual holdings is not necessarily an advantage. This problem will be discussed in Part III but, in the present
189 context, it is relevant to point out that the small crofts of Lewis contrast strongly with the larger ones of, for example, the Uists and Tiree. Therefore, what may be advantageous in the latter may be retrograde in much of Lewis.

The lay-out of the crofts aggravates this problem. The long narrow strips of the 1850 lotting, well-suited to spade cultivation and common winter grazing, may require four or five times the length of fencing required by an equi-dimensional croft of similar area. If fenced the stock may be deprived of both water and shelter; since arable cultivation has become relatively unimportant a suitable solution to this problem might be to fence a small potato plot near the house and to put the rest of the inbye down to sown grass in three or four communal parks in which grazing could be properly controlled. A particular problem is posed by crofts which have been sub-divided. These may take the form of strips as much as half a mile long by 10 yards wide or, more commonly (and much worse), of piece-meal sharing of innumerable plots, a system known locally, but incorrectly, as 'run-rig'. This is seen at its height in Kneep (fig 22), where every croft in the township is affected. The problem does not arise in townships with large crofts, which are usually more nearly equi-dimensional. These are mostly the result of re-settlement schemes and have long been fenced, (see, for example, figure 15).

Crofter-tenants.

162 An analysis of crofter-tenants according to age, sex and occupation (table 12) provides
427 several important clues as to the present unsatisfactory state of crofting. More than
463 one-third of the tenants are over 65 years of age; a further 16% are absent, some of these may also be over 65, others are younger people working away from home, a few are tenants

511 It is obvious that crofting no longer affords a livelihood in Aird; the only two families
46 without ancillary occupations are those where all the members are elderly. Of the others
262 with members in the working age-groups, five have one or more members employed in a civilian capacity at the R.A.F. station and there are five regular weavers.

621 Aird used to be a self-contained community; the land was fully cultivated and a certain
• 178 amount of fishing was carried on in spite of the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the R.A.F. station, and if this should ever close down, most of the young people would have to leave in search of other employment.

CHAPTER SEVEN

VALTOS, KNEEP AND REEF

by

David G. Symes.

131 On the eastern side of the Aird peninsula, facing east to Loch Roag is a secondary
133 peninsula of more moderate, but none-the-less broken relief. This, together with an adjacent area of the main peninsula, the islands of Pabay, Vacsay, Vuia Mor and several smaller islands, comprises the territorial limits of the townships of Valtos, Kneep and Reef.

133 This secondary peninsula is accidented in the extreme, with outcrops of bare rock and steeply angled small hills. The relief is greater in the west (summit 450') than in the east (summit 275'). Relatively level land is to be found only on the machairs of Reef and
133 Cliff (the latter only poorly developed) and on the glebe at Uigean. The Reef machair,
134 about 180 acres, consists of a succession landwards of tidal sands, a belt of sand dunes (c. 20' O.D.) and a gently plain sloping gently inland towards a reed filled lagoon. The machair at Cliff is approximately 40 acres in extent; here there are fixed dunes and, in addition, the sand has been blown inland to at least 100 ft. O.D. Except where the machair sand has drifted upslope to produce a "brown machair" of mixed sand and peat, the thin soils of the Valtos peninsula are predominantly peaty. Although the length of the peninsula faces north the extremos of Atlantic weather are moderated by the protection afforded by the Aird peninsula and the islands of Pabay and Vacsay.

175 In the period before the lotting of crofts the whole peninsula was occupied by some five
424 clachans - Valtos, Cliff, Kneep, Uigean and Reef - some of which shared common pastures.
341 During the early part of the nineteenth century and earlier, apparently, than the 1850 lotting
• 63 carried out in most of Lewis, crofts were allotted in each of the clachan areas: Valtos and Cliff shared a common pasture and so became one township; similarly Kneep and Uigean were combined.

175 In Kneep it seems that the croft boundaries were not accepted by the crofters. Certain
311 basic divisions between groups of crofts (usually three in number) are discernable today,
427 and within these basic divisions a certain regularity of distribution of strips persists, but

175 the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundred
311 and eighty separate arable plots. The lotted crofts at Reef were cleared in 1862 to provide
427 land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarted
228 by the Fisheries Board because Valtos and Kneep were then good centres for the white fish
50 industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for one
464 hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in 1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period. Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters and in 1908 an attempt was made to do this, but agricultural experts advised against it, on the grounds of poor water supply, scarcity of arable land (only ninety-three acres old arable) and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in 1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the sheep
233 farm was only carrying a stock of one hundred and seventy sheep - less than half the crofters' sheep stock in 1959.

427 Tables 15 - 18 summarise the more significant points of the economy of the Valtos
• 178 peninsula. Table 15 illustrates the fact that the economy is in decline. Only two-thirds of the total possible units are being worked. Many of the crofters have abandoned their crofts
162 and the younger generations are unwilling to take over. Of those remaining to work the crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

TABLE 16

Crofts and Crofters

	Valtos	Kneep	Reef	Total
427 463 632 Legal crofts:	40	18	15	73
No. in joint tenancy	2	4	0	6
Total possible units:	42	22	15	79
No. of operative units 8/59:	29 (60%)	15 (68%)	8 (53%)	52 (66%)
Joint tenancy crofts as one unit:	1	3	0	4
Cases of subletting:	8 (+2 part crofts)	4	6	18
Family combination of crofts:	2	1	1	4
Derelict crofts:	2	1	0	3
Crofts worked by: Full time crofter	3	1	1	5
crofter with regular work	8	7	0	15
crofter with periodic work	13	3	4	20
crofter over 65 (or invalid)	5	1	3	9

An attempt has been made in
Figs 19 and 20 to relate the size of the stock carried on
231 the individual croft to the size of holding and to the availability and age of the labour force.
311 In both diagrams there is a significant division between the subsistence holding (0 - 7 units)
464 and the commercial holding (11+ units), but there is no definite relationship between stock
471 and size of holding or labour availability. The inclusion of the points of equilibrium for
233 certain lines in Figure 20 reveals a somewhat unexpected state of affairs: in the case of
162 crofters with regular work and full time crofters, those over the age of forty-five carry a larger stock than those under forty-five. It is frequently argued that the solution to the economic problem of crofting lies in the amalgamation of holdings in order to create a more viable economic unit, but the indication from these diagrams is that an increase in
443 the size of holding will not, of itself, lead to an increase in stock. It is the absence of accessible markets that deter the crofter from increasing his agricultural production.

In their present state the crofts in the Valtos area are unable to provide a livelihood
511 for the crofter and his family. Of the crofters under sixty-five almost 90% supplement the
467 croft income by other employment. Of these casual labour (at present mainly at the Gisla hydro-electric scheme) accounts for 57% regular work - particularly weaving - 43%. The combination of crofting and weaving provides probably the best return for the labour: one crofter with a croft of 3.5 acres, carrying two cows, two followers and ninety sheep (sixty ewes) made the following estimates for 1958:

231 FROM THE CROFT:
434 Sale of two year-old calves £80
236 Cow and calf subsidies £40
286 Sale of wool at 4s. 3d. per lb. £75
£ 195 (1)

FROM WEAVING -
at two tweeds per week (32 hrs. p. w.) £550

GROSS INCOME £745

434 Weaving about 30 hours a week apparently leaves him sufficient time to run the croft
262 efficiently; at present a crofter supplementing his income by a labourer's wage at Gisla
46 hydro electric scheme would have to put in nearly sixty hours per week to achieve the
46 same financial reward.

433 The economy of the Valtos peninsula has been changing, and contracting, for several
• 178 years. The number of unoccupied crofts is increasing; commercial fishing ended at the
228 time of the first World War; the shielings have been abandoned as summer cattle pastures.
237 The Valtos shielings near Loch Scanadale were abandoned during the 1939 - 45 war, due mainly to the lack of manpower in the township, though some was used intermittently until 1953. The shielings of Kneep and Reef were abandoned in the late 1930's, at which time Kneep had some fifty milk cows as compared with fourteen in 1959.

[1] Against this figure, must be set the costs of production (i.e. fertilisers, new seed, winter fodder supplements, sheep dips etc.)

241 The area under cultivation has contracted in the past twenty years. Before 1939 most
• 178 crofts had about twice as much land under cultivation and at Valtos some were cultivating small patches outside the township fence. The cultivation of the common machair at Valtos ceased in 1939. The land had been "too long in labour" (potatoes had been planted on the same ground for nearly one hundred years), and the soil had been affected by over-liberal applications of sulphate of ammonia which replaced the traditional soot-impregnated thatch from the black-houses. Moreover the Cliff machair was particularly vulnerable to "blow outs" after ploughing. Cultivation of the Kneep common arable has all but ceased, and if fifty-two acres of arable machair in the township of Reef have been untouched since the 1930s. It is noticeable that the common machair cultivation and the shieling economy
231 ended about the same time. Smaller numbers of better-quality cattle were needed to meet the daily milk requirements of the croft; a much smaller area of cultivation was therefore needed to provide winter fodder and consequently more land was available on the croft for potato cultivation. Consequently the more distant machair was replaced by cultivation within the croft.

433 Contraction and decline of the economy is common to all three townships, but the form
• 178 and cause of this decline is different for each, and where the township consists of two separate settlement nuclei there is frequently a difference between the two parts:

633 The township of Valtos is in two distinct parts: crofts 1 - 34 are a succession of narrow
427 strips about ¼ mile in length stretching from the shore to about 200' O.D.. The boundary
361 of the outer crofts (nos. 1 and 34) if projected to a point on Pabay, form an angle of 45°,
311 so that the crofts are narrower at the shore (40 - 70') than at the upper limit (100 - 180'). Of these 34 crofts, 19 are in so-called runrig, eight in pairs and one group of three. (Fig. Cultivation is carried out on numerous intermixed small patches, held permanently; the gratings are interchanged at the year end. Fragmentation imposes a severe limitation on the economic efficiency of the croft. None of the crofts at Valtos is individually fenced
241 though some groups of two or three are fenced together. With the contraction of cultivation only the less steep areas are cultivated, to facilitate ploughing.[1] As a result, the bulk of the cultivated plots are to found at either end of the croft - near the shore and on the hill top against the township fence.

The remaining five crofts of Valtos, and a squatter, are at Cliff in the valley separating the Valtos peninsula from that of Aird. Here the crofts are fenced, more compact and slightly larger (4.8 acres as against 3.8 acres) and they occupy more level terrain than those in Valtos. Two of the crofts are worked in runrig - these being situated on the
241 machair. The houses are set back about a hundred yards from the road, along the west township fence.

Kneep township is again in two parts: Crofts 16 - 18 together with the Manse and two cottars, are situated across the neck of the Glebe promontory, on the south side of the peninsula. The five legal crofts are today worked as three units, fenced, reasonably compact and with holdings of exceptional size for the area - average 15.1 acres. Crofts
433 1 - 15 at Kneep on the northern side of the peninsula adjoin those of Valtos. Here is a climax of land fragmentation, which imposes severe limits upon croft efficiency. Twelve of the fifteen crofts are worked; of these only numbers 4 and 5 are compact homogeneous crofts; numbers 3 and 6 are compact except that part of the land which lies within their boundaries belongs to croft no. 13. The remaining eight crofts comprise a hundred and eight separate plots of croftland and fifty-two separate plots on the common machair. One croft with 2.8 acres arable the average size of each piece is a mere 0.15 acres!
233 The grazing land on the croft is divided into strips running across the slope, which are interchanged each year, whilst a large part of the common grazing lands are divided into

1. Pre-1939 much of Valtos was cultivated in lazy beds - by spade. Today 9% is cultivated by spade; 43% by horse plough + 48% by tractor.

427 joint tenants of one have moved to Geshader while continuing to work the Ungshader land.
137 Another is preparing to move to Enaclete and yet another lives on a feu at Loch Chroistean
311 Cottage. At present, three working units remain. Enaclete consists of nine crofts with ten units, one being rented by joint tenants.

221 The rhythm of work is similar to that in other parts of western Uig. Potatoes and oats are planted in April followed by lambing and peat cutting in May. In June and July the sheep are shorn and subsequently sent to the common grazings. In August the peats are carted, once they are dry, by lorry direct to the crofts. Hay-making follows. The lambs are weaned in September, harvest is then carried in and tupping and statutory dipping take place in November. The sheep are then returned to the township grazing though the lambs
241 may be fed with hay on the croft. There is little regular crop rotation and only a small number of crofters seem to undersow oats, thus improving the quality of future hay crops. Gardens are not important and only provide for family needs but Caryshader particularly has a number, some growing flowers as well as vegetables. Fertilisers vary widely from croft to croft as well township to township. Enaclete potatoes are still grown near the shore and thrive on seaweed; those of Caryshader are usually fed on artificials.

231 Most crofters keep one milk cow with a calf; a few rear a young beast for the autumn sales in Caryshader. However, some now rely on their neighbours for milk in return for grazing and one croft has turned to goats, as giving less trouble. The bull for the whole district is a beef shorthorn and is kept on Geshader - Ungshader common grazing as it is completely fenced; and Geshader is responsible for its upkeep.

233 Lambing seems to have been generally good in 1959 but it was not easy to get exact figures. The Moresgail Estate and Gisla farm also run considerable flocks. The common pastures total 3,119 acres with an enlargement, formerly used as shielings, of 1,215 acres
for Enaclete, Geshader and Ungshader near Loch Suainaval, and for Caryshader 88 acres
3,119 on Floday island. The shielings have been disused since the war. Peat is normally cut to the west of the road but at least one elderly tenant in Geshader has kept a section of his croft for this purpose to save the effort of working further afield.

241 Generally speaking the land now cropped only represents one third to one half of that
178 worked by spade 20 - 50 years ago when the crofting population was larger and when much greater numbers of cattle were kept through the winter, thus requiring more potatoes and
231 more oats. The cattle numbers are much less than the total souming but sheep are in excess. In Enaclete, at least, overgrazing by sheep has caused a decline in grazing quality.

464 Clearly in these townships, apart from the very few crofts still fully cultivated, the means of livelihood is sought elsewhere. At present there are altogether fifty-three men in the working age group (15 - 64) in all four townships. Of these fourteen are away, nine permanently and five periodically. Thirty have regular or periodic employment besides crofting and of these seven work at Gisla on the hydro-electric scheme, seven weave, some of them part-time, four hire out vans, two do post-office work and others have varied occupations while only three are full-time crofters. At present there are few men in the Merchant Navy and fishing does not provide an occupation although many share rowing-boats in their spare time, and fish for domestic use.

162 The population as a whole is ageing and of the group between 15 and 64, forty-four
169 (roughly 30%) work away permanently or have emigrated. It is noticeable that these are few crofts worked by people with young families

000 In conclusion it may be re-emphasised that the fate of the crofting townships depends more

CHAPTER NINE

THE ISLAND OF BERNERA AND

ADJACENT DISTRICTS OF THE MAINLAND OF

LEWIS

('Bernera and Bernera Shore')

by

P. Wheeler

131 Of the three main sections of the parish of Uig, the Bernera district, consisting of
103 Bernera Island (Breaclete, Croir, Hacklete, Kirkibost and Tobson) and the "Shore"
(Earshader, Crulivig and Lundale together with the isolated township of Linshader),
94 presents a number of peculiarities due not primarily to physical conditions, but to isolation. Bernera Island, though central to most of Uig and easily accessible over the sheltered waters of Loch Roag, yet remained relatively inaccessible overland until the recent building of the road bridge; even now it is necessary to travel over six miles to get from
101 the bridge to the main Uig road and a further four miles to Garynahine. Consequently the island, even more than the adjacent mainland settlements, has a very close-knit and self-sufficing population. Whether this community retains sufficient vitality to resist the destructive effect of better communications in addition to the general forces eroding rural and especially Highland life, remains to be seen.

13 The district shares the unpropitious physical characteristics described in the intro-
228 duction. Like the other districts it has virtually no valuable mineral resources (1), and
the herring and white fish industries have all but disappeared and seem unlikely to
139 resuscitated. Lobster fishing is, however, prosecuted with vigour and enterprise; it
464 provides a good living but only for a small group of families. The rest depend on regular or casual employment to eke out the proceeds of the croft. The kinds of work
14 available, and the problems of permanent or seasonal absence in search of employment are common to the whole parish; thus this account is mainly concerned with the problems of crofting agriculture.

Settlement: history and patterns.

12 The pattern of settlement in this inhospitable and discouraging environment is partly
361 very old, and partly very recent. At least four brochs are known on Bernera and various
standing stones of even earlier date, while continuous settlement has survived from the
early Christian era. Traces of old patterns and practices remain, in tangible form as
7 in the graveyard on little Bernera, or in oral tradition. All this contributes towards the very close network of family relationships that binds the island folk and to a lesser extent those of the adjacent mainland.

195 With the exceptions of Tobson, Bosta and Breaclete, all Bernera island had been
361 cleared by 1851. Resettlement began in 1878 when twelve families were moved from Bosta to Kirkibost, and continued at Hacklete in 1880, and subsequently elsewhere. Occasionally (as at Kirkibost) old, pre-clearance lotting patterns were re-adopted, but usually settlement was laid out afresh. The townships of Bernera Shore, were also affected: all the small tenants except those of Earshader and Crulivig were cleared, leaving the land under the sheep farms of West Earshader and Linshader. However, the Bernera island crofters were allowed to continue their customary use of shielings on the mainland, and the transfer in 1880 of these grazings to their present position marked the

316 (1) A small deposit of diatomite has been exploited in Kirkibost since 1959. Only a few men are employed and the number is not likely to increase.

[TEXT CONTINUED ON PAGE 61]

195 beginning of the resettlement movement which has given the modern crofters of the
361 district almost all the lands formerly occupied by small tenants. This process was completed in the Bernera region soon after 1918, and the problem now - one which is obviously going to become increasingly important - is not to give the crofters more land, but to find active crofters for the existing holdings (see Chapter III for more detailed information on clearance and resettlement).

361 The ground plans of the existing settlements vary considerably, depending mainly on
632 the terrain. Where a township is spread along a fairly straight coast the natural
tendency is for the croft boundaries to run at right angles to the coast and for each house
427 to be set on its own croft. The best examples of this are Hacklete and Kirkibost, where an early nineteenth century (i.e. pre-clearance) lotting was readopted when the township was re-settled in 1878. Linshader, Lundale, Crulivig and Earshader also follow the same type of layout as nearly as possible, but Tobson, with the exception of Valasay, is intermediate between a lotted and an unconsolidated township. Croir also differs: it was laid out in 1921 but the disposition of the potential arable forbade a cosetwise organisation. The site of Breaclete is greatly broken by lochs and a sea inlet, and consequently an essentially regular layout based along a main Loch Breaclete - Loch Beg Breaclete axis, appears somewhat complicated. The accompanying diagrams contrast the control exercised by physical conditions at Croir with the subordination of physical conditions to a simple lotting plan at Hacklete. (Figure 28).

Within the townships, with the exception of Kirkibost, the distribution of settlement
361 seems to have changed little since the original lottings, for in most cases the sites of the
392 old and present dwellings are little further apart than is dictated by constructional
problems. It would appear generally that black houses were universal in the nineteenth
178 century except for the farmhouse at 1 Croir (the oldest 'white' house in Bernera), Thule House, (18 Tobson), possibly the tacksman's house at 11 Hacklete, the former farmhouses
632 at 20 Kirkibost and at West Earshader. However, with the establishment of Congested Districts Board and of Board of Agriculture grants, housing was improved, early examples being 5 Hacklete and 10 Breaclete. The resettled townships generally had improved accommodation from the start. Improvement has greatly accelerated since 1951. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

312 Water supplies and sanitation are less satisfactory. Most crofts by now have their
private water supply, thought it is hoped that mains schemes may be constructed within
the next few years. Sanitation varies in standard and in places there are still open
514 ditches, but all the newer houses have water closets. It is worth remarking in this con-
164 nection that tuberculosis is almost eliminated. Electricity has been available since 1952
to all crofts and most are connected, though not necessarily in every room. Cooking is
354 sometimes by electricity but more commonly by Calor gas and a peat-fired range or stove (open or enclosed). Peat is cheap to those able to gather it themselves. Where, however, help is needed to carry the cut and dried peats to the nearest road, difficulties may arise. The cost of hiring labour for peat cutting may be such that it is cheaper to buy coal.

491 Access to Bernera by road is now comparatively easy. Where formerly Loch Roag
provided the highway of communication, the road built to Earshader after the Great War,
494 and the £67,000 bridge to Bernera Island, built in 1953, have caused a revaluation of sites. Linshader is approached by a tarred branch road and the other Bernera shore townships lie upon the narrow and twisting main road, though four of the six Lundale crofts have no connection with it, and two of the Crulivig crofts, and West Earshader, are somewhat isolated. On Bernera Island the old cart track from the pier at Barraglom across to Tobson and Croir has been somewhat re-aligned since the construction of the bridge. This is a good tarred road, as is part of the branch to crofts 3...8 Croir. The old road to Kirkibost was tarred in 1959, though three outlying crofts near Barraglom were still without a road suited to vehicles, and the branch within Breaclete remained untarred. There is a new road to Hacklete from Breaclete which provides tolerable, though circuitous, communication. Valasay is one of the most isolated settlements in Bernera, linked with Breaclete rather than with Tobson by the footbridge and causeway paid for by Congested Districts Board grant about 1903.

493 Problems of communication are not, however, solved merely by providing better
494 roads: at least one household in four has a car or van, and this, with the fall in population,
has caused a fatal decline in the use of public transport. The Bernera 'bus service was
178 discontinued in August, 1959, for lack of demand. This is not, of course, an isolated example; the problem is common to all the Highlands, and indeed, to all the rural areas of Britain: in Sutherland, for example, the number of registrations of private cars has risen to very nearly 250% since 1945, and the total number of registrations for all classes of vehicles up to 1958 had risen to almost 200%, while the number of hackney carriages, after reaching a peak in 1952, has since declined by 70%.

Bernera District

Land related to tenants and working units

(all figures, except last column, are acres)

	Inbye: per tenant	Inbye: per working unit:	Common grazing per tenant	Common grazing per working unit:	Total land: per tenant	Total land: per working unit:	Ratio of inbye to total land
Breaclete	8.0	7.4	99	92	107	99	1:13.3
Croir	29.2	33.4	78	89	107	122	1: 3.6
Hacklete	12.7	12.7	96	96	108	108	1: 8.5
Kirkibost	15.9	15.3	92	89	108	104	1: 6.8
Tobson	7.8	9.0	94	109	102	118	1:13.1
ISLAND TOTAL	13.2	13.5	93	95	106	108	1: 9.9
Earshader	11.5	9.5	264	220	275	230	1:24.1
Crulivig	14.0	14.0	220	220	234	234	1:16.7
Lundale	25.9	25.9	166	167	193	193	1: 7.4
Linshader	5.6	6.9	873	1,067	879	1,074	1:155.1
SHORE TOTAL	12.8	13.3	473	491	486	504	1:35.1
DISTRICT TOTAL	13.1	13.5	183	188	196	201	1:15.0

Note: in this table, "working units" include all crofts, whether stocked or not, and all other agricultural holdings. Two or more crofts worked together, whether registered under the same tenant or not, are counted as single working units. An agricultural holding is defined as one with at least one cow, or five sheep, or half an acre of cultivation.

for an average year (such as 1953) for Local Authority Housing, we may allot half this to net output of local materials and to wages earned by Lewismen, some £65,000, of which rural wages were a small fraction, say £20,000.

For crofters and cottars, however, in 1953, a fairly typical year, there was much local effort and achievement, by help of 180 loans and grants from the Department of Agriculture for Scotland, totalling £81,000 for new houses or house improvements (with a very few steadings). £80,000 may be allotted to local materials and to labour paid or given by householders themselves.

APPENDIX II

(iii) *Fishing Industry* (1953)

The renewed Russian contracts for herring have meant loading of Baltic shipping at Stornoway with barrels of herring cured both in Stornoway and Ullapool. Catching power in Scotland generally is hardly enough to meet this contract. Thus, while the numbers of boats continued to decline after the war, leaving only one steam and 33 motor drifters (over 30 feet keel) registered by 1953, the fishermen employed rose to 610, of whom some 520 were crofter-fishermen. Many worked much of the year; on the other hand, most of the winter catch went for 'oil and meal' at about 50s. per cran instead of the top price of over 80s. For local boats a figure of £30,000 is suggested for the catch of herring, say £10,000 for white fish, with £5560 for shellfish. For "curing and associated income" the pre-war figures may be doubled.

(iv) *Other Sources of Income earned in the Island* (1953)

In mid-1953, of just 5000 registered for the Island as employed—and other than the self-employed, *i.e.* the farmers and crofters, the hand-weavers and the boat-sharing fishers—1130 earned by the three industries first named, the rest by other trades and professions, 3870 in all. The unemployed numbered 1180. Analysis of wage-rates would throw light on total earnings. As to unemployment, the fact that, like crofters and many fishers, hand-weavers count as 'self-employed' means that when out of work they are not covered by unemployment insurance, and have to be helped, at low rates, by public assistance.

(v) *Allowances, etc.* (1953)

Turning now to Remittances, to the manifold categories of Pensions, National Insurance and National Assistance, and to Unemployment Benefit (a small item), the Table B, 1953–54, shows the totals kindly furnished for this study, with £1,017,110 for all Lewis and an estimated £977,010 for rural Lewis.

APPENDIX III

(A) THE STORNOWAY TRUST: A COMMUNAL OPPORTUNITY

THE people of Stornoway town and rural parish are in a position to control their own future to a degree unusual in Britain since the general loss of common lands in the eighteenth century. Three or four bodies or groups are important in local governance, and in addition to these an effort to arouse citizenship has taken shape in the Lewis Association. As elsewhere, the Town Council acts for the burgh and, it should be added, the Grazing Committees for the townships, the District Council and County Council acting for wider spheres. The Harbour Trust has its special charge. In addition, the fact of corporate ownership is important, as vested in the Stornoway Trust. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole landward area of the parish, from Arnish Moor north to Tolsta. It should not be forgotten that the resources of the sea are public property and that the inshore fishings, owing to a considerable measure of protection, are virtually in the possession of the coastal communities. Freshwater fishing is also in the hands of the Trust. Thus, not only building property but essential sources of production on land and sea are in communal possession. The Trust was formed in 1924.

During the first five years of its existence the Trust was burdened with a growing deficit, but since 1929 it accumulated a credit balance, due partly to agricultural derating and partly to the registration of the Trust as a charity and the resulting relief from income tax. Possession without prevision can do little, however; and hence the need for the citizens of town and country to regroup themselves as thinkers for the common

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Morsgail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age: such lazy-beds are certainly old, possibly pre-potato (c. 1790 here) - but the huts do not decay with age and may be very much older.

175 427 604 Early in the eighteenth century the present area of the parish of Uig was held from the Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, (Fig.4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks 241 coincides fairly well with that of the better agricultural ground (Fig.2). Five of them cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Bernera. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% 178 of the rental and by 1901 the proportion was reduced to 14%. The relative decline of Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis 369 has tended to exaggerate the remoteness and isolation of Uig in the present century.

161 175 241 407 494 000 By the end of the eighteenth century the tacksmen seem to have disappeared; at any rate they are not mentioned in the remarkably detailed account of the parish given in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied: whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the minister recorded 1,898. At this time there was neither plough nor cart in the parish. The minister was cultivating potatoes and his family were eating them

TABLE 3

AVERAGE STOCK HELD BY EACH FAMILY

162 178 233 422

	1792	1959
Cattle and calves	9.2	2.1
Sheep	13	37
Horses	1.8	-
Goats	0.8	-
No. of families	387	450

Note: the figures for both dates refer to the area of the old parish.

632 * The old parish of Uig excluded the Loch Carloway district, from Kirivick north; this area lay in Loche parish until 1891. Unless the old parish is specified figures quoted have been corrected to conform with the modern boundaries.

1. [See p. 2--Analyst]

The minister
was cultivating potatoes and his family were eating them

175 241 422 251 441 614 as an example to the crofters who were still reluctant to adopt the new crop. Some 70 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly outnumbered in good herring seasons by boats from other parts of the kingdom. To encourage curing, particularly of white fish, the proprietor had set up two storehouses to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844. But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the 175 232 221 Uists, but the Loch Roag kelp was of particularly good quality and commanded more than the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear 233 to have been inadequate to support the population. In this connection it is worth noting 162 178 the change in the average stock held by each family since 1792 as shown in table 3.

Clearance and Congestion.

175 228 175 233 166 427 274 Even after the end of the tremendous boom in kelp, brought about throughout the Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses, yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempting industrial developments and agricultural improvements. The former included short-lived distilleries in Stornoway, the latter involved the removal of some small tenants in order to introduce mainland farmers. For these Uig was particularly attractive, the extensive mountain pasture offering good prospects for sheep graziers. The exact dates of the formation of the earliest farms are not remembered nor are they precisely recorded, but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalascro, with the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

175 427 In Bernera Island, Kirkibost was cleared about 1822, having been lotted in individual crofts some years earlier. Thereafter Kirkibost formed part of the large farm of Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Strome and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as fertiliser remained a vital necessity to the small cultivators, often working the same land year after year). In 1841 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land was inadequate to support them. In 1844, of necessity, Seaforth sold the island. The 162 population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,463 Figure 8).

1. [See p. 18--Analyst]

175 427 311 632 growing family could increase the size of his holding. Secondly, in the absence of fences a certain discipline of agricultural management had to be maintained; moreover the proprietor, through the factor, grounds officers and township constables, saw to it that it was. This "good husbandry", albeit at a rather low level, was maintained in the interests of tenants and land-owner alike. After the arable land was lotted permanently to individuals, there was less flixibility and less need for communal-management. But the absence of fences between the new lots, or crofts, meant that they were still common land during the winter months. In some cases the proprietors paid the tenants to erect fences round the newly lotted inbye land of the whole township but, even when a ring fence existed, stock was allowed to graze indiscriminately within it from November until April.

It is fortunate that the first Ordnance surveyors were at work in Lewis just as the lotting was coming into effect. The new lots were not divided by fences, therefore they were not marked by the surveyors, but in several townships they arrived in time to plot the clachans and in some - Breasclete, for example (fig. 6) - the first edition six-inch maps show some of the new houses, neatly spaced out on the new lots. The arrangement of the latter is recorded in the Factor's sketch books, of which fig. 7 is an example.

175 632 178 Thus whilst we have little evidence of the appearance of the former rural landscape, we have an excellent record of the birth of the new. The characteristic units of the new lotting were townships divided into long narrow strips, arranged parallel and fan-wise more or less in the direction of steepest slope. Such an arrangement was simple to lay out; it tended to give everyone a fair share of the land of each kind - ill-drained and well-drained, high and low. And, if a road or track passed through the township it was usually possible to give each lot or croft direct access to it without the necessity for side-roads. 367 Consequently the houses, when re-built, were usually put on the crofts. A dispersed pattern of settlement replaced the little huddles of the clachans. The extent to which it was dispersed depended on the width of the lots; the greater the number of tenants to be accommodated in a given area, the narrower were the lots. In extreme cases they might be as little as 20-30 yards in width and then the houses, aligned along the road or access track might form a virtually continuous terrace or street.

CHAPTER THREE

THE CROFTING STRUCTURE

427 In the parish of Uig about 90% of the families are crofters. That is to say, they owe their presence in Uig to their hereditary tenancy of a small-holding of croft status. To these holdings they have a deep attachment; many of them have been inherited through 428 several generations. Others were obtained more recently during the process of re-settlement of farm land which followed the Napier Commission report and 1886 Act. Many older crofters regard the resettled townships as the fruits of a hard-won victory. Nevertheless, we have seen, very few of the holdings are in fact more than 110 years 162 old. And, whilst some families can certainly trace their ancestors in the district for several centuries, there has always been a good deal of movement between townships. Thus the claim that they occupy holdings which were carved out of the barren moor by the toil and sweat of their ancestors is, in most cases, metaphor rather than strict truth.

is probable that the constant but rather low incidence of cattle on the Island is governed by two factors: first the shortage of common grazing near the township and the neglect of the only alternative source, the shielings, and second, the memory of past isolation - and the present impossibility otherwise of getting milk save from a neighbour - which makes a milch-cow a necessary part of the equipment of almost every household. On the mainland, where the common grazings are contiguous with the inbye, summer grazing of cattle is much easier particularly, as in Crulivig and Linshader, where there are special fences to divide the near and far pastures (cf. the old Norwegian spring-autumn and high summer seters.

We may compare fifteen Sutherland townships, in which 89% of the stock held is sheep, with the Bernera District in which 80% of the total stock is sheep. That this balance of stock is not old-established is revealed by comparison with the stock figures collected for

231 the Napier Commission in 1883; these show that the Bernera region now keeps less than
233 half the former number of full grown cattle beasts but only a slightly higher percentage
311 of sheep. It is an unavoidable conclusion that resettlement and enlargement has not led
632 to greater agricultural efficiency: since it was carried out for social and not economic
reasons, this is perhaps not unreasonable, but it augurs ill for the future of a community
[178] which must be largely dependent on agriculture.

Land Use and Cultivation*.

241 Before considering the details of stock management it is well to review land-use, for
[231] cultivation is subsidiary to, and directed at, stock keeping. Few crofts have no culti-

241 vation at all, but even fewer have more than 2.6 acres (table 29). Expressed as a percentage,
little more than a quarter of the total inbye area is even "old arable", of which only about two-
thirds is cultivated. Oats are every-where the most important crop: they are used almost
exclusively for fodder. Potatoes, mainly for domestic use, are the only other significant
crop; the absence of turnips is noteworthy. The crops are in general subject to some sort
of rotation within the physical limits of each croft unit; oats are usually undersown with grass
when the arable is to be left unploughed for a period but the "sown grass for pasture" is
[314] largely reseeded pasture land. The rest of the croft is left for pasture and hay, and, in
many cases the cutting of peat - a sure sign of agricultural decline. The inbye economy
depends upon so many unpredictable variables that it becomes extremely difficult to generalise
about the areas thus used. Forty-seven gardens exist in the Bernera region, but many of them
are almost 'notional' and others are merely potato patches: perhaps half-a-dozen are at all
well cultivated, for flowers or food.

241 The main change in the crops grown, apart from the introduction of sown grass, has
178 been in the corn crops, where barley has been completely displaced by oats. Barley was
grown up to 1936 - at least in Crulivig - and gave a good crop. It used to be pulled, (not
scythed), stacked, then the ears cut off with a sickle and the stalks used for thatching.
Probably the disappearance of thatch and the replacement of barley bread by the products of
the town bakery account for the decline in barley. Fewer potatoes are grown than formerly:
this directly reflects the decline in population. The absence of turnips is due at least in
part to the heavy incidence of finger-and-toe disease.

Stock Management.

221 The annual rhythm of stock keeping has lost the clear definition it used to some extent
235 to possess. The decline in summer residence at shielings has already been mentioned:
178 most were in use up to 1914, and many were visited after the Great War, but the decline
continued during the inter-war period until practically the last visits were made between
1936 (Lundale) and 1939 (Tobson): very few shielings have been visited since. There
are one or two isolated examples of a summer visit to the pastures still surviving, but
[476] they are not carried out by regular crofters having normal grazing rights. The
construction, since 1908, of ring fences around the inbye and the more recent fencing of
certain common grazings has further lessened the necessity of herding and co-operating
regularly on the commons. The importance of fencing may be judged by the fact that it
was estimated that, whereas prior to the construction of the fence there were about 4,000
sheep grazing over the Earshader - Crulivig - Lundale area, including about 2,000 from
the Bernera Shielings and about 200 from Uig, there are now only about 1,500. Figure
10 indicates both the periods when the sheep are on the hills and the variation in the
dates of movement. This applies mainly to the Island townships, for mainland townships
which are contiguous with the grazings, may keep sheep on the hill for as long as six
months each year. The rest of the year is spent on the township pasture and inbye.
Hacklete, Kirkibost and all but seven of the Tobson crofts are open in the winter to common
grazing. When the custom was more widespread the dates were clearly stated and
adhered to, now there is more variation, and November 7th or 14th (Hacklete) or 17th
(Kirkibost) have become indications rather than rules, depending on weather and the
lifting of crops. On the mainland, ('Bernera Shore') the sheep may be brought merely
nearer to the crofts rather than right onto the arable, where fences have been constructed
separating off an area of common grazing next the head dyke of the township, as at
Earshader (1908)*, Crulivig (1908, and 1939), and Lundale, this practice may be formalised, so that only certain classes of sheep are ever taken on the croft. The movement
from the croft to the hills is governed mainly by the weather: the old sheep will be sent
off to the hills some time in April if at all possible, and the ewes in lamb often there-
upon taken into the inbye if they are not there already. During May, when lambing is
safely accomplished, the beasts able to support themselves and when the weather is
suitable, the ewes with lambs are sent to the hill.

There are some places with special practices, notably Little Bernera which is closed
to grazing in July, August and September. Similarly each holding may graze a certain
proportion of replacement hogge upon the township common grazing of Breaclete while
the other stock is on the hill: this may formerly have been a more widespread custom:
it certainly has contemporary parallel in Kirkibost where some sheep remain on the
township common pasture to compensate for the much reduced numbers of cattle grazing
there in summer.

The individual crofter, or two or more in co-operation, keeps tups buying a new beast
from a different source every three years, unlike Sutherland where it is almost universal
to hire them. These are usually tethered upon the croft from August until tupping in
December. This again takes place on the croft (compare Sutherland, where, since the
tups are generally hired by the township, the tupping is usually done upon the hill and
often entails a good deal of herding). The ewes are not generally hand fed except in
emergency, though here, as in all other crofting areas, opinion is divided on the advisable
extent of this practice. It is however, more general to hand feed the hoggs which, indeed,
may be kept under-cover at night in the worst weather, even though they are on the croft
[132] or (Bernera Shore) on the nearer common grazing during the day. It is clear, though,
that, in spite of the occasional hard weather, there is not generally the amount of snow
and frost in winter to cause that amount of hand feeding and care which is a necessity in
many parts of the mainland Highlands.

*Since 1950 about 120 acres have been divided in four and individually fenced.

221 Since so much of the year is spent either upon or near the crofts it is but to be
233 expected that greatest losses of island sheep will take place in the summer when they are far from supervision upon the hills; this contrasts with the mainland Highlands where heaviest losses, apart from those due to sudden snow falls, generally come about lambing time, when this takes place upon the hill, or soon after, in cases when the ewes and lambs are put to the hill too soon. On Bernera Shore on the other hand losses are heaviest on the hill in winter. Losses are extremely uneven in their incidence in time and from croft to croft. The cause of loss varies: there are no serious endemic diseases now, and there are few coastal cliffs - a frequent cause of loss in other places. There are however some boggy areas in the interior and some rugged: whether or not there are losses due to vermin particularly eagles, is a debatable point. Probably the fundamental cause of loss is lack of shepherding and adequate day-to-day oversight upon the hill.

There are certain special pastures that show interesting features. The Flannan
233 Islands have excellent pasture, especially for the poorer male shearlings which need bringing on. There is all-the-year-round grazing for fifty sheep, which is shared by two crofters in Crulivig and one in Earshader. Unfortunately, the difficulty of getting a boat to go across has meant that for the last two years no visits have been made, and, after one or two years unattended, the animals become quite wild. Since 1949, when the Croir tenants were first permitted to cut peat upon the Bernera shielings, they have ceased to do so on Vacasay Island, where they now each send two sheep for summer grazing. They also send one sheep each to Euglam Island from 15th May to 16th August. One croft in Tobson includes certain small islands:

Bearsay Island (16.4 acres; soumed for 12 sheep per annum)

Eilean Fir Crothair (4.6 acres; soumed for 5 sheep per annum)

Seildeim (1.0 acres; soumed for 3 wedders per summer)

Similarly, Valassay (part of Tobson), has Eilean Liongain Valassay which provides summer pasture for two young cattle beasts or five sheep (one per croft). One crofter in Crulivig has a small offshore island taking two hogge during tupping and at least one crofter in Crulivig also grazing on Ben Sgurain, but there has been no success in the attempts to heft stock there. It is distant and unfenced; losses can be heavy.

231 Lewis is a very restricted market for livestock: the general practice in the Bernera area is to sell cast ewes at five or six or even more years to the butchers in Stornoway. Lambs may be sold on occasion, but generally they are kept either for replacement or for sale as three-year wedders.* The losses which occur, plus a certain amount of slaughter for domestic use, prevent long-term accumulation, though periodic fluctuations may be severe. Occasionally when there is a surplus of summer grazing, the Bernera Shore townships may buy in lambs from the western coast of Lewis, carefully eschewing those raised on the machair lands, which are said to be too "soft" for the hills. These are reckoned a gamble, they may or may not "take". The practice may be compared with that of the former Linshader Farm where, to take up the summer surplus of feed, young cattle were bought from the crofters.

236 The wool from the Lewis Blackface sheep generally varies from three to four lbs.
[178] per fleece. There is no longer any hand spinning; most wool is either sold outright or
[234] sent to the mills for spinning and dyeing. This practice is of long-standing. Even before the Great War, when the rent formed by far the most important item in the monetary affairs of the croft, the wool was either sold outright or, more commonly, sent to the mills for spinning and then taken to a weaver; the tweed was then sold either locally or to a merchant in Stornoway, the proceeds being used for the rent and other items.

231 Cattle, as has been pointed out, have declined greatly in relative importance since
178 1883: they are fewer in number - though far better in quality - and consequently subject

[234] *Three-year wedders in good condition fetch about £6 for slaughter. Carcase weight is about 44/45 lbs., sometimes as little as 38 and sometimes as much as 55 lbs.

231 to less regular routines than was the case when the shielings formed an essential part of
178 the grazing regime. The old "Black Cattle" strain is completely bred out, nor is there much trace of Highland blood. The cattle are almost exclusively of Shorthorn or of Aberdeen Angus or of cross blood in order to qualify for the bull cattle subsidy. The exceptions, like the Jersey cow in Crulivig, are very few. The cows are dual purpose beasts, kept for milk and for production of calves for sale. The latter are sold either within a week or so of birth, or at the age of up to six months (i.e. in autumn) or at about eighteen months age, after which the regulations usually specify that followers must be counted as full-grown beasts in the soum. They may be sold either in Stornoway or at the biannual sale at Breaclete. Cows unless they are being passed on to another crofter, are usually sold to the Stornoway slaughter house. Again, owing to the restricted market available, prices are lower than on the mainland, though undoubtedly greatly improved since 1939.

The problem of winter feed is still a governing factor in cattle management: cattle kept through the winter need a good deal of fodder, and happy the crofter and fortunate the year when it is not necessary to buy in a certain amount of cake, bruised oats, other feed or even hay. However, it is generally reckoned that the croft will supply the most if not all of the hay and oats. In any case, the amount generally bought in is a great deal less than that necessary in the mainland Highlands. This is largely due to the fact that, on many days, the cattle can be let out for foraging and will, in fact, manage to gain some natural feed.

Here, in contrast with Sutherland (where frequently a bull upon a neighbouring farm is used for service), and even with Park (where each township has its own bull) there is but one bull. In order to get round the problems of maintenance which have occasionally bedevilled Lewis townships, there is a recognised practice: the bull spends July to October upon the Tobson township common grazing, and the rest of the year on Little Bernera.*

Horses have never occupied a very important place in the economy of the area. It is said that the first horse on Bernera Island was taken to Hacklete bout 1923: previous to that and for some time after, most of the cultivation was by hand. This is understandable: in an area where most of the arable land is in lazy beds, and where, owing to dependence upon and nearness to the sea, problems of long distance land transport did not arise, there was little place for the horse, a fact which was recognised by the omission of horses from all the soums save that of Linshader itself. There is no recollection in the area of the keeping of goats. Nor is there a tradition of pig-keeping, though there were undoubtedly a few kept in the past. Poultry are kept almost entirely for domestic use.

Population - ages and occupations.**

162 Questions of land use cannot be separated from questions of population. The permanently resident population of the Bernera region is but three hundred and sixty and it is not balanced as to age-distribution (see Fig. 30). Appendix C(3) shows that out of 85
464 croft-holders on Bernera there are 34 full-time crofters: 21 are men, only seven of whom are less than 65; 13 are women, only six of whom are less than 65. The situation is even worse on Bernera Shore: out of 25 croft holders, only 11 are full-time, all men but all are over 65. The term 'full-time crofter' really implies crofter with no other occupation, and cannot be taken as necessarily involving a full-time unit of effective agricultural labour. Of the croft holders with full-time employment, 33 on the Island and six on the Shore, all but one, as would be expected, are less than 65. Therefore a large part of the active labour force is siphoned off into other occupations, for, increasingly, a man with a regular job has neither the energy nor the inclination to work a croft in

*The introduction of Artificial Insemination may soon change this.

**Appendix D(1) contains details of population by townships, appendices D(2) and (3) give further details of occupations and emigration.

[TEXT CONTINUED ON PAGE 81

464 his little spare time. In addition there are a few croft holders with periodic employment. It is noteworthy that the incidence of employment bears no direct relationship to the size of croft holding - there is not, for example, a preponderance of holders of small crofts taking permanent employment.*

162 However, the croft holders are not the only source of labour: Appendix C(4) shows
464 that there is a total force of fairly regular labour for the crofts amounting to 147, or rather less than half the total resident population. Of these, 78 undertake regular employment, 24 have employment on occasion, and thus only 45 are full-time, of whom 25 are
288 over 65. The forms of employment are indicated on Appendix D(2): weaving, with 49
226 persons regularly involved, is by far the most important single source of full-time employment, the only other being fishing (24 persons). Estate work (mostly gamekeepers, ghillies, etc. at Grimersta Lodge) gives regular employment to ten persons in the townships of the Shore. No other form of employment accounts for more than three residents between 15 and 65 years of age; the category 'casual' covers a variety of unskilled labour and there are five non-employable invalids.

288 About 50 households, out of 130, have looms. Yarn is distributed by the Stornoway
283 producers for weaving on commission; they collect, finish, and market the cloth. Hand spinning has all but died out and such yarn is more likely to be used for handknitting than for weaving; at least one lady supplements her income in this way. There is some evidence that Bernera weavers receive less work than those more accessible to Stornoway; the reason for this may lie partly in individual contacts between weavers and producers, and partly in the particular skills of particular weavers but transport is an important factor. Such a small isolated group of weavers does not justify frequent journeys by the Stornoway vans; in fact most yarn is put out, and tweeds collected, by a weekly carrier.

Note: Not all the boats returned were necessarily engaged in regular fishing. Nor is the value of the catch shown necessarily attributable entirely to Bernera.

* Editorial Note: this is an inevitable result of the rigid structure of crofter land holdings. See Part I, page 30 and table 12. The age of the crofter, and his family circumstances are decisive.

Figure 33

361 Contrasting patterns of crofts: the main block of Callanish crofts was lotted befo
178 1850. The group of crofts known as Breasclete Park was added in April 1850 for families evicted from Reef in south Uig. These, and many of the original Callani crofts were later subdivided. The irregular shaped crofts in the south of Callani were added at later dates, probably originating as squatters on the common pastu The Garynahine crofts were formed in 1935; they have a large area of common pasture south of the farm.

/p. 86/

23/There is no bull in Garynahine; the Department of Agriculture bull from Callanish is borrowed. Most crofters buy their milk either from the Admiral at the Lodge or from Stornoway whence a dairy delivers daily.

233 Eight crofters keep sheep; stocks vary between 5 and 30 per holding. Two crofters exceed their wintering (there is no equivalence in Garynahine because there has always been plenty of pasture). With a total of only 166 sheep and lambs on 1800 acres common pasture there is no danger of over-grazing.

312 The village has a good piped water supply from Loch Mburchaidh, and has had electricity since 1951. There are excellent communications: 4 buses a day to Stornoway
391 and also one bus from Uig and one from Berneray passing through Garynahine. These
427 good communications have probably contributed to the declining interest in crofting.

463 There are only three full-time crofters (two of whom draw war pensions). Of the remaining 12 adult men permanently resident, 10 have regular or part time work, the remaining two being 65 and 70 old. Employment is either in Stornoway or at the Lodge. Only
● 178 two people do part time weaving. Crofting is rapidly decaying in Garynahine. The croft land is reverting to rough grazing, and there is no indication of renewed interest in the land. Instead, life is becoming increasingly orientated towards Stornoway.

CALLANISH by Anne Iredale and Jennifer Oxenbury

172 Callanish must be one of the original settlement sites of the Hebrides, as it boasts an impressive standing stone circle and two other groups of stones. The stone circle
135 is on a promontory, which projects into East Loch Roag. The promontory rises to about 125 ft, and then the land drops almost to sea-level at the neck (less than half a mile wide)
367 which joins the promontory to the mainland. The township extends inland for about six miles in a belt roughly two miles wide. This inland area forms the common grazing; it is rough hummocky moorland with the general height rising gradually inland; the highest point is 425 ft.

195 The early crofts were situated close to the stone circle overlooking the Loch. The area was given to crofters who had been cleared from Linshader in the eighteenth century,
427 and it is said that until the Crofter's Act the Callanish crofters had to return to Linshader
34 to work for one day a year in return for this grant of land. But later the crofts on the more exposed westward facing side of the promontory were cleared and replaced in the 90 acre Callanish Farm. Some ruins of the croft houses still remain. The crofts then spread across the low lying neck to the main road from Stornoway to Breasclete, which
241 now forms the boundary between the crofthland and the common pasture. The crofthland varies in quality, but it is mainly quite good potential arable. Fertiliser and manure are extensively used. Seaweed was widely used in the past but in more recent years the labour of gathering the seaweed has been out-balanced by the lower price of the artificial fertiliser. The main problem of the crofters is one of drainage, and in some parts the drainage channels have to be as wide as the strips of cultivation. Croft 29, situated on a small peninsula from the neck of low lying land, is almost cut off from the mainland at high tide.

175 The croft houses were then in two nuclei; one on each side of the narrow neck. Much
361 later a third nucleI developed, known as Callanish New Park, further north along the
427 Stornoway road, formed by evicted crofters from Berneray; they had put to sea in small boats with their belongings, and they happened to land at this point. They first became
311 squatters on the common grazing but later gained crofter status.

427 There are 47 crofts in Callanish which vary in size from 2 acres to 9.7 acres. Some of the larger crofts are a result of private enterprise; the crofters have, without any

[TEXT CONTINUED ON PAGE 89]

000 weather although the wells on the lower ground never fail. Mains electricity was installed
354 7 years ago, but on the whole cooking is still done by Calor Gas and peat. The chief source of fuel for heating purposes is peat, although a little coal may be used.

427 There are 63 registered crofts, including many subdivisions, a small-holding of 15
acres formerly the Mill, and 10 feet, all of which are worked as 54 units. The crofts
341 lie an long narrow strips in a NE - SW direction from the moorland to the sea. All are at least partly fenced, the fencing being of recent date. Some crofters are, at the moment, making use of fencing grants to enclose their land completely.

241 The only crops grown are oats and potatoes, and although a little clover mixture is sown for hay most crofters find that the natural grass is sufficient for their needs. Vegetables are produced in a few gardens, but most people do not have enough time or interest to bother with them. Flowers rarely flourish owing to the lack of shelter.

311 Far less of the croft is cultivated now than in the past, and the land nearest the shore,
● 178 part of which was once cultivated on a run-rig system is now unfenced and used entirely for grazing together with some peat cutting. A piece of the common grazing has been improved by application of shell sand and chemical fertilisers and reseeded. This
improvement is one which almost the whole township took part in and has proved very successful and there are plans for further reseeding. Details of crops are given in Appendix C.

167 Although the tractors of which there are two in the township are used wherever possible,
the spade is still used on many small patches, particularly for potatoes. Much hay is
29 cut by mower but scythes are used to a large extent. There is still one horse in the township but it is scarcely ever used for ploughing except by its owner.

233 The total number of sheep kept in the township is 1,500 i.e. 2½ times the wintering which here is 2 cows and 5 sheep per £1 sterling rent. 40 crofters keep sheep but
● 178 only about half of these are sufficient to make a livelihood from sheep alone. Many lambs are lost on the moors during the summer and more fail to survive the winter. The number of cattle
231 kept is 84, i.e. only 1/3 of that permitted. It is usual for each household to keep 1 cow and 1 calf which is generally sold after 6 months when a subsidy can be claimed. Breasclete has no bull, but shares the one from Callanish. Most households keep sufficient poultry for their needs but no eggs are marketed.

Shielings were still used to some extent up to 1938. Now it is not necessary as fewer cows are kept than formerly. With the reduction in numbers of stock the common pasture close to the village are being colonized by heather.

221 The crofters' year begins at the end of March when the ditches are cleaned and the
231 land is prepared. In April the ground is ploughed, fertilised and sown with oats and
233 potatoes. The sheep are plotted out on the 10th of May and the cows are put out on the
394 crofts are then closed to common grazings. Soon after this peats are cut on the moors
few or less far from the village. After about 20 days the peats are lifted and carried
to the Pentland Road by tractor where they are stacked to await the lorry which takes them to the village.

In June, the sheep are gathered into the fank for shearing and the cows are usually brought to graze on the crofts from the nearby moors. If the croft is not fenced they must be tethered. At the end of June the clover is cut, while the potatoes must be cleaned and hoed. In August the lambs are weaned and dipped. Natural grass is cut for hay and if there is any first-year sown grass this may yield a second crop in
September, together with the corn harvest. When the potatoes have been lifted in October the crofts are opened and the sheep are brought in for the winter. Final dipping takes place in November.

162 Out of a total resident population of 226, 56 are under 15 years and 57 are over 65
years of age. Of the resident tenants 9 are between 15 and 44 years, 19 are between
44 and 65 years and 26 are over 65 years of age. Twenty on persons are periodically
000 away e.g. students and seasonal workers and 39 are permanently away. Since 1939,

241 are usually all the potatoes. Between the road and Loch a' Bhaile and between the unmade road and Loch Shader on crofts 22 to 25 the land is probably more intensively cultivated than ever before, but strips now overgrown with rushes and coarse grasses, especially near the cemetery give an idea of the former extent of cultivation. The working of strips nearer the sea is no longer worth the labour involved. Crofts 22 to 25 are further divided by the small Loch Shader; no. 28 however makes good use of a small alluvial flat at the head of Loch a' Bhaile.

237 Artificial fertilisers are in general use together with lime and dung. However some
B24 crofts were using seaweed, in particular now. 1A, 1B, 1C, 4, 5, and 19 - i.e. those
423 crofts with easiest access to the sea. The seaweed is gathered in the New Year and trodden into the ground in the spring and apparently gives excellent results, but tuomch labour is involved in carrying it to crofts in the centre of the township. Forty years ago each croft had rights to the "red" and "black" seaweed along the coast.

The crop acreages for the whole township will be found detailed in Appendix C (1) The area of oats for each croft varied between 0.25 and 2.50 acres while the maximum for sown grass was 1.5 acres. The excellent crops of hay from sown grass would
133 suggest its further extension, but unfortunately most of the land suitable for cultivation is already under oats and potatoes. The practice of undersowing oats was not particularly widespread whilst only two small strips of oats-rye mixture were found. One crofter had also obtained good results in a small patch with seven different vegetables, whilst soft fruits are to be planted next year. The two sets of 'run-rig'crofts practise a fixed run-rig with the usual rotation of oats and ley on the strips.

231 In cattle stock (Appendix C) the township has 28 three year-old beasts, 2 one
year-olds, and 24 calves. Only 6 registered occupied crofts have no cow, two crofters
● 178 have two cows each, and one crofter has two cows and two calves. The township has no bull however and the nearest is at Carloway or Callanish. Many lambs are lost on the moors during the summer and more fail to survive the winter. The number of cattle
231 kept is 84, i.e. only 1/3 of that permitted. It is usual for each household to keep 1 cow and 1 calf which is generally sold after 6 months when a subsidy can be claimed. Breasclete has no bull, but shares the one from Callanish. Most households keep sufficient poultry for their needs but no eggs are marketed.

Shielings were still used to some extent up to 1938. Now it is not necessary as fewer cows are kept than formerly. With the reduction in numbers of stock the common pasture close to the village are being colonized by heather.

221 The crofters' year begins at the end of March when the ditches are cleaned and the

CHAPTER ELEVEN

THE CARLOWAY DISTRICT

by

Brian Loughbrough

131 The seven crofting townships of Upper Carloway, (including Carloway Park), Borroweston,
128 Garenin, Knock Carloway, Dun Carloway and Kirivirie form a compact area of land in the
103 south of the Parish of Uig bordering the East Loch and Loch Carloway. Here the Lewisian gneiss has a thin discontinuous covering of glacial drift which is most extensively
developed immediately above the head of Loch Carloway. Crofting is largely to deter-
341 mine the layout of the townships and settlements (figure 37). The townships to the north-
133 west of the Carloway river are found on more gentle slopes than those to the south east where the slopes are less uniform and are use uniform and are often broken by short steep rocky faces. The north western area therefore offers an environment where almost continuous cultivation is possible whereas in the south east the frequent rock outcrops have led to fragmented cultivation on minute plots which are inaccessible to the tractor or other mechanised implements.

13/ The soils are heavy and acid even on the skinned land of the boulder clay slopes nor
is there any machair to mitigate the acidity of the peaty areas which dominate the land
in the shores. Only in one place is there any trace of the influence of the sand and this is to be found where the crofts numbered 1 to 3 Garenin border the small bay in the north of that township. Here the fierce gales have blown some of the finer beach deposits on to the croft land.

Much of the peat has been cut from the inner common pastures except in the case of Upper Carloway where active cutting is still taking place in the valley whose flanks are
311 occupied by squatter settlements, to the east of the football pitch. On the common
311 pasture the vegetation varies from peat moss and heather with bracken to fescue and close turf on the skinned land by the road to Dalcmore. On the upper common pasture heather and bracken have increased since the abandonment of the shielings and the reduction of the cattle stock; many inhabitants remember that the hills once had a much greener aspect. Nor is this a feature confined to the common pastures; on one croft in Upper Carloway 1.5 acres are completely covered by heather whilst a neighbouring croft has a good crop of oats on similar land. At the lock in both Knock and Upper Carloway areas of former arable land have reverted to moss, the old lazy beds being picked out by the peat cutters.

361 Settlement. The settlement pattern is one of great interest for it shows in a clear way the effects of the district phases in the historical geography of the area. The evidence of success and failure stands side by side. Before attempting to justify this assertion it is necessary to give a brief account of the physical evolution and distribution of settlement.

361 The origin of permanent settlement is believed * to have been the permanent occu-
178 pation of shielings used by people from Bernera until the eighteenth century. Until about
1850 arable land was held run-rig and the houses were huddled together in tight little clusters. When individual crofts were lotted, about 1850, the houses werescattered, each on its croft and generally up to fifty yards from the present road which was then
340 no more than a rough track). Sea access was then most important but since the advent
of modern road transport new houses have been built nearer to the roads, producing a
178 modern markedly linear plan. The roads extend at different heights across the slopes

* based on information supplied by Mr Macleod of 27 Garenin.

[TEXT CONTINUED ON PAGE 101]

361 and across the croft boundaries and it is along these that the majority of the houses are
491 to be found so that as the roads followed the easiest course open to them so the settlement
● 178 has moved to the roads.

A particularly interesting example of this kind can be drawn from Upper Carloway where a twofold movement of settlement has taken place; the original houses were built, there was an uphill movement to the upper of the two roads which cross the township at from 150 to 170 feet above sea level, and, secondly (and more recently), there has been a move to build at from 25 to 30 feet above sea level along the lower road which has become the main axis for the public
342 services. Three main types of building exist then in this township. The first is the blackhouse of which only one or two now remain. Even these are not the primitive type of blackhouse, for they all have proper chimneys. The second is an ill-defined group which includes buildings erected during the later years of the fishing boom and in the period up to the Second World War. These houses are either one or two storied often with the traditional dormer windows; they form the majority. Finally there is the development of the modern bungalows which are built by the Crofters Commission but have no plans supplied by the Department of Agriculture. Few have ventured to build away from the level of the lower road.

How then does this pattern of settlement illustrate the changes referred to at the beginning of this section? The original houses were abandoned gradually as the temporar
178 prosperity of the fishing enabled the crofters to build the better houses. These have seen great changes, but in most cases they are still occupied. Some have been extended and improved by their owners whilst others remain without additions almost as they were when first built. That the crofter owns his own house has certainly encouraged replacement
694 in recent times. The generous grants and loans provided by the Department of Agriculture have been utilised to construct the modern bungalows on crofts where the original croft house stands as a byre and where the second house is sometimes inhabited by some relative or parent of the crofter. In this way the district phases have left their mark on the croft, it is rare to see an isolated croft house, the landscape reflecting the varying fortunes of economic enterprise and the influence of government subsidies now so much a part of the life of the crofting township.

Roads and public services.

Carloway's importance as a centre for West Lewis is accounted for by the fact that
491 at the turn of the nineteenth century the coastline caused by East Loch Roag the main road southwards from Barvas turns inland to Breasclete. Near the point where it crosses the Carloway river at Carloway bridge it is joined by a number of local township roads to create a focal point of community services (figure 38). Here also the line of the still unfinished 'Pentland' road, projected as a direct link with Stornoway during the fishing boom, reaches Loch Carloway and passes along its north shore to the pier at Borroweston. This substantial pier was the scene of great activity during the period of commercial fishing before the First World War.

The six hundred residents of the immediate Carloway area are served by eight travel-
369 ling shops visit us by the local carrier. Bread, fish, meat, groceries, hardware, ironmongery, liquor
494 and bank all come to the end of the croft if not to the croft's door. Of the vans one is
based on Carloway, one on Breasclete and the rest on Stornoway. A mobile film unit
162 visits once each fortnight. The churches and school rightly reflect their importance in the community by the commanding position which they occupy just above the bridge. Here too is the showground; the annual show attracts people from all over the island, being as much a social as an agricultural gathering. Other services are more dispersed but not far away. They include doctor and district nurse, policeman, post office, and football

[TEXT CONTINUED ON PAGE 103]

1,[Presumably the author means figure 39--Analyst]

241 Oats are the main fodder crop and although the practice of undersowing is not familiar it is increasing with the incentive of cultivation grants. Potatoes are the other major crop, the main crop being Kerr's Pink and the 'earlies' several varieties. Domestic gardens, common in nearly all the crofts, grow cabbages and carrots. Turnips only succeed occasionally and there were many reports of poor yields. Two crofters had grown sugar beet successfully for fodder but did not see much future for it.

Sown grasses are being used increasingly and several areas of varied quality were noticed ranging from an indifferent field of Italian rye grass that had been down for five years to mixtures recommended by the Agricultural Advisor. These mixtures are used in rotations thus:- oats - potatoes - oats - sown grass - sown grass - sown grass. Some surface reseeding has been attempted and has succeeded on the crofts but none has yet been tried upon the common pasture, which is shared with Park Carloway. The chief problem has been that of finding a suitable area readily accessible to all the crofts. With the example of Breaclete and some of the townships in Ness in mind all agree that reseeding would be beneficial.*

Fertilisers are used on all the crofts and a clear pattern of their use emerged. With the obvious exception of dung the traditional types of fertiliser have been abandoned. Only one person uses shell sand in preference to lime for normal crops. For surface reseeding sand is obtained from the north west coast though transport costs are high. Contracts were given of regular liming, the only dissenter significantly having his croft by the river. Seaweed is not now in use though there were good reports of its
[254] value; labour, to obtain it was not available. With the incentive of the cultivation grants there is a regular application of blended artificial fertilisers by the majority of holders.

The Carloway hill common has not been cultivated within living memory but the cultivation of every possible piece of croft land was remembered by many. Several crofters recalled the period before the First World War when all cultivation was by spade
233 alone. The abandonment of the shielings some forty years ago reflects the decrease in cattle stocks; the smaller the numbers of cattle the less important is it to obtain additional grazing during the summer so that the croft land may recover from the winter and spring grazing. All that remains of the shielings are small, almost circular, mounds
● [178] of stones surrounded by a green sward. The decrease in cattle stocks, then three times larger than now, and the primitive life of the shielings are probably the chief reasons for their demise.

A comparison of the percentages of the souming taken up reveals this decline in cattle and the relative and absolute increase in sheep stocks. On six of the forty one units on the crofts the total souming is exceeded, one is at par and the rest are understocked. The sheep figures show a slightly different situation; eight of the forty one are exceeding their souming, two are at par and the rest are below, but not far below, if sheep are kept at all: but, whereas only six of the fifty six total units have no cattle, twenty three are without sheep (14 crofts and 9 feus). For an analysis of the statistics for the whole area see tables I, II, & III. The most interesting feature of the comparative figures is the figure for sheep, for in spite of the fact that Park Carloway has an excess of sheep, the joint figures do not exceed the total joint souming for the townships.

CARLOWAY PARK

361 In contrast with the excessive elongation of the crofts in Upper Carloway those of
427 Park Carloway form compact blocks. Another unusual feature is that when the crofts were lotted five field drains per croft were laid at a depth of eighteen inches: this may have something to do with the good quality of the land. Nineteen acres of croft land is worked in five effective units that form a distinct block of cultivation. Croft 6, which

* In 1960 and 1962 172 acres of common pasture were reseeded.

DUN CARLOWAY

361 Dun Carloway though clearly of a similar type to the other townships south of Loch
427 Carloway has certain features peculiar to itself. The croft land may be divided into two sections; crofts 18 to 23 occupy the deep trench which extends from the Dun Carloway
241 school to Loch Carloway itself. These holdings are larger than the average discussed above and are divided in broad rectangular block. To the west there is a less deeply entrenched zone where the crofts are long and narrow lying up and down slope like those
241 of Borrowston. Short steep and narrow lazy beds characterise the cultivation which follows the pattern set in the other townships, although the areas, as has been noted above, are much larger in some cases; the largest have up to twenty acres. Despite this increased size no croft has more than two acres of oats. The low percentage of land under cultivation is only in part explained by the difficult nature of the ground and
461 the limited use which can be made of the tractor. Few crofters are willing to attempt
● 178 more cultivation (to provide extra feed for store cattle or some other form of stock enterprise) so long as the income from weaving is satisfactory. The concept of the croft as an ancillary employment appears to have defeated its own end for with the population at its present level, and with the income from weaving as it is, very few crofters are prepared to do more than provide milk for the family, (with the animal and calf subsidies), and the proceeds of the sale of the annual calf as by-products) and to derive what income Providence rather than goodmanagement may allow from the sheep.

427 The total area of individually held crofland is 194 acres which is worked in twenty
427 five agricultural units derived from twenty six crofts, nine feus, one 'free gift' holding
311 and one squatter. The cultivation is accomplished by one horse and one tractor, each fo which is owned within the township.

311 The total souming is exceeded, the main reason for this being the gross overstocking of sheep: 187.4% of the souming. This overstocking cannot fail to have a harmful effect on the common pasture, promoting an increase in the bracken already visible on some of the crofttland itself, under-nourishment and disease. The poor quality of the hill pasture is brought home by a comparison with the grazings of North Uist where the most striking feature of the landscape is its greenness after the heavier browns of Western Lewis. Regeneration by surface seeding would certainly be helpful here.

SUMMARY AND CONCLUSIONS

178 The tables given in appendices C and D form the basis for much of the comment in the preceding pages. They must now be considered in the light of the general tendencies which they illustrate in the changing livestock economy unite.

241 Appendix C (1) elucidates the working of the crofts. The picture is somewhat com-
311 plicated by the large number of non-crofting holdings in the area, of which 43 carry
231 stock (a quarter of these sublet crofttland). The number of feus also tends to mask the process of amalgamation of crofts to form larger working units; a process which has
435 been taking place for some time. There are in this connection one or two cases of the
427 cross working of crofts between individuals in neighbouring townships. The figures for these units have been included with those of the township where the tenant is resident.

241 Oats are the most important arable crop. The acreages of sown grass for hay and pasture are much lower in comparison. Permanent grass, mostly old arable land, is to be found on 58% of the total area of land occupied as crofts and feus. A large proportion of this is on very thin soil where bare rock is exposed and on wet land, but even so it does show that much more of the land might be under cultivation or improved grass.
● 178 The decrease in cultivation since the late nineteenth century is probably much less than that for the Valtos area of South Uig where about 70% of the inbys and outrun is under

241 permanent grass. The pre-eminence of the Carloway area is then only a relative one
● 178 where the decline in cultivation is taking place at a slower rate. Isolation, the decline in fishing and the lack of alternative employment leading to a greater decline in population may explain the more rapid decline in the Valtos area. Whether Carloway will see a similar decline remains to be seen.

Table 35

Stock carried as a proportion of total souming of each township - Carloway district, August 1959

TOWNSHIP	All Stock	Cattle	Sheep*
Carloway	63%	53%	70%
Carloway Park	87%	64%	119%
Borrowston	74%	15%	121%
Garenin	97%	30%	160%
Knock Carloway	64%	30%	90%
Kirivick	73%	25%	124%
Dun Carloway	104%	21%	187%

* As recorded in some cases these figures are too low (see Appendix C (2)); the maximum error is probably around 10%.

231 Table 35 summarises the agricultural system; further details of the relations between
311 size of unit, status of tenant, stock of cultivation, will be found in Appendix C (3), (4), (5)
231 and (6). Though the total soumings (that is the conversion of both cattle and sheep units
233 to 'cow units' expressed as a percentage of the souming) never fall below 60% the sheep
311 souming is exceeded in five townships and that grossly in two cases. Once again however this is not as serious as it is in the Valtos area where soumings are exceeded by up to three times the figure allowed. Nor does the mere statistical analysis reveal all the picture for it is essential that a proportionate number of cattle be kept so that the grazing of both cattle and sheep may regulate the growth of the grass. As it is, the relative and absolute increase in the numbers of sheep is having a serious effect on the quality of the pastures.

Sheep are given less attention that the cattle whether they need it or not and few of the present generation are prepared to tolerate the life of the shieling in its old form where the cattle were taken in the summer. In consequence the grazing on the outer zones is almost entirely given up to sheep. The shielings are now only marked by small broken stone mounds which were once the shelters and by the small surrounding areas of greener sward. The changing aspect of the hill landscape has already been mentioned.

231 Comparison of the totals given in Appendix C (1) shows how the present pattern is develop-
ping. 167 milk cows are being raised on 171 agricultural units and with these are 113 calves. Appendices C (5) & (6) indicate that the agricultural unit farming the basis of farming is the single milk cow and annual calf which carries a subsidy if it passes the inspector of the Department of Agriculture. A few crofters are raising young beasts for sale but there is A general unwillingness to grow more fodder to raise cattle for an uncertain market which may be affected at any moment by an increase in transport costs which are already high. Without the subsidy such enterprises would hardly be possible at all and indeed one could say this of many aspects of life in the island today. Some of the calves are wintered, but the usual practice is to sell off late in the year.

233 Little close attention is paid to shepherding though several crofters profess to lifting
● 178 the great losses in the moor (often amounting to one third of the lambs each year) does not seem to cause much worry. The chief income from the sheep is the fleece which
435 sells at up to 4/- per pound, an average fleece weighing from three to four pounds. This
280 wool is not used for the tweed industry since it is too coarse being more suited to carpet manufacture. Appendix C (6) shows that the majority of flocks are small averaging from 10-20. The overgrazing is the result of a smaller number of owners keeping larger flocks. Thirteen of the working units have between 50 and 100 sheep. As to those without sheep, several crofters declared themselves to be too old to bother with them, a fact which serves as an illustration and introduction to the population problems.

162 Appendices D (1) shows the twofold nature of the difficulties which confront the community.
Twenty-two per cent of the residents are over 65 years of age and no less than 56% are
164 over 45 years old. With the sole exception of one man who works on the power develop-
● 178 ment project at Gisla in South Uig, the main focus of employment is local. A small number
435 of people are engaged in services to the community including shopkeeping, but the main source of income is weaving since crofting itself (by definition in this area at least) does not yield sufficient to maintain a family. Yet there are 31 full time crofters who are being supported in some other way, either by relations temporarily or permanently absent or by
162 interest on capital accumulated during periods of employment away from the island.

162 There is an insufficiency of women of child-bearing age to offer hope of an increase in
164 the population or even a sufficient number to guarantee a level of replacement. This fact together with the emphasis on one form of employment gives rise to anxiety among the crofters, who recollect what happened when the fishing finally collapsed during the First World War after a period of steady decline. In 1913 twenty boats sailed from Carloway
● 178 and gave employment to 295 men. If the weaving fails (at present a weaver making three
435 yards per week) an alarm up to 1 for them there will be similar results and the net emigration from an area already none too attractive to young people will certainly become more marked than it is at present.

[178]

not have crofter status. Thus, despite the rigidity imposed by crofting legislation, the crofting structure is evolving; whether the larger units so formed are agriculturally more productive than the smaller, statutory, units is another question.

Cattle and sheep stocks

231
178

The production of cattle and sheep is the main function of the croft, from the agricultural point of view, and the main function of the crofting parish. In this respect a great change has occurred in the last 80 years: about 1880 some 3,300 cattle and 14,000 sheep (of all ages) were kept; in 1959 the corresponding figures were 1,281 and 35,000. This change is by no means the result of the re-settlement of crofters on former farms; in 1879, according to the Report of the Royal Commission on Agriculture, the sheep:cattle ratio was 2.3:1 on the crofting townships and 9.6:1 on the farms: now it is 27:1 over the whole parish. The change (Table 38) has been fairly uniform over the parish except that, whereas sheep stocks generally have more or less trebled, in the Carloway district they have little more than doubled.

[161]
[162]

The decline of cattle numbers has been at the same rate as that of the human population and this, together with the much lower sheep:cattle ratio on crofting townships than on farms in 1879, suggests that, 80 years ago just as to-day, the main object of cattle keeping was subsistence rather than commerce. The increase in sheep numbers on the other hand is probably no more than a reflection of increasing disregard of the soumings.

233
311
178

If we compare the cattle and sheep stocks with the soumings shown in Table 38 and Appendix E we find that 80 years ago, except in Bernera, there was rough agreement between stock and soum. To-day cattle stocks are around one-third of those allowed by the soum whereas sheep stocks are greatly in excess. Examination of the soumings leads one to question their validity in the light of modern conditions: the sheep soums bear no regular relation to the available areas of common pastures (Appendices A(2) and

le soums appear impossibly high unless large quantities of winter fodder in the old townships the soums of each croft are still based on minor additional "1 cow and follower and 8 sheep per pound rent"; the rents, alculated on the potential value of the croft in days when an inexhaustible was available for production of winter fodder by cultivation. This is no nd the old assumption no longer holds.

tures are seldom, if ever, used to best advantage. Because the rally allow unlimited substitution of sheep for cattle, the soumings are xceeded by the presence of the increased flocks of sheep. In practice, ation is quite different. In the first place the difference between the zing of sheep and cattle on the hills is not widely appreciated. In crofters remarked on the change during the present century in the nearer hill pastures - "they were green when I was a boy, now they are was seldom correlated with the decline in cattle and increase in sheep. doubt that the increase in the ratio of sheep to cattle has generally led to the grazings. Further, there are almost five hundred separate sheep sh pastures, most of them with less than 20 ewes; at some fanks the men outnumber the sheep! Little real sheep-herding is done - nor can it be other regular employment. Consequently the hills are not grazed evenly: rossly over-grazed whilst others are neglected. This situation has the decline in cattle numbers and consequent abandonment of the upation of which ensured that use was made of the more distant pastures.

ctor inhibiting proper use of township pastures is their situation and vnships, particularly in South Uig, have detached areas of hill pasture, These are often singularly inaccessible now that the custom of huts has ceased. Other township pastures are long narrow strips up to seven miles. Straying from one township's lands to those of re common. Individual allocation of the hill pastures is not certain amount of fencing and, possibly, the employment of a paid l (as in the nineteenth century), would help.

the stocking of individual working units, Table 39, we find that only 30% heir total soum, 35% carry between a half and a full soum and a further an half their soum. The situation does not vary very much as between although there appears to be a slight tendency for working units in

of unit; the result (Table 45) does not suggest that the possession of a large agricul unit encourages a man to become a full-time rather than a spare-time agricultural Indeed, the possession of a large unit, built up by amalgamation, is often a fortuit result of marriage, death, or inheritance, rather than a matter of individual choic only significant correlation in the table seems to be the understandable tendency fo female croft workers to work the smaller, rather than the larger, crofts.

East Loch Roag	9	50	11	11	19	(146)
Carloway	16	61	6	6	13	(171)

Table 55 and figure 47 summarise the main sources of employment. The small group engaged in 'croft-work only' may be briefly dismissed. A large proportion of these men are elderly or otherwise infirm; a few are pensioners (e.g. retired police or service men); very few indeed are fully occupied in the agricultural work of their crofts, thus 'full-time crofters' is a misnomer in this area.

The most important category, in all districts, is 'croft-work and weaving', but it is relatively far less important in the south where there is correspondingly greater reliance on other forms of regular employment or on periodic work, i.e. casual labour.* It is difficult to overestimate the significance of weaving in all districts. It is the only substantial source of income in the parish and it should be clear from the previous chapter that weaving is not an ancillary occupation to croft work except in a few cases in the south. The weavers are not 'crofter-weavers' so much as 'weaver-crofters'. A curious distinction between Carloway and the rest of the parish is that, whereas generally weaving is young mens' work, the great majority being under 45, in the Carloway area two-thirds of the weavers are over 45. The historical reason for this may be the earlier spread of weaving into Carloway than elsewhere for, although some weaving has always been done throughout the area, it only became a major source of employment south of Carloway in the last 20 years or so. Thus few of the older men in the south learned weaving when they were young. A corollary is greater dependance on the Merchant Navy as a source of employment for young men from Carloway than for those from the south.

Other sources of regular local employment are lobster fishing (Bernera only), gamekeeping and other estate work (Bernera shore and South Uig), and government establishments (South Uig). In addition there are the usual services - postmen, haulage contractors,

* For a detailed discussion of the significance of weaving see Moisley, H.A., Harris Tweed - a growing Highland industry. Economic Geography, 37, 1961, pages 353 - 370.

THE PATTERN OF CROFTING

427 241 178 423 477 Crofting, a distinctive system of land tenure, is confined to Argyllshire, Inverness-shire, Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland, the seven Crofting Counties of Scotland. Small agricultural units sharing rights in common land, usually pasture but in some districts arable land also, survive in 151 out of the 163 parishes, and these holdings form the nearest equivalent to peasant communities in Britain, although only a small minority of crofters own their holdings, and the true subsistence element, implicit in any definition of peasantry, has all but disappeared.

175 427 241 423 Before 1886, the crofter was a tenant-at-will, with no security of tenure, and no right to compensation for improvements. The Crofter's Act of 1886, defined a croft as an agricultural holding in a parish where there existed, or had existed, rights of common grazing, and where the annual rent paid was less than £30. Security of tenure, and compensation for improvements were the main provisions of the 1886 Act; the rent qualification was later raised to £50. In all, there are about 20,000 crofts in Scotland today[1] and Collier[2] estimated the crofting population at [161] about 100,000. The number of crofts in Park is 215, with population of 908. Thus Park forms [162] a 1 per cent sample of the crofts, and a 0.9 per cent sample of the estimated crofting population.

Crofting Organisation, Layout, and Settlement.

423 427 361 311 The characteristic settlement unit is the crofting township: Figure 3 illustrates the areal distribution of the 12 townships in Park. Each township comprises two main elements, the individually held croft land, and the common grazings. The number of crofts per township ranges from 6 in Caversta to 43 in Gravir.

632 233 The individually held croft land (1,839 acres) is partly 'outrun' or permanent pasture and the holdings are usually but not always consolidated - in Gravir (Fig. 4) and Cromore some of the crofts comprise as many as five non-adjacent pieces of land. Each croft is normally separated from neighbouring units by a drystone dyke or fence but in Park, such demarcation is the exception rather than the rule.

The croft land is separated from the common pasture by the township dyke, a stone or turf wall. The Park common pastures consist of 22,023 acres of moor grazing - generally very poor, ill-drained land with a large percentage of bare rock, areas of peat, and numerous lochs. In Park, only Oronsay common pasture is fenced, the limits of the remainder being faintly marked by crumbled turf dykes. Each croft has a defined right of grazing or 'soum' on the common pasture; the 'soum' is the number of beasts which may be pastured, a term comparable to the obsolescent 'gates' of northern England. In Gravir, the soum is 1 cow and follower or young beast, up to 6 quarters old (i.e. 18 months), and 8 sheep, per £1 rent. There is also a system of stated equivalences (Gaelic 'coilpeachadh') in most townships whereby substitution of cattle for sheep and sheep for cattle is permissible: in Gravir, the exchange rate is one cow for five sheep. Soumings and equivalences vary throughout Park. In former times, when a subsistence economy prevailed, soumings were enforced but nowadays the majority of the crofters do not even know the souming of their croft.

[113] 1 Crofters' Commission, Annual Report 1958.

[113] 2 Adam Collier, "The Crofting Problem", 1953.

427 241 [22] 423 178 233 Although the croftland is individually held, individual control of the crofts only applies for six months of the year. After the harvest, the croft land reverts to common grazing and the whole township stock graze indiscriminately over the crofts. Thus basically the whole area of the township, the individually held crofts and the common pasture, is common land, and it is clear that the agricultural revolution with its system of enclosure has not yet fully refashioned the Crofting Area.

175 233 Before 1900, there was a third element in the crofting landscape, the shieling (Gaelic - 'airigh'). The sites of the shielings are usually on slopes commanding a view of the surrounding area near a spring or stream and usually two to nine huts belonging to the same township are grouped together on a site; isolated shielings are rather rare. In order to conserve the pasture within the township dyke for wintering and to protect the unfenced crops, the cattle were removed to the hill early in June, and the younger members of the households went out to live in small stone or turf-walled huts to tend the cattle. The milk was either carried back to the township daily or made into butter or cheese at the shieling. The distance of shielings from the crofts varied from one to five miles in Park.

632 The affairs of the townships are managed by the Grazing Committee, elected triennially by the township and presided over by the Clerk of the Committee. The duties of the Committee in the past related mainly to the enforcement of soumings, but are now reduced to the disbursement of subsidies, although responsibility for the maintenance of the township dyke and the care of the township bull (usually lent by the Department of Agriculture but sometimes communally owned) are also the province of the Committee.

[361] [342] [78] The layout of the townships varies with the topography but the majority of the crofts are aligned in strips from the moor to the sea (figures 4 and 5). Most croft houses are built on the crofts; in former times, the majority of the houses were sited on the poorest part of the croft as all the cultivable land was required for crops, but nowadays the houses tend to be sited near the road.

162 361 427 241 [464] The official pattern of crofting is thus one of tenants, each living on his or her croft and sharing in the rights and duties of the township. Table I gives an analysis of the tenants of the 215 Park crofts. It will be noted that only one-fifth of the crofts are tenanted by those in the 15-44 age group: a similar proportion are tenanted by those over 65 years of age. Absentee tenants account for 14 per cent of the total. Women form under 10 per cent of the total, but only one in seven of the women tenants is the sole labour force on the croft. The intrinsic worth of the holdings can be inferred from the fact that two-thirds of the male tenants in the insurable age group take supplementary work, two-fifths of them furth of Lewis. With such a large proportion of the tenants either fully employed in ancillary occupations in Park or elsewhere it is hardly surprising that the theoretical township organisation exists mainly in name alone.

427 241 Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feuars, all legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without [113] arable or pasture land". For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155.

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

231 Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and overstocking increase with the size of the croft: the units of ten acres and over, on the basis of stock carry, would appear to be the most intensively worked. In all, just over half of the units take up their full souming. Table IV gives an analysis of employment ancillary to croft work for 141 of the 219 units and it would appear that neither ancillary employment nor age is significantly related to the intensity of croft working. Table V points to the fact that more full-time crofters are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural townships is nine acres, compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

[463] [561] [887] [311]

175 178 241 231 The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission made a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident that the number of cattle was much higher at that time and that the cattle-sheep ratio in the selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistics for the parish of Lochs as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; bere (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36 per cent. Large areas of lazy-beds, no longer cultivated, are visible landscape signs of these changes; seaweed, the sine quae non for lazybed cultivation, is no longer carried to the upper parts of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

[512] [824]

233 241 From the foregoing account, it is clear that there are two major agricultural problems in Park, the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing; these deficiences bring in their train the problem of overstocking, and the existence of uneconomic holdings.

241 242 176 The more progressive crofters, significantly resident on the better crofts of the agricultural townships, have shown how croft land can be improved by re-seeding and sowing down to grass, practices which could be fruitfully extended throughout Park. In addition, several townships by co-operative effort, have reseeded small areas of the commons grazings with splendid results.

241 However it is clear that it is not possible for 219 viable agricultural units to be maintained on the present crofting area. The optimum size of croft which could maintain a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

231 241 242 This problem was referred to a practical agriculturalist who was asked to state what size of croft and number of stock would be required to provide an annual income of £300, excluding croft benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil these conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

166 167 464 However, not all such employment is available in Park: 47 percent of the insurabl leave the Hebrides to find employment; one third take seasonal emplo permanent employment furth of Park (See Table VIII).

Employment within Park

298 464 Table IX shows that opportunities for local employment are strictl Harris tweed is the most important single source of employment. It engaging in it are almost all crofters working in their abundant spare adjunct to croft work as it is unaffected by weather or hours of dayli formed during periods of agricultural inactivity. The vagaries of the make the occupation precarious; Park is one of the more inaccessible mills are apt to give their commissions to the weavers nearer at hand work is scarce. Since 1952, the number of weavers in the fishing tow Marivig, Calbost and Gravir has grown from 11 to 22 and much of the the activities of the Pairc Association. Fishing, on the other hand, h period: the number of fishermen has declined in these townships from weaving, service occupations form the only other employment availab and road maintenance being the chief occupations in the service group craftsmen: with such a small population, and the long established trad builds his house and is his own tradesman, there is little opportunity or even shoemaker to make a livelihood. The professional class is s of the minister and missionaries, the doctor and several schoolmaste

[178] [228] 463 464

[462] There is little opportunity for women to find employment in Park, shop-keeping and school teaching, and a few domestic service posts (

Employment furth of Park

166 167 462 463 464 The persons in the 15-44 age group form the main body of those w The distinction made between 'seasonally away' and 'regularly away' i spend part of the year elsewhere, the men on whalers in South Georgi Fisheries at Perth, or labouring on the mainland. The women are in in hotels. A majority of the men in the latter category are in the Mer these men take leave to coincide with the spring work and the harvest. women are in domestic service (See Tables IX and XI).

An interesting comparison in the 'regularly away' group exists bet the professional classes (Tables IX and XI). The sample is small, but women than men attain professional status. The number of domestic merchant seamen is a reminder that the crofting districts provide a po vital occupations, some none too popular in Britain as a whole. In peo that Park makes a distinct contribution to the fabric of the national eco is much more apparent outside Park than within the district. At the s those who are temporarily or permanently away eventually marry and and thus a most valuable section of the community is constantly moving per cent of the men in the 15-44 age group are wholly resident in Park, women in the same age group, a reflection of the poor prospects and u resources on the most of the crofts.

1 The 1952 figures are abstracted from the Lewis Survey Report on

Types of ancillary employment

241 464 The question of the desirability of ancillary employment in a crofting district is often debated. On the one hand, engaging in such work means less time for croft work and makes wholehearted participation in the agricultural life of the township a virtual impossibility. On the other hand, crofters who take ancillary employment are better able to make capital investment in their croft. Table IV shows that in Park, croft efficiency, as expressed by the sowing to actual stock ratio, is not necessarily related to participation in ancillary employment. If 000 the township is to be re-established as a working entity, a clearer dichotomy in the population seems desirable; those who wish to work the croft on a full-time basis might be given full use of the available land, and those who wish to earn their living in non-crofting employment could take out feu charters for their houses. It is clear that the agricultural resources of Park are insufficient to maintain the present number of crofts as viable economic units but the problem of finding industrial employment for any large non-crofting population is very great.

184 464 The Park Association, in their keen search to attract industry, met with little response for high freight rates and distance from markets made economic industrial costing well-nigh impossible. The Chairman of the Crofters' Commission has recently suggested that some of the Glasgow Overspill of "tradesmen and small businesses" might find "an opportunity to prosper in the West Highlands and Islands"[1] but even with Government grants for the establishment of small factories, it is clear that present freight charges would be a severe deterrent.

178 228 One possibility is that the fishing industry might be revived. In 1945, 16 large motor vessels were fishing from the townships between Cromore and Gravir; by 1952, three boats remained;[2] only one boat was still fishing in 1958. The recent Fishing Board Scheme guarantee, which provides a flat weekly rate for every boat turning out, brings hope as this guarantees a minimum livelihood. The major problem is the finding of the initial capital [445] required to buy and fit out a modern boat, at present about £20,000. Eighty-five per cent of [452] this sum can already be found in the form of grants and loans from the Herring Industry Board but the remaining fifteen per cent or £3,000 is often the more difficult sum to raise. The Murdo Macaulay (Rhodesia) Trust has offered assistance to a limited number of fishermen towards the raising of the £3,000[3], and this offer is a real opportunity. If fishing is not re-started soon in Park, few of the original fishermen will remain to instruct the new generation.

484 [312] Tourism is an industry hardly developed at all in Park. Lack of running water has made the householders shy to offer accommodation, but it should be remembered that there are city dwellers who are delighted to accept inexpensive accommodation away from the crowded resorts. Dr. Stig Jaatinen, in his "Human Geography of the Outer Hebrides"[4], states that this fact has made the Aaland Islands prosperous, and believes that tourism on simple lines could be successfully developed in the Outer Hebrides. Tourism need not bring in its train the desecration of the Sabbath for people who are willing to journey far in search of a quiet holiday usually conform to local observances.

464 Unless new sources of employment are brought to Park, it is clear that ancillary employment must continue to be sought elsewhere. The higher 'spending standard' in industrial employment, and the opportunities to find entertainment in urban areas (tastes often resulting from experience during school days in Stornoway or National Service), militate against a large population of young people, but basically lack of employment and the uneconomic nature of the crofts are the real reasons for the high degree of temporary and permanent employment away from Park.

[Seaforthhead]

161 Table XVII reinforces the idea that there is a striking dichotomy between the agricultural
162 and fishing townships. The former are characterised by a more stable population trend,
166 significantly fewer of the population in permanent employment furth of Park, and a smaller loss by
167 migration. In the fishing townships, where growth and decline have been equally meteoric,
241 there is a larger proportion of persons in permanent employment furth of Park, and migration
222 losses have been greater. It is also significant that there is a smaller natural increase of
232 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Calbost, one of the fishing townships.

SEAFORTHHEAD AND SHIELDERNISH

Rachel A. Hirst

131 Seaforthhead and Shielderniah are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHHEAD

135 Seaforthhead, the most isolated of all the Park townships, consists of three crofts and a
361 gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at their furthest extent are only 150 yards from the shore. Immediately behind the road the land rises very steeply in rough uncultivable moorland covered with many boulders but generally below the road the land slopes gently at about 5-10 degrees, in places being
[247] completely flat. Here, however, the lazy-beds are very boggy and rushes have appeared in the ten years since cultivation ceased.

134 The soils are deep near the shore due to soil creep; higher up they are very thin and peat
137 accumulates to at least 3 feet both below and above the road. There is little cover; bracken is rare, but silverweed and heather, moorland sedges and grasses soon colonise disused lazy-beds.

241 Legally there are three crofts but only one is still cropped, the other two being used solely
[255] for grazing. There is, however, a gamekeeper's holding within the township boundary worked as a croft. The other two crofts are used as ancillary grazings to holdings in Airidhvruach and Balallan and have not been lived on for forty years and ten years respectively.

[244] The chief crops are oats and potatoes, though the gamekeeper had a patch of turnips and
the other croft had grown them during the last few years until 'finger and toe' developed.
[407] Patches, about half an acre in extent, are drained with stone drains and ploughed by tractor, after which potatoes are grown to clean the soil, followed by oats for one year and then sown hay for three to four years. This is not strictly adhered to and several lazy-beds appeared to be
[314] in natural hay. There is no peat-cutting on the crofts as peat is secured just outside the township fence on the common pasture. Lambing has been poor for the past two years being
[251] only 50 per cent in 1958; the stock carried is twice the sheep soum. The cattle, Highland and Ayrshire or Shorthorn crosses, are below the soum, but previously nine cows and followers have been kept.

161 There has been a great decrease in population and cultivation since the resettlement in
162 1886. In Seaforthhead and Shielderniah as a whole, there were twelve crofters before the
241
178

[Seaforthhead] [Shielderniah] [Habost]

161 suppression of the original townships opposed to six today. As a result, many lazy-beds, now
162 given over to natural grass, are being gradually encroached on by heather and juncus. Out
of the present population of twenty-three, one is permanently away and two have migrated
241 since 1939. There is a more healthy population structure, with a large number of males
178 between 15 and 44, due to a large family having returned home and six children, five of school age.

241 In Seaforthhead and Shielderniah all settlement is below the road and house-sites are on
[407] slight elevations. At Seaforthhead is the reputed hunting lodge of the Seaforth's, 'Seaforth Castle',
[275] now ruined, but still showing signs of abnormal size and arrangement. When first settled,
[241] communication was by ferry (1820). Now a cart-track, deeply rutted, to Eisken Lodge gives
[78] access to the Tarbert-Stornoway road two-and-a-half miles away.

SHIELDERNISH

131 Shielderniah, also consisting of three crofts, is better situated on the Park and South Lochs
361 road. The three houses are situated on a well-drained northerly slope, half-way between the
[142] road and the shore, but the three crofts are on better land and greater accessibility has led to better management and new ideas.

241 Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put
311 together to permit ploughing by horse or tractor. One croft grows neither oats nor potatoes,
[246] preferring to enclose two one-acre parks, re-seed them, cut the hay in June, and wean the
[131] lambs on the aftermath. By next year, this crofter hopes to have enclosed and re-seeded a
[304] further acre and will then use the three in rotation. The other two crofts grow both oats and potatoes and one is also sowing down. The crofts average fourteen acres in size but although
[224] gentle slopes are extensive, the major part of the crofts is in permanent pasture. The total
[288] stocking of the Shielderniah crofts is below the souming. Fishing is now only for domestic use though there is a small jetty on No. 1. Part-time weaving is performed on two of the six crofts.

The future pattern would appear to progress to more grazing and less cultivation. Two out of the six crofts - both at Seaforthhead - are worked from outside the township and this isolated township, being difficult of access and having little cultivable land, is better suited to grazing. Shielderniah appears more suitable for enclosing parks for fattening lambs, as soils are deeper and slopes gentler, making the use of a tractor feasible. More could be got out of the crofts especially with fertilising and re-seeding for hay and pasture and growing
[185] fodder crops for wintering. It is hoped to fence the common securely, and then stock will be renewed - a great necessity. Daily communication with Stornoway also means that Shielderniah is better placed than Seaforthhead for a flourishing settlement. The crofts are certainly of a workable size - provided part-time work, such as weaving, is maintained, along with the grants from the Crofter's Commission.

HABOST

Rachel A Hirst

131 Habost is scattered around a small bay on the south shore of Loch Erisort. Settlement
135 stretches for over a mile encroaching on three small hills separated by wide, well-drained
241 valleys which soon rise to the dominating Craigeal (225 feet). Slopes are varied but tend to
361 flatten out at about 100 feet near the road and on this flat, most of the cultivation takes place.
[134] Nearer the shore, slopes are much steeper and on the hills there are bare rock faces and thin soils.

[Habost] [Kershader]

464 Of the 53 residents, 19 are over 65 and only 5 under 15 years, leaving a working population
161 of 29: seven are in permanent employment elsewhere. The population has been steadily
162 declining since its peak of 121 in 1901.
166
167

Since 1946, the township has changed considerably. It has been completely fenced and the
178 method of cultivation has changed from spade and horse-plough to tractor and cultivators. A further fence has been erected for a lamb park and much land has been re-seeded; an increasing
241 area has been put down to hay. It would seem that fattening of stock for market is intended, and better attention is being paid to stock. Yet the population is ageing and there are few young men
[407] to take the place of the older crofters; when working units become larger and stock decreases to
[162] a figure nearer the real carrying capacity of the grazing, the croft could become a profitable concern: at the moment, the croft is only maintained through grants and ancillary earnings. Should that happen, however, there must be more re-seeding and an increase of cultivation to provide winter fodder.

KERSHADER

Philip W. Wheeler, M. A.

131 Kershader is a township of forty-three permanent residents on thirteen crofts, which stretch
161 for a mile along the southern shore of Loch Erisort. The crofts extend up to one-third of a
162 mile from the coast with a two-and-a-half mile deep hinterland of common grazing. The extreme
135 elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged
361 in rectangular strips at right angles to the coast, are lower (maximum 125 feet) and include three main zones (Fig. 8):

241 (a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet,
134 dissected by four rejuvenated valleys. The soils of the greater part of this zone have a
361 distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilisation by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an extension of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, overlying aquiferous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hollows with deep moss soils requiring intensive drainage and reacting well to heavy fertilisation with seaware and intervening heights covered with blanket bog, partly skinned, heather and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

241 In Kershader, there are thirteen legal crofts and twelve operative units. The crofts vary bet-
311 ween 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (oats 18.5, potatoes 6.0), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

[Kershader]

241 with heather and peat on the higher areas, hay is taken off 19.25 acres. Four acres, mainly for
311 potatoes, are worked by spade but most of the cultivation is by tractor hired from Balallan or,
[407] in 1958, from Habost. Lazybeds are common and in some cases are carefully renewed, but the present tendency, reaching its extreme in a field of about two acres on one croft, is towards the formation of larger, ploughable fields for ease of tractor operation. Most cultivation is in
244 zones (a) and (b), with little development of (c) at present. The only crops are oats and potatoes,
246 with some garden plots of cabbages, turnips and carrots. The potato main crop is generally Kerr's Pink (Golden Wonder on one croft), with a couple of rows of Skerry Blue or Edzell Blue for earlies. There is no memory of Black Oats (Avena strigosa), and bere (Hordeum vulgare)
198 has certainly not been grown since 1930, and probably not since 1909. The oats are grown
[256] exclusively for winter feed and are hand-threshed with stock and comb as the need arises; the
[255] last water mill in the locality went out of use after 1914, the last handmill in 1916; no grain has been sent to Stornoway since about 1930. Rotations are extremely irregular: some lazy-beds are still cultivated with alternate crops of oats and potatoes and have heavy seaware and manure fertilisation, but most other arable areas have some sort of oats, potatoes, oats, sown
[224] grass sequence. Fertilisers used are seaware and manure (ten crofts), manure (eleven crofts), a
[247] sand (one croft), lime (ten crofts) and artificials - 'Potato manure' and sulphate of ammonia - on eight crofts. Artificial fertilisers and much of the seed are obtained through the Crofters' Agency.

241 The only two horses ever owned by this township were kept on croft 11 from 1936 to 1953. The
[407] plough was first introduced in 1936. When a tractor from Balallan became available for hiring
[242] in 1953, the horses were disposed of. The present soums are by cow, young beast and sheep per croft in proportion to rents and range from 3 cows, 3 young beasts, 69 sheep down to 1 cow, 1 young beast and 23 sheep. Eight crofts exceed their entitlement but no croft hasless than half the souming and the deficiency is mainly in cattle, especially young beasts. On the other hand, no operative unit is entirely without cattle as manure is extremely important. Cattle are kept for
254 domestic milk supply, and calves, having qualified for subsidy, are normally sold at 6 to 8 months
[52] old. 10 acres of the common grazing were re-seeded in 1957 and the following rhythm for milk cows
[22] is developing:-
131
255
311

(a) As soon as the weather allows in May, the cows are put out in the park for about three weeks.

(b) Next, about 6 weeks are spent on the common grazing between the ring fence and the new outer fence erected in 1957.

(c) Back to the re-seeded park for about five weeks.

(d) Return to the crofts for the winter, being let out either to the park or to the common grazings whenever the weather is suitable.

[78] The young beasts spend much of their time on the outer common grazings. As most of the crofts, beginning with one in 1938 and ending in sequence with 10, 11 and 12 probably in 1959, are fenced, the old arrangements for township commoning from 15th October to 10th May are now obsolescent. Another park was also fenced for general purposes and for weaning in 1957. Prices for calves
[185] and cattle are very low and this discourages cattle breeding; on the other hand, lack of winter keep enforces an occasional sale.

The rhythm of sheep husbandry is largely independent of that of cattle:-

(a) By 20th November all sheep, except possibly the lambs, are cleared from the crofts for the tupping of breeding ewes thereon till 31st December. Every crofter now keeps his own ram, exchanging it or buying another at least once in five years.

18

[Kershader]

289 (b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular; some flocks are usually hand fed, others only rarely. In the former case they hefit near the upper limit of their home croft and remain fairly close at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

292 There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

294 Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces
295 about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average
296 sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost
297 never above £4. Bracy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

298 Under-employment is a serious problem in Kershader. There are nine males classified as
299 full-time crofters, but probably only four of these (two on one croft) are in fact in this category,
300 and of the total of thirty males with their homes in Kershader, only fifteen of the insurable
301 population are permanently resident. There are twenty-eight females with their homes in this
302 township, but on only six crofts do any of twenty permanently resident females help with croft
303 work. Local ancillary employment consists of weaving, fishing (for domestic consumption
304 only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The
305 only resident professional worker is a nurse. Ancillary employment must be, and is, sought
306 away from the township. As a result, of the 73 persons recorded as having migrated since 1939
or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from the
307 optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907
308 and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard,
309 Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly
310 constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

312 It will thus be seen that the most serious problem facing Kershader is that of stabilizing the
313 population and giving it a stronger economic basis. Apart from the potential development of
314 tourism, fishing, weaving and other home industries, the only possible occupation is in
315 agriculture with perhaps a little forestry. Forestry, though important as shelter provision,
316 cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Cromore]

The crofters sowed
320 clover with their oats in 1957; the quality of most of the natural grass could be improved considerably
321 by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining
322 lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofts have
323 vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced
324 crops of lettuce, cabbage, turnips and carrots.

325 The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not
326 enforced. The crofters keep the stock which they can manage to maintain throught the winter and
327 no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only
328 seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes
329 place in April and May and often a high proportion of ewes and lambs is lost. The sheep are
330 clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and then dipped; November is the tupping period and almost every crofter had his own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March so that they are six months old in October for the Garyvard sales. The cows are served by an Aberdeen-Angus bull from Crobeg Farm. The township gates are opened in October and the cattle remain within the bounds until May. An interesting regulation enforced by the Grazings Committee is that each family can have only one dog, and that it cannot be taken on to the Common grazing without special permission, or on fank days.

332 Shielings, situated on the common grazing between Calbost and Cromore, were used until
333 the 1890's. Active land use has gradually declined; in the 1920's, much of the outrun was under
334 cultivation and from an an air photograph, it is evident that hay was being taken on the strips
335 above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land but
336 this year ten crofters have formed a group to enclose and improve a ten-acre plot on the common grazing;
337 it is unfortunate that all crofters are not willing to take part. Peats are now being cut near the
338 road between Caversta and Gravir, about three miles south- south-east of Cromore and one mile north of Gravir.

339 Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore
340 fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men
341 who would welcome the opportunity to start fishing again. There seem little prospect of this,
342 however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and,
343 in fact, at low tide it is useless. So much for the hopes that it might have been used by cargo vessels bringing goods to Park.

344 In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by
345 road from two mills in Stornoway and one in Airidhvruach. At present the average production is
346 only one tweed per loom per week but the weavers could quite easily double their production. During
347 the past two years this industry has been comparatively prosperous. Knitting is a winter pastime
348 but only for pleasure, although one household possesses a knitting machine.

349 In common with the rest of Park, Cromore has a high proportion of old people. Many from the
350 middle age groups have sought employment on the mainland, and the teenagers, many of whom have
351 been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting
352 with the croft work. Some younger folk are resident to care of aged parents.

353 Cromore is only eight miles by sea from Stornoway yet all communications with the town are by
354 road a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a van
355 which is occasionally hired. Some people recalled that the only route to Stornoway was once by
356 boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the
357 haulage in Cromore, particularly for bringing home peats during the summer. As a result of recent
358 additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no
359 shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday.

[Marivig] [Calbost]

360 In conclusion, it may be said that the problem of Marivig's future, and that of other crofting
361 townships, is not only one of adverse aspect, soil and weather conditions, and of distance from
362 markets, but a problem of the population finding a stable and viable level where agricultural units
363 are large enough to encourage the active and enterprising section of the population to remain, and
364 a problem of finding capital to equip a modern fishing fleet.

CALBOST

Anne Cooper

365 Calbost is situated five miles to the north-east of Gravir on the Minch coast of Park. It occupies
366 a basin-like hollow in the centre of which is Loch Dubh, and is open to the sea on the east. The
367 croft houses are scattered over a shelf 50 feet above sea-level round the sides of the hollow and along the valleys which enter the township to the north and south-west.

368 The cultivable soil, a mixture of peat and well-drained gravelly drift, is on the higher ground,
369 although here the rock outcrops in many places. On land formerly cultivated, bracken is spreading
370 rapidly and now covers a large proportion of the surface, although twenty to thirty years ago it
371 was unknown. Heather dominates the common pasture and rushes are widespread in the low-lying central area. There are a few willows and rowans round the old buildings, probably planted as wind-breaks.

372 Calbost was originally a single farm but the township was formed about 1820. The pattern of
373 the crofts differs from the usual shore-to-dyke alignment, as six crofts were allotted extra land
374 in the valley which enters from the north, when a part of the common grazing was brought within
375 the township dyke. There are now fourteen crofts of which four are worked by resident crofters
376 and two by squatters. The remainder are used only for hay and grazing and are sub-let to crofters
377 in Calbost and other townships.

378 Cultivation is entirely by spade and of the 2. 6 acres now in cultivation, potatoes account for
379 2. 37 acres. The small acreage of oats reflects the greatly reduced cattle stock of only two cows and
380 two calves. Approximately twelve acres of hay are cut as winter feed for the 225 sheep which graze
381 in the township.

382 The lazy-beds in natural hay and the outrun are being rapidly encroached on by bracken. The
383 prevalence of bracken, and the amount of work needed to clear it, is likely to deter any attempt at renewed cultivation.

384 Calbost was originally a fishing township in spite of its harbour being so exposed: boats have to
385 be taken up on the shore instead of being moored in the bay. The decline of the fishing industry which
386 has prevailed in Lewis has contributed towards the almost complete desertion of Calbost, leaving
387 only a few boats now used only for leisure purposes. Croft income is supplemented by only two of
388 the men in the township, one a weaver and the other in the Merchant Navy. Although there are a few
389 productive gardens, no attempt is made to market any produce.

390 The township dyke is very close to the settlement and in the past shielings were not so widely used
391 in Calbost as elsewhere. The cattle were instead brought near to the dyke for milking and allowed
392 to graze on the common unattended. There are ruins of shielings to be found on the hills around
393 Calbost but a more interesting feature is the second dyke; enclosures were made adjoining the main
394 dyke and in the late summer the cattle were brought to fresh pasture within these dykes before
395 the opening of the township gates. Following the opening of the gates the stock are free to wander
396 over all crofts but there seems today to be a move towards the complete enclosure of the crofts.

[Calbost] [Gravir] [Glengravir]

397 The present situation in Calbost is best illustrated by reference to the population statistics.
398 There are only 17 people living there at present, seven of whom are squatters and only eight houses are occupied within the dyke. Of the male population, there are three children under fourteen years, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly shows the lack of active men from 15-44 years, necessary for the continuing economic success of
399 the community. However, even these figures are not so striking as the numbers of emigrants as
400 no less than 39 men and 40 women have left Calbost since 1939.

401 A community of 120 persons has shrunk to less than 20 in only twenty years as the younger
402 people have left to find employment in Stornoway and on the mainland. The present population
403 structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

404 Gravir, the largest Park township numerically in population and crofts, lies astride the major
405 east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the considerable population existing on slim resources, problems common to Park as a whole, are all epitomized in Gravir.

406 On the south-facing slope above the loch and the continuation of the trough in the valley to the
407 west, the majority of the crofts have been carved from moor to sea, some before 1800, and some
408 in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852.
409 Originally, there appears to have been thirty crofts, but four were added during the nineteenth
410 century, two at each end of the line, and in 1934 a further fifteen were cut out of the common grazing, a mile to the west of Gravir. On the south side of the loch, the 'clachan' of Tom an Fhuadain, established about 1800, has since developed into a further nine crofts. Thus there are forty-three legal crofts in Gravir and a further fifteen in Glengravir making fifty-eight in all.

The layout of Glengravir, a line of crofts from 3. 6 to five acres, typifies the small post-1918 Department of Agriculture holdings. The arrangement of the Gravir crofts is illustrated in Figure 4, and it will be seen that not all the crofts are consolidated. There are three areas of former arable common which have been lotted in unfenced strips and they may well be reclamations which were necessary to supplement the food producing capacity of the holdings. The method of division and allocation speaks of a period when a subsistence economy under severe pressure from over-population necessitated fair shares for all. The last of these commons was in cultivation until 1891. Although subsistence crofting has been obsolete since then, there is as yet no move towards a regularization of the layout.

411 The congestion which necessitated the reclamation of the arable commons developed mainly
412 as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars
413 were tolerated and the population rose from 197 in 1830, to 366 in 1881 reaching a peak of 466
414 in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not yet ceased. Gravir reverted from 1918 to a township of agriculturalists and a base for employment
415 furth of Lewis, although there have been spasms of successful fishing activity since.

416 Stock raising is now the function of the township and the agricultural resources and conditions
417 are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts
418 vary between 3. 5 and 26. 5 acres in size: no croft has more than four acres of 'old arable'. In the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds, backed up with stones at the downward extremity on the steep slopes, was much more extensive.
419 All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away as
420 Cromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is now
421 cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the lazy-

here and there in small patches of less than a quarter acre and therefore do not appear in our summaries, appendices A (1) and C (1).

The amount of cultivation carried out depends on three factors:

(i) stock, particularly cattle, to be carried through the winter,
(ii) size of family, which influences the amount of potatoes grown,
(iii) available labour, because cultivation is mostly by hand, especially in South Uig and Bernera.

The size of the effective agricultural unit has little influence on the area cultivated although it may bear some relation to the amount of natural hay taken. This can hardly be regarded as 'cultivated' and the acreage is difficult to estimate; the custom is to cut as and when weather permits, and wherever there is a convenient stand of natural grass.

Hand labour is a necessity on most crofts in the Bernera district and on many elsewhere. The traditional 'lazy-bed' - a long narrow strip of cultivation bounded by deep ditches which may be half as wide as the bed - is a necessity on broken, rocky ground on which the only soil is peat which often has to be gathered into hollows in order to get sufficient depth. The small size and long narrow shape of most crofts do not lend themselves to tile drainage, which is almost unknown. If it could be extended it would be a great advantage but, in general, it would have to be organised by townships, or at least by groups of crofts, and the whole trend in management of croft land is towards individual occupation and use.

This may not always be a good thing. Fencing is a case in point. Until the last ten years fenced crofts were rare altough small parts of crofts might be fenced and, in some cases, a group of crofts might be fenced off from the rest. But, in general, the crofts were common land in the winter and used individually only from May to October. Fencing grants, and the encouragement of sown grass in rotation with oats, have changed this. A great rash of fencing is appearing. This may not be altogether a good thing, particularly for the sheep in winter and spring; even if gates are still left open, stock are deprived of the ability to move for shelter. There may also be watering difficulties. Co-operative draining, cultivation and grazing, of groups of crofts if not of townships, would be more efficient and more productive.

Finally, we may remark on the curious insistence on hand cultivation of oats and potatoes for consumption on the croft, whilst cash crops well suited to hand labour, and which would be far more rewarding, are neglected. Flowers, vegetables and potatoes are imported into Stornoway daily on the mail steamer and even by 'plane. Neither climate nor soil prevents their production in Lewis. Moreover such crops could provide a much needed source of additional income. A few croft gardens produce excellent soft fruit and as the local season differs slightly from that on the mainland there would seem to be possibilities here, too. There have been virtually no agricultural innovations since the potato.

Economic and Technical Factors.

The agricultural income of a croft arises from:

(i) the sale of livestock, mostly store stock at the spring and autumn sales,
(ii) the sale of the annual wool clip,
(iii) the receipt of certain annual subsidies and grants.

These are the main items; in addition some may sell small amounts of potatoes, eggs and standing hay; a very few sell a little milk although strictly this is illegal. Such an annual income comes in three or four annual instalments, uncertain as to date and amount. Moreover, a crofter may suddenly and unexpectedly find himself deprived of a large portion of his income due to casualties amongst his stock or poor demand at the seasonal sales. Unlike the mainland farmer, should an islander withdraw his store

TOWNSHIP STOCKING: 1883[1] AND 1958

1. Royal Commission on Crofting - mss. data, 1883.

   Register House, Edinburgh.

   Information was not complete for Gravir, and the remaining townships were not in crofting tenure in 1883.

/p. 8-D/

n Claigan, for example, the crofters felt they would do 234
atter with private flocks than with a club stock. Although 476
ach man now has his own sheep on the township grazing, they 178
re cared for like any club stock. The four crofters are
seded for success at the dippings, marking, and shearing,
nd they are always at the fank on these occasions. In larger 234
ownships, those with ten or more holdings, the need for all 476
he crofters to help out at the fank is less pressing while 621
he felt need for auxiliary employment is stronger. In con- 632
sequence, the cooperative work habits run less smoothly. In
n attempt at adjustment, many townships have resorted to
aying the share holders for their labor from the profits.
o the best of my knowledge, only one township has witnessed
he total suppression of the cooperative spirit; all the
rofters are too busy with full-time employment to bother with
he steadily declining sheep stock.

Nevertheless, it has become commonplace for the crofters [179]
o complain of at least one individual in the township who
oes not pull his full share, someone who is "trying to
abotage the whole thing."

Independence is a personality trait, but it is best 157
escribed as a steadfast determination not to conform for the 476
ere sake of conformity when an innovation handed down from 829
he outside commercial world is at stake. The old ways are the 888
est ways, even if only the old men think so. It is the old
en who uphold the traditional practices. As long as they do,
nd as long as unanimous consent is required for any change,

Township Government. The township system has another marked 621
influence on the economy of the Sgiathanach. By far the larges 632
obstacle in the path of reform is the persistence of primitive 178
democracy, distinguished from the democracy of Western Civili- 182
zation by the requirement of unanimous consent rather than 626
majority rule. The individual who comes to realize that it is
possible to improve on the ways his father did things is
deterred from attempting to introduce innovations. He cannot,
for example, erect a fence around his croft unless everyone
in his township approves such a departure from tradition. The
dissenting voice of one old man is sufficient to thwart any
plan. Unanimous decisions on all township affairs mean that
the most progressive worker must keep pace with the most con-
servative. This fact goes a long way in explaining the
essential agricultural disharmony of Skye, and most of the
Highlands, with the rest of Great Britain. It is also a singu-
lar example of the incomplete adaptation of the culture to
the higher socio-cultural organization.

When coupled with the many limitations on the economy, 621
township government helps the outsider to understand why many 632
younger crofters feel that the primary value of their few 233
arable acres is their use as pasture. Even in townships which 626
have been fenced, the prevailing practice is to open the crofts
after the harvest. All winter long the stock is free to
graze where it will. "My arable is no use at all, except to
winter my sheep," said one young crofter. Another asserted,
"I have three crofts and the use of one more, but it's not

worth while to cultivate any of the arable, so I use it for 626
grazing." A case which aptly illustrates the influence of 632
the township system as an agent of conservatism is the breeding 621
of pigs. Although several old crofters told me how many 233
people during the times of the "Clearances" kept a pig, they 179
are rarely found anywhere in the Highlands today. The Biblical 183
injunction against the flesh of swine has been taken literally. 632
The older people simply have a strong aversion to handling 621
pigs. One man, a very successful cattle and sheep breeder, 626
put it this way: "Pigs are filthy brutes. I just don't
want to touch them -- I never have kept any and never will."
At the same time, there are men who believe that the prices
these animals bring at the mainland markets more than compen-
sate for the individual's revulsion, especially as long as
the Ministry of Food pays for the cost of transportation.
These men cannot try branching out because they have no way
to restrict the foraging animals. "Skye is ideal for pigs," one
young fellow told me, "but I don't have the freedom to work
the croft to suit myself."

Smaller deviations from the traditional methods of land 621
use face the same difficulties. A progressive crofter who 632
attempts to improve the value of his stock by growing scientific 626
mixtures of grasses is always penalized. As soon as the harvest 232
is over, the stock of all his neighbors will show their ap- 241
preciation by concentrating on his croft, trampling his fields, 178
and overgrazing his grass. Nor is this his only penalty. His
neighbors will regard him with skepticism for his departure
from the ways handed down from the past.

241 the economy by subjecting many fertile acres to disuse because
427 of his infirmity. The other factor is the absentee tenant,
887 an individual who has obtained possession of a croft, normally
887 by inheritance, but who has failed to take up his inalienable
311 rights of tenancy. Let us very briefly review the economic
[128] trends of the last fifty odd years and, then, try to assess
the importance of the absent and the aged.

Although the Sgiathanach has refused to become a
436 specialist, fully involved in a money economy, he has become
433 increasingly dependent on the products of the wider commercial
241 society. Long ago he gave up growing the old staples, barley
178 and oats. Not for many years has he grown enough potatoes
437 or turnips to feed himself and his cattle. In place of these
home grown subsistence crops, he now imports a great deal of
his food. In an average year Skye imports over 700 tons of
bread, 10 tons of vegetables, 300 tons of canned goods, 300
tons of potatoes, 500 tons of flour, and 100 tons of milk.
To pay for these products, he exports cattle, once his only
marketable produce, and an ever increasing number of sheep.

Hance, writing about the Outer Hebrides, sees the growing
436 tendency of the crofters to buy their food as indicative of an
241 increasing cash income.[16] To a certain extent, this may be
233 true. There are, however, additional factors involved. Ecolo-
433 gical limitations have played their role. That the climate and
soil together make Skye a grassland suitable for stock breeding
rather than an island fit for cultivation is an often repeated

[16] Hance, The Outer Hebrides in Relation to Highland Depopulation, p. 82.

427 fine to go home to Skye to die." I might add, "and to live on
888 a pension."

427 It is not only the tenant crofters who are non-resident.
428 about 20 percent of the owner-occupiers in Glendale are non-
resident. Only two townships have no derelict crofts. Those
who have sublet their homes and land have an additional problem.
Apparently unaware of the full implications of the Small
Landholders legislation, they have received a rude awakening.
The people whom they thought were their subtenants are, in the
eyes of the Land Court, crofters entitled to security of
tenure.

511 One reason for absenteeism, as for emigration, is a
427 felt need for a higher standard of living than the croft can
[178] provide. This desire, common to almost all European peasants,
as well as American farmers, has assumed increasing importance
with the extension of communication and education. The out-
standing exception in Europe is Italy. There the métayer
population has increased markedly since World War I. Today
92 percent in the métayer category have a substandard livelihood, judged in terms of sheer necessity.[18] Only 800,000
families out of 5,000,000 have enough land to meet subsistence
needs. The difference between the European peasant and the
American farmer is that the American lacks any traditional

[18] Information from the files of the Italian Statistical Institute, as reported in the Glasgow Herald, Feb. 22, 1954.

As we shall see in the next chapter, 232
there is hostility between the Portree dwellers and the crofters.
One reason for this is the fact that the village pays more in
property tax than the rest of the island put together while they
receive relatively little in return. The feeling that the
crofter is "aye wantin', but never pays a cooper" (a penny in
taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms
of the standard of living it affords, it cannot be considered
as satisfactory. There are persistent environmental obstacles,
among them geographical isolation and an unfavorable climate
for pastoral-agriculture. We have seen that few can hope for
anything which would approach a desirable income in the sur-
rounding commercial society. The crofters have been caught
between two cultural patterns. The old system of land use
has persisted. A new system has been superimposed. From this
new system, however, the Sgiathanach has accepted few innovations
of more recent origin than the eighteenth century, except those
of a material or technological nature. Still, he has ceased to
be self-sufficient, and, in doing so, he has become dependent
on the commercial world for the very essentials of physical
existence. For many of the crofters this means seasonal migration
in the quest of employment. For some it means part-time or full-
time work locally. For a relatively large proportion of the
population it means dependence on contributions of their children
and government agencies. This dependence has not led to a full

233
adjustment to the higher society in which the successful individu-
al is the specialist. The Sgiathanach has remained a pastoral-
agriculturalist, and when he does seek employment, it is typically
as an unskilled laborer.

It is far easier to point out the traits and trait-com-
plexes he has lost than those which he has accepted during the
two hundred years since 1745. The sad economic condition
under which he labors is not conclusive evidence for disorganization.
Integration does not mean smooth functioning. Nor do the
changes, important as they are, point to discontinuity. The
contemporary economic system reveals a fundamental continuity.
As I remarked at the beginning of this chapter, there is some-
thing far deeper involved than economic considerations. Let
us now turn to the social aspect of the culture in order to
seek an answer to the question why has the Sgiathanach remained
in the face of all the inadequacies and insufficiencies we
have reviewed.

236
tourists, and newcomers who carry with them ideas of reform.
Further, as well as being mutually dependent commercially, the
crofters and the villagers interact formally and informally
in social, political, and, especially, religious activities.
The consciousness of common interest of the villagers, however,
stems more from a knowledge that they are different from the
crofters than from any common symbol. The 1000 villagers
are from diverse backgrounds. They find solidarity in being
different rather than in "neighboring" or all attending the
same church. The village also lacks the time depth of the
rural settlements, being a creation of an individual in the
last century.

For community I prefer an inclusive definition on the
order of Redfield's.[8] A community is characterized by con-
ventional understandings, the occupation of a territory, and
the possession of a culture. Thus, we shall refer to the
Isle of Skye as the community.

It will be noted that I have not used the term parish.
Although the parish was once important politically and religiously,
as the older baronies were replaced, it lost these functions
in 1929.[9] People reside within parishes and they, along with
their crops and stock, are enumerated by parishes, but the
parish is now little more than a statistical convenience. Church
organization and political administrative units cross-cut
and override parish boundaries. Indeed, I doubt if the people
ever thought of themselves as members of a parish.

240
by leaving, for if he fails to conform to the traditional norms
and patterns of behavior, he will be locked upon as an eccentric.
This fact has continuity through all periods of Skye's history.

We have already seen how the age and sex structure of the
population has changed in response to social and economic
conditions and how this change has influenced the ascription
of statuses within the crofters' division of labor. Briefly,
there has been a contraction of the number of opportunities
for ascribing status. This had made it necessary for some
men to perform tasks once the exclusive domain of women and for
women to participate in activities which formerly were the
responsibility of their men folk. Older people must now
function in ways which once were the responsibilities of the
youth and young adults. These changes, however, have been
accompanied by persistencies, in particular a continuity of
basic status values. I think this will become clear through
a discussion of the family structure. We shall begin with
the nuclear family.

The Nuclear Family. Since my interest is in status, I shall
adopt the unorthodox procedure of considering the nuclear
family in terms of the changing status of the individual members
from birth to maturity. This will give us a dynamic picture
of family life. At birth the individual's relationships with-
in the crofting family and, to a lesser degree, within the
township are established. Like those of his parents, who
now have the ascribed statuses of mother and father, his
relationships will remain unchanged until he marries and founds

requirements of adulthood, and also old age, are still boys
and girls.

Status Equality within the Township. The ascription of stat
on the basis of age and sex has resulted in a straightforwar
system of status. The facts are simple. Men are the social
superiors of women. Youth are socially inferior to their se
Men, or women, of a common age category are equals. We shal
now examine a few interpersonal relationships to see how the
system operates. Unless a man and his wife are eating alone,
women never eat with men. They wait until the men have finis
before taking their meal. When neighbors come to visit, the
man of the house does not rise for a woman. He does rise for
a man and shakes him by the hand. The woman of the house, on
the other hand, rises for both men and women. Furthermore,
when a couple comes to call, the woman greets the man first.
Only after he has been offered a chair does she greet the
woman. Young people are seen but seldom heard. They do not
speak unless addressed.

All societies allow some deviation from traditional
norms of expected behavior. On Skye, as elsewhere, excessive
deviation is censured. Neither increased opportunities for
education nor the steady flow of Skye men and women to the
four corners of the earth, accompanied by the slow returning
trickle, have disturbed these fundamental values. Like the
youth who leaves home to achieve upward mobility through out-
ward mobility, the man who returns must conform to the
traditional norms, which he learned as a child, or be regarded

The labor in this pastoral-agricultural economy is provided by the crofter's family, periodically aided by some or all of the families who share in the common grazing.[11] Under the direction of the father, the mother and children care for the crops and cattle. Heavy work, such as ploughing, reaping, and feeding the cattle in the winter, is left to the men. The women milk the cattle, help at the harvest by raking and stacking, and care for the garden. Although men never do any work in the house, in the absence of a son the wives and daughters are expected to fill in the gaps in man's work in addition to running the household. Inter-family cooperation centers on the handling of the sheep. Frequently, the families who share the common own the sheep collectively, as a "club stock," and share in the expenses and profits as well as the labor. The only basic pattern in the division of labor is that women never shear, and it is their responsibility to feed the group.

Formerly, the annual economic cycle was adjusted to the demands of crop cultivation and cattle breeding. Within the last hundred years, however, sheep have assumed commercial importance and now determine the seasonal tempo of labor. The old year ends and the new begins with the bringing in of the rams from the hill. In March the sheep are dipped and then the preparations are made for the lambing season, in April. From spring until autumn there is a rapid succession of duties: ploughing, planting, peat cutting, dipping and shearing the sheep, stock sales, harvesting, and similar tasks. After the

[11] cf. Ibid., pp. 63-64, 70-74.

one or more country stores, a few workshops, and a post office. Kilmuir will serve as an example of these larger settlements.

Along the shore of Loch Snizort, on the peninsula of Trotternish, there is a broad, fertile plain. Including old Loch Chaluim Chille, there are approximately ten square miles of good land. Although the soil is not cultivated as intensively as in the days when Kilmuir was "the granary of Skye," this is regarded as the best agricultural region on the island. In all there are 122 crofts, held by 105 crofters, in 9 townships. There are also two small farms. The population is slightly over 300.

The crofters' cottages are loosely strung around the old loch and across the plain in an irregular "Y" shaped pattern (Figure 3). Basically the pattern resembles the French line village, but there are several features reminiscent of the British open country neighborhood. Most of the cottages, it would seem, were originally built on the landward fringe of the plain and along the shore of a small bay, known as Camus Mor, without any regard for road access. In recent years, increasing dependence on motor transport has led to demands for roads. Now almost all the crofters, except those in Borneskietaig, have a paved road running by their door. About a third of the houses are on the county road which encircles the peninsula and links Kilmuir with the outside world via Portree.

In the center of Kilmuir, in the township of Balgown, stand two spireless churches, a church hall, a two room school,

[TEXT CONTINUED ON PAGE 46]

mainly because there are enough young people to form a strong age grade of their own. The more liberal outlook of the villagers is, however, tempered by the old men.

Religion

The attachment to the past embodied in the social and economic aspects of the culture carries over into the religious life of the Sgiathanach. He is a Presbyterian who continues to worship and view the world within a pattern which characterized the Scots of the sixteenth and seventeenth centuries. The doctrine and theology are derived from the teachings of Calvin as interpreted by John Knox and refined by the Covenanters of the seventeenth century. To the original ethical code a strong measure of influence from the English Puritan movement has been added. The guiding principles are still foreordination and election. The dominant motivating factor is asceticism.

One of the outstanding features of the island today is the large number of churches for such a limited population. To serve the 8,600 people there are 21 churches with ministers and 13 mission stations. A hundred years ago, when the population was almost triple the present number, there were only seven ministers on Skye. The present abundance is the outcome of a series of religious schisms of the past century. There are now four Presbyterian sects. Of all the neighborhoods on Skye, only Glendale is religiously homogeneous.

Portree has three Presbyterian churches and, in addition, an occasionally used Episcopal church and small Catholic chapel for newcomers. Kilmuir has two Presbyterian churches, and the population includes affiliates of three denominations. In contrast to the pattern of schism in the United States and, indeed, in most of the Western World, the schisms on Skye have been due to a strong desire to maintain cultural conservatism. Each time a church has tended to become more lenient in official policy, there has been dissension and disruption. This does not, however, mean that the several sects are dissimilar in practice and outlook. In Scotland the local kirk is governed by the congregation in accordance with the democratic principles laid down at the Reformation. The people call their minister and elect the lay officials of the church.

Religion is of supreme importance for an understanding of the configuration of the local culture. In fact, beyond being a highly integrated and systematized pattern in itself, religion has come to provide a focus for the culture. Through the religious pattern the culture achieved a reintegration and found continuity at a time when the people were faced with the prospect of enduring instability, if not total social and cultural disintegration. Although it has the appearance of being an extremely negative institution, in that much of the former secular life has been circumscribed by clerical censure, religion has sanctioned the fundamental values and patterns of

Although the Sgiathanach accepts his religion without question, unless he is willing to abandon his cultural heritage for the outside world, many Scots are disturbed by the influence of religion on the lives of the people. It has become commonplace to call the people narrow and bigoted, and the people well know this, but if the Calvinist and Puritan ethic had not been developed with such logic and vigo I probably would not be able to assert that through religion the culture has maintained continuity while the content has changed.

lambing season, the crofter and his family go out on the moor to cut their peat for the following winter. The man uses a "tusker," a two-bladed spade, to cut the peat. His wife or his children follow behind, tossing the peats out of the ditch and building small, loose stacks for drying. After the lambs have been marked and the sheep dipped in June and the shearing finished in July, the family returns to the banks to carry the peats to the nearest road, actually a beaten cart path, in creels. They are then carted home and stacked near the door. There is a growing tendency for both the part-time and spare-time crofter to give up cutting peat. It is not because coal is cheaper or he needs time for other pressing chores. His auxiliary occupation will not permit his devoting the necessary time to this long and arduous task. He is caught between the traditional economic patterns and the money economy of which he has become a part.

The year for our part-time crofter, as for all active crofters ends in November. By then the oat and hay harvest has been stacked by the house and the potatoes and turnips stored in the ground, the wool shipped off to market, the surplus sheep and cattle have gone to market, and the rams are on the hill. Now follows a period of enforced idleness, broken by feeding the cattle. As we have seen many go away to find employment, leaving the care of the croft to their wives who have shared the work of crofting in addition to their own womanly responsibilities. We must turn to the spare-time crofter to discover just how heavy the burden of labor may depend upon the women of Skye.

division of labor. During the summer, she will milk the cows, and in the winter she will see that they are fed. If there is to be a harvest in the autumn, she will care for the crops.

Some women, in particular the older ones, plough with the caschrom, the foot plough. Other women use a small power driven plough or contract with the Department of Agriculture to have the ploughing done. The Department will also provide the men and machinery to harrow, cultivate, spread lime and manure, mow hay, cut and bind oats, dig potatoes, and thresh grain. By utilizing these services, if they can be afforded, the small crofter can free himself or, at least his wife, from many arduous tasks. The need for cooperation of the family and neighbors is thereby reduced. Although traditional mutual aid is being replaced by cash payment for labor, it is not the labor of a landless working class which commercialization often creates, but rather state provided services. Significantly, most Department employees are newcomers. The Skye man who works for the Department is a better worker away from the island. Since few are able to pay for these services, the wife digs the potatoes, and some women use the scythe to reap hay and oats. The scythe, it will be remembered is really a man's tool. Frequently, the break with tradition is avoided by the return of a son from the mainland or the sea. Running the household and working the croft is not all some women do. They also take in summer visitors, by the day or week, and provide teas for travellers.

In summary, it may be said that crofting is anything but an easy life with ample rewards. We have seen how meager the

fruits of labor are for the vast majority. Although they establish their own tempo, the crofters, both men and women, must follow the dictates of the seasons. Inclement weather imposes prolonged periods of idleness. There are conflicts. These are not conflicts of meaning, but they pose serious problems. The small crofter has to decide how he can best allocate his time. He may want to get in his hay or try making silage, but his sheep, his main source of income, must come first. This does not mean that there is economic disintegration. Integration does not mean smooth functioning. Perhaps, a further discussion of cooperation will clarify the situation.

Cooperation

Today it is commonplace to assert that the Sgiathanach, and the Highlander in general, is "independent" and "just not cooperative." Certainly they have come a long way from the days when the old four horse plough made cooperation essential and the use of the caschrom made it welcome. Population instability, subdivision of the crofts and the change from a subsistence economy to an export economy based on sheep and cattle could not have left the old pattern of mutual, reciprocal dependence undisturbed. But does this mean they no longer cooperate? I think not. In fact, I think critics of the Highland Problem have exaggerated,[9] and the people, always ready to glorify the past, have been influenced by stories of an ideal

[9] Cf. F. Fraser Darling and Averil Morley, "The Social Situation," The West Highland Survey, Part VI, p. 2.

world.

More than one crofter told me that one of the biggest changes on Skye in the last thirty or forty years was that their neighbors are "less Christian," in the sense of being neighborly and helping each other, than they used to be. Once no one said, "I've finished my work," until everyone in the township had stacked his grain. "Colin is harvesting today and Murdo tomorrow; we'll go over and lend them a hand," was the expected attitude. Toward the end of the season, the whole township would be seen working on an old widow's croft. "Now when a man has cleared his land, he says, 'I'm finished,' and that's that." such a statement has to be followed by asking if they now forget about the sick and the aged. The answer is always the same: "When a person needs help, his neighbors will help out. Perhaps they can't do his corn, but they help by just leaving a few fish by the door or a pail of milk in his cottage." In short, they continue to give mutual aid, but it is anonymous. The Highlander never looks for thanks and never offers it. I remember our landlady complaining about an Eastcoaster in Portree whom she had helped by giving some outgrown children's clothes. The recipient had thanked her profusely. "You know, Paul," she said, "If anyone did that for me, I'd be too choked up to say anything."

Not all use the same colors to paint the scene. I was also told that the harvest was formerly a time of friendly rivalry. The gobhair-bhacaig, two sheaths of oats tied at right angles, used to be thrown on the unfinished fields within

more recent to the west, and in the industrial area of the Great Glen the trend is reversing itself. To the north and south depopulation has been more serious. To the east the general trend has been similar to that of Skye. We need not be troubled by statistics at this time, but for convenience the population figures are given in Table 1. The Outer Hebridean have preserved more of the social aspect of the old culture than the Skye people while the Mainlander has felt the effects of the processes of acculturation with more obvious results than the people of Skye. In short, the Highlands are not a homogeneous region. They represent a great diversity of conditions.

My information on the contemporary culture of the Isle of Skye was provided by the residents of three communities, the villagers of Portree and the crofters of Glendale and Kilmuir. Portree is a small nucleated village with a population of a thousand. It is important to the study because in many ways it represents an alien way of life. Here are found the county and national government offices, staffed mainly by newcomers to Skye, which serve the whole island. Here too, are the grocery, drug, clothing, and hardware stores which depend on the people of at least, northern Skye for a large part of their trade. There are a number of craftsmen who are equally dependent on the rural population. For the most part, the members of both groups are newcomers from the Lowlands or elsewhere in the Highlands. As the terminus for the mail steamer which links Skye with the mainland, and the hub of the daily bus service which connects the rural

each township as a sign of contempt.[10] This suggests that the practice of helping one's neighbors with the harvest was relatively recent. Again in the matter of cutting peats, frequently described as cooperative, and a communal undertaking as late as 20 years ago, there is disagreement. All in the township used to work together, cutting for each crofter in turn and enjoying a festive picnic. "Sure they would," others told me," but first they would cut for the minister and then for the shopkeeper." The shopkeeper was more important to them in those days because they would all be in perennial debt to him, and he might extend a little more credit if they were in his good graces. They would then cut for each other. By the time they got around to the old widow with no one to cut for her, they were all too busy. The sheep had to be dipped or the fields needed attention. I have heard conflicting versions of these stories from neighbors. Are we to conclude that cooperation varied from door to door and township to township?

The growth in importance of sheep as a major source of income, associated with the decline of the old subsistence economy, led to new patterns of cooperation. To be economic sheep must be raised in numbers. As we have seen, physical cooperation is imperative, and many crofters cooperate financially, pooling their capital and dividing the profits. This is true of the nine townships of Kilmuir. Moreover, even in townships where the crofters have rejected the club stock plan the individual flocks are generally handled as club stock.

307

The religion of the Sgiathanach may also be regarded as 771
logical outcome of a movement which began two centuries 122
when the all inclusive bonds of kinship and affection were 178
laced with tenets introduced from the wider contractual
ety. This movement, as we know, bore its first fruits
r a hundred years ago. The people themselves turned from 793
ministers who were supporting symbols and values no longer
ningful to the crofters. They embraced the preachers of a 793
mic gospel as a means of consolation in their distress.
, the religious pattern derived elsewhere and superimposed 184

as become the one insurmountable barrier to assimilation
Great Britain. No less than four times religious schism 798
demonstrated the essential unchangeableness of their
gion. The process has been carried on with such dedication
success that it now disturbs the unsympathetic laity and
clergy of the Church of Scotland no less than the re-
ance of the people to Presbyterianism did in the remote
.

We saw in Chapter IV how an understanding of the re- 128
ous history of Skye is indispensible for the comprehension 121
he larger problem, the means by which the culture has
tained continuity. In Chapter V and again in Chapter VI
aw how this continuity has been preserved. We have at
come to the point at which we can ask why has there been
inuity. The following analysis is concerned with the
tions of the Presbyterian ethic, particularly as it
cts the social structure, religious behavior, and the
s of the ministers and the religious laity in the

313

121 functioning in diverse ways, religion reinforces standards
of behavior. As a supraposial and cultural regulator of
social life, it sanctions the way of life of a group and its
basic social forces.[5] While the great world conscious religions
have been influential in redirecting whole civilizations,
their success has been largely due to an ability to function
in harmony with local cultural conditions. The symbols
and values they extend must be meaningful to the people.

121 Failure to protect certain values brought about the rejection
178 of Catholicism and the acceptance of Calvinism in Scotland.[6]
798 Continued sanctification of values no longer meaningful to
the Sgiathanach cost the Church of Scotland its hold over
121 the people. The influence of religion, especially once it
has ceased to work for change and has become conservative,
as all organized religions are wont to do,[7] is expressed
in terms of what particular traits it singles out for
sanctioning and, conversely, what traits it refuses to
sanction or places under taboo. Obviously, this is but a
part of the primary function of religion, its role in
bolstering group solidarity.[8]

339

same as in the crofting areas. When a young girl presented 794
herself for instruction in the significance and meaning of 796
church membership, preparatory to her acceptance of Communion, 301
she refused to take the final step not because of any personal 626
religious problem, but rather because such a step would upset
her normal associations. What her Free Church and Free
Presbyterian friends would say was her main concern. Who was
she to become an "elect" member? Here, then, is the answer
to how the elders of the other sects are able to control
behavior of the larger group, through the fear of gossip as
a negative social sanction and, perhaps, rejection.

The semi-annual Communion celebrations are rites of 794
intensification par excellence. Although some churches 796
celebrate only one commemoration of the sacrament, and it
may be as early as February or as late as November, the
months from late April until early September, are commonly
referred to as the "Communion Season." The activities of
the people during this period cast additional light on the
influence of religion in ordering social relationships. While 573
clique membership based on sectarian affiliation is a secondary 71
factor in determining the patterns of interaction in the extended
family in the local group, it is very important in determining
one's wider relationships, the relationships between the
neighborhoods and between the Sgiathanach and the mainland
Highlander.

Within living memory thousands used to come to the 178
Communion celebrations from all parts of Skye and many nearby 794
796

340

mainland villages and crofting areas. Ministers from 178
neighboring and even distant churches used to come to take 794
part in conducting the services. There was no church to hold 796
so many people, so the Communion was celebrated outside. Then,
of course, the population was much larger and the majority
belonged to one church, the Free Church.

The Communion Season is still marked by large gatherings 794
of people at each church in turn. The "elect" from the 796
neighboring churches and the ministers from churches near and
far exchange visits. The adherents also participate in the
celebration of the Lord's Supper. From Thursday until 794
Monday the homes of the people in the vicinity are open to 796
their relatives and friends who have come to partake of the 574
sacrament or who find the highly emotional atmosphere and
gregariousness stimulating. Some, especially the "elect"
stay for the five days. Others will spend one or more nights.
During the day and in the evening, whenever they are not 571
attending religious services, they visit their "people" and
"friends" to renew ties which in many cases have been allowed
to languish since the last Communion. Thus, we find religion 182
sanctioning the time-honored custom of Highland hospitality.
It is interesting to note that many a woman who depends on 495
the tourist trade for a good share of her income will not accept
paying guests at this time. The local people have a further 794
share in extending hospitality to their visitors. All who 796
are able send food to the manse (parsonage) to lessen the 574
burden on the minister who extends hospitality to the 713
visiting clergy and as many of the laity as he can. This

344

794 thanksgiving service. The visiting ministers, the "elect,"
796 and the adherents go their own separate ways. They have spent
five days in intense, emotional spiritual communion and they
carry away with them definite, vivid remembrances. Many of
them will meet again in a few weeks when they will exchange
571 the roles of guests and hosts. The reciprocal nature in all
interpersonal activity on Skye is well developed. In many
ways, the Communion season parallels the Welsh Song Festivals.[18]

794 We noted earlier in our discussion of the Communion
796 season that there has been a decline in the number who attend
178 the Communions. I should like to add a few general consider-
ation to what I have already said on this point. Aside from
the influence of depopulation, there have been several influ-
ential factors in operation. The smaller attendance is
traceable to some extent to an almost imperceptible movement
by the youth away from the more conservative denominations.
The ever-increasing necessity of working for a wage, es-
pecially since most employment opportunities are in summer time
programs, is another cause. This factor is not, however,
important within the local kirk district because most ad-
herents and all the "elect" who work take a vacation in order
to attend. It does mean that visitors may only be able to
attend on the Sabbath.

178 The custom of visiting has almost disappeared in some
794 churches, including the Church of Scotland in Portree where
796 the fellowship meeting is no longer significant because the
349
574

[18] Rees, op. cit., pp. 129-130.

345

"elect" are predominantly newcomers and the elders are either 179
members of the landed gentry or newcomers. I was rather 794
amazed one day when a Skyeman told me, "the 'Free-Frees' 796
and 'Seceders' are no better than the Mohammedans giving 574
gifts to idols," when they sent food to the manse for the 349
minister's guests at the Communion. Over in Bracadale the 798
custom is also losing its importance, except in the Free
Presbyterian Church, and the fellowship meeting has been
abandoned in the United Free Church because of the reluctance
of the members to engage in public displays, either at
Communions or at prayer meetings. The custom of visiting
has entirely disappeared in Sleat and Strath. One of the
ministers ascribed this to the isolation of the two parishes
from the rest of the island and from each other. Certainly
the Sgiathanach on the south end of the island seldom looks
to Portree and the northern crofter hardly ever goes to
Sleat, but this does not explain why people from the mainland
will go to Bracadale, by-passing Strath.

The vitality of religion can over-ride considerations 771
of family and friendship if a Sgiathanach deviates from the 626
accepted norm. We may recall the young girl who stole church
funds and was ostracized by her "people" and the whole com-
munity. Let us consider another example. Marriage vows, as 584
we know, are held to be sacred on Skye. Divorce is all but 771
unknown and separation is uncommon. To be precise there are 626
four known cases of separation. Nevertheless, if a husband
or wife were to break a taboo, it is expected that the offender
would be cast-out. Forgiveness is not compatible with a

348

glens a family, newcomers to Skye, prevailed on the local 191
school teacher to hold a Sabbath school for the children. 771
The local missionary objected. If they were going to have 621
Sabbath school, it should be in Gaelic. His prestige and
control over the population secured his position. The
children of the people who originated and organized the
program were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191
use of Gaelic as the language of religion is the difficulty 773
of securing a minister. Traditionally, it was an ideal to 182
send a son to study for the ministry. This ideal remains, 794
but in the last few years only one young man from Skye
has shown a desire to become a minister. Indeed, the
majority of ministers on Skye are not Skyemen. I believe
the only minister who serves his own neighborhood, the
neighborhood in which he was born and raised, is the Free
Presbyterian minister in Glendale. It is becoming more
and more difficult to fill charges as they go vacant.
Each year several Highland charges are changed from "Gaelic
121 essential" to "Gaelic preferred." If we go beyond the role
771 of religion as it orders human relationships, through its
626 more formal aspects, and consider the influence of religion
178 on the secular behavior of the Sgiathanach, we can come
closer to an understanding of why the youth are slowly
turning away. At the same time we shall be able to round
out our picture of the expression given to the Presbyterian
ethic on Skye.

at which the youth can join together as a soodality; hence, they 322
hardly ever have a chance to question the control of the "elect." 153
Only once in recent years has the control of the old people 146
been criticized. After World War II, the men who returned to 578
the neighborhood wanted to erect a village hall. This threatened 153
both family unity and the solidarity of the neighborhood. The 126
young people were divided between the time honored obligation
to honor their parents and their own desires for a fuller life.
The parents were torn between religious beliefs and their
affection for their children. The minister and his elders
were faced with a situation which threatened the fundamental
tenets of the faith and the continued ability of the religious
expression to sanction the existing order. How strong are age
controls? The youth didnot get their village hall. Many of 167
them left Skye for the Lowlands where social life is less
restricted.

The difficulty is that until, say, forty years ago the 178
traditional outlets were sufficient. Middle-aged people 383
remember how the youth used to drop in on the old widow for 177
a visit on an evening and then make their way off in couples 52
for a bit of courting. Two World Wars and the continuing
program of National Service, not to speak of the influence of
the schools, have given the youth a new perspective. They
have spent one or two years in an environment where recreational
activities are considered not only innocent but also wholesome.
The radio and magazines have contributed to the demands of the
youth for amusements. As if this were not enough, there are

several agencies who have taken the task of bringing movies 178
to the remote crofters in the belief that the Highlander is 283
more likely to stay if he has a share in the life of the 177
Lowlander and the Englishman. These agencies want to "create" 72
a more adequate social organization."

Out of boredom, some young men try to add some spirit 173
to their lives by turning to "the drink." Although the 779
religion of the Sayeman is strikingly similar to that of
the rural dwellers in Wales, I found the Welshman and the
Sriathanach have quite different views on the subject of
temperance. 26 All churches support temperance, from the
pulpit and from the kirk collections, but abstinence or
prohibition has never been accepted. Perhaps, their main
reason for consistently rejecting the idea is their want
to base many of their decisions on Biblical directions.
There can be nothing inherently wrong in the infallible Word
of God. Then, too, to the Sriathanach, whisky is not Scotch;
it is the "water of life." The importance attached to the 273
dram can be judged from its functions at birth, marriage,
and death. It is also the means of thanking a man for doing
a favor which cannot be repaid. Thus, while abstinence is
a major religious tenet for the Wee Bheil, temperance is the
aim of the Sayeman.

The temperance movement has had an effect, all over 276
Scotland. The "pubs" are no more than a long bar set in a 185
bare room. Young men who have spent time in England, where
the local "pub" is a closely knit club for the villagers, frequently

26 Rees, op. cit., p. 127

may need just one more dry day to finish his harvest. If the 178
next day is the Sabbath, his one dry day may be two or three 774
weeks away and the hay a sodden heap. Nor did the Sriathanach, 241
or any newcomer with a craft, change during the war despite
all the pleas of the government for full agricultural pro-
duction. This is the one time that the Older Order Amish 774
slogan "And be not conformed to this world" fully applies
to the island. Circumspect behavior on this day functions
to remind the people of all the negations and all the sanctions
which religion has bestowed on the culture.

As in the case of Communions, there has been a gradual
lessening of the importance of Sabbitarianism, especially 178
since the return of many young men and women from the war. 774
Again, the rather spontaneous relaxation of the rules is 349
most common in Portree. It does not have the encouragement
of the ministers of any church nor the elders of any church,
except the Church of Scotland. Thirty or forty years ago 422
the ministers and the lay kirk officers had enough influence
to stop the running of trains throughout the western Highlands,
shipping in the Western Isles, and the Kyle-Kylesskin ferry
on the Sabbath. Public transportation is still at a stand- 178
still on the first day of the week, but the Sunday papers 774
appear in Portree after the evening services, despite all the
efforts of the ministers. They come by car from Inverness, by
row boat across the strait, and by car to the village.

Before the war no one in Portree would let their 178
children out of the house, except to go to church with their 774
857

parents and to Sabbath school, nor would they allow children 178
to play games in the home. Today the children of the Church 774
of Scotland people are allowed to go for a walk, read, or 257
play games. Tourists, frequently, if not always, intolerant 484
of the strict Sabbath, have no doubt contributed to the 178
relaxation of taboos. Although a further development of the 774
tourist industry would be advantageous economically, tourists
are a threat not only to the Sabbath but also to the whole
religious complex. They set examples which the youth are
only too ready to emulate. Before the war every hotel on 495
the Island, including all in Portree, and every boarding 774
house posted notices requesting visitors to refrain from
using their cars for touring on the Sabbath. In many of the
guest homes the request was the equivalent of a warning of
removal. Today the signs are gone. Still not content, the
tourist agencies in England and the Lowlands continue to make
snide remarks in their literature, suggesting "a little more
tolerance is needed in certain quarters." The youth and some 178
adults of Portree now have begun to go off for a drive around 774
the island. One reason why the Sabbath is still strong in 484
Kilmuir and Glendale is that tourists are not accepted in
either district.

Strict Sabbath observance distinguishes three broad
groups on the Island. Portree is set apart from the crofters 774
by laxity, and the county people are set apart from the 545
crofters by using the day for visiting and having afternoon 349
teas together. The gentry, of course, are not under the 571

control of the "elect" crofters. They are the "elect," 774
and their status is independent of the control of the vener- 545
able old men. 349

Summary

Whereas the culture of the Sriathanach was oriented
around the clan system in the remote past and was intelli- 771
gible only by an awareness of the all-pervasive influence 178
of the clan, today congregational religion provides the
focus for the culture. If we are to understand the Sriathanach 571
we must fathom his religion, that is, the interpretation
which he has given to Calvinism. Moreover, this highly 172
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics
and social organization aid us in recognizing how cultural
continuity has been maintained. Religion puts at our finger
tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 564
been successful in sustaining their statuses and habits 172
through their position in the esoteric religious hierarchy. 424
By holding the father responsible for the spiritual welfare 543
of his family, and judging a man's spiritual enlightenment
on his renunciation of mundane pleasures as well as his
knowledge of religious terms, the elders exercise judicial
and authoritarian functions. At the same time, the status
of the father within the family is strengthened. After a

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 172
elders, prolong their social control by sitting in judgment 424
on those who seek salvation. The strength of age controls 178
is indicated by the continued ability of the elders to resist
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 172
control, restore disturbed equilibriums, and establish new 424
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and 782
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to 52
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to 349
tempt the people. Kilmuir has no more than a Crofters' 575
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

Although asceticism, epitomized in Sabbatarianism, 771
is a marked characteristic of the expression of the 172
Presbyterian ethic, it is not completely negative. It is
one of the means for sustaining cultural continuity.
Religion has centered on the home and family. It has
preserved the Gaelic. There have been significant changes 178
in the content of the culture, but by using asceticism as
an observable test of spiritual enlightenment the limitations
of the socio-economic life have been sanctioned. The form,
the basic configuration, of the culture is still recognizable.

Beginning with a population which is believed to have been
relatively stable due to recurrent crises, including epidemic
famines, and wars, the pandemic of population growth and decl
for the Sriathanach has been found to be highly responsive
to cultural innovations and social adjustments. Between 1750
and 1341 the Sayemen increased in numbers from 10,671 to 23,0
an increase of more than 100 percent. From 1831 to 1911 the
population has steadily decreased from 22,536 to 8,603. A
decrease of 62 percent from maximum. Associated with the
decline were changes in the age structure. In 1861 34 percen
of the population was under fifteen and only seven percent
was over sixty-five; today only 22 percent of the population
is under fifteen while 19 percent is over sixty-five. How
can we account for these changes, or more correctly, how
can we account for the changes in the birth, death, and emi-
gration rates?

Broadly speaking, the increase was favored by the direc
and indirect involvement of the Sriathanach in the process
of commercialization, with all of its associated consequence
One by one, the natural checks on population growth declined
in importance. The pressure on the means of subsistence was
eased. The former clan chiefs, preferring the society of
Edinburgh and London, absented themselves. After converting
rents from kind to money, they provoked the withdrawal of the
tacksmen by resorting to rackrenting. The former clansmen,
who became joint-tenants, received a larger share in the land
and were freed from the obligation of feeding both their own
families and those of the superiors. At the same time the

the social superiors of women. The aged are the social superiors of the youth and young adults. The father determines how his wife and children will behave as long as they remain under his control. The old man, or men, determine what changes will be accepted or rejected. There is no way to question their decisions, unless one leaves the croft. Still, at the bottom, there is equality. No man can step forward as a leader. We are now in a position to look at the larger social grouping, the neighborhood.

Kith and Kin within the Neighborhood

During the days of the clan, the residents of the neighborhood were bound together by real and fictitious ties of consanguinity and affinity, which were reinforced by the strong attachment to the soil and propinquity. Only the fictitious bonds have been forgotten. Like the township, the neighborhood consists of an aggregate of conjugal families whose inter-personal relationships are reinforced by a complicated network of kinship. Once, perhaps as late as 100 years ago, the neighborhood was a highly cooperative social unit. When the local mills were in use and the church had not been broken by schism, the people must have had a more definite focus for their common interests. In more remote times, it was a defensive entity. Today the neighborhood is no longer a cooperative unit. On the analogy of the old horse plough and the caschrom, cooperation is essential to the township but superfluous to this larger group. That the neighborhoods have not lost the potential for concerted action in times of crisis is attested by the uprisings

piuthar; that is, father, mother, brother, and sister. He calls his father's brothers bràthair athar and his father's sisters piuthar athar. His mother's brothers and sisters are bràthair màthar and piuthar màthar. Grandaprents, as I pointed out, are addressed by classificatory terms. Grandfather is seanair (old father), and grandmother, seanmhair (old mother).

Turning to the more remote relatives, we find that a nephew is mac bràthar or mac peathar. In other words, brother's son or sister's son. Similarly, a niece is nighean bràthar or nighean peathar. The extent to which the descriptive principle is carried is most clearly shown by the terms for cousins. Long ago, I was told, there were classificatory terms for cousins, but they have disappeared. Today when an individual speaks about these collateral relatives, he must employ an ascending order of circumlocution. The general term for first cousins is anns na h-oghaichean (in the state of being grandchildren). Specifically, a first cousin is clann an dà bhràthar (children of the two brothers), clann an dà pheathar (children of the two sisters), or clann na peathar 's a' bhràthar (children of the sister and brother). Second cousins can be referred to as anns na h-iar-oghaichean (in the state of being great-grandchildren), but again there are denotive terms: oghaichean an dà bhrathar, oghaichean an dà pheathar, and oghaichean na peathar 's a' bhràthar. For third cousins, we have noted that the general term is anns na dubh-oghaichean. Specifically, the terms for third cousins are: iar-oghaichean an dà bhràthar, iar-oghaichean an

dà peathar, and iar-oghaichean na peathar 's a' bhràtha

Within the group which the Sgiathanach calls his we find that husband is fear, and wife is bean. Their are mac and nighean. Marriage, of course, extends the of relatives. Both members of the married pair refer their spouse's "people" as athair-céile for father-in- màthair-céile for mother-in-law, bràthair-céile for br in-law, and piuthar-céile for sister-in-law. Céile me mate's, in these cases. This leaves us with two class catory terms which ignore sex. A grandchild is ogha, son-in-law or daughter-in-law is cliamhain.[21]

Although this nomenclature is correlated with ex patterns of ideal behavior, in reality, as I have said system has broken down under the impact of economic fo

With neo-local residence the township has come to be o by what the Sgiathanach calls "friends" rather than "p Not uncommonly, brothers and sisters take up residence marriage not only in different townships but also in d neighborhoods. The sharing of work, then, mainly invo cousins. Unlike Ireland,[22] there is no strong taboo a marrying a cousin. Cousins marry "to keep the money i the family," and remote cousins were apparently prefer

[21] Although Arensberg and Kimball look upon the I System as essentially similar to that of northern and Europe and the United States, excepting minor variatio cit., p.97), I was struck by the dissimilarity of the system of the Sgiathanach to that of the United States. underlying principles are, of course, the same, but th ramifications set the two apart; see, e.g., Talcott Pa "The Kinship System of the Contemporary United States, American Anthropologist, Vol. XLV, No. 1 (Mar., 1943), and David M. Schneider and George C. Homans, "Kinship and the American Kinship System," American Anthropolo Vol. LVII, No. 6 (Dec., 1955), pp. 1194-1208.

[22] Arensberg and Kimball, op. cit., pp. 83-86.

procreation does not absolve the individuals from their obli- 602 593
gations to their "people."

Although the wake and the post-interment feast have been 593 764 178
given up under religious censure, and the ministers refuse to consecrate burial, the method of burial is fundamentally the same as it was before the Reformation. At the time of interment the coffin is carried out of the house by the closest relatives. Ideally, for a man this means his father walks in front of the 604
coffin, his oldest son (over fifteen) walks behind, and his brothers and uncles (paternal) carry the body. For a married woman the ideal is to have her husband walk in front, her father behind, and her brothers and uncles carry. When a child 604
dies, his father walks in front; his oldest brother walks behind, and the father's brothers for a boy and the mother's brothers for a girl are the carriers. Outward mobility, as well as infirmity and death, has had its influence. The nearest male relative not only walks in front of his deceased kinsman but also takes charge of the funeral. A few cases of who has filled this function will indicate how the situation is handled when the ideal cannot be fulfilled. For a man this role normally passes first to his oldest son and then to his brother. I have 607
seen a grandson take charge, and at one very atypical funeral, a brother-in-law. He was the nearest surviving male relative who could be contacted in time.

Arrangements for the burial of a widow are made by her son or brother. There was, however, one widow, a woman from the Outer Isles, who was returned to her native island for burial

by a second cousin. The striking thing to realize here is that 593 764
the nearest surviving relative always knows his obligation and 602
is ready to fulfill it, without question. Fatherless children 603
are buried by either their paternal or maternal uncle. I have
not forgotten the existence of women. The simple fact is, 562
women play no part as mourners. Indeed, the rare woman who goes to the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. 611
Linguistically, the terms for relatives may be bilateral, and 601
inheritance of possessions other than the name may be matters 478
of small importance, but the patrilineal emphasis remains. The Sgiathanach lives in a man's world. I shall explore this 128
male dominance further in the following chapter. At present, I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any 573
society, the Sgiathanach associates most frequently with those who share his interests and attitudes. It is natural, then, for his associates, other than his kinsmen, to be people who attend his church and people of his own age group. We need not explore the nature of these cliques at this time; but we should have some understanding of their function. The 794 573
religious clique is primarily a mutual aid group. There is 476
reason to believe that this particular group has lost much 178
of its importance of late, with the coming of the welfare state. Many feel that the government pays people to look after the aged and infirm. As far as doing a favor for someone is concerned, few of the same kirk, other than close friends,

s an eccentric. Included among these norms is a willingness to atisfy the curiosity of one's neighbors. Although the old woman ho acts in mysterious ways is no longer regarded as a witch, wo of the loneliest people I knew on Skye were two old pinsters who had kept their past concealed. No one in the ownship would have anything to do with them. Were it not for eriodic visits by the local Red Cross, they could have died nd hardly been missed.

This status equality for all of the same sex and age rade leaves no room for the status and role of a leader.[15] ccasionally, an individual fancies himself as a self-elected eader, but he is always resented by the remainder of the ownship and his neighbors do not hesitate to show their dis-leasure. As an eccentric, he is dubbed with a cynical title, uch as "the sheriff." If he can keep himself immune to the aunts and jibes of the people, he is accepted in time or, rather, omes to be tolerated. He gives the people something to talk bout. The aspiring leader becomes the subject of numerous okes. Any human failing he displays is immediately taken s a means to censure him. These are negative social sanctions ess drastic than ostracism. I only knew one of these self-tyled leaders. He was a well traveled man and a walking ncycleopedia of miscellaneous facts. Walking the hill with im, I was told how Boston compared with Glasgow; how the ritish fought the Crimean War; how the money they received from he Turks helped Skye during the potato famine; and how the

he growth of the population ended with a prolonged famine. 161
he proprietors, finding that the people's only justification 731
or crowding the estates and looking to their landlords for 427
elp were some nebulous customary usages, facilitated the
ecline by disregarding custom and throwing as much land into
heep farming as was possible. While evictions were not new, 427
nly after the famine did they result in an absolute reduction
n numbers. The Sgiathanach, fettered by a lack of capital 182
nd an inability to break with the past, could not make the
nal adjustment required by the process of commercialization,
pecialization. In addition to emigration, the Clearances 167
nd general economic hardship forced a postponement of 582
arriage. There was neither land nor regular employment to 464
rovide a livelihood.

Later in the nineteenth century new influences began 161
play a role in the continuing decline of the population. 167
llowing the passage of the Crofters' Act, the nature of 178
igration changed. Seasonal migration became negligible. 427
671
e provisions of the Act, and ensuing legislation, made it
ssible for a man to remain away during his active years and
turn to the parental croft to spend his old age. The ex- 871
ntion of education not only equipped the youth for life in
e larger society but also created demands for objectives
ich could not be attained at home under the existing order.
us, as in the period of population growth, the persistence of 161
ny features of the old traditional culture, and the renewed 167
portance of others, were factors of no little consequence. 182

371

nomie is an additional support for my position. With 121
e theoretical assumptions in mind, we are prepared for
nal interpenetration of the culture of the Sgiathanach.

Evidence for Cultural Continuity

If I were to view the Isle of Skye from the single 178 182
spective of the culture as it functioned two hundred years
in an organization-disorganization framework, I might
cally argue that there is evidence for cultural disorgan-
ion. The clan system, which had pervaded all aspects
he culture, was rendered inoperative by the intolerance
he British government and the cupidity of the patriarchs.
tenure was divorced from considerations of reciprocal
ndence and real or fictitious kinship. The contractual
ciples of the wider commercial society, in which the
lords found a more satisfactory status, were introduced.
ime, the customary rights of the tacksmen, who had supported
structure of the clan, and the former clansmen were
tioned and repudiated. The older folktales, songs, and
of the superstitions were obliterated. The traditional
gious and secular festivities associated with events in the
cycle were abandoned or allowed to survive in a much
fied form. The traditional customs of cooperating and
ting were either altered or disregarded. The list of
ts and complexes which were dropped from the content of
culture could be continued. It is, indeed, a long one,
it includes elements from every aspect of the culture. If

ance of the potato, a much more productive and dependable 161
175
ence item than grain on Skye, made it possible for more 178
to live on less land. The introduction of a new industry, 241
, provided many with employment and freed them from com- 464
lependence on a subsistence economy. Vaccination reduced 757
rtality rate, especially among infants whose chances of 165
ng maturity and procreating were thus enhanced. Another 511
ant factor was the Skyeman's share in the general pros-
of British agriculturalists during the early years of
dustrial Revolution and during the Napoleonic Wars. An 423
ally important factor was the practice of subdividing 582
nd which made early marriage possible, in particular after
stallation of the crofting system. Finally, but by no 161
least significant, there was the persistence of many 175
l features of the culture in the days of the clan. The 178
ental ties of kinship and attachment to the soil had 182
ed.

The population decrease, partially a result of the Skyeman's 161
vement in the process of commercialization, was primarily 175
lt of a failure to fully adjust to the higher, more 178
genecus socio-economic level. By the end of the second 184
of the modern epoch, 1845, the people had become hostages
potato and their own fertility. When the potato failed
they had nothing to fall back upon, except the generosity
eir landlords. The cattle and kelp markets had collapsed
end of the Wars, and the subdivided land could not
ce sufficient grain. The belief of many that the pop-
tn had over-run the limited local resources was confirmed.

were to adapt this argument, I might even be convincing, but 178 182
dissertation would have a fallacious conclusion. Emphatically,
reparable cultural disorganization is not a characteristic of
culture history of Skye.

Continuity has been maintained through a reintegration. 178 182
part, Skye has made an adjustment to the higher socio-cultural 184
ganization of Great Britain and Western Civilization. This
ase of the culture's readaptation, however, is an incomplete
justment. The Sgiathanach has remained enisled geographically
culturally. A readaptation has also been made in the older,
ditional culture.

The national culture has played no insignificant role in 178 182
readaptation. Parliament turned back the process of com- 423
rcialization in 1886 and undertook to rechannel the trends 427
ward ever increasing commercialization of the land, ulti- 657
tely leading to the socialization of the land. The essentials of
old system of land use and tenure were not only reaffirmed
also given legal sanction to insure their stability. The
tion confirmed the customary usages. In many townships and
whole neighborhoods the crofting system was restored. As
as the Sgiathanach is concerned, he has never known any
er economic structure than communal use and tenure of the
d. There are only three significant differences between the
rig farm, whether the farm was a tacksman's or the common
ding of several joint-tenants, and the crofting township.

their partial adjustment to the higher 178
there have been changes in crops and stock. 231 241
s influenced the crofters' output, within 433
s. The old subsistence crops of oats and

barley have been replaced by grass and hay. Conceivably, this 178
is a more complete adjustment to the environment, which has been 231 241
made possible by integration with a commercial economy, than 433
an adjustment to the demands of the outside world. Whereas
the objective of the local economy once was the export of
cattle, today the purpose is the breeding of cattle and sheep
for the national markets. We have seen that there are a host 182
of limitations and difficulties in the economic aspect of the 231 241
culture. Many of these are due to the persistence of con- 433
servative practices. Each crofter must keep pace with his [624]
tradition-practicing neighbors, with the old men of the town-
ship. Others are the result of an inhospitable environment.
The economy does not run smoothly, but this is not conclusive
evidence for disorganization. Integration does not mean
smooth functioning. In the spring and autumn the crofter is
confronted with a variety and succession of tasks which would
fill a specialist with dismay. Very often, these pastoral
and agricultural chores have to be carried on in conjunction
with outside employment. In return for his labor, the crofter [434]
receives a meager income, frequently supplemented by con- [651]
tributions from his children or the government. As a further [167]
result of the partial adjustment to the wider society and
culture, the people leave the island to seek employment and
to achieve an upward mobility impossible on Skye. Economically, [175]
Skye, along with most of the Highlands, may be viewed as
presenting a picture of the Lowlands of Scotland 200 years ago.
That is the extent of the economic adaptation of the Sgiathanach
to the national culture.

375

Additional modifications have been found in the division 178 182
of labor. Although no Skyeman has shown a disposition to assume 162
responsibility for domestic work, unless he lives alone, the
women of Skye are expected to function in roles which once were
filled exclusively by men. Old men and women for many years [561]
now have continued to perform tasks which formerly were their
duties as youths and young adults. These changes, like those
we have described, are partially traceable to an incomplete
adjustment to the contractual, commercial world. This has led [162]
to striking alterations in the age structure of the population
for it is the youth who forsake the island and the aged who
yearn to return. Nevertheless, there have been no observable [559]
changes in the status system of the rural neighborhoods.
Primitive democracy, distinguished from our form of democracy 421
by the principle of unanimous consent rather than majority rule 554 182
continues to operate in the townships. The existence of such
an institution implies a maximum of equality co-existing with
a minimum of authority. The continued ability of the crofters
to maintain primitive democracy in a nation like Great Britain
is possible only because there is a high degree of social
integration. The simple system of ranking, on the basis of [561]
age and sex, has persisted. Men are the social superiors of [562]
women; old men are the social superiors of their juniors. I
believe we shall understand how continuity of status has been
preserved if we turn to a consideration of the role of religion
in the island.

If I am right in asserting that a belief in clan brother- 178 182
hood was an all pervading cultural pattern in bygone days and 614

376

that the clan ceased to provide a focus for the culture almost 178
two centuries ago, the reader may ask how can a culture without 182
a focus find continuity, how can a culture without a central 614
theme, something around which to orient itself, achieve inte-
gration? Religion provides the answer. Congregational religion [771]
has taken the place of the clan.

The acceptance of the new religious focus curtailed 178
many traits and complexes characteristic of the old culture. 182
This is why the older folktales, songs and superstitions, the 771
festive celebrations held at times of birth, baptism, marriage,
and death, the traditional social patterns of visiting, and
all frivolous activities were abandoned or modified. In a
time of acute distress the Sgiathanach turned to religion
as a means of consolation. His religion required circumspect
behavior. Perhaps, the sheer impossibility of supporting the
traditional forms of social interaction had forced a change in
cultural content when the religious leaders placed these forms
under censure. I have suggested that religion did no more than
sanction poverty. This much is certain: religion provided the
means for the culture to maintain its continued distinctiveness.
The Scots of the Presbyterian image of the days of Knox, of [795]
the times of the Covenanters, and the year of the Glorious
Revolution continue to exert their influence on the Sgiathanach.
While the ministers and the venerable old men of the laity
stamped out all practices which they considered pagan or
Catholic, as well as modifying the social aspect of the culture,
the process was not completely negative. The religious expression

377

sanctioned the qualities which had given the people their 178
characteristic strength of character. 182
771

The churches of Skye made conservatism an official
policy in 1843, and in 1892 reaffirmed this policy. For well
over 100 years religion has had a strength and vitality which
has enabled the Skyeman to pass through times of extreme
distress, not to mention chronic economic deficiencies. Among 182
the most important religious sanctions are those which reinforce 554
the status values of the culture. The father's status in the 771
nuclear family was reaffirmed at a time when his socio-economic 543
importance was declining. He has been held responsible for
the spiritual welfare of his wife and children. The prestige 182
of the old men, the family-head elders, and their control over 554
the neighborhood group was similarly bolstered by making them 771
the judges of a man's spiritual enlightenment. Spiritual 888
enlightenment is weighed on a scale which will not balance
unless a person's religious knowledge is matched by conformity
to the ways the old men think a man should behave. Again we 182
are not dealing with a completely negative attitude. In the 771
place of frivolous amusements, religion has offered highly [787]
emotional, spiritual patterns of behavior. Religion has pre- [191]
served the Gaelic language by using it in formal worship and
within the home for family worship. In these and other ways
relizion has indeed enabled the culture to achieve a reorien-
tation and maintain its continuity.

How similar Skye is to the Old Order Amish in this respect.[3]

[3] Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania.

383

other than on business. The fraternal orders were gone. 171
Church attendance had become sparse and irregular. These 182
changes led to a decline in the strength of interpersonal
sentiments and a feeling of indifference toward one another.
His third conclusion is that these changes were followed by
a "decline in the extent to which norms are common and clear."
Since class membership is defined on the basis of interaction,
class activities are much alike, and the interests of class
members coincide. Ranking is based upon norms, in particular
the status and role of leadership in community affairs. A
decrease in community activity had resulted in a weakening
of both norms and ranking. His last conclusion is that the
changes in the intensity of everyday relationships have led
to a loss of social control by the group over its members.
Deviations were not punished by avoidance. All action was left
to the state. Here, then, is anomie. Let us compare the
contemporary behavior patterns of the Sgiathanach with the
Hilltowners.

There is evidence that the Sgiathanach no longer collabo- 178
rates in group activities as much as he once did. There has 182
been a decline in the amount of cooperation in the work of
crofting. In many activities, of course, the need has disap-
peared. The individual family can easily perform many of the
tasks, such as the ploughing of a few acres of land. In some
townships it has become the practice to pay the sheep club
stock shareholders to insure the presence of enough men and
women to handle the dippings and shearings. In others,

384

including almost all with private flocks, the crofters continue 178 182
to cooperate. The church has been broken by schism, not once 795
but four times. On Skye, however, the schisms have had as 182
their purpose conservatism, not greater leniency as in Hilltown.
Moreover, the schisms have been solidifying factors. The
progressively more dynamic world denying sects, after a period
of communal strife, have given the people an emotional unity.
The crofters have become dependent on the trade-center village 182
and the wider national markets. Many must seek employment beyond
the island. The interests of the Sgiathanach are not outside
the neighborhood, except in so far as events from the outside
affect them and, especially, to the extent that ties of kinship
and religious brotherhood reach beyond the local group. We
are hardly talking about the same situation as Homans. As we
continue to explore this condition we may also ask has there
been a decline in the frequency of interaction in the internal
sphere of activity?

The old ceilidh has disappeared under clerical bann, but 182
it has been replaced by "going to have a crack," going to visit 571
and gossip with one's friends and "people." The people may 178
no longer gather to hear the old men tell stories of clan battles.
They now discuss the latest local gossip and the news of the
outside world. The Islander has never been given to formal [575]
social organizations; they half distrust such orders as the
Masons and Eastern Star. Still there are chapters of both in
Portree. In the crofting neighborhoods face to face relation-
ships continue to preserve strong interpersonal sentiments. The [203]
postman's van and the grocer's trucks have relieved the people

else the spouse is likely to lose status. 436 284

The most powerful of all agents for social control are 436 878 the old men of the neighborhood. Through their position in 878 the church, a religious sanction for their prestige status, 779 they enforce conformity to the norms of behavior which religion has sanctioned either positively or negatively. No one, nor any group, has been successful in questioning the right of these venerable men to maintain their habits and statuses which have been preserved over the generations. The baptism of a man's children and his own salvation depends on acceptance of the authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there 182 is no anomie. 178 The content of the culture has been greatly modified, but the form, the underlying distinctive pattern, has been preserved. We are dealing with a single tradition in which the norms of behavior and the sanctions for them have remained common and clear. This is all the more striking because there have been periods in which cultural and social disintegration threatened to overwhelm the Sgiathanach. This brings us back to the role of religion in preserving cultural continuity.

Loomis and Beegle have employed Durkheim's theory to 171 analyze the growth and spread of fundamentalist religious 182 sects in contemporary United States.[16] They conclude: "It 771 is no mere coincidence that various types of emotional 786 religious sects are now among the most rapidly expanding 781

[16] Loomis and Beegle, Rural Social Systems, pp. 401-407.

religious groups." As a result of urbanization almost all 171 rural areas have experienced the pangs of social mobility and 182 few have escaped unscathed from a clash with the economic 771 forces which impinge from the outside. This predisposes the 786 people to the appeal of an emotional religion, revivalism. 781 Frequently, the sect becomes uncompromising and rejects the outside world in an attempt to bolster group security. The sequence of events on Skye enables me to add that the sect can also reject a great deal of the former content of the culture. Be that as it may, the authors show how emotional [571] religious movements restore or replace meaningful patterns of interaction among groups whose social systems have deteriorated. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175 which the Sgiathanach experienced may be placed in the first 178 half of the nineteenth century, with a climax around 1840. 771 To paraphrase Loomis and Beegle, it was no mere coincidence 786 that an emotional religious movement should have appeared and 182 found so many converts. The closing years of the eighteenth century had witnessed numerous changes in the content of the culture and the collapse of the old social heirarchy. While these events doubtlessly had an influence on all levels of the society, it was not until the turn of the century that they broke forth upon the masses. Within a decade a revival had reached effective proportions. This was a time of estate reorganization. The tacksmen, the traditional leaders, were quickly disappearing. The runrig farm was being abolished. Sheep were beginning to replace men in one parish (Bracadale).

We know these and the other changes of this period. Significantly, 175 however, there was no simple correlation of revivalism and 178 population change. The Revival began during a time of population 182 growth and emigration; it reached effective proportions during 771 a period when emigration seems to have almost stopped; and it 786 found its culmination during years marked by destitution and the beginning of depopulation. No purpose will be served by repeating what I have already said about the nature of the changes which accompanied the coming of the dynamic, evangelical message. It is sufficient to emphasize that the ministers and the Men reinforced the desirable fabric of the culture and gave the culture a new focus.

The second period of anomie on Skye is less well marked. It appeared at the end of the "Clearences." Again destitution gripped the island. Although the vital, emotional religion had enabled the people to bear the hardships of the "Clearances" without overt resistance, they now openly defied the landlords and the state. More than a series of government commissions and committees came to Skye. A still more intense religion loomed on the horizon to reaffirm the focus of the culture. Once again it was no mere coincidence that the new church should have found ready acceptance by the people in the areas of greatest unrest, the areas which required the presence of police and Royal Marines. It was a fact of no little significance that the new denomination should have been founded on the Isle of Skye, the area of greatest unrest in all the Highlands.

Whatever signs there were of social or cultural dis- 175 organization, or threatened disintegration, in the nineteenth 178 century they have disappeared. Steward's theory that folk 182 societies do not entirely disappear but are rather modified 771 by way of a readaptation to the higher level of socio-cultural 786 organization of which they become a part is borne out by the 121 evidence from the Isle of Skye.[17] At the same time, on the basis of events in the culture history of the Sgiathanach, I would qualify his theory by introducing a new condition. Isolated, relatively simple, kinship oriented societies and cultures which must achieve a reintegration if they are to preserve their continuity readapt, not only to the higher socio-cultural level, but also to the older way of life.

In conclusion, I regard Skye as a community which has 178 maintained a continuity of culture despite marked population 182 change. The continued distinctiveness has been made possible [661] by a reintegration of the culture and a restoration of the [571] network of relationships which make for harmonious living together. As in any socio-cultural group which has passed through periods of threatened disintegration, the joints of repair may be weak. Conflicts are tending to appear. The crofter, who has refused to fully adapt to commercialism, is seasonally faced with a variety and succession of tasks which no agriculturalist in the wider society would tolerate. There is the desire of the youth, who are too few in numbers to form a sodality, for a share in the mundane pleasures of

[17] Steward, Area Research, p. 111; see also Wagley and Harris, op. cit., p. 441.

the world. So far, rather than having an influence on the 178 norms of behavior, the youth have been faced with the decision 182 to conform or leave. Cultural continuity on Skye has been a sad experience for many and an expensive proposition for the government. The youth leave; the aged return. If additional changes are forced upon the culture, and there is no doubt in my mind that they will be, the culture and society may not be able to preserve the delicate warp and woof. The threads already hanging loose may unravel the basic fabric. Only time will tell.

At the present time, the culture is disturbing to many 181 people. The sentimentalists in the Lowlands worry about the loss of the old songs and the decay of the informal ceilidh. Agricultural economists commonly look upon the crofting system with dismay. Ministers, some of them born Skyemen, express a dislike for the form which religion takes among the Sgiathanach. Well meaning agencies are determined to create an "adequate social organization" by bringing a share of the urban recreational facilities to Skye. Government commissions and agencies take a dim view of a system of tenure which allows the aged and the absentee to hold on to the land. They advocate the severance of the house and croft and a modification of the crofter's security of tenure. If one or more of these changes are made, it may no longer be possible to conclude that the culture is growing old with the aging population. I do not believe that the culture will ever fully adjust to the national socio-cultural organization. Before it will do so, the Gael

133 line; and there can be no doubt of the contrast found at
131 the extremes. How strikingly different from any view over the English Plain is this, from the air or a mountain-top! It overlooks the ice-scraped rock of the fells; the drift-heaped, ill-drained hollows studded with gleaming lochs and deeply overgrown with peat; and the indented, insular coastline with its widely spaced crofting townships looking seaward, where a few fishers' sails may dot the
161 vast expanse of ocean. In 1951 the population of Lewis-
162 and-Harris numbered only 28,000 persons, and that of the entire Outer Hebrides some 36,000; but the small num-
182 bers need not lessen the geographical significance of the community.

• 18 Men have long recognised the homogeneity of the English 'Plain', with its recurring vale and wold, compact within a rounded coastline. In spite of the local variety of landscape, history or dialect, which enriched its heritage and compose its grandeur and charm, men have sensed the unity inherent in this land of a single tongue, centred upon a single capital. By contrast, the diversities in landscape, life and tongues of the lands far-flung to north and west have obscured the elements of a profound, underlying unity in geographic origins and in historic and social
[121] evolution. To understand the civilisation of the British Isles, it is vital first to perceive the complementary qualities found in the two great regions, and face their corresponding
[178] weaknesses or limitations. Second, within the less understood of the two regions, 'the North and West', it is vital to study the almost bewildering variety in regional types of life—distinguishing, for instance, the uprooted populations all too typical of the rural Lowlands of Scotland or Northumberland from the still deep-rooted communities of the Highlands and Isles.

121 From prehistory to the present day, these geographic
178 zones have played their parts as factors in evolution, although the border-lines have changed at different historic
174 crises, and have been modified by economic and social
182 phase. At times the Hebrides have been more closely linked to Ulster or to Norway than to Central Scotland.
184 In viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the revealing character of Island life lies not only in static survivals, in what Sir Arthur Mitchell found in the Isles and vividly described as "the Past in the Present". Island life is characterised still more by the dynamic strength of its continuity—notably of early or primitive Christianity—and also by the late occurrence of changes when, at last, they came.

• 18 The social consequences of these regional differences in evolution are profound. In the 'Plain', to the south-
62 east of the Severn-Tees line, large village communities
174 with 'common fields' prevailed, forming the later manor
[423] villages. To the north and west, the more varied, hillier lands encouraged the continuance of hamlets. These
[192] hamlets housed close-knit groups of families, often of no more than four or five to a dozen relations or 'friends'—
—in Scots even today (much as in Gaelic) the word 'friend' frequently implies kinship. Each small group
[462] formed a team. Together the men ploughed their mingled
[476] rigs (or ridges) and herded their stock in common, and on the coast they rowed their boat as its crew. The
[241] women, too, did much together, as when they spun their
[286] yarn, and fulled or 'waulked' the cloth that one of them had woven, helping by turn in childbirth and child-care.
[423] Usually several of these teams were linked in a larger

• 18 pastoral group, the germ (in the Hebrides) of the present
621 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
[423] These 'sociable hamlets', or 'little commonwealths', as they were called by understanding writers on the Highlands, lived on in the Hebrides almost until a century ago. Features of their form and life have long been known, but their life has not yet been envisaged in its full dynamic significance.

127 The homesteads, informally grouped in these small
36 hamlets, have been mistakenly described as solitary or
174 'dispersed' by scholars accustomed to larger and more compact grouping. The mistake was made by geographers
[423] of the nineteenth century, such as Meitzen with reference to the hamlets of Brittany. Similarly, because of the
[476] small number composing a typical joint team, the vital fact of team-work and joint holding has frequently been overlooked; yet a fundamental mistake is made when such close-knit team-work and joint tenure are described as
174 'individualistic'. Moreover, these teams were linked to-
62 gether in larger, more loosely bound pastoral communities
63 of township and district. In Scotland and elsewhere, it is true, such hamlets came historically to be split up in various
[241] ways, into smaller farms and scattered cottages. The larger link of common life was also superseded by the
[178] proprietor's estate. Indeed, the twofold revolution involved caused a fundamental regional cleavage within 'the North and West'.

[182] Partly as a result of their small size, the tenure of farm-
[184] hamlets was frequently informal. In northern England, the hamlets and their lands were not entered in Domesday Book; still less are early entries complete in Scotland.
[178] For this and other reasons, jurist and historian may fail

131 summits of up to 2622 feet. South of this chain of hill
133 the ground drops again on a peninsula some twelve mile long and only seven miles wide. This forms the mor populous part of Harris with its 'sandy shore', the Machar facing the Atlantic, and its rocky bays and fishing hamlet
[134] on the Minch.[1] Lewis has its 'machars' too, areas o
[504] white shell sand, which is so light that it blows up th hillsides, thus improving the pasture-land; but there i little 'machar' on the eastern coast, save for the south western shores of the great sandy North or Broad Bay enclosed by the peninsula of I, or Eye, which also acts a the outer breakwater for the harbour of Stornoway.

131 Landing at Stornoway and leaving behind us the pines
133 and the wind-pruned sycamore woods around Lew Castle, we find ourselves among the small fields of th
36 villages which are partly suburban to Stornoway. Inlan
[137] stretch the gently rolling, brown and somewhat melancholy moors that cover so much of the Lews. From the But of Lewis to the beginning of the Harris hills one coul make a bee-line SSW., midway through the Island for ove thirty miles, without passing a house or a strip of corn, an seeing only a tiny, ramshackle hut, a shieling (or *àirigh*) used for six weeks in the year when the cattle are taken t the summer pasture. All the villages are in sight of th sea, and generally close to it, with only one inland ex ception, Achmore, south-west of Stornoway, founded afte 1850. The hills of Harris are not less lonely than th moors of the Lews.

• 18 Diversity is one of the fascinations of such an island
131 as this. Although, like the founders of Stornoway, al
133

[1] *Am machair* ('ch' as in 'loch', also anglicised as 'macher'), n.f. th plain, smooth beach-land or links. A sandy beach or ebb-strand, *tràigh* n.f., backed by *machair*, contrasts with a pebbly beach, *cladach*, n.m., backed by rougher beach-land, as in the Cladach district of W. Lewis.

18

COMMUNITY FROM PAST TO PRESENT PT. II

126 only the place but the people are to be understood, respected and helped.

127 The planning movement is gathering impetus in Britain, as it spreads outwards from bombed towns to countrysides, embracing regions as a whole. It is certainly destruction in war that has stabbed the nation's spirit "broad awake", 128 awake to features of economic and moral disintegration that preceded actual warfare. The realisation that defeat 129 of the common enemy called for common effort roused the nation to face its enemies of want and confusion at home. Yet the seeds of the planning movement were sown in peace, and only in peace can they grow to fruition. Planning, prepared for by the survey of each region as a whole, must lead towards the freeing of its people not only from physical want but from spiritual frustration. Based on the provision of work and a livelihood for individuals, planning should envisage the common weal and attempt to realise the deeper cravings of each community and serve their highest ideals. In a word, there must be a regional vision 130 of the unity of life.

This book began by viewing the 'Outer' Isles as a heart of 'the North and West' of the British Isles, the innermost of a series of regions extending from the North-west Isles to the lowland margin of the English 131 'Plain'. Differences in landscape and community, in history and modern life, make each of these regions unique in itself; yet—it was suggested—all possess certain features of landscape and evolution in common, which marked them off from the 'Plain' of the South-east. Some four physical and human frontier-lines or borderzones divide these regions. South-eastward from the Minch four were selected: the Highland Line, the Scottish Border, the edge of the older rocks of Britain and,

CONCLUSION

132 enclosing all, the zone from Severn to Tees. Having portrayed the environment and life of the Island—' internest' of the regional series, the next step was to extend this survey beyond the Minch to the Highlands and Isles as a whole, and then to compare these with the regions extending south-eastward—' outwards'—from the Isles to 133 the margin of the 'Plain', through the regional series we group as ' the North-and-West'.

134 Two main tasks lie before us in making comprehensive community surveys, once the geographical basis is established. The first task, historical in method, is the rediscovery of cultural foundations. These might be compared 135 (as we said at the outset) to the Archaean gneiss laid bare only in the North-west, but still the foundation, albeit a hidden one, of the ice-sculptured rocks of Highland Britain, from the pre-Cambrian to the coal at the margin of the overlying, differently sculptured rocks of the 'Plain'. Understanding of the past can help us to understand not only the evidence of the present, but latent, underlying 136 powers. Regional traditions, dormant for one, perhaps for many generations, may germinate afresh if we can understand the conditions in which they once grew and also those needed to awaken them to new life in finer forms.

137 The other task of social survey must be to recognise the communal efforts of the present, and with eyes undimmed by prejudices of class or culture, grasp the relations of personal efficiency and self-realisation to life in teams 138 or groups. The inherent cultural interests of the people of each region in work and leisure must be evaluated. Underlying actual achievements, latent powers may be discovered which must be freed for communal attainment. Better work under better conditions should bring about 139 the flowering of personality in harmonious communities.

181

1

Chapter 1

INTRODUCTION

Scottish crofting townships in the Outer Hebrides, in which I did anthropological fieldwork for fourteen months in 1970-71, participate extensively in the political, educational, economic and administrative systems of larger British society. Despite this participation, the township presents various anomalous features, i.e., features which are inconsistent with what we would expect given our conceptions of the conditions of a modern, urban-industrial nation-state. The expectation that township members will manifest values and beliefs congruent with those prevalent in larger British society, and that patterns of economic specialization and individualization will be adopted by persons entering in the available industries, is not fulfilled. Crofters continue to work small plots of land and engage in communal township activities even while employed by large industrial firms. Distinct patterns of value and belief persist, and are evident even in the use of new ideas and material goods.

181 This thesis attempts to describe and interpret the seemingly anomalous survival of crofting and crofting

181 KIMON:—general orientation of the culture: predominating interests, values, themes, and motivations; characteristics of the land culture (e.g., of Greece, Ireland, Scotland, Wales, Brittany, Spain, Portugal, Sicily, Sardinia, Crete, 'urban'), allegations and inferences as to national character, etc.

27

181 three-field system with improved rotation methods involving consolidation of land. The Danish government feared that consolidation of land would have meant a reduction in taxes and fighting men.

The British government was faced with the same threat in the migration from the Highlands, as the Highlands had long been a source of good fighting men.

A reaction against the materialism of the industrial revolution developed in England as small-181 holders sold their land to large landholders to become laborers. The Taylor Report (1954) 91 reflects the values which is still placed on country life by maintaining that crofting communities "embody a free and independent way of life which in a civilisation predominantly urban and industrial is of character is worth preserving for its own intrinsic quality."

The various acts protecting smallholdings were also attempts to keep labor dispersed: to diversify and improve the use of land, and thus to increase Britain's self-sufficiency in food production. Various marketing agencies and subsidies were introduced around World War II to achieve such aims. Among the many agricultural-related 182 effects these encouragements emanating from the central government were crofters.

103

A 60-year-old woman remembers that 15 was a common age for her sisters or other girls, including girls from large families to live for as long as six weeks with other families who were relatively better off. They would help harvest the hay or the potatoes or bring in the peat in return for food, lodging and perhaps some clothing. "They usually ate better than they did at home." The children were not necessarily relatives of the families with whom they boarded.

Strong friendship, that is, the kind of friendship associated with mobile urban life in which persons confide in each other and share secrets and build up an individual relationship based on extensive knowledge of one another, was nonexistent. A "friend" was a relative, or someone who gave aid when it was needed. "Today is is sometimes said, "It used to be that your relatives were your best friends; now your best friends are better than your relatives." An old man 181 will meet another on the road and say, "I used to see more of you when you worked me." Delights used to share sheep that were killed; now households kill and consume their own sheep, and freeze the meat which they cannot use immediately. Groups that walked out together 182 to the peat to finish the job in a single day are being replaced by individual family units that can motor out and do the job in stages. People prefer to give money

122

182 government bodies and industries in cities on the mainland, rather than from relatives. Work is difficult as it was at a previous time. The periodic return of relatives to the island reflects this peripheralization, as do feelings of inferiority among the islands. The island has become not only geographically but socially marginal.

A. Geographical Marginality

Geographical marginality refers to the distance of the islanders from various economic and administrative centers on which they depend. Because they are distant, they are more likely to suffer breaks in channels of communication with these centers, as when storms prevent boats from docking. They are "marginal" because they depend on natural sources rather than being self-contained; and the difficulties entailed in this marginality encourage the retention of techniques and patterns of interaction derived from the days of relative self-sufficiency. The anomalous combinations of old and new found in the township may be attributed to such marginality.

A "mixstage" may be thought of as a pattern of behavior which develops in a particular history of reinforcement, the parameters of this reinforcement

124

The Harris Tweed industry has provided a regular 183 "shift-working, but the income from this source is inconsistent. The standards developed during prosperous 184 times cannot be met during difficult times. Many roomed 185 houses with indoor plumbing are more heavily taxed than 186 smaller, less modern homes; loans must be repayed; 187 a car and a television once gotten are difficult to 188 give up. A weaver must pay for his insurance stamp, 189 which amounts to over £70 a year; and income tax takes a large percentage of a person's income, in large lump sums which are paid twice a year rather than in smaller amounts throughout the year. When income fluctuates, any constant demand for monetary outlay constitutes a liability.

To many persons outside the island concerned with 190 Highland Island development, Lewis has a reputation for "subsidy-grabbing." According to one official, "The people are too used to getting subsidies. They tend to sit back and rely on the subsidies, which makes it difficult to develop the place."

191 "Go pay tax," said one weaver. "Why not get back what we can in subsidy?"

Income tax collectors shake their heads in despair 192 at the thought of trying to get a true estimate of a crofter's income, except for jobs such as weaving for

129

In nation-wide comic strips and jokes, the Highlander 193 plays the role of the clown, the rustic country cousin. The comic strip "Angus Og" portrays a kilted Highlander, sly and canny behind his apparent simplicity, tricking the landlord and searching for the lost Ness monster. Stories of the lazy, dour crofter abound.[1]

194 When young men go away to the Army or Navy or to 195 work on the mainland, they say that they feel like 196 foreigners. "Thirty years ago the Island was very 197 isolated. It was difficult to get away. There was 198 few education grants available. I got my teaching 199 certificate and wanted to get a post back on the island, 200 but was told there wouldn't be a vacancy for another fifteen years. So I went down to England, and found 201 I had to be at least as good as an Englishman if not better in my job to get ahead."

202 "When I went into the RAF, I had never seen light 203 switches because we used paraffin lamps. An English 204 lamp hold me to turn the light on, and I didn't know 205 which way meant on or off. That memory still sticks in me

[1] Even a high official in the Highlands and Islands Development Board tells a joke, that is "presently going the rounds" about a "Gaelic speaking Highlander" who "a Highlander and told him of the world wonders he had heard about: "Don't do today what you can put off till tomorrow." "Well, if there was a corresponding saying in Gaelic, "Ciu Gaelic," replied the Highlander, "we have no word that conveys such a sense of urgency."

"I was in the Navy during the last war. We were in Norway, and we got an invitation to visit the palace. I didn't go. I was afraid I'd make a mess of things."

"This place has an inferiority complex. It's mainland-oriented; so you feel outlandish."

The new director of an association which promotes the speaking of Gaelic in a Lowland Scot who learned Gaelic when he was in England. He was working in England and, as a Scotsman, felt so much like a foreigner that he decided "to be a real foreigner"—to be a student Gaelic. Writers which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

An Common Gaidhealach, the Highland Association, which promotes the speaking of Gaelic, was founded in 1891 in a town on the mainland, and has always been urban-based. Eighty years passed before the association established its headquarters in Stornoway; but the headquarters were relegated to bindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support. The organization is condemned by ministers on the island, who see it as an organization for someone light-hearted singing. The magazines and books which it publishes or sponsors are seldom read by the rural islanders. The

2. The Ballad: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are maintained. It is said that gossip about Stornoway travels more quickly in the district called Partick Hill in Glasgow than it does within Shawbost itself. It may be argued that the "exiles," with their Lewis and Harris associates and relatives, keep the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the famous Person-writing kin interchange) are the only people (the solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

Within the village, especially during the long, dark winter, complaints often heard of the "lameness" of things. A common phrase, almost a greeting, is, "Anything fresh?"—implying that the usual mode of existence is stale, sour, exhausted, and murky with despair. Almost all villagers have access to the range of information available to all Britishers through forms of mass media such as newspapers, radios and television sets, very little of this information is considered relevant to village life, and thus is not attended to,

relevant to village life, and thus is not attended to. Comedies, soap operas and westerns constitute the favorite television programs. Many of the men read adventure stories—war, western and detective—on the Sabbath (Sunday afternoons). Magazines and newspapers most often received includes The Daily Express, The Sunday Mirror, The People's Journal, The Stornoway Gazette, The Oban Times, and Tree Romance, documents dealing with social events or with romance and tragic personal accounts. In general, the news of the mass media to which this audience attends is gossip writ large. Such news, like local gossip, is discussed endlessly, in elaborate detail, until snipped of all pretension of excite or until even minute questions the attention of the village audience.

Events which occur in the open, treeless countryside are vivid and dramatic. The generally low level of stimulation enhances their dramatic effect. A man appears on the hillside or a car along the horizon, and all ears and eyes attend. The British system of perennial number plates on cars makes it easy to identify the shifting cast of characters. Even children remember long lists of number plates. There is a perpetual audience for dramatic events.

The generally low level of stimulation derives in part from values which restrict opportunities for self-expression. People are ready to gossip, i.e., to participate vicariously in the escapades of others, but are less eager to act. Stories concerning mad-cap adventures of other villagers do note belie the existence of constraints imposed on expressiveness. One of the major reasons given by young villagers for wanting to leave the island, and by emigrants for why they left, is that, "there is nothing to do. The place is dead."

In the everyday life of the village, a style of indirectness and restricted communication is encouraged. A man might be praised in an obituary by the phrase, "His voice was never heard in the community." The encouragement of a "low profile" of behavior is characteristic of communities in which people meet each other frequently and know they will continue to meet and ask things of each other for a long time to come. Indirectness avoids conflict arising from divergent expectations, and embarrassment from changes in plans.

A major feature of practices of child-rearing on the island is inconsistency, which develops a style of guarded willingness to take risks, hesitance to act or express oneself. Children are teased by being offered things which are then snatched away. Punishment is inconsistent.

sympathetic with each others' idiosyncrasies. A constant joking keeps people at arm's length and discourages the development of empathy.

Stimulation which style of indirect, inhibited expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visits"), the drinking situation (mainly for men), the role of clown or "character," and holidays such as New Year's. Although young villagers and emigrants often describe the village as "dull" and "dead," the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and inhibited expressiveness are encouraged and limited.

Ceilidhs, Clowns, and New Year's Festivities: Only on certain occasions is relatively spontaneous and uninhibited expressiveness condoned or encouraged within the community, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional ceilidh was such an occasion. In the past, people gathered regularly at night in the high ceilidh (the ceilidh house, or home of someone in which a general atmosphere existed; the high ceilidh was called on the home of someone who lived alone), where stories were endlessly repeated and elaborated,

were, "I'll have to ask my brothers and sisters if they mind, since they come back here every year." Some houses which are almost empty for most of the year are overflowing during the summer months. Often the visitors must come in stages.

"Ceilidh" along the old songs with vigor, drink heavily during their visit, and praise the island for that "special quality" which is unmatched by life in the dirty, crowded, unfriendly city. Some plan to retire on the island. The villagers who do not share the tone that their society is eminently worthwhile. When talking to strangers, they ask questions pertaining to this image of themselves, such as, "You've you think this place has something which you will enter fit in a city?" People come here during the summer and they love it; they can't keep away. So they must find something here. What would you do in a city anyway? Out here you're free."

The visitors are only bidders the self-esteem of the islanders, but provide them with a fund of gossip. "The summer visitors always turn things topsy turvy when you come." Talk of the adventures of the summer visitors helps to enjoy the long winter nights of the islanders.

A comment frequently heard is, "He was awfully homesick leaving." That is, he was already longing to be back on the island, his spiritual home. The image of the island

character traits just by virtue of his belonging to a particular family; he is protected from the "out" behavior of people who are not members of his clan. The village provides a colorful arena of recreation in the form of ceilidh, the character, and holidays such as New Year's.

A major system of order and meaning is provided by religion, and by the opportunity to belong to a tightly-knit religious clique. Lewis is sometimes called Tir na h-ordaineil, land of the Sortitures, in contrast with the Gaelic name for Harris, Tir na h-aireamh, land of numbers, which emphasizes a second important group. And for everyone there is the cinema of their neighbors' activities, which are played in a vast theater which includes the behavior of many generations.

5 AGRICULTURE AND FISHING

THE economic possibilities of the peat blanket of the island, particularly in Lewis, have attracted the attention of many people who would be exploiters. Sir James Matheson's advisers formed the idea that the Lewis peat bank could be turned to a good profit, and Sir James's series of peat reclamation and improvement programmes are still echoed today. He first cast his eye to the west, north of Achmore, a township set up more than a century ago on deep peat. The attempt to reclaim the peat moss was made after John Alexander Smith, one of the best-known 'speculative' agriculturists in Scotland at the time, had already transformed the Carse of Gourie from bog to a fertile tract of land; could he not do the same in Lewis? The site chosen was seven miles from Stornoway, and the township established there was called Little Dunaton, in recognition of Dunaton, Perthshire, to which Smith hailed from. The soil consisted of bog moss, varying in depth from 3 to 8 ft. Sixty acres were wedge-drained and laid out in fields of two acres enclosed with ditches and turf fences. Ploughing and trenching began and fertilizing agents were applied. Including clay marl, shell sand, grains and dissolved bones. Two of the fields were put through a course of arable cultivation, the other being laid down in grass. Half the fields had been worked for a few years it was found that the drier ground gave the best results. In time the land was handed over to some crofters from nearby Lochganvich, but in 1850 it was abandoned because of the difficulty in getting seaweed for manuring and because it was not possible to keep the land in good heart and to do fallow as well. The tract of land concerned today still shows a better quality of pasture than the adjacent natural peat land.

Smith gave his impressions voice in 1844, just after his first visit to Lewis, to the august members of the Glasgow Philosophical Society. The cultivation of the soil was as primitive as the

AGRICULTURE AND FISHING

THE CROFTER

islanders' manufacture of cloth. The inhabitants were at least a century behind the times, though they were, he found, in no way deficient by nature. They were social in their own style, and they had very good taste. What is the people not accustomed to habit of thought'. So far as agriculture was concerned, nothing in the way of draining the land, or improvements, had been accomplished; nor had any effort been made to penetrate the hard sub-soil. He held that the great scarcity of timber had been a serious handicap when it came to agricultural implements—to their renewal, repair or possible improvement. Under direction, however, he was convinced that improvements could be made. He dwelt in considerable benefits to the island. He added that he hoped the period of this agricultural and not be for all time employed was more other grass, pastoral land instead of a dreary waste'.

Yet not until 1923 was proper instruction and development set again brought not for an airing. This time, the benefactor was the late Mr T. B. Macaulay, a Scottish nationalist magnate, a son of Lewis connections. He gave £10,000 to establish an experimental farm in Lewis, and on Arnish, not far from Stornoway, was chosen. It was typical of most of Lewis: black, water-holding peat, which when drained and cultivated was seen to be very shallow in depth from 3 to 8 ft. Sixty acres were wedge-drained and laid out in fields of two acres enclosed with ditches and turf fences. Ploughing and trenching began and fertilizing agents were applied. Including clay marl, shell sand, grains and dissolved bones. Two of the fields were put through a course of arable cultivation, the other being laid down in grass. Half the fields had been worked for a few years it was found that the drier ground gave the best results. In time the land was handed over to some crofters from nearby Lochganvich, but in 1850 it was abandoned because of the difficulty in getting seaweed for manuring and because it was not possible to keep the land in good heart and to do fallow as well. AGRICULTURE AND FISHING

THE CROFTER

The pursuit of agricultural processes, their growth, development and improvement, to establish a foundation for a secure society never been any on the island. The unyielding nature of the base rock, Archaean gneiss, in hardness, in compressive property, have all contributed to the resultant pattern and character of society which emerged. Tough one is tempted to define crofting as a way of disinterest, it is also tempting to say much more insightful: a way of life. To quote the Napier report on *The condition of the crofters and cottars in the Highlands and Islands of Scotland* (1884): 'Habit and local affection bear so great a sway, that the actions of mankind, not the Highlanders will be found wholly or in great, pastoral land instead of a dreary waste'.

Yet not until 1923 was proper instruction and development set again brought not for an airing. This time, the benefactor was the late Mr T. B. Macaulay, a Scottish nationalist magnate, a son of Lewis connections. He gave £10,000 to establish an experimental farm in Lewis, and on Arnish, not far from Stornoway, was chosen. It was typical of most of Lewis: black, water-holding peat, which when drained and cultivated was seen to be very shallow in depth from 3 to 8 ft. Sixty acres were wedge-drained and laid out in fields of two acres enclosed with ditches and turf fences. Ploughing and trenching began and fertilizing agents were applied. Including clay marl, shell sand, grains and dissolved bones. Two of the fields were put through a course of arable cultivation, the other being laid down in grass. Half the fields had been worked for a few years it was found that the drier ground gave the best results. In time the land was handed over to some crofters from nearby Lochganvich, but in 1850 it was abandoned because of the difficulty in getting seaweed for manuring and because it was not possible to keep the land in good heart and to do fallow as well. The tract of land concerned today still shows a better quality of pasture than the adjacent natural peat land.

Smith gave his impressions voice in 1844, just after his first visit to Lewis, to the august members of the Glasgow Philosophical Society. The cultivation of the soil was as primitive as the

these communities of 'fisher-crofters' settled at the meeting of sea and land, yet differences of topography and situation are still accompanied by differences of emphasis in their dual way of life. Although insularity might lead one to presuppose homogeneity, actually the seaways by which an island may be reached may bring groups of different race to land at different spots, each spot appropriate to their way of life. Differing social economies may develop there, and differences of race may be maintained; divergences are found along with the convergence due to the elements common to the whole island and to its history. From prehistory to the coming of Leverhulme we shall find this crossing of influences in the Island microcosm, the Island drama.

2. *Structure and Rock-types of the Western Highlands and Isles*

In Fig. 3 are sketched those features of structure and rock-type which have guided the work of ages of erosion, influencing both the 'plan' and coastlines of Western Scotland and the surfaces and scenery of the land. In their turn, both surface and mineral composition have influenced the life of plants and animals. This sketch map should be compared to an atlas map of relief, settlements and routes. This less familiar aspect has been selected both because rock-type is a factor in the causation of land-forms and soils, and because rock structure is basic to the forms and coasts of the mainland and the Isles.

The parallelism of the main trends on either side of the Minch is seen in the structural boundaries of its coasts, which are of Archaean rock or Archaean foundation (A on Fig. 3), as are Coll and Tiree, and South-west Islay.

THE PEOPLE

HOUGH there are a number of large island communities 181 •
in the British Isles, Harris and Lewis have in particular 621
retained their individual characteristics, mainly because
Minch has acted as a buffer against effective infiltration of
n influences. The relative insularity of the north-west High-
ds has enhanced this isolation, to preserve what is probably
of the oldest forms of communal life in Britain. It has some
que characteristics which are evident even in these days of
histicated civilisation. The basis of life, although today the in- 181
idual is beginning to show face, is a communal spirit, based 476
team-work. Work undertaken with the willing help of others 621
asier, lighter and quicker done: livestock is easier handled in
arge controlled flock; boats are best rowed with a crew. And
women, with the same inborn communal spirit, once spun
n together; waulked or fulled the cloth together; and helped
h other in childbirth, child-care and the deaths which affected
community.

Several of these teams eventually merged to form what is now 181
led the crofting township. And, though a township may nowa- 476
ys number 1,000 people, to keep, if not pull, together is still a 621
ority if the social structure is not to fail. Townships have been 632
ed in the past, by understanding writers, 'sociable hamlets' and
le commonwealths'. Though these are of long standing his-
cally, they are still a dynamic form of social integration of the
d found elsewhere only in working-class districts of cities such
Glasgow and Manchester. This is not to say that one must be
or' in order to participate in such a society. In the material [735]
ld, to be poor is to be without money; in a crofting society,
of money, although this commodity has tended in recent
rs to assume for itself an out-of-proportion standing and status,
s not necessarily mean destitution; for help to keep the body
ther is always to hand, though the donor may never be seen
known.

178 Most of the outward changes which have occurred in the island
262 took place in the two decades just after the first world war. Food, for instance, now tends to be better balanced and contains more nutrients. Staple diets in the past were mostly confined to a few items, and based on the potato. Fish, particularly those with essential oils (eg cod) were, of course, available; but only if the fishermen were lucky in the catch. As for vegetables and fresh fruit, it was not until after the 1920s that these became generally available all the year round.

178 Another outward change has been in dress. Until the beginning
291 of the twenties, the women wore a black petticoat striped with colours, a dark blouse, often with stays, and a knitted muffler round the neck and over the head. In summer, the tartan shawl was more typical of Sunday-wear than of weekdays. Men's clothes tended to be of the homespun type, rich in water-resisting oil. Later these were replaced, so far as the fishermen were concerned, with oilskins, waterproofs and rubber boots. Dress nowadays of course tends to conform to what is displayed in magazines, on the film screen and on television.

178 The changes in the mental characteristics of a people are not
• 181 so obvious. Centuries of generations of long-dead forbears have contributed their accretions to the character of the island people today. It is a complex one. Impressions of the island people as such are few, mainly because observers looked for those economic aspects which gave the society its *raison d'être*. That islandfolk of
*175 former times were fond of music and dancing was the observa-
181 tion of the Rev John Lane Buchanan, who was 'Missionary Minister to the Isles from the Church of Scotland' from 1782 to 1790. In a volume published in 1793, in which he describes his Hebridean experiences, he says that the British laws had been introduced to the Island of Lewis by the Seaforth of that period. [535] The Lewis people, he says, 'since their late happy change from servitude to freedom, by the present noble-minded proprietor, are animated with such life as to meet in companies, regularly each week, at stated places, where both old and young take their turn in this agreeable past-time [dancing], when they exercise themselves with amazing alertness and spirit.' Martin Martin mentions that in his time (*c* 1695) the Lewis people were 'very dextrous in the exercises of swimming, archery, vaulting, or leaping'.

175* in the exercises of swimming, archery, vaulting, or leaping'. He 181 •
also says that they were great lovers of music, and that when he [533]
was in the island he heard of eighteen men who could play the [534]
violin well without having been taught.

The Rev William MacRae, minister of Barvas, writing in the *New Statistical Account*, gives a description of his parishioners (in 1836) which can be applied to all the country districts in the island at that time. After stating that in their habits much clean- [515]
liness can scarcely be expected, considering their poverty and the wretchedness of their habitations, he says:

> Their mode of living most closely approaches the pastoral: without arts, trade, manufacture, navigation, or literature, their whole round of duty consists in securing fuel, in sowing and reaping their scanty crops, and in rearing their flocks, and tending them at pasture. Yet in these limited circumstances, while supplied with food and clothing of the plainest description, and able to pay their rents, their simple cottages are abodes of happiness and contentment. Blue kelt [a thick cloth] is almost the only dress [291]
> worn by the men, and stuffs, variously striped, by the women, with under dresses of plaiding, all home-made. In many instances, however, cotton shirts and print gowns are beginning to supersede the use of some of these articles . . . Their ordinary food con- [262]
> sists of oat and barley meal, potatoes and milk variously prepared. Their domestic economy is frugal and moderate beyond conception. The produce of a foreign soil such as tea, coffee, and sugar, and the common conveniences of art, such as knives, forks, and etc., are to them altogether alien.

It is of interest that the change in dress-types (from woollen [164]
homespuns to cotton fabrics) was followed by an increase in the incidence of rheumatism.

Today, the island folk are reputed to be gloomy with a black, 181
depressive attitude towards life. The editor of the *Stornoway Gazette* has pointed out: 'We cannot understand a people and why they act as they do unless we know the content of their memories. We cannot understand the paradox of the naturally gay in heart seeking religious consolation in a grim and gritty Calvinism. We cannot understand why Lewis, which clothes the world in colourful tweeds, clothes most of the women in noth-

ing but black. The young have found the island a much more kindly place. They have never been forced by circumstances to choose between predestination and despair.'

To take account of matters beyond the material level is inherent in the Gaelic Celt. Celtic poetry and song, legend and folklore, all so alive with fancy and so sympathetic towards the things of nature, reflect the inborn sensitivity and character of the present-day Highlander and Islander. Fiction's caricature of the island-dweller (not only in Harris and Lewis, but in the other islands) has been taken by another society with a different cultural background, with insufficient knowledge of historical facts, as being virtually authentic. The Western Isles have had more than their share of 'observers' who have failed to penetrate to the inner Gael. Only with a knowledge of the background, social, cultural, ethnic, historical and so on, can the 'larger than life' islander be seen in perspective—as a normal human being.

RELIGION

There are few communities in the British Isles which have, since the Christian dawning, so closely integrated religious belief with secular day-to-day living as the Harris and Lewis people. Though many times the religious element in island life foundered in a Sargasso Sea of outright superstition, it has managed to survive to its present-day form which might be described as cathartic in nature. When one attempts to investigate religion and superstition as two separate subjects, one is forced to consider either both as one, or one as complementary to the other. Even in those times during the island's history when materialism was prominent, somewhere in the background religion was acknowledged in one form or another.

As mentioned in Chapter 3, in 1610 Lord Kintail brought Farquhar MacRae, the vicar of Gairloch, to Lewis. The first Earl of Seaforth, who built a church in Stornoway (St Lennan's) was nominally Episcopalian. During the temporary supremacy of Episcopacy in Scotland, there was little disturbance in the Highlands of the Presbyterian organisation. The bishops controlled their dioceses; but the ministers controlled their parishioners. In

eighty visitors each year, but there is nothing similar in Lewis. Hostellers who visit Stornoway can do little more than march through the town to the mail-boat, or else return to Harris by the next bus.

As might be expected, the reading tradition is strong, stemming from a natural desire to learn and from the fact that the ceilidh could only partly satisfy the need for mental stimulation, not to mention the need to alleviate loneliness. A century ago three books were to be found in many island homes: the family Bible, often a massive volume clad in hairy calfskin, *Turus a' Chriosdaidh (Pilgrim's Progress)* and *Gras am Pailteas* (Bunyan's *Grace Abounding*). As horizons became wider a public library was set up in Stornoway in 1907 (see Chapter 8); a library was in fact established there earlier, before 1897, but it was not a free one. In round figures, the 15,400 people of landward Lewis (Lewis excluding Stornoway) borrow some 70,000 books annually, though of course the actual readership figures are higher, books borrowed being passed round the family and exchanged with others until the 'mobile' calls again. The mobile library service was established by the Ross & Cromarty County Council in 1955 for rural villages in thirty-one school districts.

ISLAND EMIGRANTS

For all that the island is a tight-knit community, paradoxically it breeds many men and women whose destinies are not worked out within the confines of its own shores, but at the ends of far horizons. This is typical of most Highland areas: some who leave them make a mark on other societies often greatly exceeding the size of the community they left behind. Many 'great' people are also directly descended from a crofting ancestry; minds and spirits bred in the Highlands and Islands have potential for development not always apparent on native soil but sometimes fully realised in alien surroundings and conditions.

Harris and Lewis have contributed their share, and still do, to the general weal of skill, ability and intellect in all fields of human endeavour. For centuries, the export of brains was normal. Possibly the best known is Sir Alexander MacKenzie, who discovered

rocks about intrusions or dykes of more resistant crinanite. Second, the better nature of the soil derived from the weatherings of the sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point of island history, fanning out to many corners of the world, where it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of Scotland by the Minch, Lewis often went its own way. In the reign of Queen Elizabeth, when England and Sweden plotted against the Scottish crown, the emissaries of these countries met in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In the twenties, the *Metagama*, the *Marloch*, and the *Canada* came to take away almost a generation of young Lewis folk to the new lands across the seas, because their own island could not support them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, the first visit to the town by a reigning monarch. That was a great day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

9 A HARRIS VIGNETTE

LIKE a Siamese twin, Harris is joined to Lewis in eternal geographical union. The junction is at the body, however; the head of each island part has always been clear to develop its own characteristic. Thus, Harris has a quite separate personality which has risen above the common factors it has with Lewis. Both have the same historical origin: the Clan Leoid. This clan comprised two leading tribes, the Siol Torquil (MacLeods of Lewis) and the Siol Tormod (MacLeods of Harris). Tradition has accorded to them a common progenitor, Leod; though by the time history in the Western Isles was old enough for the recorder's pen the two tribes, or families, were distinct and independent of each other. Malcolm, son of Tormod MacLeod, head of Siol Tormod, had a charter from David II for the lands of Glenelg, on the Scottish mainland, which he and his successors held from the Crown. Also included in his possessions were Skye and Harris, which came to his family after the forfeiture of the Lords of the Isles in 1493. The MacLeods of Harris have, rather strangely, their clan seat at Dunvegan on Skye, and are more commonly known as the MacLeods of Dunvegan or Skye, though 'of Harris' is their correct title.

The MacLeods were, by and large, good proprietors. They held much fertile land and the clan was reasonably wealthy. Tenants' rents were paid mostly in Scots money and, to a lesser extent, in such farm produce as oats, barley, cheese, butter, wedders and marts, and in labour services. When times were hard for the tenants their rents were often 'eased' by the chief in the hope that subsequent years might prove more fruitful and that the eased rents would be paid in time. In 1705, a bad year, MacLeod actually cancelled 'eases' owing by the Harris tenants, as a gesture to them. In 1712, when some disaster had visited the St Kildans (the islands belonged to MacLeod), their chief provided them with a new boat and the islanders were allowed a two-year delay in payment of their rents to help the recovery of the community.

A HARRIS VIGNETTE

Other tombs inside the church include that of Mary MacLeod, a bardess of the seventeenth century who was also governess to the young MacLeods at Dunvegan. She was probably the first to compose what may be called the 'court' song, in simple words and in the 'strophic' verse-form of rhythm and assonance enjoyed by all Gaels since her time. Her last elegy was composed to Sir Norman MacLeod of Berneray in 1705.

So far as personal characteristics are concerned, there is a marked difference between the Herrach (Harrisman) and the Leodhasach (Lewisman). Their Gaelic dialects are different, the Harris pronunciation being much softer, with an attractive singing lilt. And Harris Gaelic has fewer words of Norse origin. The main reason for this difference has been a topographical one: before a road was cut, the mountain barrier of north Harris divided the inhabitants of the two parts of the same island, who developed in their own distinctive ways.

The character of the land of Harris has also had much to do with the difference. Harris for the most part is infertile, with great expanses of rock outcrops. The east side of the island is torn in shreds by fiord-like sea-mouths; the west coast is slow-moving, with large expanses of sand and machar-land which look out over the Atlantic breakers rolling in from a sea that is oceanic in appearance and in fact. From early times the Harris folk have had to work hard to scarify their snippets of land to make it fertile. Regular increases in population forced them to cultivate land extending up to 500 feet above sea level in some places, in the form of hard-won lazy-beds. After the clearances early last century, when the more fertile lands on the west coast were taken over for the formation of sheep farms, the people concentrated on the eastern side of the island, and on some of the higher ground in the west.

On Lord Leverhulme's death in 1925 the ownership of large tracts of Harris passed to absentee landlords. After this, some of the lands which had been cleared a century earlier were purchased by the Government and broken up into crofts again, enabling some of the indigenous population to come back to make use of the more fertile lands of the west. There are some 550 crofts in Harris, with 29 regulated common grazings; the total

SCALPAY

the community generally—in particular for a landing stage in the North Harbour. The lighthouse at Eilean Glas, Scalpay, was in fact erected as long ago as 1788; for a long time it was the only lighthouse in the Western Isles. In 1792 it was described as 'one of great utility to the numerous shipping that frequent this channel [between Skye and the Long Island] on their voyages to and from the Baltic'.

The independence of the islanders again appears in their attitude to the education facilities provided for their children. In 1949 Scalpay parents staged a school strike in protest against the delay in the construction of a road to the school. At present the island has a junior secondary school but in 1966 the Inverness-shire County Council Education Committee proposed the transfer of the island pupils to the school at Tarbert; this would mean each child rising early in the morning to face a trip across Scalpay Sound and then a road journey to Tarbert. The inevitable protests against this proposal were rooted in its deeper implications. The school roll on Scalpay (70 pupils) has maintained a remarkable level of continuity over the years, reflecting the general prosperity of the island. Forced attendance at a remote educational facility, the islanders maintain, will introduce an unsettling urban element into their children's adult views.

The smaller islands

To the west of Scalpay, in East Loch Tarbert, is the one-square-mile island of Scotosay. Its population was 14 in 1861, none in 1881, 18 in 1891, 15 in 1901, and 20 in 1911. In 1921 7 males and 12 females lived there, but none permanently since.

On the west of the Harris mainland is a high rocky island, four miles by one, called Taransay. In 1549 Dean Monro described it as being 'well inhabit and manurit', a place where people delved with spades, and with good barley and corn, and fishing. There are two old chapels and a burying ground on the island. The population of Taransay has declined to a handful through the years; its peak was 76 in 1911.

The Sound of Harris is 'a chaos of rocks and islands', so numerous that they cannot easily be counted. Some are mere pinpoints of rock; others once supported small populations. Nearest to the

NORTH RONA

Though the island is but a great lump of rock, Dean Monro says that in his time an abundance of corn was grown, by delving only, and an abundance of clover-grass for sheep. The island also produced a fine bere-meal which the islanders stuffed into the skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest Christian building in Britain remaining in its original state, Monro says: 'As the ancients of the country allege, they leave a spade and a shuil [shovel] when any man dies, and upon the morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

> The people repeat the Lord's Prayer, Creed, and the Ten Commandments in the Chapel every Sunday morning. They have cows, sheep, barley, oats, and live a harmless life, being perfectly ignorant of most of those vices that abound in the world. They know nothing of money or gold, having no occasion for either; they neither sell nor buy, but only barter for such little things as they want; they covet no wealth, being fully content and satisfied with food and raiment; though at the same time they are very precise in the matter of property among themselves; for none of them will by any means allow his neighbour to fish within his property . . . They concern not themselves about the rest of mankind except the inhabitants in the north part of Lewis. They take their surname from the colour of the sky, rainbow, and clouds. There are only five families in this small island, and every tenant has his dwelling-house, a barn, a house where their best effects are preserved, a house for their cattle, and a porch on each side to keep off the rain or snow. Their houses are built with stone and thatched with straw . . . When any one of them comes to Lewis, which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm of rats landed on the island and consumed virtually all the food. A few months later, some seamen landed and robbed the islanders of their only bull. 'These misfortunes and the want of supply from Lewis for the space of a year occasioned the death of all that ancient race of people.' Some years afterwards a new colony was sent to the island. In 1796, at the time of the *Old Statistical*

ST KILDA

and to show their friends at home, that they had braved the hazardous Atlantic seas to visit St Kilda on the very edge of the world. The tourists were charitable, but this brought a psychological evil in its wake. In 1886, Robert Connel wrote: 'One cannot be long on the island without discovering the great moral injury that tourists and sentimentalists and yachtsmen, with pocketful of money, are working upon a kindly and simple people.' It was estimated that the islanders collectively derived a profit of 5s from each of the 200 or more tourists who arrived during the short summer.

The new influx of cash into a community which required money as an exchange commodity because the original native produce was becoming less saleable, hastened the decline of effort to be self-supporting. The numbers of seabirds slaughtered steadily fell; paraffin oil replaced the traditional bird oil in St Kildan lamps. The need for daily work, to toil in fellowship with others, was dissipated; the islanders could purchase most of the food they required, provided communications with the mainland were maintained. The population was in any case dwindling, as St Kildans became more aware of 'the other life' available on the mainland of Britain.

Finally, on a misty summer's day in August 1930, at a cost to the nation of little under £1,000, St Kilda was left to the care and keeping of the changeless Atlantic. It is now preserved by the National Trust for Scotland as a crumbling monument to a small human tragedy of a kind that has been repeated, and will be repeated, in other small communities who cannot argue out the case for their survival in terms of economic viability. The island is now occupied by military personnel in connection with the Hebridean rocket range on South Uist.

St Kildans were described by Dean Monro, in 1549, as 'simple, poor folk, scarce learned in any religion'. In 1698, Martin Martin published *A Late Voyage to St Kilda*. He went there in the company of a minister who had been summoned to the island to denounce a certain false prophet who had risen among the 180 inhabitants (pretending he was an emissary of St John the Baptist). Martin found, as did later visitors, that the island economy and the quality of its life were closely dependent upon its birds,

THE OTHER ISLANDS

even to the extent that the St Kildans used their observations of the flights of birds both as compass and as omen for good or evil. Martin speaks of the islands with amusement and admiration. He indicates that the community was backward in some ways: they were illiterate, and wondered naïvely at the newcomers and their manners. 'The inhabitants of St Kilda are much happier than the generality of mankind, as being the almost only people in the world who feel the sweetness of true liberty.'

In May 1877, when the local tourist trade had hardly started, HMS *Flirt* sailed from Greenock with food to relieve hardship among the St Kildans, and an officer of the Highland & Island Agricultural Society on board reported that 'Tobacco was what they invariably asked for'. The ordinary diet of the island consisted of, for breakfast, porridge and milk; for dinner, potatoes and the flesh of fulmar, or mutton and, occasionally, fish; for supper, porridge when meal was plentiful. Seabirds' eggs, from March onwards, also formed a staple food. Tea was taken once or twice a week and the islanders were reported to be 'rather fond of it'. There were eighteen inhabited houses, sixteen of which had zinc roofs, two being thatched huts. The sixteen new cottages had been erected about 1863, 'and are certainly much superior to the inhabitations of the same class of tenants anywhere in the Western Isles'. All were well furnished, peat was used for fuel and there were two watches and one clock on the island. There were some seventy-five islanders; most of the men were old, and only two of them were unmarried, with twelve spinsters still to choose from. All read the Gaelic Bible. The men were mostly tailors, shoemakers and weavers; every house had a loom. They made all their own clothing, the men also making the women's dresses, and a good deal of blanketing and tweed cloth was made and sold. Nearly every house had a spinning wheel and a large pot in which the yarn was dyed. The women were expert knitters. Each croft and house was rented at £2 annually, sheep being charged for at the rate of 9d per head; these charges were usually paid in kind.

Feathers of the sea fowl formed the principal export of the island. The factor paid 6s per stone of 24 lb for black feathers; and 5s per stone for grey. For these he received, in Edinburgh or

11 ISLAND LIFE

181 As one might expect with an island that is not obviously surrounded with water, life in Harris and Lewis is lived out by an amalgam of communities somewhat similar to those found in very large cities, with defineable districts and recognisable boundaries. The island is too large for any physical feature to demonstrate that it is unconnected with a larger land mass. One looks to the horizon, down the coasts, at the satellite islands, and concludes that if indeed it is an island, the separate elements which combine to make an islander must be found elsewhere than in the landscape. And so they are: in the people, their way of living, their economic problems, their attitudes, and their own consciousness of the fact that distance over the hills and the moors to the sea is significant, in that one eventually comes to the end of a road or track; or that a river or stream runs itself out for ever into the sea. Harris and Lewis is the biggest of all the 'small' 161 islands off the shores of Britain, and has been fortunate in its 167 size: large enough to support a significant number of people who, despite emigration, have managed to maintain their numbers reasonably well and who are now making efforts to reduce emigration and its effects on the island communities to a bearable level.

179 Because it is an island, however, external influences are felt like cold winter winds. The 1966 seamen's strike was an example; Government intervention was needed to supply essential goods. After the strike many questions were asked. All had their roots in the island's dependence on the outside for not a few of the necessities which could be produced on Harris and Lewis itself, with either its own resources or the resourcefulness of the island 511 folk. To be short of fish, for instance—and this occurred—while 174 the seas around the island were teeming, was unhappy history repeating itself, a harking back to former times when starvation levels could have been avoided by looking around for the means to harvest the crop lying around. The strike also threw into relief the question of the viability of crofting as a full-time occupation.

PREFACE

121 It was after the end of the First World War and the
101 home-coming of the men—all too few in number after heavy losses—that I first came to know Lewis-and-Harris. Later, in the years between the two World Wars and during the Second World War, I returned to study the people's heritage and survey the Island problems and, if it might be, find solutions. Work on a West Highland farm had already made me aware of the hardships and potentialities of land and sea; of the meaning of life in field and home for farm-team and family; of the reality of the Gaelic heritage—communal, bardic and religious.
121 Wider surveys made me aware of common elements
171 throughout Scotland and the North and West of the British Isles, despite the historic contrasts from the Hebrides to
178 the Lowlands, and beyond. In the Hebrides are found an elemental simplicity of environment; an early crystallisation of culture and religion, with continuity; a recent and contemporary coming of revolutionary change. These form an interpretative chain of evidence—geographical, traditional and historical—unique in the British Isles. Hence throughout this book, from the basic maps and explanatory text to the later chapters, an interpretation of the Island and its community is linked to that of the Highlands, Scotland and the British Isles as a whole.

121 As many a Scot of crofting stock has found, when he
• 181 shares in the work of a glen by day—on the low ground and the hill, alone or with others of a team—and joins in the fireside talk and Gaelic song when night has fallen, he

PREFACE

121 discovers the strength of community life. And by his
• 181 renewal of 'racial' experience he may rediscover sides of his own nature untouched by an urban task or a rural
128 holiday. Hence a book such as this inevitably, and I think rightly, contains much that has been felt in a personal way. Yet to offset personal limitations, there is needed objective survey, geographical and social, applied with an open mind and submitted to searching criticism. These two sides, personal and impersonal, I have tried to combine.

114 The initiation of this work owes much to others, in ways of which they were never to know: to the chieftain, farmer and scholar, James Archibald Campbell of Barbreck, to my brother Alasdair, to my father, Patrick Geddes, who suggested in 1919 to the first Lord Leverhulme that Marcel Hardy, scientist and farmer, should survey the land in Lewis-and-Harris; to Lord Leverhulme, and to Dr. Hardy himself, whom I then assisted. To Mr. T. B. Macaulay, LL.D., was due the suggestion and the plea, made ten years later, that I should bring up to date Dr. Hardy's MS. report.

121 It was because of Dr. Macaulay's faith in the Island's future and the aid he generously gave to experiments in the reclamation of peat, and also because of the Islanders' own response to his lead, that I accepted this voluntary task. Acceptance, as it proved, was rash. Except for certain valuable findings included under Dr. Hardy's name, a new work had to be written. These circumstances led to the
101 making of the book, stretched over thirty-five years. Certain
178 early hopes recorded here have been frustrated. On the other hand, developments have taken place which few could have foreseen but for their faith in the future of the Island and its people. I trust that in this book the advantages of slow growth outweigh the drawbacks, for time

CHAPTER I

ENVIRONMENT AND LANDSCAPE

(a) THE GEOGRAPHIC SETTING: THE BRITISH ISLES, SCOTLAND AND THE HIGHLANDS AND ISLES

1. A 'Heart' of the 'North and West' of Britain

• 181 In the 'Outer' Hebrides, commonly regarded as the
131 most 'outlying' inhabited lands of the British Isles,
133 are revealed not only the most ancient of British rocks,
174 the Archaean, but probably the oldest form of communal life in Britain. This life, in present and past, will interest

102
131
133

FIG. 1.—Global view of the 'Outer' Hebrides, seen as the heart of the 'North and West' of Britain.

• 181 some by characteristics which may seem unique. But it
171 will interest others by features of underlying universality.
153 These might be compared to the Archaean rock, overlain toward the south-east by a succession of younger strata, but forming their foundation.

181 In this rocky land, the roots of Island life are laid
182 bare; the rhythm of work responds to the day's weather and the cycle of the year. Yet the flowering of communal life in song and spiritual tradition may offer a fresh vision of regional, even of national, being. Indeed it is in characteristics latent in the evolution of the whole 'North and West' of the British Isles that Island life is most revealing.

131 Rising in imagination to a point above the summits of
133 the Harris hills, and viewing the British Isles from the far 'north-west, we gain a new perspective (Fig. 1). The Island below us is now the nearest; the 'Outer' Isles,
182 the innermost. To us now, as to the Islesmen, their Island home is no mere fringe, but a heart of Britain.

101 Thence, looking to the lands across the Minch, each
133 further from the Isles of home, there appear, in turn, three regions: (1) the rest of the Highlands and Isles; (2) the Lowlands and Uplands of Scotland; and (3) Ireland, Wales and Cornwall, and Northern England—all sculptured in rocks older than those of the Lowland or 'Plain' of England beyond. These three roughly concentric regions, from Harris to the edge of the 'Plain', may be grouped together with the intervening estuarine lowlands—not only Clydeside and the Solway but the 'firth-land' of Mersey-and-Deeside, and that of the Bristol Channel. To these, one might add the shores of an outer Minch, the *Manche* or 'English' Channel, which once linked Devon and Cornwall to Armorica. Beyond

174 to notice the absorption or suppression of rights held in
621 common in 'the North and West', together with the
631 abolition of the duties of fellow-workers to one another.
178 Too frequently they have not troubled to enquire into the former existence of common rights and fellowship duties,
184 the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

178 Indeed, the profound character of that revolution makes
184 it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the
428 long succession from father to son, found from end to end
166 of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern
• 181 England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of
291 the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago.
171 And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

CONTINUED ON NEXT FICHE

CONTINUED FROM PRECEDING FICHE

621 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral com-
174 munities by well-armed raiders of many races, including
[172] the Celtic-speaking swordsmen of the Iron Age. The last and most notable of these conquering raiders were the Norsemen. Their influence was profound, whether, sailing direct from the Scandinavian forest settlements and fjords, they raided and settled as heathen Viking crews, or, at a later stage, they invaded England from Normandy—that fertile province which they had made theirs in fact and name—under the panoply of civilisation and with Papal benediction. A generation after the Conquest they commenced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
• 181 to a lord, of stoutly equalitarian thinking bound up with fervid admiration for an aristocracy, is nowhere more
[614] marked than among the Gael. They sought to reconcile these conflicting loyalties by claiming common ancestry for chief and people, as the children (*clann*) of a hero of history or myth. The years 1945–47, which marked a centenary of the last of the desperate Jacobite Risings, stood at the close of the latest of many wars in which fame has been won for the symbol of clanship—the tartan, long proscribed (by the Act of 1747) 'to every man and boy in the Highlands'. At such a time, the Gaels' loyalty to the death cannot be forgotten although old kings, old
[121] chiefs have gone. But its paradox must not only be re-
[182] membered but understood, from its roots in communal life and environment through history. Not until this is
[184] done can important phases of our own time be understood, such as the failure of Lord Leverhulme's seven years' endeavour in Lewis; nor can the present opportunity of Highland renewal be grasped by the help of

• 181 democratic reorganisation, with loyalty to one's fellows and
185 to a leader.

Here again, Lewis-and-Harris may have something to
178 teach, as one of the last communities in Britain in which
185 much of ancient common right over land and sea has been upheld. Trust ownership of Stornoway estate has strength-
[174] ened the possibilities of rural planning there, while the
[423] fisheries are a public resource which are partially protected for local fishermen inshore and farther out are closed to none. The useful Lewis Association has published models of local survey for social and economic planning. At a time when democracy is struggling to see its way towards economic and social freedom, such communal initiatives have more than local significance.

121 This sketch of comparisons and questions in rural life
131 raised by Hebridean evidence, through a wide and varied region of the British Isles, must serve to indicate the geo-
182 graphic setting of the Island and relate the historic and contemporary problems of its own community to wider fields. This book is not directly concerned with the urban and industrial problems of the firth-sides and 'included plains' within the varied land of 'the North and West' of Britain, deeply though they affect the hard-hit fishermen of the Isles and the Island migrants—seamen or labourers, tradesmen or factory workers, nurses, teachers or clergy.
121 Even for the migrants' sake, it is vital to maintain the
185 economic balance, and restore the cultural and spiritual life within each industrial region, in order to maintain that of Britain as a whole. It was not enough to schedule 'the murdered towns' of Tyneside, Wales, Lancashire or Clydeside as 'Distressed', 'Special or Development Areas'. The balance of Britain as a whole must be restored.

3. *The Significance of Lewis-and-Harris*

• 181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
101 from the Lowlands—the other mainly of farming, living nearer to the Lowlands and in touch with them. Through-
[197] out the North-west, Gaelic is still the common speech,
[178] even of the children. The old community feeling is strong; it is that, indeed, which keeps the people attached to the villages.

101 From the plains and cities of the South it is a far cry
to *Ultima Thule*, as Lewis, like Zetland, is sometimes called
131 even by its own people. Lying some twenty-five to thirty miles across the Minch from the mainland, its nearest links
[496] with the South lie even farther away. From Stornoway it is some seventy-five miles to Kyle of Lochalsh, the rail-
head for Inverness and North-east Scotland, and 100 miles to Mallaig, the railhead for Fort William and Glasgow. To reach Stornoway over the moors from the west coast
[504] townships is itself a journey. Stornoway is the Island's only port, though passengers are put off at Tarbert, at
[177] Stockinish and at Rodel in Harris. Isolation has always
[178] been a dominant factor in the Island's life. From pre-history through the Middle Ages to modern times, that factor played its changing part.

178 In Lewis, conditions had changed less than elsewhere during the last century; for example, the *New Statistical Account* of South-west Argyll in 1830–35 reads like a description of conditions in Lewis as they were until after 1914! Hence, as already said, the contrasts are very great indeed in the aspect of the country, its fields and houses, and in the number, character and ways of the people. It

233 away, and for a shorter period. The sheep wander over
311 the moors all the year round, though they hang about the crofts when the winter is severe.

221 A comparison with mountainous Norway or the Alps
132 and their high summer pastures suggests itself; but in Lewis altitude is almost negligible, and the shielings may
171 lie only two to five hundred feet above that of the crofts
[133] beside the shore. The difference between winter and
[311] summer is in any case less, snow being rare and the conditions being such that even in summer the shieling pasture remains poor. Hence it is that while modern Norse and Alpine economy still maintain the summer pasture, the shielings have died out in the Highlands and are slowly decaying in Lewis. Seasonally, stock are transported over longer distances, from Highland to Lowland pastures.

• 181 Reasons for the continuance of these and other crofting
[178] ways, or for their abandonment, are not of an economic order alone: not only the remuneration received for labour,
[461] but the feeling for the work counts enormously. Visiting a couple of distant shielings in the summer of 1919, I found that two lads newly home from the Navy had come up from their village 'for a holiday', bringing rods for trout-fishing and high spirits for play. By day they fished or flirted. By night they slept in one of the two shielings, while the two laughing lasses they had come to visit shared the none too wide couch of the other shieling with the two older women there. One of these was a matron with a motherly twinkle in her eye, the other was a spinster in whose eyes there shone a memorably vivid light; she was the sister (as I found later) of a noted minister on the mainland. The bare simplicity of shieling life is traditionally softened by fellowship and a gaiety that is not beyond
[538] control. A Lowland poet once coined a famous phrase,

• 181 "the lone shieling of the misty island". Traditional
[538] Gaelic songs tell rather of shielings grouped within hail,
[533] with their sweethearting and good cheer!

3. *Crops and Stock*, circa *1938*

178 As the thirties mark a transition between early condi-
241 tions prevailing until 1919 and those of 1947–53 (Appendix I), the present tense is used.

311 Of the Island's 528,000 acres, including deer forests
632 on the Harris border partly grazed, there are 24,000 acres of arable and grass land. Barvas parish leads with 6500 acres, then come Stornoway, Uig and Lochs, Harris being last with 3300 acres. Roughly one-third of the Island's arable and grass land, or 32 per cent, is permanent grass, chiefly machar, with a maximum of 39 per cent in Uig, but a minimum of 9 per cent in rocky
311 Lochs, most of this on one small farm. About 10 per cent of the arable and grass land area is given to hay
24 production; of this, rather less than one-third is rotation hay grown on the plough rigs or parks, and rather more than two-thirds is hay from permanent grass. Lochs, lacking machar, has 20 per cent hay, while Barvas, better
[632] off for machar, has only 4 per cent. Even this proportion of rotation hay shows an increase on the crofts since 1919. Stornoway parish, it will be noted, occupies an intermediate place, but if the facts for Point (Eye) district were contrasted with those for the villages along the machar, the differences between them would emerge clearly. As it is, they can be guessed from the vegetation map showing
311 the machar. Oats is the chief crop, and occupies 33 per
243 cent or just one-third of the arable and grass of the Island; excluding the permanent grass, it constitutes half the crop.

174 to bleed or to set bones, while some elderly woman would
175 serve as physician and midwife. Spiritual consolation
462 and renewal too could be found, even in the absence of monk or nun, or of priest, minister or catechist. Enough
[463] here, that with agriculture and fishing, most crafts, except
[759] metal-work, were practised in every family. The 'range of skills' was therefore wider and richer in latent art than
[793] might be supposed from those needed on a little croft today.
[593] Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

174 Their labours through the annual rhythm of the seasons
462 might be classed as efforts for the man and endurance for the women (Fig. 9). Man's muscular strength and free-
221 dom of limb rouse him to efforts demanded by the thrust
• [181] and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

[538] This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

after 1800, John Walker wrote that run-rig, "formerly very general in Scotland, was abolished with improvements but still subsists in many parts of the North. A number of tenants of the same farm have a common pasture for their cattle, and the arable is divided among them, by ridge and ridge alternately, which each cultivates for his own behoof. This gives them all a common interest in the crop and, when there was no inclosure by dyke or hedge, might be of some advantage" in giving each person some protection "against the encroachments of his neighbour's cattle". Speaking of joint possession this time, though without reference to survivals, Walker wrote that in the Lowlands "in old times a large farm might be occupied by a number of conjoint tenants who cultivated the farm in common and divided the produce. In this way the interest of each became the interest of the whole. They were ready, and were frequently called upon, to defend the common crop and cattle against depredations. There was then a necessity for such an allotment of land, especially in the Border country and in the Highlands." The team, in other words, was a unit of defence. But "nothing like improvement can be expected from farmers placed in this situation . . . [and] no community can ever equal the carefulness and industry of an individual in the management of his affairs".[1]

So far as it goes, such an analysis is incontrovertible; for Walker was one of many contemporary observers who could contrast both the "improvement, industry and carefulness" of the best individuals under a vigorous landlord, with the sluggishness of old-fashioned ways on backward estates. The fundamental reason for sluggishness was that

[1] John Walker, *Oeconomical History* [descriptive account] *of the Hebrides*, 1808.

the cultivable land and pasture having been shared out to minimal fractions, they called for a minimum of labour by the men—though housewives and mothers had always plenty to do. The morrow's tryst for work might prove a tryst with no work done. The men might foregather on the moor to cut peats, for instance, but if one of their number was late, become so absorbed by telling stories of the Fenians that, ere work had begun, it was time to go home—resolved to meet for work some other day! As a result, reformers advocated breaking-up the joint-holdings; and this was done in Lewis by 1830, as noted in the Brand Report. But mere division of the land did not increase its total amount.

Yet while noting the progress made by the liberation of individual initiative, we can see the drawbacks of individualism: the evictions made with no provision for new homes, and later the monotony and the loneliness of modern farm life, the mutual distrust of employer and employee, and the general inability of farmers, as yet, to co-operate. At the present, when planning, purchase and sale are required on a large scale, particularly among small-holders, the interest of each is still "the interest of the whole". The team-spirit must be recovered from the work (not simply the play) of school onwards to further education and communal effort.

To sum up, every farm-hamlet was held jointly and on equal terms, each joint holder being responsible for an equal share of the rent, and the movable run-rig system ensuring equal quality, as well as equal quantity, of land. Common interest was assured, and there was mutual support in distress or sickness, as when one member, named in a deposition of 1718, was 'valetudinary'. Lastly, work was done in common not only when it led to efficiency

embracing several hamlets. Yet the strength of community life sprang from co-operation in the farm-team and in the boat's crew.

With the passing of the joint farm the greatest disciplinary factor for work in common passed away from agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(8) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

Of the crofters' manner of deciding communal affairs in Uist, Carmichael wrote, in 1884, that these meetings "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy towards one another. There was one regular official known as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

a night of black mistiness . . . he waded nearly breast-high" through the dangerous South Ford of Benbecula, "conscious only of the roll and the singing of waters and the rhythm of a poem he had taken down a few hours before"—"The Invocation of the Graces", so nearly lost with him! Much that Carmichael learned was given him under a seal of confidence he never broke, although he mourned the loss this meant. The confidence he inspired—which even those who knew him only in their childhood remember for life—was a source of his quiet, unfailing power.

The following begins with the runes and rites of labour, throughout the day, week and year, on land and sea and at home. Turning to the day of rest and to congregational worship, one must enquire as to the presence of the clergy, and question closely how far the people had access to the Bible throughout the centuries: were they really cut off from its riches, from its essence, as the Reformers and the Evangelicals of last century asserted with such vehemence? One can then turn to the runes and rites which opened the phases of life, from birth to maturity, marriage and parenthood, leading at last to life's close.

But no social inheritance is without its burden. Having told of the foundations of faith, something must be said in the next chapter of the negative or superstitious side of Island belief, of temptations and evils which the people could face, and of others to which they submitted in ignorance. From the evidence of faith and wisdom, or error, one must attempt some evaluation of attainment by single souls and by the community, and of the power and fullness of life in common.

175 earth shone, The wave shone on the shore; The deer of
796 the mountain steep shone. . . ."[1]

533 "The Christ Child's Lullaby" is a lovely carol narrat-
ing the Christmas tale. Legend tells that it was sung by
175 'Mary-Mother' herself to an unwanted stepchild lost on
796 the moors, where his stepmother found him in the arms
533 of Mary, who sang as she lulled him. The stepmother
773 cherished this song with the lost child, henceforth loved as her own.[2] The poetry of the Gael, like the odes of Greece and the Psalms of the Hebrews, is luminous with the vision of mountains, land and sea, reflecting a light within that of sun or moon, and sonorous with the rhythm of wave, tide and season which are "of all ages and to all time,
•[181] *gach linn gu brath*". Its adoration is full of nature and of humanity, yet it soars above mere nature worship or anthropomorphism.

175 While Christmas, more than any, was a festival of
796 leisure, others were closely linked to labour. The festival dates of Candlemas or Lent, of Saint Bride's, Saint Patrick's or Lady Day, marked the stages of spring's coming and the duties they brought. Summer came in at Beltane—held in May, though the word included other dates connected with spring fire; and on St. John's Day

113 [1] Donald Macdonald, M.A., MS. essay for the Royal Scot. Geog. Society.
[2] A short version is published in the *Songs of the Hebrides*, vol. i. A translator may choose from its 29 stanzas—though all are true to the Gospel and worth translation. Of the simple choral variant of the air (as published) Fr. Allan Macdonald told Miss Amy Murray his grief that it had superseded the melodic variety given to the Lullaby when sung by one singer at a time (*Celtic Review*, 1905–6). From three variants noted from oral singing one can arrange a melodic sequence. To pass from a major variant (set to stanzas on Jesus's mother, the shepherds and the 'kings') to minor variants (set to the tale of Herod's evil deeds) restores much of the dramatic intensity of this noble carol. Only deep feeling for the Gospels could create and maintain, without written help, so full a version of the words and variety of associated melody. (The complete words, *Taladh Chriosta*, are in Fr. Allan Macdonald's collection, p. 7.)

776 fellowship. "The Irish Church", a Roman is said to
171 have exclaimed to a Gaelic Catholic in scorn, "has won
174 no martyr's crown!" "Ireland was named the Isle of Saints not by persecuting but by cherishing God's elect", was the reply. The Celtic Church linked the lands across St. Patrick's Channel; and what was true of Patrick's missionary field seems to have been as true of Celtic Britain, the land of his birth. Kilpatrick on the Roman Wall of Clyde has been claimed as the birthplace of one who was certainly a Cymric Celt by birth and baptism, a Gaul by training, and an Irishman by mission.[1]

771 This closeness of fellowship ranged from personal to divine relationships in waking or rest, with an intimacy of
[782] expression all its own. A prayer for rest begins, "I shall lie down with God, and God lie down with me. . . ." A
•[181] simple and universal gesture of love, in which parent, child or lover slips an arm under the loved one's head, is carried into prayer at rest, "the arm of the Father", or
779 of Jesus or Mary, "under my head". This image must be the inspiration of one of the loveliest of Christian tombs,
764 preserved by clan loyalty, respect for the dead, distance
532 and later forgetfulness on the priory isle of Inchmahome, where the Highlands meet the Lowlands at the Lake of Menteith. As on a number of medieval monuments, knight and lady are sculptured side by side. But here the two lie each with "an arm under the other's head", the free arm of the knight reaching over to clasp hands

[1] While in Scotland the name Bride is now rare as a Christian name, that of Patrick is still found among Grants, Campbells, Macdonalds and others. It is even commoner than English speakers might suppose, owing to the practice—almost the necessity—of giving an English form to a Gaelic name when it is turned to English speech—as Daniel for Domhnuil (Donald), Aeneas for Aonghas (Angus) or Peter for Padhruig (Patrick). Many a Gael in the Lowlands felt obliged to relinquish his baptismal (and ancestral) names, with their link to Celtic Christian tradition.

779 with his spouse. The knight, the first Stewart Earl of
764 Menteith, had died four years after his wife, in 1294.
532 Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness.

175 The following year, 1295, saw the commencement of "the
644 three hundred years war" with its repeated destruction of Scottish arts and traditions of peace. Under King
[829] Alexander III, "that Scotland led in luve and law", peace within the kingdom of Scots allowed a union embracing
[648] Gaelic Christian traditions and Scoto-Norman arts. After his death this became all but impossible. So far as scholars
•181 can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts of Scotland, hitherto in touch with European achievement, were shattered by invasions, and Gaelic tradition was only to be maintained by the very poor, whose debtors, for all time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the wish for Confession to a priest, followed by Supreme Unction for the attainment of 'Happy death', *Bas sona*.[2]
[174] In early times confession seems to have been made as willingly to the 'Soul-friend', followed by Benediction.
764 When death had come, the mourners sang of sleep and home. In Lewis today funerals are conducted in silence to the graveside, where the last service is held; but

[113] [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory:
[171] pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

175 The advent of the Reformers to the Island may at first
798 have seemed less revolutionary to the people than has generally been suggested by historians of either the new
• 181 Church or the old. Ministering to one another, the people
779 had not, like the city-dwellers of their time, enjoyed—or suffered—a multiplicity of offices, administered by priests whose ways of living might be a scandal. The Mass heard in Latin was incomprehensible to those of Celtic (or Teutonic) speech without the aid of translation into the vernacular—an aid now universal among literate Roman Catholics. Most of these offices, such as auricular confession to a priest to obtain absolution, with masses for the dead, indulgences and the like, were performed for payments prohibitive to the poor. The Islesfolk, for the most part, lived far both from the orthodox practices of the Latin Church and from the more flagrant abuses against which a minority of the old Church had protested in vain. Hence the transition to early Protestant liturgy would not be too painful. In prolonged isolation, the Gaelic people, perforce, had lived the life of the Lollard and Protestant doctrine of "the Priesthood of all believers".

175 After the Reformation the people were bewildered by
181 the mutual condemnation of Presbyterian, Episcopalian
798 and Jesuit, and torn to the quick when all three parties in turn denounced so much that they themselves held dear. The more the rival clergy confused and wounded their minds, the harder it was for younger generations to discern ancient Gaelic wisdom and discard superstition; and the easier to fall into credulous and secretive repetition of rhymes and strings of holy names. The scorn of the wealthy for simple rites and of the book-learned for the symbols of old speech would add to confusion rather than aid discrimination. As pious and understanding crofters

complained in Carmichael's own time, mockery is hard to withstand. One can only guess, as yet, what were the real effects of the decadence of Rome and the impact of the Reformation upon the landward communities of the Lowlands and Northern Isles. But the records of the Western Isles leave no doubt as to the onset of this spiritual tragedy among the Gael, of which Carmichael and others saw the later acts and of which one still finds the epilogue.

The grim desperation of the religious and civil wars, and their persecutions—crucifixions made by every side in the name of the Cross—caused faith to be disastrously shaken. Superstition rushed into the widening cracks in older belief, aided by important sects of clergy. In the Highlands, 'witch' torture was never carried to the lengths it reached in the cities, though the last 'witch'-burning in Scotland may have occurred in east Sutherland (P. Hume Brown, *History*, ii, 1912, p. 451). But the frenzy of witch-hunting by ministers in the Lowlands, during the widespread evictions and social anarchy of the post-Reformation period, suggests that the Adventurers' invasion of the Lews, followed by the arrival of new masters and Presbyterian ministers after 1600, must have aroused morbid, anti-social fears. Lewis certainly suffered from fear of the evil eye as late as the nineteenth, and even this, century.

We have to face the effects on the people of religious strife. To ardent Reformers the Blessed Sacrament of the Roman Church was a 'Jack-in-the-box'; and at the climax of the Mass, the elevation of the Host—the moment of 'transubstantiation' with its literal interpretation of the words, "This is my flesh" (*Hoc est corpus meum*)—was so much 'hocus-pocus'.[1] Conversely, to Roman Catholics

[1] J. H. Matthews, *The Folklore of the Mass*, p. 96, 1903 (Catholic Truth Society).

much of Protestantism was a denial of Christianity. Holders of all these forms of Trinitarian belief have united in condemning Unitarianism as heresy, its earlier Arian form having been stamped out in blood. The 'heterodox' are held by the orthodox of many Churches to be awaiting eternal torture. To a thoughtful humanist like Sir James Frazer, on the other hand, the belief that one alone by suffering can atone for the sins of others is of the deepest significance, as being an ancient, widespread and 'pathetic fallacy'. Happily, one finds the greatest tolerance and sympathy where Protestant and Catholic are mixed in the Isles. Elsewhere, too, sympathy and reverent enquiry are taking the place of dogmatic assertion.[1] It is in this spirit that we can best understand Gaelic beliefs at their highest, and so distinguish their lowered use—or misuse for selfish ends—from the highest use of sacrament and prayer by the pure of mind and heart.

(B) RELIGION, MAGIC AND SUPERSTITION IN DAILY LIFE

Evil ends might be sought by means of the ancient runes: the power of their poetry and associations could tempt to perverted use. Carmichael tells how in Uist a malefactor, in terror of the law, went to a needy woman, and by appealing to her pity—and in exchange for a small sum—learned from her an "Invocation for Justice". Strengthened by its rhythm and imagery, and by his own associated belief in its magical power as a charm, he stood up boldly in Court, firmly asserted his innocence and got

[1] Cf. the friendly theological arguments between a Bernera Presbyterian and a Roman Catholic from Barra (*Bodach Bharraidh*—vii, viii), sketched in Gaelic by I. N. Macleoid, *Litrichean Alasdair Mhoir*, Stornoway, 1932.

trouble; and neighbours come to suffer too!

Turning to natural things, how far could the people observe and think rationally, free from the intervention of imaginary beliefs? The Gael possess common sense, keen observation, ready wits and accurate memory. They show powers of tracing effects to their cause; and on the whole, their agricultural practices were based on good sense, and their knowledge of nature was wide. Before taking a social decision, they reasoned together to good purpose.

In the ordering of family life, their ideals were founded on common sense and human feeling, little interfered with by superstitions. Irrational prohibitions too often restrict the issues of life where it is already severely limited by environment. A word should therefore be said of the bearing of beliefs upon the physical aspects of mating and parenthood, and of Gaelic teaching upon these. To begin with an early experience among all peasantry, during calving and lambing today shepherds, cattlemen and dairy-maids show delighted tenderness—there is no other word for it—in the care of mother and new-born offspring, though at other times they may be quite rough-and-ready at their work. What is true of hired farm-hands is still truer of a crofter's family tending their own precious stock. When out herding, boys and girls, before and after puberty, have to be exact in reporting when a bull has served a cow, so as to tell whether or no a calf is to be looked for next spring.

At the same time, human facts were not left to be learned only by observation of animals, but were simply and frankly taught. In a parent's verses to a maiden, for instance, marriage is spoken of tenderly but frankly, in words which can hardly be translated literally without over-emphasis to most English ears. There is a place for

gentle frankness, as there is for reticence.[1] But since Augustine, orthodox religion, Catholic and Protestant, has overstressed and misunderstood the folk-lore of 'the Fall'—originally, it seems, a legend of fertility and fulfilment! In part as a result of the teaching of the doctrine of the 'Fall', there has arisen an attitude to parenthood which falls short of rational understanding and reverence for human life.[2] If fact be the best guard against superstitious fancy, and if sensibility and tact can soften the first shock of adolescence, then the Gael knew wisdom.

Returning to the main theme, it is clear that primitive religion and folk-lore alike show misunderstandings of cause and effect, and of the action of 'mind' on 'body' and 'matter'. What are facts to faith may be symbols to science; yet if these symbols prefigure truth, they may outlast the present stage of scientific recognition. Gaelic belief and practice show a recognition of communal as well as individual spirituality; of the depth of consciousness below its upper surface, and its upwelling power; and of the visible world without, in all its beauty, as a gate

[1] Needless to say, Gaelic verse has its moments of coarse freedom like that of any tongue. Of the lively lilts (*puirt-a-beul*) sung when there is no piper or fiddler to play for dancing, most of the words are delightful, but a few are not. A rather 'drinky' dissolute fellow—a small contractor on one of the Isles whose apprenticeship in the cities had not improved his character—once quoted a coarse jingle to me, only to see little amusement at his song and some contempt for its singer. He excused himself by saying, "It's rough . . . it's rough—but it's not dirty"! His excuse sums up the cruder expressions of animal spirits found in Gaelic jingles. One may adapt it as "Sometimes coarse, but rarely or never vicious".

[2] A. Geddes, "The Origin of Sin in Genesis and a Missing Legend", *Hibbert J.* vol. 44, Nos. 1 and 3, 1945-46. Cf. *The Legends of Creation: an Anthropo-Geographical Interpretation of Genesis*, i-iii (with map); *Man*, vol. 45 (104), 1945.

The Churches have given attention to the second chapter of Genesis, at the expense of the first. Gaelic spiritual tradition seems to have been singularly unwarped by such confused mythology, and to have held firmly to the first chapter, in its noble simplicity.

to the world within. Above all, harmony of relations, at every stage of life, in man and woman, was felt to prefigure relations with the Divine. The religious poetry of which the Gael were the creators and heirs, promoted courage and calm. True, its very power could lead to superstitious respect for mere forms of words, debased as 'magical' charms. Such misuse was 'superstitious', being false in itself and falling short of the clearest thought, the highest aspiration, of the time and the community. Worse still, use with evil intent could concentrate ill-will and evoke mutual fears. Yet at its best, thought was clearer, less confused, than is commonly imagined. To the aspiration and attainment of the Gael—in congregation or solitude, in meditation or labour, in love and faith or in works—the fragments of their oral heritage bear witness.

(c) LITERACY AND EVANGELISM: 'THE MEN' AND THE DISRUPTION

From before 1680 "a school for the gentlemen's sons and daughters" was open in Stornoway. Latin and English were taught, and a century later even Greek had been added, as recorded by W. J. Gibson, for many years Rector of Stornoway's high school, the Nicolson Institute, in his *Education in Scotland*, 1912 (chap. v). Particularly towards the end of the eighteenth century, the Gaelic School Society and other bodies, like the Society for the Propagation of Christian Knowledge, sent out schoolmasters to teach the reading of the Scriptures. Industrial schools were set up at the same time by Lady Seaforth, to teach spinning by the wheel, replacing the slow distaff. It was not till nearly a century later that teaching of English was widely taken advantage of—partly by the compulsion of the

COMMUNITY FROM PAST TO PRESENT PT. II

115 undergone the same crushing experience, at a time when
193 communal life was being overthrown by the Industrial
771 Revolution. "Terrible old men I" exclaimed a wise Lewis
195 schoolmaster, of these 'Disruption Worthies'. It was not
that they were inhuman—that is clear from the warmth
felt for them by so many of the people, who would never
have taken kindly to the unkind.

Nor were the first Evangelicals invariably severe. Of
115 the Rev. Mr. Macrae, long in Lewis, it is told that, when
790 young he had rebuked an older fellow-minister for levity
771 at a ministers' supper on Communion Monday. Leaping
up, the minister seized Macrae by the shoulders and danced
behind him, till Macrae was forced to join in the laugh!
181 Macrae never forgot the sane and kindly words spoken
to him after: and he saw he had been wrong to identify
cheerfulness with irreligion. Yet much joy was extinguished or found illicit vent. To such ruthless zeal, there came inevitably reaction, noted even by 1877, and still more notable during the wave of joy of 1949 and after. Conflict or compromise was inevitable where Churchmen emphasised terror and inveighed against the calm heritage of their forebears and the happiness for which human nature yeaks. The days of emotional 'Revival' are by no means over and from them the pendulum may swing from excess back to relieved but wearied unconcern. Moreover, with the emigration of so many of the men, the balance of family life was upset. Some thoughtful men and women feel that the 'Revival' which swept their Island (with the rest of the Presbyterian Hebrides) before 1939 and during the war was partly due to the excessive influence of spinsters, to whom strict Presbyterianism offered little outlet for motherly emotion or sisterly service.

CH. VIII RELIGION AND SOCIAL CUSTOMS

(c) SOCIAL CUSTOMS IN CHANGE

178 In spite of 'the wrath to come', life had to go on, work
be done, and natural affection find an outlet in youth.
181 How could the women waulk the cloth without a chorus
195 to keep their beating hands in time? Songs had to be
allowed by the stronger for this work in common. In a
land where marriage was not an affair of dowries, but
chiefly of love choice among the young folk, the old courting customs could not wholly be denied. Curiously enough,
drinking was not severely looked upon by Scots rural
Evangelists; in one story in the Old Testament, it is
not the drunkard, but his mocker whom the Lord punished! In a city, a drunk man is a prey to thieves and
harpies; but, in a township none will do him harm. But
today there are Evangelical ministers who think that drink
should be frowned on at weddings and *ceilidhs*, while song
and dance might be tolerated.

115 Not all the people gave in willingly to the severity of
the new creed. In Uig there is a cave, the 'Piper's Cave',
771 to which a crofter was wont to resort on dark nights, his
195 pipes in his oxter, when the wind blew *from* the manse and
185 out to sea! Ultimately the least willing were forced to
give in, first, by the appalling threat of the refusal of communion, and secondly, by denunciation from the pulpit
178 and the ostracism of the Elders. Much was destroyed
that can never be recovered now, and many a fine heart
saddened or broken. It was the most intimate expression
of their lives, their religious lore, which suffered most.[1]
178 Yet something remains, preserved by the good sense,
181

[1] Carmichael gives an infinitely pathetic account of a conversation in a house in Ness about 1880-85, *Carmina*, pp. xxvii-xxxii.

COMMUNITY FROM PAST TO PRESENT PT. II

178 intuitive and traditional, of the people, and their love for
181 the good and beautiful. Song collectors from outside the
114 Island have found little and assumed that songs had been
swept away. Discretion is certainly needed for song col-
533 lection! Years ago in Bernera I had been told of a pretty
love lament I had not heard. Calling with my hosts to
175 invite him to their house that evening, we found the singer,
533 a burly crofter of fifty or so. We had been about to
183 mention the word 'song', when the word was checked on
our lips by a swift, warning glance. The singer lived with
his old mother and she must not be told that her son went
533 out on such an errand! Nevertheless, Islanders them-
814 selves are collecting many unpublished songs, where
strangers failed. The Laxdale School choir wins prizes at
the national gathering or *Mod*, for their spirited singing
of songs, many of them unpublished. Owing in part to
their very isolation, these songs have remained as pure in
form as in the Catholic Isles, whether in time and rhythm
or in scale and mode. Thus the sub-intervals or 'quarter-tones' of the modal scale add subtlety to the melodic line
of an air, as in the melodies of Wales or of distant India.[1]
These intervals are rarely heard on concert platforms,
being unrecognised by many. Mod medallists[2] They
are rarely known to professional musicians trained to
the mechanical scale of the piano, and who are asked,
as adjudicators, to award praise or criticism by alien
standards.

181 Courtesy and modesty are noticeable among the young

[1] *M. Kennedy-Fraser, Preface, Songs of the Hebrides, vol. i. Cf. Glyn-Williams, Welsh Song and Dance (Cardiff, 1928). For India see A. H. Fox Strangways, The Music of Hindostan (1914), pp. 104 ff., and H. A. Popley, The Music of India (1921); cf. A. Geddes (ed.), Kathleen Ferrier, Sa vie, son art, Paris, 1957. While published phonographic records of Indian singing normally illustrate these intervals, those of Gaelic Hebridean singers rarely do, as they are accustomed to alter to suit a piano.*

CH. VIII RELIGION AND SOCIAL CUSTOMS

181 people, although life in crowded quarters and daily con-
cern with the rearing of animals make for a frankness not
193 readily understood by strangers in Victorian times. The
195 standard of morality in the Isles is high, and the rate
564 of illegitimacy low. A courting custom, once common
through the northern and western coasts of Britain, as in
Norway and New England, was 'bundling', a preliminary
to marriage, or bed-fellowship (*leabaidh*). This is noted
(832) with disarming frankness by various writers.[1] After the
ceremonial and festivities of the betrothal, *reiteach*, a young
man was allowed to sleep beside his betrothed; but the
marriage ceremony was to follow, before consummation.
At wedding festivities, sweethearts found their way
to the barn and took their rest together on the straw. In
the shielings, too, courtship was given some freedom:
trust is a necessity where there could not be total
restraint.

585 To what extent marriage sometimes took place or may
still occur after consummation and the expectation of a
first child is not known to any people, knowledge could say.
'Hand-fasting', marriage made binding only by the con-
ception of a first child, was an ancient custom. Two things
must be remembered. First, the strength of parental
benediction and authority, backed by community in
which all know one another from childhood, gave binding
force to betrothal and its obligations; and ceremonies
such as that of the ketching effectually replaced legal and
ecclesiastical marriage when there was neither registrar,
minister nor priest. Secondly, marriages blest with children
tend to be happy ones. Fulfilling the cycle of life, children
also provided the support to old age needed among
peasants living on the edge of poverty.

(115) [1] W. A. Smith, *Lessons*; and Brand Report, 1902.

COMMUNITY FROM PAST TO PRESENT PT. II

121 had learned that the spiritual sanctions of the township's
181 activities were not yet dead. Legal recognition of the
771 township's social economy would complement constructive action in common. Communal responsibility,
not merely private morality, would have had to be upheld.
As it was, the people's acts of charity or justice modified
the growing individualism of tenure and economic relationships. But with township duties to perform relative to
standard of office to fulfil, the congregations could have
maintained a common purpose; religion would have retained a deeper social meaning, binding neighbours as one.
It is true that divisions rent the Island communities, as a
result of the Evangelical reaction both from the lay patronage of the Moderates and their easy-going tolerance.
Protestantism broke with the communal religion of the
past and replaced it by individual faith, faith and doctrine, at the cost of schism. Hence, it appears less able
to aid the renewal of the township than Catholicism, with
its greater emphasis upon corporate unity, mutual aid and
Christian worship in common. Yet, if men of the township
had been chosen to bear communal responsibility, then,
'living the life', would they not have re-learned 'the
doctrine'? Ministers did not share in common responsibility, it is true, nor do they now. The Established Clergy
dwelt apart upon their glebes, and the Evangelicals are
housed in the village, but without a croft or a share of the
scatt and a common grazing. Yet in youth as the sons of
crofters, and after ordination also, they might have learned
from experience.

000 Altogether, for reasons not only temporal but spiritual,
the township with its elected officers should have won
recognition. Given the responsibility which those who
knew it believed it could still fulfil, the crofters' relations

CH. IX ECONOMIC CHANGES: 1750-1919

115 some whose feelings and interests opposed emigration.
193 Free from social economy would have been the beliefs they had
195 introduced would be shaken by travel; and their income,
167 like that of the merchants, would have disappeared as a
(647) result of depopulation. The Congested Districts Board,
however, sponsored two schemes of colonisation in 1888-89.
In the first scheme thirty families, and in the second, fifty
families were taken to Canada, mostly from the Island.[1] The
(832) first and smaller group repaid their loans and received their
lands; but the second failed to do so, and the State
was only reimbursed by sale of the land.

121 The story of the schemes suggests the lack of four
181 elements needed for success: promptitude in organisation;
sympathy with environment, and, in Canada; a
year's experience of new conditions or technical guidance,
rather than segregation of the inexperienced without
leadership; and choice of vocation as farmer or as farm
servant. Many, contrary-minded, emigrant has succeeded as a
shepherd and farm hand or as an independent farmer;
but not every Islesman, particularly a cottar or landless
squatter, is fit to conduct a farm. Technically, an all-round
experience of crofting and of fishing by rule of
thumb does not train a man for farming in a new environment without even a year's apprenticeship. Success is
possible in schemes which overcome initial difficulties by
providing. Manning, contrary-minded and community life, in
a suitable physical environment.

One further principle of communal life was the spiritual,
121 which Parliament and administration failed to grasp. The
181 most significant evidence for the Upper Commission was
771 that of A. Carmichael; and from this the Commissioners

(113) [1] J. P. Day, 1918, pp. 123-125, from Reports of Congested Districts Board, and Crofters and Colonisation Commissioners (Fifteenth Report).

COMMUNITY FROM PAST TO PRESENT PT. II

perhaps once in a generation, the neighbours were still the
175 best administrators for poor relief. On the whole, this
4% 257 remained true to 1914.

As to financial assistance from the Government, the
175 evidence seems at first bewildering in its contradictions,
257 suggesting utter inconsistency on the part of the people.
4% Thus, the record of the Lewis-and-Harris fishermen, in
repaying loans for the purchase of boats, was the most
honourable in the North-west. In 1900, of the total
capital on barely 100 loans made to them, 83 per cent had
been repaid, whereas on 150 loans elsewhere less than
60 per cent had been repaid.

Yet as to the record of Lewismen with regard to assis-
175 tance for road-making, the Brand Report was significantly
253 reticent. In 1891 a road was planned direct to Stornoway
from Loch Roag on the west coast at Carloway. This
short-cut of sixteen miles was to shorten the distance by
seven miles and so facilitate the transit of fish landed at
Carloway. Crofter labour was employed as a means of
'relief-help'. The road was, mistakenly, printed as complete on 'base maps' and other recent 'quarter-inch'
maps. By 1901, £15,500 had been spent, a sum which
exceeded the estimated cost, but only eight miles of road
had been completed and five miles partially made, while
three miles were incomplete. The estimate having
been exceeded and "financial difficulties having arisen"—
the contractor had gone bankrupt and the engineer was
dismissed—the work came to a standstill, £10,000 more
having been estimated as necessary to complete the road.
(191) Of that sum £8000 was granted.[1] But the road was left
761 unfinished. These figures alone might not condemn

[1] J. P. Day (1918), p. 328. Day added that "the work should now, more than twenty years after its start, be approaching completion."[1]

COMMUNITY FROM PAST TO PRESENT PT. II

175 the work done—or rather not done—by the local labourers;
253 for deep peat has misled road engineers elsewhere.
But impartial observers have left no doubt that the work
was shirked—partly from the labourers' lack of will,
181 in other words from laziness, and partly from the not
unnatural desire that further grants might continue,
offering easy money. Inspection revealed deliberate and
combined concealment of bad work, road metal being
thrown on to give a surface which had no foundation.
The Carloway road, which was to help the Loch Roag
fishermen by rapid transport of fresh catches, was never
completed. The bad work of many contributed to the
undoing of all.

175 How far are these two apparently contradictory responses
257 to help to be explained? The answer lies in the completely
253 different methods of expending the grants. A loan to
121 fishermen for a boat was put into their own responsible
hands. The hope of profit in which each could share
stimulated their enterprise; and where both the private
honour of each member and the corporate honour of each
crew was at stake, mutual obligation and team-spirit
spurred them to better work. But road-making—a work many
had done for contractors elsewhere as navvies under degrading conditions—was different. A Gael responds when
his imagination is fired, whether for selfish or unselfish
ends; but he can also enjoy leisure as to the manner born!
Not only was personal skill or effort in road-making of no
advantage to an individual; there was little to call out either
personal prowess or team-spirit in the work. Moreover,
little effort appears to have been made by the administration
to arouse ardour. The ultimate advantage of a good road
to the people on the west of the Island, as a whole, was
clear. Yet since bad work and delay led (at first) to further

181 grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

175 With regard to loans for settlement and housing, similar
657 contrasts are found. Near Stornoway the farm of Aignish
476 (B36) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £380 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750–1914–1919

175 The transition from the old economy of mutual aid in
178 self-support, little changed down to the 'Forty-five, to the
433 development of production for sale had proceeded far by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the
731 anchorage of home. After the potato famine, a century
144 ago, the people tended to move away from the outlying
167 townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

159 weighed the estimated expenditure necessary to complete
433 the unfinished projects, and their prospects of success,
226 comparing these with similar conditions on the East Coast and at Fleetwood, and with the trend of prices. His decision was to close the venture, and Harris was sold.
1423 The skeletons of the works were left to rust beside the quay, while the wreck of a coal steamer was left unsalvaged, to break up slowly upon the rocks outside, a symbol of a lost enterprise.

2. *An All-Round Policy for Sea and Land*

185 From the 'start' in Lewis, the first Lord Leverhulme
114 had shown his vision and grasp as a planner. Bureaucracy conceded plan, and decisions were swiftly put into action.
185 Why then had abandonment and failure followed? Per-
114 sonal factors have been over-stressed. 'Crofters' have been accused of stubbornness, the Scottish Office of procrastination and Leverhulme of impatience or obstinacy. Stornoway shopkeepers have also been apportioned their share of blame; and while all of them welcomed the advent of Leverhulme as sure to bring money through the crofters' pockets to their own tills, it is possible that later on, some of them did prove Devil's Advocates, having come to fear the rise of competition by co-operative or other large-scale concerns, should the town expand at a
● 181 rapid rate. Stressing other factors of character and incompatibility, one popular Scots author went so far as to praise the Lewis crofter for preferring a spiritual life with poverty on a croft, to easy work and high wages in a town. There was a story, well vouched for, which might seem to confirm this. After Leverhulme had held forth upon 'work for wages', in a township where there had been pressing

185 applications for shares in the division of a farm, but where
114 Leverhulme now felt sure of his success, an old crofter spoke up slowly: "My Lord, what the crofter wants is
185 *Contemplation*". Now, fondness for contemplation is
114 found not only among crofters as they age, but among older fishermen all round the shores of Britain, even if it
● 181 mellows in the Isles especially. Yet, as Leverhulme saw for himself, there was abundant activity among men in their prime, as they strove to refit their boats on their return. In 1919 hope, not contemplation, was their prevailing mood: hope for an active, fisherman's life.

With all these hopeful human factors on the side of common effort at the start, why then did differences of view-point come to be accentuated, not harmonised, and 'incompatibilities' lead so soon to friction, deadlock and
159 breakdown? Surely one basic fact remains. In 1917–18,
433 when Leverhulme framed his policy and made his plans,
226 the Scottish fisheries, to judge from pre-war years, could still expect to hold high place in providing for a brisk
185 market in herring and white fish. True, the value of the
235 Island cure of white fish had fallen from £100,000 in 1900 to one-tenth, £10,000, in 1913; but Leverhulme saw that since fresh fish were now demanded, his capitalisation of equipment with accelerated transit of the catch should bring quick recovery. The herring trade had been active at the end of the war; and although the Islanders had made leeway following the introduction of steam and of larger motor drifters, Leverhulme thought he saw an opportunity to capitalise the industry, providing 'work for wages'. This forecast was wrong. Consumption declined, and the market fell. Not only so; the proportion contributed by Scots fishermen to the shrinking market declined even more.

185 construction of the Island must rest upon the improvement
311 of the land": and secondly, that by this means "it was
185 imperative to raise the traditional community spirit, the
114 essential feature of Hebridean civilisation". Those words still hold good. Yet the land itself is too barren and the soil too poor to provide a living for many by export of
● 181 fresh agricultural produce to the mainland. Only a local
159 market could pay a fair price for most of the products of
433 intensive small-holding. Judging from the free, untram-
226 melled trade before 1914, Leverhulme held that fishing could be set upon a commercial basis in the Isles; and there could be few better judges of commercial possibilities than this keen industrial thinker and organiser. If he was right, as surely he was, to begin with, then the local market to be created, or enlarged by growth of population and prosperity at Stornoway, could have purchased the fresh milk and eggs, the fresh greens and fruit, raised on enlarged small-holdings and marketed co-operatively.

A final comment remains to be made. The community
● 181 spirit of Scots fishers from Berwickshire to Barra has gone
470 far to make co-operation among the men of the crews a living thing. 'Work for Wages' offered little outlet for this, indeed it virtually suppressed it; and 'co-partnership' on the Port Sunlight model was a very different matter from the co-partnership of a crew. Even if at that time it had been proved impossible to organise free co-operation in fishing, co-operation in small-holding township might have kept the communal spirit alive, for later renewal at sea.

114 It is not easy to assess the after-effects of Leverhulme's
433 activity. Leverhulme certainly helped hundreds of families by the provision of wages for the building or rebuilding of roads and other works, of which some were completed

114 and are of lasting advantage. Yet his projects were con-
433 ceived, planned, and put into effect from the people, and to be valued in terms of money alone. Was it to be wondered that more permanent values were liable to be overlooked?
● 181 Immediate payment and the prospect of further wages rather than a home to build and a boat to adapt, suggested immediate prosperity, for example. The unsettling influences of War, and the natural wish for a big spree after four years of it, led to some squandering of money; and there was heavy drinking at Stornoway by fishers there and from round about. In the end, when payments ceased, the prospects of the crofters and fishers were as bright as ever. Above all, the somewhat conservative though sensible outlook of the people having already been disturbed by the impact of War, their sense of values was further shaken by seeing the control of immense capital resources in the hands of one man, whose efforts seemed, by comparison, to dwarf their own independent struggles and group co-operation. Of definitely spiritual values little was heard, for 'enlightened self-interest' was Leverhulme's declared motive in life. Remembering this, there are men and women of insight in Lewis today to whose judgment a lifetime's disinterested work with the people gives some authority, who believe that in the end Leverhulme's incursion brought
114 little lasting good. Leverhulme certainly showed how to
433 plan boldly and on a great scale. He drove straight for a vital issue, but in an ill-balanced way. The result raises a
000 major question. Can balanced planning be achieved by one man whose personal fortune and pride are at stake, in opposition to a free community, and in face of an international situation of which the prime social issues oppose his desires and declared principles of 'enlightened self-interest'?

423 —or by a compromise between. But as it is, if one crofter,
431 or a small group of crofters like those of a township or
477 parish of Lewis, were to become owner-occupiers (even by
637 gift), they would be penalised as compared to others.
824 Hence the Lewisman preferred to go on paying rent as statutory crofting tenants. Leverhulme sold the land and received the price; the new owners paid for it and received an investment; and the only 'loser' on this curious transaction was the Local Authority, the County, which failed to make more in rates!

Further reasons why the great majority of crofters
623 declined Leverhulme's offer have been given by the Lewis Association's Economic Committee (1944):

(a) As individual crofters they could lose the advantages of the jurisdiction of the Scottish Land Court in dealing with their disputes, and any litigation would take a more costly form.

(b) They would be debarred from obtaining loans from the Department of Agriculture for Scotland for the improvement of their holdings or houses; as the Department would no longer have the "Corner Stone" of a landlord to fall back upon in the event of reconversion.

(c) The crofters were afraid that as individual proprietors they would forfeit their share of the Common Grazing rights.

(d) Should they sell their holdings they would be compelled to find a buyer in the open market, instead of renouncing to their landlords and getting valuation.

(e) There is a feeling among Lewis crofters that they prefer to have a landlord before whom they can lay their difficulties and grievances, and who will attend to their wants; an authority that relieves them of responsibility.

As the historical evidence has shown, a lack of responsi-
● 181 bility has been greatly due to the undermining and then the
624 abolition of the authority of the township's own elected
195 Constable.

458 problem remains that Island seamen may thus continue
746 indefinitely to be crofters receiving partial relief, seamen only in name. Without doubt, part-time work on a croft is socially a lesser evil than prolonged unemployment in a slum or semi-slum. The crofter's family, too, is relatively better reared than that of many a poor seaman in Glasgow, Liverpool or Cardiff. Yet if this were all, it would be no adequate life for a man, while continuing to be an expense
(461) to the State. The more satisfactory side of such relief is
311 that the Islanders, when unemployed, turn to building new 'white houses', and either to making small improvements on their croft, or, as in Ness (a progressive island with a high proportion of seamen), to the reclamation of new holdings on 'skinned land'. In all such cases a means test provides against full payment to those who could do without it.

To women normally employed in 'gutting', unem-
458 ployment relief is given only at such time as there is no
746 work during the season when it might be expected, *i.e.* 462 from May or June to December. Gutters from the Island are busiest for the months from June to August on the
728 West and East Coast of Scotland, and again for two months, from October to November, in East Anglia. The number of Lewis women normally employed was over 1500 in a typical season (1930), the earnings averaging £9 each for the summer fishing in Stornoway, and as much again for the gutting in East Anglia. But the demand fell, and by 1932, for instance, some 250 women were obtaining relief, although Stornoway, in early August, the number doubling during the slack months from mid-August.

● 181 The tragedy and the danger of any means test are that
458 in effect it asks, not "How prosperous can you become
746 if given help?" but "How poor can you become to qualify

● 181 for help?" In one of the Outer Isles, I know of one or
458 two crofters holding fifteen acres of arable, with a share of
746 a good outrun, who have let their stock dwindle and deteriorate, and their croft lie mostly fallow, plans whereby these could support a horse or two, several cows, and fifty sheep. After having found some casual labour, they discovered they could live mostly idle 'on the dole'. Self-respecting neighbours who prefer to be independent of 'Assistance' and to improve their croft
(492) and stock, and the outrun too. These find their stock deteriorating for lack of co-operation in breeding, fencing, and marketing, or as in Ness (a progressive island) their croft is invaded by weeds, blown from a lazy neighbour's plot. While an idle neighbour benefits by their industry, they themselves are losers.

In another island, a hard-working crofter lost a score
458 of good lambs through 'worrying' by the dogs of an idle
746 neighbour, whose own stock had dwindled to a trifle. He was finally awarded legal compensation; but he found it wiser not to exact it, for the unspoken threat of exaction
(492) was shown in the case of the idle 'dole-drawer'. The whole
(622) could still insist that the idler pay his share of the cost of
(492) posts and wire for a fence on the outrun, or contribute the minimum hours of labour due for fencing and other
(481) communal work on the township. Men like that idler sap
(481) the urge to work. They lower communal morality to a semblance of the social code once too commonly seen by Islanders in the domestic service of the upper and middle classes, in which the idler, by which deterioration is signified as 'leisure' and conspicuous dependence upon the work of others was honoured as 'independent means'.[1]

[1] A summary of production, and figures of productive and non-productive income, are given in Appendix I.

or after it. After 1914–18, the Rector of the Nicolson Institute, Stornoway, proposed village halls for village education and recreation.[1] The scheme was never fully realised except in one township, Sandwick, near Stornoway, owing to the strength of puritanical opposition. In particular, dancing by young folk was condemned as "dancing upon the graves of their brothers". This attitude is breaking down; social standards, in becoming less repressive, may encourage young people to stay.

Broadcasting—a factor of change everywhere—came to the townships as a revolution. Newspapers had already filtered in; but for the first time the Gaelic-speaking home was entered and dominated by an English-speaking voice. It has made itself heard there almost ceaselessly ever since—in broadcast talks, discussions, announcements of news, entertainment, singing and prayers. Only the Sabbath imposes general silence. In the Scottish Home Service great trouble has been taken to meet all tastes at the highest level for each, from 'low-brow' to 'high-brow' and from Clydeside to the Isles. To a thoughtful, selective Island listener the new opportunity for imaginative human contacts and for initiation of all kinds is immense. And the purely Gaelic listener is not forgotten. He welcomes Gaelic song or story; and worship in Gaelic has reached many an elderly person's bedside.

Yet few listeners select: much broadcasting is designed for those whose only picture-galleries are advertisement hoardings and whose only drama and music are to be found at "the Pictures". And through no fault of the B.B.C., the Sports News offers temptations for those in poverty to acquire wealth innocently through luck in a football pool,

CHAPTER XI

CONCLUSION

ISLAND, REGION AND NATION. REGIONAL SURVEY FOR COMMUNAL SERVICE IN 'THE NORTH AND WEST'

THE aim of this study has been the survey of a region for the service of its society. Survey is fundamental. As treatment should follow diagnosis, so should decision for action be based on balanced knowledge. Until now this has too seldom been the case. In Scotland particularly our land and resources are as yet imperfectly surveyed; our activities are still too haphazard and chaotic. There is work to be done and there are hands to do it, but they have been kept unemployed; the workless slackened in body and mind, and their spirits failed; and our communities are still without clear aims in common. The first five years of peace have seen an increased awakening to integrated planning. Planning must be preceded by survey and be linked to international order; it must be aimed towards better living and finer purpose. This study is part of a world-wide movement of survey and planning directed, not first to private gain but to common ends. In Western Europe until the war, in the United States and (in a different way) in the war-ravaged Soviet Union, men and women of good-will have striven to prepare for a 'New Deal', region by region.

he attachment to the holdings is very real and must be given careful con-
assessing their present utilisation and potential value. It is particularly
se it leads to large numbers of tenants retaining holdings which are far
d a living. Inevitably they seek other sources of income either at home
r casual road labour) or away (as in the Merchant Navy, armed forces,
killed or unskilled work). As a consequence the croft is neglected and
urces, small as they are, are not realised. The decline in cattle
e late nineteenth century gives some indication of the scale of this lost
the parish as a whole. This is the crofter's own loss. Individually
e the problem - "four cows will not give me a living - better to get
-scheme and sell the cows". And when one hydro-scheme finishes
ts place, or there will be casual road work or other labour and, between
oyment benefit which the self-employed crofter does not get.

and is of poor quality, the climate in some respects severe, and the
from Uig even to Stornoway let alone to the mainland, a perpetual prob-
of the problem is the small size of most of the crofter-holdings, on
on the other, the importance which most crofters attach to the posses-
o matter how small and how neglected it may be. How has this come

29	40	£149	?
18	23	£89	£80

231 summer, were last used for cattle six to eight years ago by people in Brenish, but none are in use today. These shielings were at the western foot of Mealisval, only about a mile from the township. The Brenish 'distant' shielings, about six miles to the south-east of the township across the mountains, were not used after about 1920, while the adjoining Islivig shielings were last used in 1922. Mangersta may have had its original shielings to the east of Loch Melavat about a mile south of the township, but after obtaining the enlargement from Mealasta farm, until about 1939, shielings were used in that area.

314 No peats are cut on the crofts; the peat-cutting areas for all three townships are near the road and in no case far from the township. The common pasture near the crofts bears
241 evidence of former cultivation, but it is at least fifty years ago since crops were grown on it. At this time the townships of Islivig and Brenish were over-populated with many cottars living on the crofts and all possible land on the crofts was already under cultivation. Today, less than half this 'old arable' is being cultivated, and in several cases the land is used solely for hay and grazing.

342 There are now no thatched houses inhabited in the townships and most houses have kitchen and other extensions added. Some crofters have built concrete two-storey byres
312 of modern design. In Brenish, where the hills to the east provide a good catchment area and the Brenish river a good source of supply, all the crofts have their own private piped water supplies, while in Islivig and Mangersta most crofts now have, or are getting, a
377 water supply. All croft houses are supplied with electricity from the grid.

226 Commercial fishing has long ceased and as there are only three boats there is now very
301 little fishing for domestic use, the principal use of the boats being to ferry sheep to the off-shore islands. Weaving is an important occupation. There are seventeen weavers -
286 nine in Brenish, two in Islivig and six in Mangersta, and during 1959 they were kept busy;
464 in 1958, however, few orders were received. Weaving cannot be said to bring in a steady income here, and some of the weavers, and others, find additional employment outside
[334] the township - this includes four men at the hydro-electric scheme at Gisla, three at Mangersta Ministry of Civil Aviation station, three at Aird R.A.F. station and at least
[467] one in the Glen Valtos quarries. In addition, one man owns at tractor which he hires
[493] out, and one, owning a lorry and van, does haulage work. Altogether, out of a total of twenty-seven men under sixty-five who do work, all but three (one just out of school and one a semi-invalid) have other employment in addition to their crofts.

162 The total population for the three townships is one hundred and twenty-one residents, and fourteen permanently away from home. Of the residents, twenty-eight (or 23%) are children of, or below, school age, forty-seven (39%) are in the 15 - 45 age group, 15 (12%) are in the 45 - 65 age group, and 31 (26%) are over 65. Of the resident tenants, thirteen are over 65, twelve under 45, and five between 45 and 65.

181 The relatively young population may help to account, together with the better soils, for this area giving an impression of a fairly prosperous crofting district compared with some of the others in Uig. Amalgamation of crofts into larger units has also gone further. The use of a tractor or horse for ploughing, extensive use of artificial fertilisers, the sowing of grass seeds and the sale of sheep for meat, all seem evidence of a group of people who are determined to make the most of their limited resources.

233 One enterprise, that of the Aird Bheag sheep farm, deserves special mention. Four crofters (three from Brenish and one from Islivig) have purchased from the Uig shooting estate about 2,000 acres of land on the Aird Bheag and Aird Moire peninsulas, five miles south of Mealasta. Here they are running a flock of about five hundred sheep. There is

CHAPTER NINE

THE ISLAND OF BERNERA AND ADJACENT DISTRICTS OF THE MAINLAND OF LEWIS

('Bernera and Bernera Shore')

by

P. Wheeler

131 Of the three main sections of the parish of Uig, the Bernera district, consisting of
[103] Bernera Island (Breaclete, Croir, Hacklete, Kirkibost and Tobson) and the "Shore"
[49] (Earshader, Crulivig and Lundale together with the isolated township of Linshader), presents a number of peculiarities due not primarily to physical conditions, but to isol
Bernera Island, though central to most of Uig and easily accessible over the sheltered waters of Loch Roag, yet remained relatively inaccessible overland until the recent building of the road bridge; even now it is necessary to travel over six miles to get fr
[181] the bridge to the main Uig road and a further four miles to Garynahine. Consequently the island, even more than the adjacent mainland settlements, has a very close-knit an self-sufficing population. Whether this community retains sufficient vitality to resist the destructive effect of better communications in addition to the general forces eroding rural and especially Highland life, remains to be seen.

13 The district shares the unpropitious physical characteristics described in the Intro-
[23] duction. Like the other districts it has virtually no valuable mineral resources (1), and
[17] the herring and white fish industries have all but disappeared and seem unlikely to resuscitated. Lobster fishing is, however, prosecuted with vigour and enterprise; it
464 provides a good living but only for a small group of families. The rest depend on regular or casual employment to eke out the proceeds of the croft. The kinds of work
[164] available, and the problems of permanent or seasonal absence in search of employment are common to the whole parish; thus this account is mainly concerned with the problem of crofting agriculture.

Settlement: history and patterns.

172 The pattern of settlement in this inhospitable and discouraging environment is partly
361 very old, and partly very recent. At least four brochs are known on Bernera and various standing stones of even earlier date, while continuous settlement has survived from the
[73] early Christian era. Traces of old patterns and practices remain, in tangible form as in the graveyard on little Bernera, or in oral tradition. All this contributes towards the very close network of family relationships that binds the island folk and to a lesser extent those of the adjacent mainland.

175 With the exceptions of Tobson, Bosta and Breaclete, all Bernera Island had been
361 cleared by 1851. Resettlement began in 1878 when twelve families were moved from Bosta to Kirkibost, and continued at Hacklete in 1880, and subsequently elsewhere. Occasionally (as at Kirkibost) old, pre-clearance lotting patterns were re-adopted, but usually settlement was laid out afresh. The townships of Bernera Shore, were also affected: all the small tenants except those of Earshader and Crulivig were cleared, leaving the land under the sheep farms of West Earshader and Linshader. However, the Bernera Island crofters were allowed to continue their customary use of shellings on the mainland, and the transfer in 1880 of these grazings to their present position marked the

[313] (1) A small deposit of diatomite has been exploited in Kirkibost since 1959. Only a few men are employed and the number is not likely to increase.

[TEXT CONTINUED ON PAGE 61]

511 attachment to the land, or his attachment is not strong enough
429 to offset his desire for material rewards.[19] Regionally, a possible exception in the United States is to be found in the Southern Appalachians, where the majority have a net annual income of less than $500.00.[20] These mountaineers, significantly, are largely of Irish and Scottish derivation.[21] The Skyeman who leaves in his youth returns in his old age, if he can. We may logically ask what opportunities exist on the island for employment which might enable the Sgiathanach to raise his standard of living without forsaking the land.

Fishing

226 Fishing, it will be remembered, was once a traditional
181 and functional activity in the economic cycle of the Sgiathanach, but as far as the Skyeman was concerned, it was no more than a supplement to crofting. It was fine to be able to bring home some fish to be smoked or salted for the winter. The wages earned as a hand on an east coast vessel during the summer months were also welcome. Beyond this, he did not care to become involved with the sea as an occupation. His attachment to the land was too strong.

the world. So far, rather than having an influence on the 178
norms of behavior, the youth have been faced with the decision 182
to conform or leave. Cultural continuity on Skye has been a sad experience for many and an expensive proposition for the government. The youth leave; the aged return. If additional changes are forced upon the culture, and there is no doubt in my mind that they will be, the culture and society may not be able to preserve the delicate warp and woof. The threads already hanging loose may unravel the basic fabric. Only time will tell.

At the present time, the culture is disturbing to many 181
people. The sentimentalists in the Lowlands worry about the loss of the old songs and the decay of the informal ceilidh. Agricultural economists commonly look upon the crofting system with dismay. Ministers, some of them born Skyemen, express a dislike for the form which religion takes among the Sgiathanach. Well meaning agencies are determined to create an "adequate social organization" by bringing a share of the urban recreational facilities to Skye. Government commissions and agencies take a dim view of a system of tenure which allows the aged and the absentee to hold on to the land. They advocate the severance of the house and croft and a modification of the crofter's security of tenure. If one or more of these changes are made, it may no longer be possible to conclude that the culture is growing old with the aging population. I do not believe that the culture will ever fully adjust to the national socio-cultural organization. Before it will do so, the Gael

will have made his final retreat from one of his last outposts. 181
The belief of an old minister in Glasgow, a Sgiathanach who serves his fellow exiles, that "the Gael wants out" will be confirmed.

We have now finished our exploration of the thesis 121
that marked population change is not a criterion for cultural discontinuity. If my arguments have not been convincing, I shall feel very much like another minister who served the Sgiathanach as best he could. When his worn and torn Bible fell from the pulpit during his sermon one Sabbath many years ago, he looked down at his congregation and said, "I have spent myself and my Bible on you, and you are still not converted."

182

182 FUNCTION--internal cultural consistency or its lack; allegations of integration or disintegration; adjustments of parts of the culture to one another; relation of cultural forms to biological and social needs and to physical environment; etc. See also:

Integrative process in culture change . . . 178 Functional integration of kinship systems. . . 601

632 578 to neglect crofting and to concentrate on weaving. Those who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 182 462 Despite these tendencies, certain criteria of firm boundedness are still found in the township network. All the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the [654] organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township reseeding schemes" (see Chapter 2). All adult males of [464] the township are expected to provide labor to implement such plans.

632 571 666 Township meetings, chaired by the clerk of the grazing committee, are held twice a year. A vote is taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

Chapter 5

GEOGRAPHICAL AND SOCIAL MARGINALITY

182 Despite the growth of the Harris Tweed industry and the gradual disappearance of some of the techniques and expectations associated with heavy reliance on the land and the sea, an important factor which helps to sustain some of these patterns is the social and geographical marginality of the islanders.

175 [729] [231] [407] When the young men who survived the second world war returned to the island, most households still had horses to cultivate the croft, but a few years later the tractors replaced the horses. The Labor government, 175 657 which came into power after the war, passed legislation which extended the processes of centralization that had proceeded since the breakdown of the clan system. The National Health Service was established. Free milk [871] became available in schools. More scholarships (called "bursaries") became available for further schooling. [207] Television came in the 1960's. In short, the islander was exposed to a number of new alternatives.

182 To the extent that persons became involved in these possibilities, the island became peripheral or marginal. The island has become more dependent upon central

182 government bodies and industries in cities on the mainland, rather than being relatively self-sufficient as it was at a previous time. The periodic return of relatives to the island reflects this peripheralness, as do feelings of inferiority among the islands. The island has become not only geographically but socially marginal.

[166] [181]

A. Geographical Marginality

121 Geographical marginality refers to the distance of the islanders from various economic and administrative centers on which they depend. Because they are distant, they are more likely to suffer breaks in channels of communication with these centers, as when storms prevent boats from docking. They are "marginal" because they depend on central sources rather than being self-contained; and the difficulties entailed in this marginality encourage the retention of techniques and patterns of interaction derived from the days of relative self-sufficiency. The anomalous combinations of old and new found in the township may be attributed to such marginality.

131 182

121 A "strategy" may be thought of as a pattern of behavior which develops in a particular history of reinforcement, the parameters of this reinforcement

121 being determined by conditions of culture, such as political and economic conditions. Under conditions of gradual centralization of economic and political systems, the geographically marginal crofting areas have evolved strategies, some of which puzzle agencies concerned with development or other aspects of governmental process.

121 178 182

178 Before the North of Scotland Hydro-Electric Board began to operate in the crofting counties, not more than one croft in every hundred had electricity; but by the end of 1951, one in every six holdings had been supplied (Taylor 1954: 20). "The light" came to Shawbost in 1951. Before then, the islanders used Tilley lamps, a Canadian invention; and before then, double-wick paraffin lamps. Piped water came a few years later, around 1955; it was brought from a nearby loch, and the construction work gave temporary jobs to local people. The availability of these services facilitated the building of county council houses, which many welcomed as providing a relief to the congestion caused in part by rules against building more than one house on a croft. But, paradoxically, with larger, better homes and all these services came a decrease in the advantages of living in a crofting township: property was assessed and people began paying rates or taxes.

365 511 [354] [177] [312] [464] [344] [342] [651]

South Uig and Park seem to suffer in the same way even though the larger producers, using mills, are able to distribute weaving equally to all districts. The weaving earnings vary from individual to individual, according to the amount of work they get, and also from year to year according to the fortunes of the trade, especially of the American export trade. A good weaver, in a good year, might earn from £400 to £500 but an average weaver, in an average year in Bernera, probably earns between £250 and £300, whereas in the Carloway district (more accessible to producers based in Stornoway and Shawbost), the comparable figure is around £400. Most weavers try to maintain connections with several producers and this difference in earnings may be between those who obtain additional work for 'small-producers' (i.e. tweed merchants who do not spin their own yarn), and those who do not.

Fishing has greatly declined since the late nineteenth century (table 3) 1, neither white fish nor herring are of any significance, nor do Bernera men contribute significantly to the island's economy by working on east coast boats, as was formerly the case. But Bernera has become one of the most important centres of Scottish lobster fishing. The value of landings having increased from £983 in 1937 to £4,949 in 1956. There are six locally owned lobster boats and others use the facilities at Kirkibost. The vessels generally have seven to a crew (c.f. the usual five in Sutherland) and work the whole length of the Atlantic coast and out to the Flannan Islands and St. Kilda. They carry 100 to 160 lobster pots and one (also called a creel) crab; crabs are almost entirely ignored because they are difficult to transport to the distant, mostly English, markets.

One very important factor in the present prosperity of the Bernera lobster fishing is the Kirkibost lobster pond. This was built by a local crofter in the 1920's. It was closed during the war, and was afterwards taken over by the Crofters' Supply Agency, though the original proprietor is still employed whole-time in looking after the pond and re-fishing the lobsters. There is naturally some loss of fish in the pond, and when high prices are being obtained at Oban the local fishers feel rather disgruntled at their loss favourable market here. Hence, if there is a good catch, say over 2,000 lbs to a boat, and reasonably good weather prevails, the lobsters may be taken straight to Oban where up to twice the local price may be obtained. The C.S.A. pay 2s less per lb than Oban because of the cost of the upkeep of the pond, and the wages for two men with their boat. There was an experiment in flying lobsters direct from Lewis to Billingsgate, but the cost was too high. The problems of isolation here are very severe for the lobsters have to be sent by Macbrayne's steamer and by British Railways upon which there are no cold wagons reserved for the small quantities in question - a hazardous course for a highly perishable cargo.

Conclusions.

This part of Uig, therefore, has had a long and complex history of human settlement, exploitation, and adaptation. Much of the more recent part of this history is vividly remembered and still plays a part in the making of modern decisions. The sense of kinship and a common past is an important element of society, for where natural resources are so limited a mystique of other than a material type is necessary if society is to retain its self-respect. However, the natural resources are indeed so limited that economic self-improvement is extremely difficult. The egalitarian tendencies of Gaelic society and crofting legislation are not now sufficient to resist the tendencies of the times and to prevent some of the crofters making adjustments in their holdings, but unfortunately there is insufficient good land to allow much adjustment without a drastic reduction of population which would be equally damaging to the well-being of the local society. It seems unlikely that alternative sources of employment could easily be found - the isolation within Lewis, the isolation from markets of Lewis itself, and the lack of local resources have combined on previous occasions to defeat plans for development. Weaving is the most important means of supplementary livelihood, but it is too vulnerable to politics and fashion; fishing is greatly decayed from its former dominating position; only agriculture remains locally, and perhaps the greatest possibilities there lie in better standards of cultivation (especially drainage and fertilisation), a better standard of animal husbandry, and more seeseeding. But whatever developments are undertaken will need careful selection and encouragement: results cannot be hurried but nevertheless something must be done soon if the local society is to maintain itself. This great and paradoxical element of the "crofting problem" is as important here as elsewhere in the seven "Crofting Counties".

464 full-time crofters; 19 males have other regular employment and two have periodic
165 employment. 8 crofters are aged over 65. It seems that the most successful combination
208 of employment is weaving and crofting; weaving is carried on in twenty of the holdings.
208 Lobster fishing in the evening is still popular but regular small-boat fishing has disappeared:
167 one crofter took up regular fishing when weaving was slack in the autumn of 1958.
166

Of a resident population of 125, 32 males and 32 females are between the ages of 15 and 64, these representing the effective labour force. Thirteen persons are temporarily away and 16 permanently away whilst at least 46 have emigrated since 1939 and 6 have immigrated. Thus twice as many that have emigrated is nearly three times the number that are merely permanently away. With a population of 125 and an effective labour force of 64 to work 35 operative units Tolsta Chaolais would seem to be far from a dying township.

131 If not exactly progressive the township economy seems stable and moderately pros-
181 perous, in spite of the fact that the settlement is rather isolated, for the roads which
000 join the Carloway-Breaaclete road are both very steep and have bad corners. To add to the apparent isolation there is only one Post Office-shop in the village but most commodities are bought from vans. A realisation of the smaller crofts to younger, more ambitious tenants at the deaths of the older tenants could reduce the number of operative units to about 25. Admittedly, little can be done with the rougher terrain, and although cattle stocks could be increased there would be the added problem of sufficient winter feed. With better drainage more land could be taken into cultivation - especially between the two lochs - where marsh is wasted at the moment - whilst weaving might supply a surer source of income, especially in the winter. Tourism on a small scale might be a further possibility for the coastal scenery is very fine and the immediate setting of the village is very attractive. It would be more realistic however for Tolsta Chaolais to find future prosperity within its own boundaries.

341 is attached to the Free Church Manse, is sublet to two ewans and is used entirely for
427 hay. One remarkably well stocked croft has one horse, two cows in milk, one calf and a heifer together with a sheep stock of twenty breeding ewes, twenty lambs and twenty other sheep (this was the first 100% lambing for many years). Labour is provided by one full-time crofter with assistance from two others one of whom is a weaver. On another croft an elderly lady was preparing to rouse an application for a cultivation grant.

241 The intensity of cultivation may be attributed to two factors; first the sheltered position of the land, the moderate slope and good drainage and second to the energy and enterprise of the crofters.

BORROWSTON

361 Borrowston exhibits many of the characteristics that have been noted in Upper Carloway
427 and which are common on the north west of Loch Carloway. It consists of sixteen registered crofts and there are no feus. The crofts are plotted in narrow strips which rise steeply from the western shore of Loch Carloway to a head dyke at about 200 feet O.D. The drift cover thins as the ground rises until an upper zone with exposures of bare rock is reached. The result is that most of the cultivation takes place below the road which passes through the croft land and along which the settlement is located. All the crofts are fenced below the road, but are only partly fenced above it, presenting a pattern similar to that at Upper Carloway. Because of the steepness of the crofts the only way that the tractor can gain access to the land is by way of the lower road which passes from the bridge to the pier.

241 Fifty four acres of crofland are worked in fourteen operative units on which the oats
427 are cultivated by tractor and the potatoes by spade. Though all the crofts have immediate access to the shore none are fertilised with seaweed at the present time; following the common practice in the past a artificial fertilisers are used to supplement lime and manure
233 from the byres. None of the crofts are open for common grazing in the winter; this is because of the use of the old farm of Laimsbader, granted to the township as an enlargement. The former arable land is now used as additional common pasture. The normal practice is to use the former farm land in conjunction with the croft land in the summer, the cattle being maintained on Laimsbader as late in the season as is possible.

241 Borrowston is intensively cultivated, presenting a prosperous picture when viewed
427 from the opposite shore of the loch, but in spite of its apparent prosperity the majority
181 of the population is over 45 years of age. Herein lies one of the main causes of concern in this part of Uig parish, for though Carloway is in many ways more prosperous than it
163 is South Uig and has a larger and more active population working in much more favourable conditions, the population is an aging one that has not the potential for maintaining a level of replacement. In Borrowston eight of the crofters depend on weaving, four are full-time crofters and seven of the twelve are over sixty five. Yet these men are active and maintain large sheep stocks, ten of the twelve exceeding their summing though only one of them has an excess of cattle.

Figure 40 has been drawn to illustrate the land use on particular crofts in this
233 northwestern area; one is in Borrowston and one is in Upper Carloway. The stock data
427 have also been added to give the complete picture of the agricultural unit. Each croft though prosperous, has an elderly tenant.

GARENIN

361 The township of Garenin, whose main area of crofland is situated a little apart from
427

[TEXT CONTINUED ON PAGE 107]

λ. [Presumably the author means figure 41--Annlyst]

361 the main area of cultivation at the head of Loch Carloway, is similarly divided into long
427 narrow crofts which traverse the broad valley which falls to the sea from the low water-mark marking the boundaries of Upper Carloway, Borrowston and Garenin. The settlement is to be found on either side of the road which rises from the bay to join the two major township roads of Upper Carloway.

181 The township has a very individual character, especially at the seaward end which is
427 exposed to violent winds and spray in the winter and where the dwellings are mostly black houses. Tenanted by old ladies two of these are partly sublet and the future seems to suggest that a complete subletting will take place, which contrasts with the activity of many of the other crofters in the township. One man was prepared to rent all the fertiliser for the croft on his back because it was impossible to gain access for the tractor.

427 The twenty eight crofts, one feu and one allotment are worked in twenty five units.
311 Extensive improvements have been made on two crofts with the introduction of sown grasses in their rotations. A general increase in fencing is now taking place with the consequent closure of the crofts which were formerly open for common grazing in the winter. By far the most striking feature in the figures gathered for the township are those for the sheep stock. Although the total summing for all stock is not quite reached, the sheep sum is exceeded by 65.3%. This does not worry the crofters one of whom spoke of a 'natural summing' pointing to the fact that the total summing was not exceeded and he continued that "if the land is overstocked animals die"; this they do all too frequently. The assertion seems to be based on the belief that the equivalence of one cow equals three or even five sheep gives an accurate assessment of the potential of the grazing. The evidence of the heavy sheep losses does not bear this out. That sheep eat a different herbage and in a different manner to cattle seems to be either unknown or is ignored.

The whole agricultural operation of the township is complicated by its situation; long
286 journeys were necessary by boat to the shielings and are still the rule for herding purposes the
74 people. Once again the emphasis is on weaving as an occupation and many of these people
164 are ageing. It is a measure of the decline in the population that now only fifteen children go to school whereas one crofter could remember up to fifty in the school before the First War.

The main features which emerge from this examination of the townships to the north west of Loch Carloway may be summed up quite briefly. The crofland is a compact area of well cultivated land on the seven slopes which rise to over 200 ft. O.D. It is divided into long narrow holdings which ensures that each has a fair share of the different types of land. Careful attention to much of the land shows that this is far from being a dying community. In spite of the defects which can be noted in the animal husbandry, the decreased population and the reduced number of working units (a result of the subletting) could allow of a much more efficient working than does take place at the present time. The potential is there. Carloway has many of the basic social services which help to stabilise a community and with the advantage of its strategic position the concentration of settlement could be assured if additional employment and/or more efficient agricultural methods could be adopted.

KNOCK CARLOWAY

133 If the north west presents a picture of relative prosperity the area to the south may
181 be described as one that is showing signs of decay and decline. Knock Carloway itself of the township extends to the northern flank of Loch Carloway). The eastern section rises steeply to a rocky crest which marks the beginning of the common pasture. In
361 consequence the crofts are less regular than those already described and three are
427 worked in 'fixed runrig' with a pattern of much more fragmented cultivation. Situated on the lower shoulder of the ridge are the churches and school close to the road junction

[TEXT CONTINUED ON PAGE 109]

000 2) Further depopulation is inevitable but is not necessarily bad. The special privileges
163 of crofting tenure have tended to delay the inevitable because the agricultural structure
311 has been unable to adapt itself to changed circumstances. The island as a some was less productive than it was 80 years ago. But, as population does decline, eventually more
433 land ought to be available for each remaining family and, if properly used, should enable them to increase the proportion of their incomes derived from agriculture. Thus depopulation could have beneficial effects provided it were not haphazard nor complete. The rate and ultimate extent of depopulation could be controlled to some extent if a realistic assessment of the possibilities of each district were made, followed by a vigorous attempt to realise these possibilities. This must be done locally because the problems and possibilities of each district, sometimes of each township, are different. How can this be done

289 3) It is not realistic to plan for any extensive development of industry nor for any sub-
427 stantial further development of forestry or fishing. Lewis is suitable for the development of industry - the phenomenal growth of the Harris Tweed industry, with an annual output worth £5 million, much of it for export, is proof enough of that. But when it is difficult to get industrialists to invest in lowland Scotland there is little point in living in perpetual hope in Lewis. To constantly cry, as some politicians do, that 'the government should send industry to Lewis', is not helpful, either, for no government has ever had sufficient power, nor is it desirable that it should have, to force a firm to invest against its will. If there is to be some industrial development it must come willingly; it would be unwise to depend on it. It follows, therefore, that agriculture must be the main source of livelihood, though not the sole basis, of most crofting communities. The present heavy dependence on casual or seasonal employment, and on permanent employment away from home, can never provide the base for a truly viable community though it may provide a useful outlet for some younger folk. On its present scale it leads to the neglect of the only widespread natural resource, the land, as well as encouraging permanent emigration

311 3) Crofting agriculture, as at present carried on, on most crofts, does not make the
433 best use of the local resources. The land is marginal in many respects and the development of its potentials demands the following:

(a) particular skill in farm management, including initiative and technical ability to take advantage of new materials and methods, and

(b) a marketing system on which the crofter believes he can depend. At present it is the uncertainty, as much as the poverty, of the reward that deters young men from taking up agriculture seriously.

427 4) The small size of holdings need not be a serious disadvantage. Since the time of our
survey subletting is no longer necessarily contrary to the conditions of crofting tenure; since it represents a voluntary evolution towards larger holdings it, rather than wholesale reorganisation, should be further encouraged.

5) It should be recognised that if a croft is not properly stocked it cannot justifiably be the subject of any of the privileges of crofting tenure. Failure to maintain a properly balanced stock is damaging to the land and to the ultimate well-being of the community as a whole. At one time the factors, through their ground officers, maintained a degree of control over the stocking of township lands and this could, in some way, be resumed - if not by the proprietors then by the Crofters Commission, - though the best way would be, initially, through the township committees. This would depend on establishing summings which fairly represented the grazing capacity of the township lands; and on restricting the unlimited substitution of sheep for cattle. At present many summings depend on estimates of old ones the validity of which is very dubious; summings are unlikely to be respected unless they are reasonable.

181 6) Few crofters possess sufficient technical knowledge and confidence to make the best
427 use of their land. It is particularly difficult for men with such limited resources of land and ready cash to embark on new agricultural enterprises; they are naturally reluctant to take risks and therefore tend to be excessively conservative. This cannot be put right quickly nor so long as the majority of those working the crofts are middle aged or older men who have spent the greater part of their working lives in other occupations. Such men require special help but, above all, some of the younger men must be encouraged to

[Garyvard] [Caversta]

At the moment Garyvard appears to be a go-ahead village, carrying out communal schemes which will benefit the township as a whole. However, the age structure of the population is abnormal since 60 per cent of the population is over 45 years. The future in Garyvard offers young people hard work, little money and no entertainment, making the attractions of the cities and industries of the mainland quite irresistible. Unless some industry can be started the future bodes ill for the area, since most crofters are of the opinion that a weekly wage packet would more than compensate the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and subsidies that man cares more for momentary rewards and the luxuries of life. This is well understood by parents who encourage their children to leave the islands to seek employment either in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditions and a way of life. His present desires have been re-cast as a result of his increasing contact with the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purposes. Unless prosperity can be brought in by way of industry, tourism or increased croft efficiency, possibly through co-operation in working and marketing, it is possible that we are witnessing the end of a community.

CAVERSTA

Helen Mackenzie

Caversta lies along a southern inlet of Loch Erisort, five miles from the Minch and is partially sheltered from east winds by the Cromore peninsula and Eilean Chaluim Chille.

The physical nature of the terrain is irregular, rising steeply from the water's edge to a level of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it is here that the settlement occurs. Particularly in the north-west, two marked breaks in slope are visible at 75 feet and 100 feet above the loch, which is here bordered by a 25 foot rock face. The resulting platforms are separated by faces of bare rock. The valley of the Caversta River is a noteworthy feature. Below a small loch, the river follows an irregular course though a wide and shallow moraine-strewn depression and a quarter-of-a-mile from its estuary, has cut through some low hills rising about 30 feet above the depression. At this point, its course becomes steeper as it passes through a small gorge, which is probably an overflow channel.

Trees are non-existent and the natural vegetation consists of Sphagnum on the peat bogs in the hollows and grasses and sedges on the gentler slopes. The steeper, less waterlogged slopes, often broken by rocky bluffs, have heather cover; bracken growth is kept in check by heavy grazing. Forty-six acres of land have been reclaimed by clearing heather and removing peat to form the crofts, but the soil, which varies in depth from a few inches to a few feet, is very acid.

The six legal crofts vary in acreage from 4.75 to 8.5 acres and a squatter has 5.5 acres of enclosed land. The township is in two parts: Toristа, with the two smallest crofts, lies at the east-erm extremity, while the other five holdings, also bounded by a dyke, border Tob Caversta, an inlet of Loch Erisort. The crofts, which run from the shore to the township dyke, were set prior to 1861; originally the township formed part of Crobeg Farm. The legal units are, in fact, operative units except that one of the Toristа crofts, now unoccupied, is used for wintering lambs by the absentee's brother, a resident of Caversta.

There are no occupied black houses remaining in either Toristа or Caversta, as during the past fifty years new dwellings have been erected in dressed stone or corrugated iron, usually with roofs of asbestos slate, tarred felt, or corrugated iron. Several old thatched houses are now used as barns and byres.

[Lemreway] [Orinsay]

The West Highland Survey Township Card[1] describes Lemreway as "predominantly a fishing township". The remains of an old curing station are visible today and until 1947 there were twelve boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent boats and the lack of a landing stage led to the decline of the industry in this township. Today there is one fishing boat which lands its catch in Stornoway: working with modern equipment, drift and ring nets, it provides a regular income for a crew of six.

An examination of the population statistics proves interesting, especially when compared with those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large considering that there are six unoccupied crofts. Eleven of the crofts have more than one house and the cottar population forms over a third of the total residents. More than two-thirds of this resident population is in the two important age groups - between 15 and 64. With over forty resident males in the working age group, Lemreway provides a striking contrast to other crofting townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancillary occupations such as weaving and fishing. A further eight supplement their croft work with regular employment - a postmaster and a postman, a bus driver, a lorry driver and several weavers. Just over thirty people work away from the township permanently, fourteen in the Merchant Navy and nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1939. Nevertheless, Lemreway has a larger proportionate resident population than most townships.

Only four thatched houses are occupied and housing conditions generally are good. Every house has electricity, but, with four exceptions, water has to be carried from springs and wells. Most of the present houses were constructed in the 1930s and they are usually near to the road. Ruins of the old houses remain, some being used as byres, and these were built either along the shore or up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs. Today supplies of food, peat and even seaweed are brought by road.

Mention must be made of the possibilities of the tourist trade in Lemreway with its most attractive situation and reasonable road connections. An approach has been made to the Scottish Youth Hostels Association and while hostellers could not greatly increase the income of the residents, they would stimulate interest in the area. Accommodation for summer visitors, other than relatives of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considerable enterprise is being shown. A Ferguson tractor, bought this year by a man returning from whaling, is an example. It is to be hired out and could be put to good use in some parts, especially on the outend. The attempt to improve the common pasture and the new extensions to neatly painted houses all reflect a combined effort to improve conditions. The old economy of crofter-fisherman is being adapted to modern times and crofter-weaver, crofter-postman and crofter-bus driver are the contemporary employment combinations.

The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions, it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access to the Individual Township Cards, which are a storehouse of information. For detailed contents of the cards, see West Highland Survey p. 247.

141

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during these years from 510, in 1841, to 893, in 1881, but this can hardly be regarded as a significant trend.

The really striking aspect of this period is the almost complete lack of protest by the Sriathanach against the violation of his presumptive right to the land. The disappearance of the tacksmen, of course, had left the people without their counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farmers, counseled submission to the will of God. Then, too, the ethos of the Skyemen would not allow them to ventilate their grievances. They despised the Sassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cottages wrote unanimously of a people who endured overwhelming sufferings in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Sassanach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had been widespread and growing discontent all over Europe with the

155

District Council was established, but the only functions left to the Islanders were such minor ones as providing recreation grounds and maintaining footpaths. Today the members of the Council can only make the local needs known to the county council and carry out the functions of the county council.

In more recent years the functions of the county and national governments have increased still more. Government employees have multiplied. After the Second World War, the county became a landlord, building subsidized housing. Since the county has built these houses at Portree and at a few centers such as Broadford, Uig, and Dunvegan, where the police have their stations, they are still persisting in the attempt to bring villages to the island. Roads have become the concern of the county. Within this period, then, the crofter became dependent on the county and national government for the satisfaction of many of his needs. Although he resents authority, he has not shown any resentment at the continual encroachment of the government's services. To him the government is a "rich man" who has bestowed many favors and may be asked to bestow a few more, like electricity and plumbing.

Like European peasants in general, the Skye crofters have lost three important things: isolation, political independence, and self-sufficiency. At the same time, they have retained a good deal of their former identity, a continuity of culture, and an attachment to the land and to the traditional way of life. The culture has been modified by adaption to the higher socio-cultural organization, especially in material

[1]Even a high official in the Highlands and Islan
Development Board tells a joke, that is "presently go
round Westminster," of the Spaniard who approached th
Highlander and told him of the word mañana which he t
lated as "Don't do today what you can put off till
tomorrow," asking if there was a corresponding word i
Gaelic. "In Gaelic," replied the Highlander, "we hav
no word that conveys such a sense of urgency."

culture which can hardly be distinguished from that of the Lowland rural areas, but it has by no means disappeared.

Socially, these changes, particularly the introduction of national laws of land tenure, involved a leveling of the social hierarchy. The old polarity of the land lord and tenant, with an intermediate group of doctors, ministers, and tradesmen, was restored. The place of the tacksman, of course, has been filled by the government. The bulk of the population was once again undifferentiated socially or economically. Land lost much of its commercial value for the proprietors. It once again had more of an intrinsic value, almost as in the days of the clan. The status of the proprietors, locally and as a horizontal segment of the total British population, depended on land ownership. The graziers and the proprietors who had appeared during the "Clearances" withdrew, selling out to the national government.

These changes did not work to halt the continuous outward flow of the Sgiathanach. To the contrary, increasing integration with the national culture created new needs, such as a demand for a higher standard of living and an opportunity to achieve status, and provided the training necessary for the youth to find roles more suitable to their talents elsewhere in the world. The young men and women of Skye journeyed to the Lowlands to join the national labor force, to enter the professio or to seek other permanent employment. Thus, emigration changed from a movement by families to a movement by individuals. At the same time, the benefits of the crofters' legislation and the program of government assistance made it possible for the

427 511 than the bare essentials, these people just get along. Even so, they would be unable to get by were it not for some form of [464 654] supplementary income. This essential prerequisite for the individual or family who upholds the crofting tradition may take the form of seasonal employment on the island or away from home; contributions from a child or, less frequently, a brother or sister; or payments from the government in the form of unemployment compensation, relief, or a pension.

427 181 Many a Sgiathanach thinks of his croft as a home more than anything else. There are men who have found full time employment. Some in this catagory work the croft in the evening. Others expect their wives to care for the crops [887] and stock, or they leave the land untouched. Then, there are the old men and women who have returned to their an- [167] cestral homes to spend the twilight of their lives. These exiles come back from cities as near as Inverness and from places as far away as the sheep ranches of Montana or the cities of Australia. Perhaps, the most significant point is that for all Skyemen the croft cannot be evaluated merely in terms of acreage and income. As we shall see, it is a way of life in which an attachment to the land, as an embodiment of kinship, plays a very important part.

427 511 The incomes of three representative crofts clearly reveal the financial difficulties under which the crofting family labors. Although I have somewhat arbitrarily divided the holdings into small, medium and large on the basis of acres of arable land, it should be remembered that this

175 information via the technology of mass society to
423 affect the choices made by succeeding generations.
671 For example, young people are able to leave the island
178 and work in British cities or abroad, sending money
[464] home to sustain their aged parents who by law cannot
[457] be removed from the croft.

E. Changing Land Use

311 Darling (1955) described the previous Highland way
175 of life as a well-adapted, ecologically balanced system,
182 in which proper use of land was attempted by limiting the number of livestock, preserving a proper ratio between cattle and sheep, and regulating the flow of stock on the land throughout the year. Dikes (fences of turf or stone) and drains were communally repaired
178 and cleaned. Although continuity with the previous way
311 of life is evident today, the overall picture is one of
[182] partial use, and misuse, of natural resources. Various
[154] advisors from government organizations and colleges have been brought in to encourage effective husbandry and land use.

1. Specialization and Individuation: The change from an ecologically adapted, internally regulated community in which land was used intensively for subsisten

181 some by characteristics which may seem unique. But it
171 will interest others by features of underlying universality.
133 These might be compared to the Archaean rock, overlain
toward the south-east by a succession of younger strata,
but forming their foundation.

181 In this rocky land, the roots of Island life are laid
182 bare; the rhythm of work responds to the day's weather
and the cycle of the year. Yet the flowering of communal
life in song and spiritual tradition may offer a fresh
vision of regional, even of national, being. Indeed it is
in characteristics latent in the evolution of the whole
'North and West' of the British Isles that Island life is
most revealing.

131 Rising in imagination to a point above the summits of
133 the Harris hills, and viewing the British Isles from the
'far' north-west, we gain a new perspective (Fig. 1). The
Island below us is now the nearest; the 'Outer' Isles,
329 the innermost. To us now, as to the Islesmen, their
Island home is no mere fringe, but a heart of Britain.

101 Thence, looking to the lands across the Minch, each
33 further from the Isles of home, there appear, in turn,
three regions: (1) the rest of the Highlands and Isles;
(2) the Lowlands and Uplands of Scotland; and (3) Ireland, Wales and Cornwall, and Northern England—all
sculptured in rocks older than those of the Lowland or
'Plain' of England beyond. These three roughly concentric regions, from Harris to the edge of the 'Plain',
may be grouped together with the intervening estuarine
lowlands—not only Clydeside and the Solway but the
'firth-land' of Mersey-and-Deeside, and that of the
Bristol Channel. To these, one might add the shores of
an outer Minch, the *Manche* or 'English' Channel, which
once linked Devon and Cornwall to Armorica. Beyond

133 line; and there can be no doubt of the contrast found at
131 the extremes. How strikingly different from any view
over the English Plain is this, from the air or a mountain-
top! It overlooks the ice-scraped rock of the fells; the
drift-heaped, ill-drained hollows studded with gleaming
lochs and deeply overgrown with peat; and the indented,
insular coastline with its widely spaced crofting townships
looking seaward, where a few fishers' sails may dot the
161 vast expanse of ocean. In 1951 the population of Lewis-
162 and-Harris numbered only 28,000 persons, and that of the
• 182 entire Outer Hebrides some 36,000; but the small num-
bers need not lessen the geographical significance of the
community.

18 Men have long recognised the homogeneity of the
English 'Plain', with its recurring vale and wold, compact
within a rounded coastline. In spite of the local variety
of landscape, history or dialect, which enriched its heritage
and compose its grandeur and charm, men have sensed the
unity inherent in this land of a single tongue, centred upon
a single capital. By contrast, the diversities in landscape,
life and tongues of the lands far-flung to north and west
have obscured the elements of a profound, underlying
unity in geographic origins and in historic and social
(121) evolution. To understand the civilisation of the British
Isles, it is vital first to perceive the complementary qualities
found in the two great regions, and face their corresponding
(198) weaknesses or limitations. Second, within the less under-
stood of the two regions, 'the North and West', it is vital
to study the almost bewildering variety in regional types
of life—distinguishing, for instance, the uprooted popu-
lations all too typical of the rural Lowlands of Scotland
or Northumberland from the still deep-rooted communi-
ties of the Highlands and Isles.

121 From prehistory to the present day, these geographic
198 zones have played their parts as factors in evolution,
although the border-lines have changed at different historic
174 crises, and have been modified by economic and social
• 182 phase. At times the Hebrides have been more closely
linked to Ulster or to Norway than to Central Scotland.
184 In viewing these zones, we shall not find simultaneity in
historic events, but comparability in stage and transition,
even at differing periods. From the evolutionary point of
view, the revealing character of Island life lies not only in
static survivals, in what Sir Arthur Mitchell found in the
Isles and vividly described as "the Past in the Present",
Island life is characterised still more by the dynamic
strength of its continuity—notably of early or primitive
Christianity—and also by the late occurrence of changes
when, at last, they came.

18 The social consequences of these regional differences
in evolution are profound. In the 'Plain', to the south-
62 east of the Severn-Tees line, large village communities
174 with 'common fields' prevailed, forming the later manor
473 villages. To the north and west, the more varied, hillier
lands encouraged the continuance of hamlets. These
192 hamlets housed close-knit groups of families, often of no
more than four or five to a dozen relations or 'friends'—
—in Scots even today (much as in Gaelic) the word
'friend' frequently implies kinship. Each small group
462 formed a team. Together the men ploughed their mingled
476 rigs (or ridges) and herded their stock in common, and
on the coast they rowed their boat as its crew. The
241 women, too, did much together, as when they spun their
384 yarn, and fulled or 'waulked' the cloth that one of them
423 had woven, helping by turn in childbirth and child-care.
Usually several of these teams were linked in a larger

18 pastoral group, the germ (in the Hebrides) of the present
621 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
473 These 'sociable hamlets', or 'little commonwealths', as
they were called by understanding writers on the High-
lands, lived on in the Hebrides almost until a century ago.
Features of their form and life have long been known, but
their life has not yet been envisaged in its full dynamic
significance.

127 The homesteads, informally grouped in these small
361 hamlets, have been mistakenly described as solitary or
174 'dispersed' by scholars accustomed to larger and more
compact grouping. The mistake was made by geographers
473 of the nineteenth century, such as Meitzen with reference
to the hamlets of Brittany. Similarly, because of the
476 small number composing a typical joint team, the vital
fact of team-work and joint holding has frequently been
overlooked; yet a fundamental mistake is made when such
close-knit team-work and joint tenure are described as
174 'individualistic'. Moreover, these teams were linked to-
621 gether in larger, more loosely bound pastoral communities
131 of township and district. In Scotland and elsewhere, it is
true, such hamlets came historically to be split up in various
241 ways, into smaller farms and scattered cottages. The
larger link of common life was also superseded by the
198 proprietor's estate. Indeed, the twofold revolution in-
volved caused a fundamental regional cleavage within 'the
North and West'.

• 182 Partly as a result of their small size, the tenure of farm-
184 hamlets was frequently informal. In northern England,
the hamlets and their lands were not entered in Domesday
178 Book; still less are early entries complete in Scotland.
For this and other reasons, jurist and historian may fail

621 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral com-
174 munities by well-armed raiders of many races, including
172 the Celtic-speaking swordsmen of the Iron Age. The last
and most notable of these conquering raiders were the
Norsemen. Their influence was profound, whether, sailing
direct from the Scandinavian forest settlements and fjords,
they raided and settled as heathen Viking crews, or, at a
later stage, they invaded England from Normandy—that
fertile province which they had made theirs in fact and
name—under the panoply of civilisation and with Papal
benediction. A generation after the Conquest they com-
menced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of stoutly equalitarian thinking bound up with
fervid admiration for an aristocracy, is nowhere more
614 marked than among the Gael. They sought to reconcile
these conflicting loyalties by claiming common ancestry for
chief and people, as the children (*clann*) of a hero of
history or myth. The years 1945–47, which marked a
centenary of the last of the desperate Jacobite Risings,
stood at the close of the latest of many wars in which fame
has been won for the symbol of clanship—the tartan, long
proscribed (by the Act of 1747) 'to every man and boy
in the Highlands'. At such a time, the Gaels' loyalty to
the death cannot be forgotten although old kings, old
121 chiefs have gone. But its paradox must not only be re-
• 182 membered but understood, from its roots in communal
184 life and environment through history. Not until this is
done can important phases of our own time be under-
stood, such as the failure of Lord Leverhulme's seven
years' endeavour in Lewis; nor can the present opportunity of Highland renewal be grasped by the help of

183 democratic reorganisation, with loyalty to one's fellows and
181 to a leader.
185 Here again, Lewis-and-Harris may have something to
178 teach, as one of the last communities in Britain in which
185 much of ancient common right over land and sea has been
upheld. Trust ownership of Stornoway estate has strength-
174 ened the possibilities of rural planning there, while the
423 fisheries are a public resource which are partially protected
for local fishermen inshore and farther out are closed to
none. The useful Lewis Association has published models
of local survey for social and economic planning. At a
time when democracy is struggling to see its way towards
economic and social freedom, such communal initiatives
have more than local significance.

121 This sketch of comparisons and questions in rural life
131 raised by Hebridean evidence, through a wide and varied
region of the British Isles, must serve to indicate the geo-
• 182 graphic setting of the Island and relate the historic and
contemporary problems of its own community to wider
fields. This book is not directly concerned with the urban
and industrial problems of the firth-sides and 'included
plains' within the varied land of 'the North and West'
of Britain, deeply though they affect the hard-hit fishermen
of the Isles and the Island migrants—seamen or labourers,
tradesmen or factory workers, nurses, teachers or clergy.
121 Even for the migrants' sake, it is vital to maintain the
185 economic balance, and restore the cultural and spiritual
life within each industrial region, in order to maintain
that of Britain as a whole. It was not enough to schedule
'the murdered towns' of Tyneside, Wales, Lancashire
or Clydeside as 'Distressed', 'Special or Development
Areas'. The balance of Britain as a whole must be
restored.

184 share their characteristics. So to gain a sense of pro-
105 portion from the start, we must map the location of Scots
countrymen, their numerical importance, and their types
[128] of grouping. Let us begin with the first of these three
[102] aspects, their regional location (Fig. 2).

The base map on which the data are plotted shows the boundaries dividing the hill masses of the Highlands and
102 Southern Uplands from true 'lowland'. This hill country
13 is mostly covered by rough pasture (left blank on the map)
311 within which lie strips of 'Isolated Arable' with other improved land in the valleys and along the outlying coastlands (shown in black). This hill country includes the Scottish Isles, with the exception of Orkney, which falls
[241] rather into the category of 'lowland'. It is largely devoted
[429] to sheep farming and crofting, or left to grouse and deer. The lowland area from the Orkneys to the Tweed and Solway is devoted to mixed and dairy farming with lowland types of small-holding, except, of course, for 'Industrial Regions', which include most of the urban area of Scotland.

[226] Within the 'three-mile' territorial limit from the coast lie the inshore waters, in which local fishing was once important, and might again become so; these are left white on the map (Fig. 2). By contrast to their narrow extent on the East Coast, their width is notable in the Northern Isles and on the West Coast.

102 The problem set in making this map is to show two
13 different worlds, as it were: the Highland and the Lowland.
[84] The two are rarely envisaged together, and much confusion
of thought and policy results. To master the map, the
128 reader may scrutinise first one part, the Highlands (cover-
ing the other with one hand), then the other part, the
• 182 Lowlands (in the same way): thus each will appear clearly in turn. Both can then be envisaged together.

• 182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are
311 concerned. Economically the crofters' 'living space' is the narrow interrupted belt of improved land (shown black)
[241] which is generally fronted by the sea and its inshore waters,
and is backed by the Crofters' Grazings (enclosed by line
[429] C on the map). Some 700 crofting townships or com-
[341] munities are found in Zetland, the North-west mainland and the Western Isles, each with its Common Grazing; the line C also encloses a small area devoted to other grazings. Deer forests predominate on the eastern, mainland, side of the line. On the remainder of the hill country are to be found the hill-sheep farms, with other small farms and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
62 team on land formed the communal units contained within

Key to use of Land and Sea
(Highland, Island and Urban Areas)

1. The dotted line C .... . . C encloses the Crofters' Grazings, mainly 'Commons'.
2. Black areas: strips of 'Isolated Arable' within the rough pastures of the Highlands and Southern Uplands (left blank).
3. Horizontal ruling: open sea, outside the 'three-mile' belt of 'inshore fishing' (left blank).
4. Vertical ruling: urban and industrial regions.

Key to Size of Labour-Teams of Farms and Small-Holdings
(in the Lowlands)

The symbols show the average number of employees per team in each county.

(1 symbol = 100 teams)

(a) Per Mixed and Dairy Farm
— 2·2 to 3·8 (3·1)
● 4·1 to 5·6 (4·9)
■ 6·4 to 8·2 (7·1)

(b) Per Full-time Small Holding
• 0·7 to 1·0 (0·85)

(The numbers in brackets are the averages for Scotland.)

174 the township; and to each were allotted the rights of the
226 common grazing and the fishing grounds. For more than
241 a century the croft has been held individually, though in
423 the townships the common grazing is still held in common.
621 Beyond these 'homely' limits lie wider horizons, in the
632 past those of seafaring and of droving or the chase, and
today of fishing and gillieing at home, or of ocean journeys,
[178] urban occupations or colonisation.

In the Lowland regions each symbol represents 100
• 182 holdings. For (A)$_a$ 'mixed and dairy farming', the par-
184 ticular type of symbol shows the average number of workers
241 employed on a farm-holding in each county. On each farm the employed workers form what may be called the 'Labour-Team'. A team may be 'small', 'medium' or 'large'. The Scottish averages of these three types (indicated in the inset key to the map) are roughly three, five and seven workers per team. Four 'casual' workers are counted as equivalent to one 'permanent' worker, but farmers' wives are excluded. Under (B), for the same Lowland counties and areas, full-time small-holdings are
[543] shown separately. The Scottish average of less than one full-time worker employed, most often a son or daughter of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of
[162] farms and small-holdings in Scotland, true agricultural land-holders number 68,000, of which fully one-third hold part-time holdings (like the Island crofters), one-third 'full-time farms', and rather fewer (one-fifth) hold 'full-time small-holdings'. The remainder accounts for other types of less importance. The farms predominate in terms of improved land, full-time employment, and of course of
[311] production. As to area, farms cover 80 per cent of agri-
[164] cultural land. The average employ nearly 90,000 workers,
[162] A [refer to map p. 16 - analysis 18]

184 verses would ring false to them! Before 1939, two-fifths
241 of the rural pupils of most non-crofting counties came or
went in the school year—most of them the children of
361 farm servants. Their schooling suffered, and their
166 teachers might be reduced to despair; indeed it is to
• [182] educationists, rather than to agriculturists, that we owe a survey of these facts. When they leave home to be 'hired',
[891] the young folk learn to fend for themselves but may suffer
in the learning: stability of character and endurance in
[156] attachment are hard to form.

It would be difficult to overstress the tragedy of the long-continued break-up of rural communities in the Low-
175 lands. From the later years of the English invasions, as
178 when Major wrote with his knowledge of Scotland in 1500,
241 this break-up continued through the early, largely unre-
361 corded phases of the agricultural revolution, down to the
166 later phases from 1750 or 1800 to the present day. No
155 one who has worked with fellow-servants on Scots farms will under-estimate their sterling qualities. But the break-
[114] up, the tragedy, happened. It was boldly sketched by the Rt. Hon. Thomas Johnston (to 1929) and verified by Miss I. F. Grant (1924 onward). Beginning from intimate study of well recorded and surviving ways in the Highlands and the Hebrides, Miss Grant realised the significance of earlier Lowland life in the farm-hamlet or ferm-toun, as Lowlanders themselves could hardly have done. Comprehension of this break-up of community brings out the value of the enduring elements of communal life still recorded, remembered and surviving in the 'Outermost' Hebrides, at the core of 'the North and West'.[1]

[1] Ideas outlined in this section are developed in A. Geddes (1938-54). Detailed references will be found in the Bibliography.

178 follows that as the descendants of the crofters of the South-
west and East Highlands could and did change their ways
within the space of a lifetime, so those of the North-west
114 Highlands and the Isles can change too. Given the co-
178 operative leadership which is arising in the twentieth
century and was totally lacking in the ideals and training
185 typical of the nineteenth, that change may be not only for the better in the development of 'individual' qualities, such as the power to do hard work for 'success'; change may also maintain and develop what still remains of the old characteristics which gave the community life of the Gael, with all its faults, elements of beauty and sanctity.

In an article on "The Human Geography of Lewis", A. Stevens (1925) described the Island and people. His comparison of the cold, wet 'desert' of Lewis and its corn-patch 'oases' with the desert of heat and drought
• [182] and its oases of palms, is ingenious and suggestive. One
[241] might follow up the analogy and compare irrigation to the drainage of moorland and its fertilisation, which form the means of reclamation at home, and draw parallels between their immediate results on the land and the ultimate effects on work and social life.

Until the agricultural revolution, the unwritten story
174 of Scotland was in great part that of a long, uneven struggle
241 to make sour soils fit for cultivation and productive of a
134 livelihood. Most of all is this true for North-west Scot-
178 land; moreover, there, for eighty years past, the struggle has been a losing one, in the sense that arable land has been
241 decreasing and rough pasture deteriorating. In spite of
134 subsidies, the 'marginal farms' of Scotland have a tough
178 fight. Yet lands from Scandinavia to Finland and North Germany are giving a lead in peat-reclamation, where
[654]

133 tively to the rolling upland in the north. Ages of 'normal' denudation by running water must have worn away most of what later rocks may have overlain the gneiss, smoothing the Island's forms. Glaciation, however, played the latest part in this process, roughly planing its lower surface as it flowed out to the open sea, or widening the stream-veined valleys and gouging out the corries which make the craggy beauty of the Deer Forest of Harris.

A characteristic of many of the lower hills of South Lewis and of Harris is the greater steepness of their slopes to west than to east (or south-east) and the drift material heaped there. Scenically, this lends a feeling of rhythm to the skyline when viewed from north or south, as of westward moving waves. It was the ice-sheet, working upon structure and pre-existing form, which steepened the western slopes 'to lee' of its westward flow, by its 'plucking' action.

133 The chief and most important characteristic of the
137 major surface of the Island is its rolling, hummocky
topography, so different from that of a river-sculptured
• [182] land. Negative as is its influence upon the life of plant
communities, animals and men, its importance can hardly be exaggerated. Whereas river and stream drain a land, as they etch their way into its surface, and their deposits are laid down in gentle, regular slopes, glacier and
[134] ice-sheet leave an irregular, ill-drained surface. Upon this surface, waterlogging takes place, the life of plants and soil bacteria is slowed down, and so peat accumulates, rather than the humus which might enrich the soil in a similar temperate climate upon better drained slopes. Not only the climate of the present, but of the past, hinders the processes of plant life, and all that these can mean to man.

Shawbost

The Harris Tweed industry is lauded as an industry which is compatible with crofting. Because weavers are self-employed, they can set their own schedule of work and thus continue to participate in croft work and fulfill various township obligations. The effects of this industry on the township as a social boundary system were investigated. The income available from weaving is unpredictable, which encourages the retention of crofting practices and other patterns of behavior, such as "occupational pluralism," that were found to be adaptive in the past. Such strategies also strengthen township boundaries; for example, they encourage mutual aid and communal township practices. But weaving also offers a high level of income; and some weavers, preferring to spend most of their time weaving, have neglected crofting, or have invested in tractors or other motorized transport which enables them to harvest crops, cut peat and perform other activities independent of other township members.

The fundamentalist Free Church constitutes an important boundary-maintaining mechanism, serving to exclude various external influences of the larger society from the township. However, a smaller network of persons engaged in the religious sphere of social activity, a subsystem within the township system, also exists which has the appearance of a firmly bounded system. These are members of the clique

ISLAND REGIMENTS

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

Later (1938), the unit became the 203rd (Ross) Battery of the 51st (West Highland) Anti-tank Regiment. It was whilst fighting as an anti-tank battery that, with other units of the 51st Division, the men were taken prisoner at St Valery in 1940. Today, after more changes, the battery is the oldest in 540 LAA Regt RA, TA (the Lovat Scouts). In 1960 the Ross Battery received the Freedom of the Burgh of Stornoway in recognition of a century of voluntary service to the community and the nation.

LAND USE AND CROFTING

The history of land use and the crofting system in the Highlands and Islands (see Chapter 5) is full of difficulties. In the older days of the clan system, before the rot set in, though the clan members belonged to the chief, they also belonged to the land and the land to them. In such a climate, the agricultural system, for it was such then, was in a reasonably healthy state; the land was worked to the full. Good land was available for the support of the clan, and as often as not in good years there was ample produce, crops, and livestock, to send south to well-paying markets. That fertile lands abounded is indicated by the reports of visitors in various centuries. But times changed. The increase in population after the breakdown of the clan system by statutory legislation, and the policy of population placement carried out with a rigorous enthusiasm, planted seeds of discontent—in particular a hunger for land. The land was in any case becoming ever more inadequate to support those already on it.

The story of the agrarian troubles in the Highlands area is well

documented; and Harris and Lewis played out their part in the agitation for more land. Briefly, when the clan system was broken down, the clansman found himself freed of the obligation of service to the chief. The chief, on his side, found himself thrown to the economic dogs. Payments in kind were no currency; a house in London or in Edinburgh had to be paid for in cash, and a London hairdresser would hardly accept half a dozen eggs for his services. The effect of the Heritable Jurisdictions Act was like a butcher's chopper. With a stroke a social organisation was given notice to change overnight, with no period of transition allowed. The chiefs looked to the land for their money. In the old system, their prosperity had been largely measured in fighting men. Now the pressures of economics demanded increased rents from those who were being called tenants. Increased rents can, however, be paid only when the land's productivity rises. The agricultural changes percolating through the Lowlands of Scotland had not even begun to penetrate to the Highlands area. Many tenants found that, unable to pay the increased rent demands, they were ejected from the lands which, incidentally, they had held by traditional understanding—written deeds were rare. Emigration started, and the vacant lands went to sheep-farmers, well able to pay good money for the grazings.

Some chiefs did give their tenants time to change to new methods of land use, and were careful not to make a breach between agriculture and grazing. Their tenants in turn improved the land, changing in particular from the old run-rig system, whereby a man working a piece of ground one year had the same piece the following year only if the dice were thrown his way. But the class of farmers' tenants called crofters (who had no security of tenure) or cottars (a squatter type with no legal recognition) found themselves on the verge of starvation. The few acres of ground they had, or to which they had been removed, were quite unsuitable for intensive cultivation to produce even the basic necessities of life.

The picture of land use was that of a great black pot boiling furiously with a brew of which the final taste was quite uncertain. When the boiling was controlled, the land began to be parcelled out, a share to each family. This led to a rigid, almost monolithic,

[TEXT CONTINUED ON PAGE 55]

10 THE OTHER ISLANDS

THE continued evacuation of islands is a problem peculiar to Scotland. In the eighteenth century some 8 per cent of Scots lived on islands; today the figure is less than 2 per cent. Island populations today account for about 30 per cent of the total Highland (crofting counties) population. The difficulty for most islands is the relationship between population density and potential for economic development.

As though reflecting the relationship of man to man on Lewis-with-Harris—keeping together in community for survival—the other islands round the larger island mass have played some role at one time or another in recorded history. Most of the socially-significant islands of Harris have been described in Chapter 9. Lewis has very few, and these are mostly far-flung oceanic outliers.

North Rona

To begin at the northern point of the Lewis parish, about 45 miles NNE of the Butt of Lewis is North Rona, a block of hornblende schist with pegmatite intrusions. Though the island has never figured in any Census reports, since the Census began, it has been inhabited from time to time. Of about 300 acres in extent, it is cliff-bound and reaches 355 ft at its highest point. It lies in a part of the Atlantic where a deep swell seems perpetual, and landings can be difficult.

Dean Monro comments: 'Towards the north northeist from Lewis, three score myles of sea, lyes and little ile callit Roney, laiche maine land, inhabit and manurit be simple people, scant of ony religione.' The Dean's 'simple people' were no recent settlers. They were in fact the continuation of a community which had inhabited North Rona for at least 700 years previously. Tradition has it that the first inhabitant was St Ronan, who built a small monastic cell or hermitage there some time during the eighth century, but there may have been earlier inhabitants.

133 137

2. *Plant Life in Lewis-and-Harris*

Lewis has been dismissed by many as a floating peat bog, and its name has even been derived from *leodus*, a bog! For good or ill, peat influences the Island, its history, the distribution of its people and the economic and social features of their life. In Lewis, peat once covered everything except the narrow fringes of sandy machar, the surface of the inland waters, jutting rocks and steeper hills where drainage is rapid. Man's encroachment on that carpet has so far been mere nibbling. Except for the machar lands, every acre of ground occupied or cultivated by man has been reclaimed from peat.

133 137 182 [185] [311]

137

The Map of Vegetation and its Key portray the distribution of the main plant communities (Fig. 8).[1] All plants are of low habit with small leaves, well protected from excessive transpiration. They are mostly perennials or biennials; annuals are comparatively few. There is no burst of flowering save where the heather blooms on better-drained slopes, or where shell sand has blown, enabling clovers, vetches and meadow-sweet to give colour and scent. Moss, sedge and dwarfed heather prevail widely in tussocks.

137 233 [311]

Constant cropping by sheep and cattle, and also deer, tends to keep vegetation low, but on the wide, boggy moors this is a minor factor. Nor is there much systematic heather-burning. Even upon the islets of inland lochs, untouched by grazing animals, and in spite of better drainage due to the undercutting of the waves, growth is not really luxuriant. Bracken, however, is found on the islets, and a little on some former sheep farms, but not on the heavily grazed common pastures, for cattle keep down bracken.

[1] [see p. 50 -- analyst]

175 311 185 182

reclamation, which Dean Monro has described as he saw it. Technique and economic return must be balanced against the factors of nature. Although natural conditions are difficult, they may not form a complete explanation of the relative arrest of reclamation in the nineteenth century; for here separation from the agricultural advances of the Lowlands by barriers of mountain and sea caused the retention of unprogressive methods until the wave of agricultural improvement had spent itself by the middle of last century. To this cause must be added other influences contrasted to those leading to peasant advance in the rest of Western Europe: the political history of the Gaeldom after 1745, the revolution in land tenure and in the social life of the upper classes, the commercial, industrial and imperial development of Great Britain. All these factors help to explain the contrast offered to the Lews by western Denmark and western Norway, lands in which the soil and climate are comparable to those of the Island. Yet reclamation is proceeding, as on skinned land at Ness, where plots of ground have been steadily broken in by pick and by spade or plough.

[178] [171]

226 [361] [311] [241]

Settlement and agricultural land are placed around the coasts with their fishing grounds. In spite of what was often said—that the Lewisman is and has always been primarily a fisherman—fishing alone is not enough to account for this distribution, for the agricultural conditions on the whole are also best along the coasts, or were so for early settlers. As Stevens remarked, the light sandy 'machar' lands are there, and the fringe of partially improved soil close by; drainage is, on the whole, better, while shell-sand and sea-ware are to be had for manure. The sea-ware also serves still as fodder, while one or two sorts are sometimes cooked for human food; carragheen

Significant local characteristics emerge in the the ancient districts (inset with the Map of Ve Fig. 8). In the north is Ness (Norse, 'nose' along the west is Cladach (Gaelic, a stony beach in South Harris the western 'Machar' contrasts eastern 'Bays'. 'Park', a sheep-run in the ea teenth century, was the Norse 'East-fell'. In the parishes of Lewis centre on four churches, the road-system. This radiates from Stornowa directions: east, NE., NW., SW., and south to

[173]

[1] Pulling dulse (*Rhodymenia*) is one of the 'delights' of Ion a poem long attributed to Saint Columba!

struction of a single ring fence round the croft land, which also circumscribes a good deal of rough grass, the ground being generally rough in parts. Individual crofts are fenced only where exceptionally large, or when the possessor is unusually enterprising or is isolated. Departmental help is given in the provision of fencing materials for a township, the crofters supplying labour. As the animals are allowed to graze freely in winter, this limits crops to those sown and harvested in the summer half-year —a serious matter for any man of enterprise who cannot afford a fence of his own. Cattle kept on the croft when the fields are under crops have to be either tethered or driven to a common pasture. A drystone dyke may enclose a small patch of garden, rarely well tended, the school gardens providing a laudable exception.

Shortly before 1939, the stock included under 1000 agricultural horses and well over 10,000 cattle (of which more than 6500 were milch-cows), but practically no pigs. Sheep number 42,000 ewes, or 94,000 ewes and followers in June. Thus there are 2·5 cattle on an average holding, of which more than 1·5 are milch cows; and there are half a score ewes or about a score of sheep in June. The size and the quality of the cattle have greatly improved since first I visited the island in 1919; at that time the mongrel Highland breed must have been the very poorest in Britain. The Blackface sheep are small, either through underfeeding or because of traces left from the old, smaller Hebridean breed, or from both causes. On an average there is, or was, one horse, or pony, to every five or six crofter holdings, but their number is much reduced.

Actually, such Island averages for horses and sheep are somewhat misleading. In particular, either there are more horses than the average in a given district, or almost none,

according to the relief, as explained. Thus the Barvas parish with its smooth topography permits of ploughing, and there is, or rather was, one horse between two crofts, or one pair between four or five. In rocky Uig or in Lochs, however, there is only one pony between ten or twelve crofts. Lending or hiring of horses has still to be practised, but within manageable limits, though the increase in 'cars' had lessened the number of horses, even before the war-time introduction of tractors. Hiring is often done for cash, though this conflicts with older communal custom. Yet lending had its difficulties: "The borrowed horse", says the lender bitterly, in the Gaelic proverb, "is never tired!"

The number of sheep per holding is noticeably highest in Harris, with one score ewes per holding. The sheep pasture of North Harris was well spoken of by Dean Monro, and the link with the home industry of Harris, its weaving, is evident.

Comparisons with the western mainland show, in holdings of similar or rather large size, the diminished amount of cereals now grown there even by crofters. The increased proportion of grass reflects both the greater dependence on bought provisions, and also the fact that the West is not a land to ripen crops, but that it can grow grass for stock.

4. *The Moors as Pasture: Game and Sport*

In order to estimate the relative value of the rough grazings of Lewis and Harris, it will be well to compare these with the moors lying across the Minch and east of Cape Wrath. There also may be found crofting communities whose economics are similar to those of Lewis, so that the stock carried on their pastures will furnish some

175 usually corresponded to six imperial bushels). The stock
434 was "four milch cows, three to perhaps four horses, and as many sheep on the common as the tenant has luck to rear". Although such estimates, especially of crop yields, are apt to err on the favourable side, a comparison with the same writer's statistics of stock (and rental) shows that this estimate gives only a little over the modern average per family in Harris, and allows an average sheep flock of one score ewes.

175 The briefer Statistical Accounts of Lewis indicate the
434 average stock per family, suggesting comparisons both with the present, and with an earlier time (Chapter II). In 1790
422 the cattle and horses, though small, were greater in number per family than now. In Lewis there were eight head of cattle per rural family, compared to 2·5 today; there were one or two ponies per family (according to the topography and ploughland of the parish) instead of an average of only one horse to five or six families today; the small family sheep-stock was similar; and there were also some goats,
175 say, one to every second family. In addition to these
226 resources, there was fishing; and the number of boats in Stornoway parish, giving one boat to four families, is a guide for the rest. Fishing, with net-making, was a predominant occupation in all parishes by that time, and boat-building was significant too.

175 As to changes, fishing had grown in importance since
433 about 1720, and kelp-making added an important new
434 resource. But one may doubt if the Island supported an appreciably larger live-stock in 1790 than seventy years before; one must rather assume smaller shares per family,
[182] for population had increased. A basis for agricultural security was an adequate balance of sandy machar to 'black', peaty, clay land; and the area of machar, a limited

175 natural zone, could not be extended. In any case, the re-
433 clamation of clay land tended to slacken as efforts turned
434 to fishing and kelp-making. The introduction or increased growing of potatoes added to the human, but hardly to the
[182] animal, food supply. Finally, while the beginnings of
[311] medical knowledge and vaccination had aided the growth of population after 1750, veterinary science had made no
[232] progress, nor did it advance in the Island for many years to come. We may conclude that an average stock per Island
[422] family about 1720 was rather more than that of 1790, and the acreage relatively larger, while both were greater than the average of today, particularly in the Lews.

175 What, then, could a family have to eat, from such crops
262 and stock? While in winter even now there is almost no milk to be had on a croft, and there would be little then,
244 there was salt meat, dried or salted cod (or herring) and fish oil; oat and barley meal and some rye meal; cabbages; and, increasingly in the eighteenth century, potatoes. Martin included potatoes among the crops grown even on far St. Kilda in 1697. A century later it was written that the people of Uig, for instance, had, though 'unwilling', been induced to grow and eat them 'forty years before'; and the years tend to be under-estimated where changes are slow and memories long! But it was written of Harris that by June the meal and potatoes had mostly been consumed, "and such as cannot afford to purchase imported meal subsist chiefly on the milk of their cows and sheep, with what fish they may chance to catch, till their wants are relieved by the first fruits of their potato crops early in Harvest".

175 We conclude that with even less money but a little
511 more grain the population in the Island had fluctuated
162 about a mean for some centuries before, as it had in so
171

175 rent-rolls record something of more vital and enduring
241 concern, the unit of community life in the Lews. This was
427 the 'conjoint' or 'group' farm of the labouring peasantry
[476] —though it was overlaid in parts of the Island by the formation of tacks held by gentleman rent-farmers.

Both rolls are Judicial Rentals, that is to say, the
175 tenants, great and small, were convened by the Govern-
241 ment Commissioners and examined on oath as to the rents
427 they formerly paid; the accounts were then entered and
656 totalled. Because of the Jacobite resistance, the small amounts of rent and the maladministration of the Forfeited Estates, doubt was cast upon the first rental, of 1718. A second rental was therefore compiled in 1726, upon a different system, which confirms the correctness of the first.[1] All were named, including those absent or 'valetudinary'.

175 Owing to the Island's comparatively smooth land sur-
361 face and access to the sea, the people could group themselves
[182] as they chose. Whereas in the Highland mainland many a pocket of land is too small to keep more than two or three
[184] families alive and no fishing grounds are available, in Lewis the people could join together in teams of four, five or six,
[433] to work a hamlet-farm or penny-land, definable as a
[476] joint-farm of unit size, and to man a boat with "four to row and one to steer".

175 The first point of interest is the equality of the shares,
241 each man paying exactly the same as his fellow-tenants for
427 his 'farthing',—a fourth, or other equal share of the farm.
[436] An average share of rent was a little over 10 shillings sterling
[113] with additional payments in farm produce, though not (as

[1] A. Geddes, "Conjoint Tenants", etc., *Econ. Hist. Rev.*, Second Series, vol. i, no. 1, 1948, pp. 51-60. This reconciles the evidence of 1718, reproduced in the Brand Report (1902), Appx. O, and that of 1726, edited by J. R. N. Macphail (1916).

(c) FARM-TEAM AND BOAT'S CREW

175 The strictly equal division of rent on each joint farm
241 shows the equality of sharing among its workers by 'run-
427 rig'. By this system, periodic pooling and redivision kept the land in convenient blocks, a wet part here and a dry
476 one there, all shared out to give each man an equal chance
423 whatever the weather might bring. Such sharing was not mere static division of goods: it was the means for co-operative work, in ploughing and harvesting, or cutting peats, on land, and in manning a boat for the fishing.

175 For ploughing, two or three men were needed—one
241 leading the horses (walking backward and singing his en-
476 couragement), a second to hold the plough and perhaps a third to turn the sods; but four ponies abreast were needed to haul the plough, and each tenant possessed only one or two. In addition, the plough might be preceded by an instrument to clear the ground, a 'reestle', requiring two horses and one man. A Gaelic proverb notes the selection needed in the horse team, and one disabled by age could be replaced as leader by another. Ploughing was necessarily co-operative.

175 The rockiness and hilly ground of Uig and Lochs
241 diminished the usefulness and, no doubt, the number of
[182] ploughs, but the importance of their fishing was some compensation for poor agriculture. In 1790 there were
134 ninety ploughs in Barvas parish, where they were no doubt
226 of ancient usage: a ratio of one plough to five families, or one per joint farm. To judge from the smoothness of Stornoway parish, ploughs were probably used there in a similar ratio.

175 While some jobs were done by no more than two people,
476 —as when a ridge or 'lazy-bed' was put in order, the

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
228 curers were best fitted to take action not only in marketing but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of a community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

175 Looking beyond the Island to the mainland, the time is
621 approaching for a fair assessment to be made of the historic
622 parts of chief and landlord, factor and tacksman. Not only
427 is there an enlarging body of documentation, but a growing
184 understanding of communal strands in tradition and of changing social economy seen in relation to geographic factors of place and region. And in the Gaeldom, condi-
[178] tions varied greatly between bordering areas from Mar to
[182] Kintyre,[1] and the heartland of tradition in the Hebrides. In the Island, one must remember the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of
[113]

[1] A. McKerral, *Scot. Hist. Rev.*, 1947.

175 saint, a character so eminently Christ-like",[1] and to his
793 intimate beliefs, doctrine and wide influence. The same
159 Highland roots and deep charity characterised Dr. Norman
Macleod, author of the popular classic, *The Friend of the Gael* (*Caraid nan Gaidheal*).

121 If a student of community ventures upon an interpretation of theology, it is because, to him, any attempt to understand "the relations of God to mankind" must take account of men's relations to one another. Ideas are transformed by human experience during economic and social revolutions, and in their turn they transform society. To make contact with reality, theology must regard mankind: it
175 must be integrated with sociology. Because of its close
178 bond with communal life, the religious spirit, recorded in
• 182 Gaelic lore, was jarred, almost overwhelmed, when community was shaken to its foundations by the commercial,
178 agricultural and industrial revolution. Happily, the value
79 of communal Christianity has been acknowledged both by Roman Catholics—notably (among Gaels) by the Rev. Allan Macdonald of Eriskay—and by Protestants.[2] In the Scottish Presbyterian Church today, the movement which seems most deeply aware of the need for a new society has acknowledged its debt to communal tradition where this has been best maintained, that is, in the Isles. Seeking to aid Christian endeavour, international and national, this movement has turned for inspiration to Iona.
(771) In Iona, of which the noble cathedral belongs to the Church of Scotland but is open for service to all denominations, Presbyterians have found a new symbol.

(113) [1] Canon Vaughan, cited by the Rev. Norman Maclean (*Scotsman*, 21st Aug. 1943).
[2] "The Church should interpret the Love of God by a flaming zeal for the redress of the social order." (The Very Rev. Prof. John Baillie, Moderator of the Church of Scotland, at St. Andrews, 1943.)

175 real hopes that prosperity could be maintained. In 1914
228 war came, followed by sweeping changes in international
178 trade. These changes left the Island fishermen workless,
(439) and with wrecked and rotting boats. In twenty years the number of Scotland's fishermen was halved, and the remainder all but ruined. For guidance, past progress and past losses should be reviewed, in order to see what measures can be taken to restore prosperity.

121 For the slow growth of a native fishing industry, two
175 factors were to blame: the poverty of environment, to-
• 182 gether with the unsettled state of the Isles, and also, it seems, the jealousy of urban interests. These were repre-
228 sented, to 1603 and even after, by the Royal Burghs, and from 1707 by the British Parliament. The Royal Burghs certainly developed Scottish trade and industry through their own ports, but they feared competition, and opposed any direct contact of other ports, such as Stornoway, with foreign fishers and traders. From the days of the MacLeods
(648) this difficulty had hampered regional development. It was in spite of royal prohibition that Seaforth encouraged Dutch curers to settle, an arrangement interrupted by war with Holland in 1653 and 1665. Curers from Caithness and the East Coast were encouraged to replace the Dutchmen, and from time to time through the succeeding century efforts were made from the south to form fishing companies, and in the Island to encourage local fishers to profit from example in the catching of herring and of ling, hake and cod.[1] The people fished for food, with fishing-rods from the shore, and in frail boats in the lochs, and if they
(648) could, they also sold a surplus. Fish were not only taken direct to Glasgow, but sold at home, first to Scots and foreign and later to British boats, of which ninety visited Lochs in

[1] W. C. Mackenzie, 1919, p. 65 ff.

178 and savings were sent by emigrants who remained faithful
433 to parents and home.
167 If it be asked why most of the people kept to their Island home in spite of its poverty and earned so little
175 away from it, one answer must be that their native tongue formed a barrier encircling them as a community at home
178 and cutting them off from the rest of the nation. Seventy-
197 five years ago the new Education Acts were not yet in full operation. Comparing the relative well-being in the
(671) Shetlands with the extreme poverty in the Hebrides at that
(871) time, a northern agriculturist wrote that in Scotland, only in the Hebrides "is the food obtained by the peasant
(511) occasionally so scanty" as to be unable "to maintain a
(184) labouring man in vigorous health". Inquiring why there should be so great a difference between the Shetlanders
175 and the Hebrideans, living in similar, distant isles, he
178 wrote, "We think the answer may be given in one word—
197 *language*. . . . The population of the Hebrides cling to their ancient Gaelic with consequences most disastrous to
• 182 themselves. . . . It handicaps them in the race for life . . . is a hindrance in the cities and a check to the emigration of both sexes to those world-wide regions where all who speak the English tongue find themselves at home."[1] He concurred with the Census Report of 1871, which stated: "The Gaelic language may be what it likes, both as to antiquity and beauty, but it decidedly stands in the way of the civilisation of the natives making use of it, and shuts them out from the paths open to their fellow-countrymen who speak the English tongue". The Report concludes: "It ought therefore to cease being taught in all our national schools. We are one people and we ought to have but one

[1] James Mollison, in the Highland and Agricultural Society's *Report on the Present State of the Agriculture of Scotland* (Edinburgh, 1878), pp. 136-38.

175 language." Many Islanders would agree with the state-
178 ment that Gaelic was a barrier to economic progress.
197 It was not only Lowland schoolmasters, ignorant of Gaelic but an educated, sensible class of men in their day, who
• 182 used the strap on the palms of the little children "for their good" because they could not understand English.
(511) An active Lewis country schoolmaster, who had considerable rural knowledge and experience, said to me: "I know what
175 I have suffered through life from being brought up on
197 Gaelic. If I had my way, I would *punish* [with the strap]
871 every child I heard speaking Gaelic in the playground!" Had the Island School Boards wished Gaelic to be consistently taught with English, they could have prevailed.

114 One may not only disagree strongly with the means—
197 the strap—but hold that enlightened bilingual teaching is
871 both worth while culturally and also of assistance to intelligence without interfering with use in English of the three Rs, and of secondary and higher education. Yet in
153 Lewis recent non-verbal tests in English and Gaelic show a mean intelligence quotient depressed by about 15 points.[1]
153 The conclusion seems to be that under the present system
197 the Gaelic school child is still at a disadvantage compared
182 to other school children. But even more important to the child's development would seem to be the expression of
121 his response to his rural environment in his own tongue. For this the school tests and the educational code do not fully provide; nor do the tests of life when the adolescent Islander suddenly finds himself at work in a Glasgow
175 factory or abroad in city streets. What concerns us here
197 is the economic drawback of a lack of ready English among
182 [1] Christina A. Smith, M.A., B.Ed., *Mental Testing of Hebridean Children in Gaelic and English*. (Scot. Council on Research in Education, vol. xxvii
(113) (London, 1948); J. L. Campbell, *Gaelic in Scotland* (2nd ed.) (Edinburgh, 1948).

• 182 rural Islanders throughout the nineteenth century and even
197 today.
From 1887 the State made efforts to improve the
175 crofters' lot. Crofters' claims to stake shares upon the only
654 available reclaimed land in the Island, that of a few farms,
241 had been refused in the 'eighties, but came to be granted, in principle and in fact, after 1900. During the war of
427 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

175 When war broke out in 1914 over 5000 men left Lewis
161 to join the Services, and corresponding numbers left from
72 Harris. Others, too, served in the Merchant Marine, ex-
701 posed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss.
175 The last blow to the Island came after anxiety had ceased.
161 Early in 1919 the transport *Iolaire* struck a rock and sank at the entrance to Stornoway harbour; and 200 men who
731 had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

511 coat, was thought to be supernatural. The fishing, too, is
226 of good standard: a typical annual catch including 1700
511 salmon, 5000 sea-trout and 1800 brown trout; and it was for this, as well as for the shootings, that the moors pertaining to the different shooting or fishing lodges and hotels
137 were bought at Lord Leverhulme's sale. The absence of
233 foxes was important to sheep-rearing before the introduction of guns, and is still a favourable factor.

5. *Sea-fishing*

226 Fish have always contributed to the diet of the Islesfolk,
178 whether they fished from coracles or boats, or with 'lang wands' from the shore as they still do, and as they did in
[262] the days of Dean Monro and, no doubt, right back to neolithic times. The relative importance of fishing and
[433] agriculture, however, has always varied according to place
[241] and time.

182 Fishing in modern and historic, and also in prehistoric,
226 times—to judge from the kitchen middens of Uig—has always flourished more where there were deep sea-lochs;
241 and settlement resulted, even though rocky hillsides made ploughing difficult or impossible. Conversely, agriculture
[178] has offered better opportunity on smooth coasts with a
[172] variety of soils, though fishing was poorer there. Thus the men of Stornoway Bay and Eye, of eastern lochs and of the Harris bays, like those of Loch Roag on the west, have long been partly fishermen. In the extreme north, too, men of Ness—with the chance of choosing their fishing grounds on the north, west or east of the island and with their little rocky port giving shelter, of a sort, from south-
[461] west gales—were good fishermen; they are good seamen
[829] still. "The fishing of the Barvas folk" is an old gibe,

182 meaning that the men of that village, and its immediate
226 neighbourhood, were the last to put to sea and the first to
241 return. The Barvas folk could retort that they would have been fools to do anything else on a straight exposed
[829] coast; and that anyway their pony-drawn ploughs were
[461] of more use than the foot ploughs of the rocky south. A form of provender taken indirectly from the sea was the sea-birds and eggs from the sea-cliffs and islets like Rona, north-west of the Butt. This helped to support a few families in St. Kilda and on the rocky Shiant Islands south-east of Harris.

175 Fishing remained backward and primitive, however,
226 until the nineteenth century. After developing in a promising way, it was checked before the First World
[178] War, and fell into decay during and after it. Decay has,
504 of course, been widespread. In 1935 the chief ports of
501 the East Coast, from Leith with Granton northward by Fraserburgh to Wick—a round dozen—had still an average of 250 to 300 vessels, 3000 in all. These were chiefly of steam or motor auxiliary power and valued (with fishing gear) at £2,750,000. Orkney and Zetland, too, had each their 300 boats. The whole West Coast, however, from Stornoway to Ballantrae, had only 2000 boats, valued at less than one-tenth of the fleet of the East, and worth only a fraction of this, to judge from prices in the open market. Nearly 400 boats were still on the register for Lewis and Harris (Stornoway district) and another 300 for the rest of the Outer Isles. But fewer put to sea each year, even from Stornoway itself.

182 A major drawback to herring fishing in the Stornoway
226 district is the uncertainty in the movements of the herring shoals. On the Clyde, moreover, herring can be sent fresh to the city but further north they must be cured. Whereas

182 on the East Coast and in Orkney and Zetland there are
226 comparatively well-marked seasons at which the herring can be expected, Stornoway appears to lie marginally to their main migrations. Thus the amount of the catch varies and curers have been disinclined to set up large curing stations such as those which deal with the enormous influx at the height of the season on the East Coast. A partial compensation is found in the continuance of herring fishing in winter.

226 While fishing from rowing boats for saith, lythe and
[178] mackerel still supplies food for home in summer, fishing with long lines in winter and spring brought cod and other white fish, sun-dried and salted, which became an important export though declining sharply after 1900 and of no importance since 1919. Lobster fishing is undertaken in small boats with two or three men from many townships, and two ponds have been reopened, one on Bernera, Lewis, and the other at Stockinish in Harris to store the lobsters. Conditions in 1935 and 1951–53 are compared in Appendix I (iii) and II (iii).

6. *The Annual Rhythm of Life*

221 It is appropriate here to show how fishing and crofting fitted together into the seasonal calendar a hundred years ago, and shortly before and after the war of 1914–18.
[182] The Lewisman's year shows its relationship to the seasons,
[175] with their temperature, rainfall and wind (Fig. 9). A century wrought changes: cod fishing declined as the
[178] herring fishing grew in importance; but the latter fell
[286] away again after the war. Partly as a result, weaving has become important, the men fitting into the idle periods between the brief peaks of spring and harvest work.

461 Men's work can be roughly estimated as either light,
462

[TEXT CONTINUED ON PAGE 22]

342 maintained—once an important aid to the survival of half-
343 starved cattle. A slope from the dwelling-quarters down to the byre facilitates drainage: normally the length of the
[178] homestead follows the slope. The separation of house from byre took place in Harris and Uist over seventy years ago by County Council decision, but in most of Lewis, even in 1947, about 40 per cent of the homesteads were
342 of the primitive type, outwardly but little changed. This separate cottage, as in Harris, is a shapely little structure, roughly symmetrical and particularly pleasing when the walls are whitewashed below the pale-gold thatch.

342 The surviving 'black house' is a stone structure. As
343 Stevens has written, "the rock of the island is hard to
[314] work, and hard to win", and may be covered by peat. Undressed stones are collected and sometimes carried for
[324] long distances. Before dynamite came into use, a very large stone could be broken up by lighting a peat fire on it, then dashing cold water over it. By an old Gaelic custom, the bachelors of a township used to help to build the house for one of their friends who was about to marry.
[333] Lime for mortar being absent from the island, the walls are built dry. The wall is double, the space between being filled with earth. Hence it may be six feet thick
[354] at the base, though barely six feet high. Typical primitive houses lacked windows, only a little light entering through the smoke vent and through a piece of oiled skin, replaced latterly by a pane of glass let into the thatch of the roof or by a deep window aperture in the wall.

342 Roof building is a difficult problem in construction,
343 on account of the scarcity of timber and the strength of
313 the winds, and explains the narrow plan. Wood was so scarce that when a house was abandoned the frame of the
[182] roof was removed, the spars being the tenant's; but in
[422]
[178]

[TEXT CONTINUED ON PAGE 82]

342 adequate air-space, and windows opening at the top and
746 usually kept open by day, in which a woman can work at
178 ease. The Department of Agriculture aided the building of a good standard type. The quality of joinery and
656 masonry or concrete work improved, one fairly skilled
[335] workman usually directing the householder and friends as
[333] amateur builders. The cost of materials was met by a grant, generally of £250, half being repayable by an annual rent of £6: 10s. for twenty years. Repayments proceeded satisfactorily. No scheme organised by the Department of Agriculture for Scotland won so general a commendation as this of house improvement. It made good use of family initiative and responsibility, with neighbourly co-operation not called for upon a large scale, a township at a time, but in quite a small, personal way. Nevertheless, had more guidance been provided to the builders, the
[464] houses could have been really well built. For lack of this, perhaps, crofters increasingly prefer to pay for skilled work, though helping actively. Appendces I (ii) and II (ii) gives pre-War and post-War statistics.

3. *The Township and its Changing Plan*

361 Where absence of rock and boulder permits ploughing,
[182] the village land is laid out in a series of parallel strips,
[491] aligned with the slope. The road runs either parallel with shore or river, or at right angles to it. The inter-mixed possession of strips by 'run-rig' characterised the Lowlands before the Enclosures, and is frequent in
[423] the Highlands and Isles. The apparent regularisation of field lines may conceal the fact that an individual holder's plots may be scattered amongst those of others in fixed
[182] run-rig. This is an advantage where quality of land is so patchy, and each man thus gets his share of good and bad

361 luck in land, but a disadvantage where control of a single
[423] area is desired by one man. Regularisation of roads,
[182] houses and holdings is relatively modern, for crofts and dwellings were once grouped in hamlets usually close to
[172] the seashore. The early hamlets can still be made out from their ruins among the rocks, sometimes sketched in the 'six inch to mile' Ordnance Survey plans. They were without formal order or arrangement, each homestead within its boundary wall. Where ploughing was and is too difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 Shawbost, on a rocky part of the west coast (six miles
491 south of Barvas) consists of three main sections: a scatter of houses and ruins by the enclosed loch, two main streets linking the loch to the main coastal road, and inland another short street. The three can be made out on a 'quarter-
[175] inch' map. The two main streets were laid out by the
[311] Estate Officers following removals in the mid-nineteenth century from another part of the island, Uig, and the third running inland was laid out still later, when population was growing and land was needed. When the third street was laid out, the landlord, Matheson, lent good plough-horses for preliminary reclamation. The irregularly placed black houses near the sea are tending to be rebuilt close to the main road.

361 In addition to this type of movement, farms 'broken
178 up' once more into crofts have been laid out on a regular grid plan, each house placed on a corner of its five, ten,
311 or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned'
[654] land may also be reclaimed for crofts by squatters tolerated by the community, or on a regular grid by agreement of the assembled crofters, guided by the Department of Agri-
[491] culture. Thus two distinct tendencies are seen: the grid plan in new settlements, road alinement in existing ones.

311 illustrates the narrow margin of habitability on these frag-
241 mented holdings.
423 Now, in Lewis periodic pooling and exchange, or the
practice of *movable* run-rig on the small joint-tenants'
241 farms, was abolished early in the nineteenth century, except
423 upon the machar, where it still continues. Apparently the
476 strips were simply fixed where they had last been appor-
178 tioned by lot. Subdivision of the little crofts among sons
and grandsons followed, owing to inheritance without re-
[175] clamation. Fairness gave 'the patchwork quilt' described;
but it was fairness pushed to the point of folly, for differ-
ences in soil from one adjacent strip to another were slight!
It is otherwise with the long, narrow plough-strips which
run from the houses on the pure boulder clay down to the
sandy shore: run-rig, movable or fixed, is understandable
and necessary there. The case just cited shows how a
sensible communal tradition, such as that of '*movable*
run-rig' with periodic pooling, may degenerate into ab-
surdity by fixation. Happily the machar still shows the
sane maintenance of a tradition, the pooling of resources:[1]

182 In 1924–25, widespread distress in the Isles, the failure
161 of the Leverhulme endeavour, the crofters' refusal to own
their own crofts, and the emigration which followed, caused
many outsiders to forecast rapid depopulation. It was all
182 the more interesting to note the confidence in the Island's
161 future shown by buyers of the great estate, all of whom
471 knew what they were about, for they were men with
experience of the Island, of its rates and rentals and of its
people. To a wealthy man who repurchased a sporting

[113] [1] Apportionment of lands held in run-rig in the Carloway estate is described, and the principle discussed, in *Scottish Land Court Reports*. (See *Scottish Law Rev.* vol. 28, 7; July 1940, pp. 51-54.) At the same time 'mechanisation', or the co-operative utilisation of tractors had led to pleas for 'collective farming'. (*Stornoway Gazette*, February 1944.)

182 estate, or where a single lodge was bought as a home for
161 retirement, depopulation might not matter. Certain popu-
471 lated parishes, however, were bought as investments by
men of comparatively modest means. The principal
471 reasons for his purchase given to me by a retired man,
formerly connected with the administration of the Lews
124 estate, were two. Asked if he had found, and expected,
steady, remunerative payment of rent, he replied: "Cer-
tainly!" Next, in view of Press forecasts of general
emigration, I referred to the fact that if large numbers
of crofters decided to give a year's legal notice of departure
and apply for compensation for improvements, including
the erection of a 'white house' (otherwise than by Govern-
ment aid), the landowner would be faced by heavy lia-
bilities while deprived of income. Had the purchaser no
fear of such an eventuality? "Certainly not!" was the
reply, "the crofters will stick to their homes for many a
long year."

829 These examples show that, while the defeat, or non-
realisation of Leverhulme's schemes, seemed to many out-
458 siders the beginning of a not distant 'end' to the Island
community, the Islanders themselves did not contemplate
a final exodus. They were quite uncertain what was to
come, it is true. Who was not, in those years of discour-
agement for Scotland and her people, for Wales, for
Tyneside and Lancashire? The years of Leverhulme's de-
parture from Lewis and of his death brought bad seasons.
In 1924 storms destroyed crops and the peat would not dry.
Herring catches and prices, though they had risen a little
since 1921–22, had not allowed recovery from the losses
sustained. The cessation of Leverhulme's wage-payments
meant a gap in income which the Islanders could not fill
[135] at home. To relieve poverty in 1924-25, a Highlands and

178 exists at Tarbert and another was erected in
286 district by Leverhulme. Leverhulme also
have introduced 'Automatic' hand-looms i
[423] Today as in the past, the weavers possess a li

Lewis and Harris

121 The importance of the 'regional' movement is inter-
185 regional and indeed international. In the case of the
Island, international order is required for its fisheries to
438 recover, and for its weaving to find purchasers abroad as
well as at home. This in turn could allow small-holding
to find an Island market in its little burgh, Stornoway.
Without this triple basis of fishing, weaving and crofting
for its economy, Island society will break up and its culture
[182] vanish, not evolve. It is no less true that only by the best
utilisation of each regional environment, economy and
society as we find them, will profiteers be held in check
at home, and powerful peoples cease to exploit the sweat
of others.

121 A pioneer American Report acknowledges the debt of
171 regional survey for the New Deal not only to France and
Germany, but to a group of practical idealists, of geo-
[185] graphers, biologists and sociologists in Britain.[1] If nation-
[433] ally we can be proud of Scots and British initiative in
[184] planning, we must own, until recently, to humiliating
slowness in its execution, and in the mobilisation of regional
resources for social ends. The chief end of our planning
must be the re-making of society. In Britain it is not
always realised that in the great developments of the New
Deal the execution of concrete schemes which include civil
engineering, industrial expansion and agricultural con-
servation, is accompanied by real cultural achievements,
both urban and rural. Not only are geographers and
economists, technicians, industrialists, and officials called
to survey and plan the Tennessee Valley, but sociologists
and educationists are required to complete the work. Not

Uig

28 South Uig and Park seem to suffer in the same way even though the larger producers,
434 mostly mills, endeavour to distribute weaving equally to all districts. The weavers'
earnings vary from individual to individual, according to the amount of work they get, and
also from year to year according to the fortunes of the trade, especially of the American
export trade. A good weaver, in a good year, might earn from £400 to £500 but an
average weaver, in an average year in Bernera, probably earns between £250 and £300,
whereas in the Carloway district (more accessible to producers based in Stornoway and
Shawbost), the comparable figure is around £400. Most weavers try to maintain con-
nections with several producers and this difference in earnings may be between those who
obtain additional work for 'small-producers' (i.e. tweed merchants who do not spin their
own yarn), and those who do not.

228 Fishing has greatly declined since the late nineteenth century (table 31), neither white
[226] fish nor herring are of any significance, nor do Bernera men contribute significantly to
433 the island's economy by working on east coast boats, as was formerly the case. But
Bernera has become one of the most important centres of Scottish lobster fishing, the
value of landings having increased from £983 in 1937 to £4,949 in 1956. There are six
locally owned lobster boats and others use the facilities at Kirkiboat. The vessels
generally have seven to a crew (c.f. the usual five in Sutherland) and work the whole lengt
of the Atlantic coast and out to the Flannan Islands and St. Kilda. They carry 100 to 160
lobster pots and may also catch ling; crabs are almost entirely ignored because they are
difficult to transport to the distant, mostly English, markets.

One very important factor in the present prosperity of the Bernera lobster fishing is
the Kirkiboat lobster pond. This was built by a local crofter in the 1920's. It was close
during the war, and was afterwards taken over by the Crofters' Supply Agency, though th
original proprietor is still employed whole-time in looking after the pond and re-fishing
the lobsters. There is naturally some loss of fish in the pond, and when high prices are
being obtained at Oban the local fishers feel rather disgruntled at their less favourable
market here. Hence, if there is a good catch, say over 2,000 lbs to a boat, and reasona
good weather prevails, the lobsters may be taken straight to Oban where up to twice the
local price may be obtained. The C.S.A. pay 2s less per lb than Oban because of the
cost of the upkeep of the pond, and the wages for two men with their boat. There was an
experiment in flying lobsters direct from Lewis to Billingsgate, but the cost was too high
The problems of isolation here are very severe for the lobsters have to be sent by
Macbrayne's steamer and by British Railways upon which there are no cold wagons reser-
ved for the small quantities in question - a hazardous course for a highly perishable carg

Conclusions.

182 This part of Uig, therefore, has had a long and complex history of human settlement,
exploitation, and adaptation. Much of the more recent part of this history is vividly
remembered and still plays a part in the making of modern decisions. The sense of kin-
ship and a common past is an important cement of society, for where natural resources
are so limited a mystique of other than a material type is necessary if society is to retai
51 its self-respect. However, the natural resources are indeed so limited that economic
181 self-improvement is extremely difficult. The egalitarian tendencies of Gaelic society a
crofting legislation are not now sufficient to resist the tendencies of the times and to pre-
vent some of the crofters making adjustments in their holdings, but unfortunately there i
insufficient good land to allow much adjustment without a drastic reduction of population
[447] which would be equally damaging to the well-being of the local society. It seems unlikel
that alternative sources of employment could easily be found - the isolation within Lewis,
the isolation from markets of Lewis itself, and the lack of local resources have combine
on previous occasions to defeat plans for development. Weaving is the most important
288 means of supplementary livelihood, but it is too vulnerable to politics and fashion; fishin
is greatly decayed from its former dominating position; only agriculture remains locally
228 and perhaps the greatest possibilities there lie in better standards of cultivation (especia
drainage and fertilisation), a better standard of animal husbandry, and more reseeding.
But whatever developments are undertaken will need careful selection and encouragemen
results cannot be hurried but nevertheless something must be done soon if the local socie
is to maintain itself. This great and paradoxical element of the "crofting problem" is a
important here as elsewhere in the seven "Crofting Counties".

[Kershader] [Garyvard]
182 common grazings - at present approximately correctly stocked - and cannot therefore provide
241 much employment. Hence it is the standard of agriculture that must be improved. Since the
[213] land does not permit striking extension or improvement of the cultivated area, development
must be directed towards improving pasture, with more re-seeding and controlled grazing
100 similar to that already described. All this, however, is of little avail if prices for cattle, sheep and wool remain low, or at least lower than prices prevailing on the mainland. The first priority, therefore, in the establishment of a prosperous agriculture is a guaranteed market-price. Given this, it might become worthwhile to take steps to increase the carrying capacity of the crofts. It may be assumed that this would involve an all-round improvement which could give a firm basis to the economic existence of the community; until this is achieved, stability and continuity are out of the question.

GARYVARD

Gwenyth R. Page, B. A.

131 The landscape of the south-east coast of Loch Erisort is a sombre and rugged one. The
133 Quaternary ice sheets left in their wake troughs now filled by the sea loch, innumerable lochs covered in water lilies, a massive area of indeterminate drainage and expanses of bare gneiss.

Garyvard is set on the fringe of this landscape on a 20 to 25° slope with the crofts aligned
[551] from the moor to the sea, on a mantle of drift. Here is the home of the MacLeods, the Mackinnon
221 and the Montgomerys. Life beats out its regular pattern of existence during the winter months
231 on the croft, followed by an increasing tempo and variety of work during the rest of the year. In
241 January and February the animals must be fed on hay or lose the battle to survive. In February there are preparations for the year's tasks, making repairs and improvements to the croft. Next month will find the crofter on the land, making or clearing drains and putting fences and dykes in order. The tempo of life quickens with the year; April sees the first sheep dipping, the land turned over, potatoes and oats sown. From mid-May, the sheep leave the crofts to fend
[147] for themselves on the common grazing. The following three or four months are times of tremendous activity on the moors when the peats are cut, to be stacked later, first in fours, then in eights, so that the wind may dry them, till eventually bee-hive-shaped stacks - some four feet high - can be seen near the peat banks in August. Then begins the wearisome task of carrying the peats home, all too frequently in creels carried on the back, since the peat workings of Garyvard are on the moors up to half a mile from road. Altogether some two miles of roads are needed to prevent the villagers patronising the coal merchants of Stornoway. Two crofters, however, cut peat on their crofts, whilst others have permission to cut from Cromore or Caversta common grazings close to the road. All the while croft work continues, varying from hoeing, weeding and cutting hay to the gathering of sheep for shearing. As there are no fences between the various commons, crofters must travel from one township fank to another, seeking their own. In August the lambs are weaned. Hay making generally ends in August and is immediately followed by the oat harvest in September. By the time both oats and hay have been gathered in, the potatoes are lifted and the sheep are brought in from the common grazing about October 12th. The last sheep dipping takes place in November and is followed by tupping.

241 There are eleven crofts altogether, though one is divided, each portion having a legal tenant
423 who has a half share in the common grazing. Two crofts are 12 acres in extent, the half crofts 2.75 acres only, though the acre cultivated on the common grazing by one of the latter crofters since 1923, has recently been officially recognised. Most crofts are in strips running from the sea-shore up the slope some 500 yards to the township dyke, and are clearly demarcated by fences erected just after the last war. Three crofts have additional strips whilst one croft was
[75] an extra strip belonging to another croft. The additional strips date back about 100 years to a time when the township grew rapidly as a result of evictions in southern Park. One croft is divided and worked in three separate parts so in effect there are fourteen operative units in Garyva

The future existence of the community depends on its ability to develop a viable economy integrated by
10 overcrowding. The housing is not enforced in Crowdley and the actual sheep stock exceeds the ceiling
745 of 1000 per year. Crowdley possesses a highly valuable grazing area; the hinterland is a rough
place where they even have some peat cutting on the Ledger grazing on the island. The degree both
of overcrowding and of inadequate cutting cannot be measured in the environment.

The evidence must seek of attempts to improve the quality of the common pasture. The establishment of a crofters' association to control the use of the common pasture and to carry out improvements
746 seems chance if they were carefully sited. Much of the common pasture could be improved by a skilled
drainage scheme and by re-seeding, after seeding and liming, a project well within the capacity of
the contract labour force.

Good crops on a few of the crofts suggest that the land is not inherently sterile, however, and
it would seem that if the drainage had been reduced to a minimum of time, an considerable crop
be feasible on lesser crofts. The steep nature of the soil limits the possibilities of tractor cultivation
and with no improvement in drainage, soils are might be used in the two cultivs.

It is not up easy to be optimistic about the establishment of surplus population resulting from
the proposed crofting improvements. Although crofting is a traditional occupation in the Highlands
747 and there are some signs of a growing interest in crofting among people who have no other
prospects of employment in the Highlands. Renewed to be plausible supply, indeed Lanverney people also stress
that regions and should be given priority in grants enhancement of a processing plant would provide
suitable employment.

The problem is of be becoming increasingly obvious that unless the holdings can be enlarged, shrink
officially or by sub-letting, and some further employment created, Dirnsay is liable to stagnate, and
the population to continue. The township was developed to relieve congestion in some round
congested.

SUMMARY AND CONCLUSIONS

The aim of the Glasgow University Department of Geography Crofting Survey is to record and
analyse material relevant to the crofting districts, and in so doing provide a clear and impartial
assessment of the crofting scene. The survey has been carried out over a period of two years and
has found that a lotty of fact could be assembled and conclusions drawn which would invite the
Association to their admirable aims of advancing the well-being of the area. Their two Prizegiver
Lectures of 1955 and 1957, indicate that they have already investigated most of the problems
748 of the crofting counties. The Department of Geography Crofting Survey, which is a continuation of the survey
of crofting in Lewisland, on final assessment of the Crofting Area as a whole can be made.

The economic of Fluch is one of the more isolated and difficult crofting environments. The rugged
and mountainous terrain, the lack of good arable land, the inaccessibility and the unfavourable climate
749 are extremely unfavourable conditions. In addition, many of the Fluch communities were first
established as a result of population pressures in more favourable areas of Lewis, and the original
settlers were not attracted to Fluch by the prospect of a good living from the land, but by the
750 necessity of survival under Fluch subsistence farming in an unknown, harsh environment. The
impact of Fluch change ceases to Fluch in the form of the solution of a large body of small farmers in
favour of an enlargement of the grazing area. Thus the present conditions are a legacy of the necessary
751 adjustment to Fluch life. The problem of the future of Fluch is a legacy proportion of solutions
reached in the nineteenth century. Population then the land could reasonable carry. Two World
Wars and fluctuating economic factors have had repercussions in Fluch and resulted in a change in
economic and social values, and depopulation has resulted the 1951 population was 60 per cent of
752 the 1881 population.

The Commissioners proposed that only holdings created at 12 and over should have security of
tenure, with a view to discouraging the perpetuation of grossly uneconomic holdings; in the Ard.
all holdings were given security of tenure.

97

As a consolidation of the agricultural situation reveals that there are insufficient resources to
make the present number of crofts viable. Overstocking in sheep, an attempt to increase cash
745 crops and a reluctance to adopt a high subsidy regime, contribute grazing stress. In the island, croft
land is faced with a classic dilemma. If by part of its efforts into the working of the croft, the crofter
is prepared to work off the croft, the croft cannot be enlarged to provide a living for the family.
The Crofting Industry. Normally the chief reason of a livelihood rather than the croft itself, has
been the employment of men and women in the Crofting Industry. Unfortunately, the crofting industry
has been in decline and is not likely to find any employment in the area when have been events
and the Crofting Industry. Unfortunately, the crofting industry

SUMMARY. The first period of culture change following the abortive rebellion established a series of trends which have contributed to the present culture. The social hierarchy was modified by the degradation of the chiefs and their absenteeism. In order to maintain their status in the larger commercial society, they replaced the former bonds of kinship and affection with contractual relationships. Indignation with the landlords and the lack of replacement of the tacksmen led to the decline of the tacksmen as an important element in the social hierarchy. The people were left without their traditional leaders, and the fiction of kinship which had bound the members of the clan together could no longer be maintained.

The subsistence economy was strengthened by the clansmen's receiving a larger share in the land, the introduction of the potato and helping, and by the booming cattle markets. The social and economic changes allowed an increase in the population, which was facilitated by the introduction of vaccination. In time, the population over-ran the means of subsistence. Seasonal migration for employment, and emigration to the New World became a necessity. As far as the people were concerned, the significant thing is that the introduction of commercialism did not mean the conversion of the estates into large farms.

Two processes are observable in the religious facet of the culture, the relaxation of the rigor of Presbyterianism and the beginning of a conservative movement. A combination of economic depression, threatened social disintegration, and cultural instability disposed the people to accept the more

dynamic evangelical form of worship in preference to the moderate, humanistic preaching of their own ministers.

Period II (1811-1845)

The year 1811 marks a turning point in the culture history of the Isle of Skye. During the second period the processes we have observed in the initial period gained strength and began to unfold in their characteristic forms. By this time the Industrial Revolution was nearly 100 years old. Britain was on the verge of victory in her wars for the freedom of the seas, and her commercial empire was her major concern. Since the government remained disinterested in the Highlands, the sources for culture change must again be sought in the attitudes and policies of the local landlords.

Exercising their legal powers to separate and reunite the intermixed strips of arable into permanent, compact holdings, the proprietors began a reorganization of their estates.[24] Between 1811 and 1819 runrig was virtually abolished.[25] In the Lowlands and Eastern Highlands this alteration of the traditional system of land use and tenure had been only a step in the direction of a more sweeping reform, consolidation of

The land into large commercial farms.[26] Even had the landlords desired to emulate the results achieved elsewhere, it is doubtful that the persistent demands of the steadily increasing numbers of people who lived on the land could have been disregarded at this time. On Skye, as in most of the Western Highlands, the arable of the old farms was simply divided into as many equal shares of five to ten acres as possible. The grazing lands continued to be held in common and used under a system of stinted rights, and the arable was used communally between harvesting and spring ploughing. Leasing and legally recognized traditional or written right to the land, the people remained tenants at will, enjoying hereditary tenure as long as they had the good will of the landlord and, especially, that of his factor.

The people, then, were each given a precisely equal share, which was often assigned by lot, in the old farms. Just as the old infield and outfield system had functioned to provide each man with a bit of the worst and a bit of the best soil, the shares were set out in long strips. After the former joint-tenants had received their allotments, they were moved their dwellings from the small hamlet-like clusters near the center of each farm to the individual plots. The township settlement patterns, as we now know it, came into existence.

The effects of this rather superficial reorganization

[26] See, e.g., Malcolm Gray, "The Abolition of Runrig in the Highlands of Scotland," pp. 52-53; Ray Burnett, Scottish Farming in the Eighteenth Century, pp. 190-200.

soon became apparent. There was a leveling of the social hierarchy. The former joint-tenants, subtenants, and cottars had become crofters. Whatever socio-economic distinctions had once marked off people in the land could no longer be discerned at this time. On Skye, as in most of the Western Highlands, the arable of the old farms was simply divided into as many equal shares of five to ten acres as possible. The grazing lands continued to be held in common and used under a system of stinted rights, and the arable was used communally between harvesting and spring ploughing. Leasing and legally recognized traditional or written right to the land, the people remained tenants at will, enjoying hereditary tenure as long as they had the good will of the landlord and, especially, that of his factor.

The people, then, were each given a precisely equal share, which was often assigned by lot, in the old farms. Just as the old infield and outfield system had functioned to provide each man with a bit of the worst and a bit of the best soil, the shares were set out in long strips. After the former joint-tenants and subtenants received their allotments, they moved their dwellings from the small hamlet-like clusters near the center of each farm to the individual plots. The township settlement patterns, as we now know it, came into existence.

The effects of this rather superficial reorganization

in Scotland, it lasted the same effects elsewhere. There is a significant correlation in the Highlands and Islands, as in Ireland, of the disproportion of the population to the means of subsistence, the rise of a cottar class, and the decline of the tacksmen. Whatever socio-economic distinctions had once marked off people in the land could no longer be discerned at this time. On Skye, as in most of the Western Highlands, the arable of the old farms was simply divided into as many equal shares of five to ten acres as possible. The grazing lands continued to be held in common and used under a system of stinted rights, and the arable was used communally between harvesting and spring ploughing. Leasing and legally recognized traditional or written right to the land, the people remained tenants at will, enjoying hereditary tenure as long as they had the good will of the landlord and, especially, that of his factor.

The people, then, were each given a precisely equal share, which was often assigned by lot, in the old farms. After the former joint-tenants and subtenants received their allotments, they moved their dwellings from the small hamlet-like clusters near the center of each farm to the individual plots. The township settlement patterns, as we now know it, came into existence.

The effects of this rather superficial reorganization

The process to be observed in the religious facet of the culture during the second period is conservatism. Itinerant ministers, catechists, and a religious brotherhood known as the "Men" supplemented the regular clergy. As the Revival grew strong, the "Men," as tenacious defenders of the evangelical cause, began to wage an anti-clerical campaign.[44] They usually remained within the Church, opposing and separatist movement, but they drew a sharp distinction between the Church and the people. To be a member of the "Men" was to dissociate oneself from the death-dealing moderate ministers,[45] who were said to have had more interest in their farms than in their congregations.[46] The "Men" conceived their function to be one of delivering powerful testimonies of evangelical truth.[47] They rebuked and constantly reminded the people of their religious duties. They made Sabbatarianism an observable test of religious obedience, separating the respectable Christians from the godless. Prayer meetings were held at which the "Men" engaged in short, earnest prayers, and exhorted the people to read their Bibles and to be honest in family worship.

The growing influence of the Revival did not leave the clergy unmoved. At least two areas to recreate the spirit of vital religion and revive emotional enthusiasm in their congregations.[48] It was no accident that these ministers should

appear in the parishes of Bracadale and Duisort. Bracadale had already seen the beginnings of the final stage in commercialization; Duisort had been sold piecemeal to new landlords. The Evangelical Presbyterian created a new pattern of social and religious life on Skye. It gave the culture a new focus to replace the dead clan system. Much of the form of religious worship and behavior characteristic of the Island today was established during this Revival Movement. The "Men" became the dominant members of the community. An esoteric religious hierarchy evolved. There were the unfriendly few who were in a state of saving grace and acceptable at Communion, and the eminent "Men," the aged, venerable spiritual laity.[49]

The Revival, unlike many nativistic movements, neither held out the promise of cultural regeneration nor fostered the dream of prosperity. To the contrary, the attack against the folk culture characteristic of the late seventeenth and early eighteenth centuries was renewed with vigor. While religious enthusiasm grew, social life beyond a family level was restricted. Perhaps, the years of destitution and the ever present threat of famine had made hospitality a luxury which few could afford. Perhaps, it was no longer possible for the people to provide whiskey and food for large numbers at a funeral or a wedding. The Irish ministers assert that the changes were due to the activities of the "Men." It would seem that the "Men" were

[49] MacCowan, op. cit., p. 211.

agents for what have been called "cries of intensification."[50] They restored the equilibrium of interaction by creating new behavior patterns. This was probably particularly true during the famine, when the people's relatives and friends were dying and emigrating in large numbers. While the patient, an evening of spinning folk tales, singing, and dancing, was condemned, and the children of parents who would not conform to the dictates of one minister and the "Men" were refused baptism, prayer meetings and other church services were providing emotional outlets.[51]

Like the Welsh,[52] the Skye crofters found the Bible revealed unto them their own past history and their present difficulties. As the "Men" preached from Scripture and interpreted the meaning, often using allegorical interpretations, of the word, the people became familiar with a story which was striking similar to their own. The present social and economic conditions were but a prosage of the coming dissolution. It was all there in the Old Testament, in the books of Judges, Kings, Chronicles, Psalms, and Prophets. The omen was all the more vivid because the transgressors in the Bible lived a life much like the crofters. Both the ancient peoples and the Skyemen had a pastoral economy, a patriarchal family structure,

ruled by elders, and a heritage which had never admitted compact, non-rural population centers. These basic cultural values and patterns were given religious sanction.

Year by year throughout this period the following and the influence of the "Men" increased. As the ministers were moved, especially as the old hereditary families of ministers were closely related to the old gentry were replaced by ministers from the people,[53] the "Men" became influential in the Church as elders. Now they could not only exhort the people but also judge them, by determining who was worthy of communion and whose children might be baptized. The strength of their control, however, did not require holding office. In Duirinish where an old moderate minister remained, Communion had not been celebrated for eleven years in 1840, and there were 200 baptisms in 1841.[54] Many preferred to walk miles to worship under an evangelical minister rather than put themselves in peril by hearing the local moderate minister. Dissension was becoming a significant factor and was paving the way for personal secession from the Church. As the official Church was weakened, the stage was set for the Disruption, but we shall leave that for the following period.

SUMMARY. The second period of the modern epoch saw the continuation of the trends established in the initial period. The process of commercialization was carried one step further. The old runrig system was replaced by the crofting system.

[53] Scott, op. cit., Vol. VII, pp. 166-182.

[Kershader]

(b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular; some flocks are usually hand fed, others only rarely. In the forr case they heft near the upper limit of their home croft and remain fairly close at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average sheep carcase weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

Under-employment is a serious problem in Kershader. There are nine males classified as full-time crofters, but probably only four of these (two on one croft) are in fact in this category, and of the total of thirty males with their homes in Kershader, only fifteen of the insurable population are permanently resident. There are twenty-eight females with their homes in this township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption only)and work on the roads. Boats, one with outboard motor, are owned by three crofts. The only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person h entered the township since 1939. The age structure of the population, too, is far from the optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907 and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard, Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

It will thus be seen that the most serious problem facing Kershader is that of stabilizing the population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Garyvard] [Caversta]

At the moment Garyvard appears to be a go-ahead village, carrying out communal schemes which will benefit the township as a whole. However, the age structure of the population is abnormal since 60 per cent of the population is over 45 years. The future in Garyvard offers young people hard work, little money and no entertainment, making the attractions of the cities and industries of the mainland quite irresistible. Unless some industry can be started the future bodes ill for the area, since most crofters are of the opinion that a weekly wage packet would more than compensate the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and subsidies that man cares more for momentary rewards and the luxuries of life. This is well understood by parents who encourage their children to leave the islands to seek employment either in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditions and a way of life. His present desires have been re-cast as a result of his increasing contact with the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purpose. Unless prosperity can be brought in by way of industry, tourism or increased croft efficiency, possibly through co-operation in working and marketing, it is possible that we are witnessing the end of a community.

CAVERSTA

Helen Mackenzie

Caversta lies along a southern inlet of Loch Erisort, five miles from the Minch and is partially sheltered from east winds by the Cromore peninsula and Eilean Chaluim Chille.

The physical nature of the terrain is irregular, rising steeply from the water's edge to a level of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it is here that the settlement occurs. Particularly in the north-west, two marked breaks in slope are visible at 75 feet and 100 feet above the loch, which is here bordered by a 25 foot rock face. The resulting platforms are separated by faces of bare rock. The valley of the Caversta River is a noteworthy feature. Below a small loch, the river follows an irregular course though a wide and shallow moraine-strewn depression and a quarter-of-a-mile from its estuary, has cut through some low hills rising about 30 feet above the depression. At this point, its course becomes steeper as it passes through a small gorge, which is probably an overflow channel.

Trees are non-existent and the natural vegetation consists of Sphagnum on the peat bogs in the hollows and grasses and sedges on the gentler slopes. The steeper, less waterlogged slopes, often broken by rocky bluffs, have heather cover; bracken growth is kept in check by heavy grazing. Forty-six acres of land have been reclaimed by clearing heather and removing peat to form the crofts, but the soil, which varies in depth from a few inches to a few feet, is very acid.

The six legal crofts vary in acreage from 4.75 to 8.5 acres and a squatter has 5.5 acres of enclosed land. The township is in two parts: Torista, with the two smallest crofts, lies at the eastern extremity, while the other five holdings, also bounded by a dyke, border Tob Caversta, an inlet of Loch Erisort. The crofts, which run from the shore to the township dyke, were set prior to 1861; originally the township formed part of Crobeg Farm. The legal units are, in fact, operative units except that one of the Torista crofts, now unoccupied, is used for wintering lambs by the absentee's brother, a resident of Caversta.

There are no occupied black houses remaining in either Torista or Caversta, as during the past fifty years new dwellings have been erected in dressed stone or corrugated iron, usually with roofs of asbestos slate, tarred felt, or corrugated iron. Several old thatched houses are now used as barns and byres.

The Part-time Crofter. The part-time crofter follows much the same schedule and shares the same succession and variety of chores. Indeed, some are not so much part-time crofters as they are part-time employees. As such, they are successfully preserving a traditional economy no longer en rapport with the surrounding twentieth century commercial world by depending upon economic benefits of contractual relationships to the smallest possible degree. One fellow saw the situation this way: "We don't need factories and the like; what we need is something that will give us time to attend to our crofts." Others feel that if they have to abandon the traditional way of life, they might just as well leave the island for places where greater opportunities for social activity are joined with relative economic prosperity.

The part-time crofter has less land than the full-time crofter and less need for cultivating all of it because he has fewer cattle to feed during the winter. He, therefore, devotes less time to tilling his soil. On the other hand, although he has fewer sheep, the collective flock of his township is almost always larger than the stock of a large croft. Consequently, he spends more time dipping, marking, and shearing sheep in cooperation with his neighbors. Hired labor plays a minor role in the townships. Often the only hired hand is one of their number who assumes the responsibility of shepherding the flock. Some of the townships with club stocks, however, have adopted the practice of paying each shareholder for his labor out of the profits to encourage cooperation or to penalize those who do not do their full share.

Township Government. The township system has another marked influence on the economy of the Sgriathanach. By far the largest obstacle in the path of reform is the persistence of primitive democracy, distinguished from the democracy of Western Civilization by the requirement of unanimous consent rather than majority rule. The individual who comes to realize that it is possible to improve on the ways his father did things is deterred from attempting to introduce innovations. He cannot, for example, erect a fence around his croft unless everyone in his township approves such a departure from tradition. The dissenting voice of one old man is sufficient to thwart any plan. Unanimous decisions on all township affairs mean that the most progressive worker must keep pace with the most conservative. This fact goes a long way in explaining the essential agricultural disharmony of Skye, and most of the Highlands, with the rest of Great Britain. It is also a singular example of the incomplete adaptation of the culture to the higher socio-cultural organization.

When coupled with the many limitations on the economy, township government helps the outsider to understand why many younger crofters feel that the primary value of their few arable acres is their use as pasture. Even in townships which have been fenced, the prevailing practice is to open the crofts after the harvest. All winter long the stock is free to graze where it will. "My arable is no use at all, except to winter my sheep," said one young crofter. Another asserted, "I have three crofts and the use of one more, but it's not

mainland for the summer. For many of these people, unemployment is a misnomer. It means they are receiving a weekly allowance from the government while they wait for the next seasonal opportunity to turn from crofting to wage labor. Moreover, providing work and paying unemployment compensation is by no means all the government does for the Island's economy. Through the National Assistance Program many more are aided financially. In 1954, for example, there were no fewer than 726 individuals receiving some form of national assistance.[33] Most of this number were recipients of a non-contributory old age pension. The next largest category were young women required at home to care for aged and infirm parents. Of the total number, only thirty were Portree residents. Then, too, there are the previously mentioned subsidies and grants for agricultural improvement and fuller exploitation of the land.

We may conclude, then, that cultural continuity is an expensive proposition with a double-edged penalty. On the one hand, there is the sentimental distress which depopulation involves. Both the man who leaves Skye and those he leaves behind feel the loss of their loved ones. On the other hand, there is the expense to the government, which must be staggering and out of all proportion to the amount contributed by the people in taxes. It is not that the islands receive any special grants, but, as one newcomer said, "They just happen to qualify for all the grants, doles, and subsidies there are." He, of course, was exaggerating. As we shall see in the next chapter,

[33] Information extracted from the files of the National Assistance Board in Scotland, Edinburgh.

As we shall see in the next chapter, there is hostility between the Portree dwellers and the crofters. One reason for this is the fact that the village pays more in property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "aye wantin', but never pays a cooper" (a penny in taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms of the standard of living it affords, it cannot be considered as satisfactory. There are persistent environmental obstacles, among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use has persisted. A new system has been superimposed. From this new system, however, the Sgriathanach has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical existence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

adjustment to the higher society in which the successful individual is the specialist. The Sgriathanach has remained a pastoral-agriculturalist, and when he does seek employment, it is typically as an unskilled laborer.

It is far easier to point out the traits and trait-complexes he has lost than those which he has accepted during the two hundred years since 1745. The sad economic condition under which he labors is not conclusive evidence for disorganization. Integration does not mean smooth functioning. Nor do the changes, important as they are, point to discontinuity. The contemporary economic system reveals a fundamental continuity. As I remarked at the beginning of this chapter, there is something far deeper involved than economic considerations. Let us now turn to the social aspect of the culture in order to seek an answer to the question why has the Sgriathanach remained in the face of all the inadequacies and insufficiencies we have reviewed.

554 626 829 New Zealanders breed sheep and make linen. One might say he knew more about the world than about Skye. He could not understand why so many people made fun of him when he was only trying to help.

626 632 In the absence of any traditionally valued status and role of leadership, administration of the common interests of the township members is the concern of all. We say in the last chapter that primitive democracy is the guiding rule. Each crofter has an equal voice in deciding any question which affects the group and all, without exception, have to agree before any action is taken. Consent is expressed by silence. Typically, the crofters will have talked the [624] matter over among themselves beforehand. At such times the fact clearly emerges that the grazing clerk and the grazing committee are no more than figureheads required by law. They have no coercive or disciplinary powers. In any group situation, their views are taken no more seriously than those of any other man.

887 888 626 632 It is the old men who gather at one anothers' homes or on the hill on a summer evening to weigh the innovation which the youth want introduced. If they find the change acceptable, they approve it at a meeting of the township by keeping silent. If they believe it will upset the communal system, they disapprove it. The dissenting voice of one old crofter is all that is required to maintain the conservative patterns, economically and socially.

182 626 In summary, we may say that within the township and on the croft the cultural patterns reveal a fundamental continuity. As of old, status is ascribed. Men have remained

182 626 583 882 559 the social superiors of women. The aged are the social superiors of the youth and young adults. The father determines how his wife and children will behave as long as they remain under his control. The old man, or men, determine what changes will be accepted or rejected. There is no way to question their decisions, unless one leaves the croft. Still, at the bottom, there is equality. No man can step forward as a leader. We are now in a position to look at the larger social grouping, the neighborhood.

Kith and Kin within the Neighborhood

182 621 During the days of the clan, the residents of the neighborhood were bound together by real and fictitious ties of consanguinity and affinity, which were reinforced by the strong attachment to the soil and propinquity. Only [602] the fictitious bonds have been forgotten. Like the township, the neighborhood consists of an aggregate of conjugal families whose inter-personal relationships are reinforced by a complicated network of kinship. Once, perhaps as late as 178 182 621 100 years ago, the neighborhood was a highly cooperative social unit. When the local mills were in use and the church had not been broken by schism, the people must have had a more definite focus for their common interests. In more remote times, it was a defensive entity. Today the neighbor- 182 621 hood is no longer a cooperative unit. On the analogy of the old horse plough and the caschrom, cooperation is essential to the township but superfluous to this larger group. That the neighborhoods have not lost the potential for concerted action in times of crisis is attested by the uprisings

during the "Clearences." 182 621

Strong in-group feeling is manifested not only in a belief that people of other neighborhoods are not quite as good somehow, but also by the tendency to withhold social acceptance. 186 621 571 182 There is, for example, a family of newcomers in Kilmuir. One day when they were being discussed one old crofter remarked, "Well, when they have been here as long as Jock over there, they will be just like one of us." It turned out that Jock's family had come to Kilmuir three generations ago. More than once I was reminded of the story of the Yorkshire man who moved from one village to another. He persisted in calling everybody a foreigner, and when asked why, he replied, "I've lived here sixty years, and they still call me a foreigner." The newcomer to Skye is known only by his nationality. The few Polish war refugees are "the Poles." The man from England is "the Englishman" or, in Gaelic, Sassenach, a term also applied to Lowlanders. They have no real place in the scheme of things.

Within the neighborhood, there are invariably established 571 602 social circles within which the people habitually move. These cliques take several forms on Skye,[16] as in most cultures, and cross cut each other as well as the townships. The most important clique consists of "my people and friends," the individual's kinsmen. The Sgiathanach carefully distinguishes between his "family," his wife and children; his "people,"

[16] Although I consider "clique" to be an unfortunate choice of terms, because it has unfavorable connotations in the lay mind, it has been introduced into the vocabulary of the social sciences; see, e.g., Steward, Area Research, pp. 40, 49; Murdock, op. cit., p. 88; Loomis and Beegle, op. cit., p. 135.

distinction. During the war when Skye had its own little 875 554 576 army, he came to know many of the old crofters quite well. Finally, he came to use personal names when speaking to them and asked to be called by his first name. The people explained that they might be older than he, but he was too important to be spoken to as anything other than mister.

The tradesmen and the shopkeepers in Glendale and 554 443 Kilmuir are not any different from any other man. They are not specialists. They are part-time crofters. We have to turn to Portree to see what status position they fill in the society of Skye. I might just add that they are on a first name basis with their neighbors, and, like the crofters, they are known beyond the neighborhood by their first name and township, such as Ian Borve or Murdo Stein.

To summarize, there is additional evidence for cultural 576 182 continuity in the structure of the neighborhood. The extended family, although very unstable and, therefore, somewhat amorphous, is still a reality in the minds of the people. It still has two functions which it must have had in the remote past: seeing that all are cared for and given a decent burial. The ascription of status noted for the township 554 182 carries over to the neighborhood, as does the underlying status equality and need for unanimous consent. Among the crofters leadership is still undeveloped. The old men can enforce [882] conformity but they cannot lead. Although prestige ranking is developed, in the form of the achieved statuses of ministers, doctors, and teachers, it is significant that, except for the minister in Glendale, all holders of prestige status are

alien to their heritage. There was little local need for roads and steamships, but they were paving the way for the final stage in commercialization, the conversion of the island into sheep farms. 175* 178* 621

The record suggests that the culture was suffering from disorganization and the society had been threatened by disintegration. The Revival, which began at the close of the initial period, became full blown. This movement confirms what the record suggests. A new pattern of social behavior and religious life came into being. The traditional secular patterns of interaction were being replaced by patterns of sacred interaction. New values, new statuses, and new roles were evolving to give religious sanction to the old patterns. The result was an esoteric religious hierarchy. The religious leaders, both the "Men" and the ministers, were coming from the people rather than the old hereditary families who had been closely related to the gentry. Religion replaced the clan as the focus for the culture. The similarity of the story unfolded in the Bible and the past and present conditions of the crofters made the presage of the coming dissolution vivid. By the end of the period, dissension within the Church had become a significant factor and was paving the way for individual secession. The third period of the modern era was to witness more than a social and economic transformation; there was to be religious schism. 175* 178* 182 786 [797] [793] 175* 178* 182 771 786 [798]

Period III (1845-1886)

By the beginning of the third epoch of the modern phase of Skye's culture history, all the elements necessary for a social and economic readapatation to the wider commercial, contractual society had begun to function. The socio-economic changes in the preceding periods, especially the partial commercialization of the land, the abolition of the tacksman system of tenure and runrig farming, the establishment of a village, and the extension of regular communications, had paved the way for the final stage in the process of commercialization. It was now an aforesaid fact that industrialization in Scotland was to be a Lowland phenomenon. The disparity between the Eastern and Western Highlands was already well developed.[54] The former had become a region of commercial farmers, men with the incentive and ability to make technological advances. Now economic deterioration led the landlords to attempt a basic change.

The bankrupt proprietors, anxious to recoup their losses, found sheep farmers eager to buy or lease the virgin grazings of Skye. Sheep farming meant the landlord would have a secure rental several times that his rackrented crofters and cottars could pay, and he would not have to spend any capital either on behalf of the incoming tenant or on behalf of an indigent tenant unable to make his own way. The sheep farmer had the capital and, even more important, the incentive to adopt scientific methods. The crofter, obviously, had neither the

---

[54] Cf., e.g., Collier, The Crofting Problem, pp. 43-51.

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of only 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five" Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

[68] Lachlan MacDonald, The Past and Present Position of the Skye Crofters, pp. 4-5, 6-7, 11-12, 14-15; and J. G. MacKay, "Social Life in Skye from Legend and Story," TGSI, Vol. XXIX (1922), pp. 260-290.

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during these years from 510, in 1841, to 893, in 1881, but this can hardly be regarded as a significant trend.

The really striking aspect of this period is the almost complete lack of protest by the Sgiathanach against the violation of his presumptive right to the land. The disappearance of the tacksmen, of course, had left the people without their counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farmers, counseled submission to the will of God. Then, too, the ethos of the Skyemen would not allow them to ventilate their grievances. They despised the Sassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cottages wrote unanimously of a people who endured overwhelming sufferings in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Sassanach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had been widespread and growing discontent all over Europe with the

[70] Norman MacLeod, op. cit., p. 136.

over this and an associated question, the principle of the spiritual independence of the Church from civil authority. Although the Revival might have created or even renewed a belief in the right of a congregation to call their own minister, it is difficult to see how the principle of spiritual non-intrusion, by courts and parliament, could have mattered much to the people. The significance of the Disruption is that it continued the trend toward conservatism established by the Revival and made it an official policy of the Free Church of Scotland. The overwhelming acceptance of the Free Church manifests a strong correlation with the suggested amount of social and cultural disorganization at the close of the second period. It was no accident that the first Free Church congregation should have been in Bracadale, the first parish to be cleared for sheep. It was not by chance that the people of Kilmuir and Glendale, like so many others, turned to this new source of hope. The ministers left the Church in the true tradition of the Covenanters: "in a state of toil and privation, whether within or without the Established Church, and under persecution if need be."[74] The people followed them because of emotional attachments which they had formed with the seceding ministers during the Revival. Only the seceding ministers were successfully restoring group solidarity. Their emotional and dynamic approach was giving the people the means to maintain cultural continuity. The Old Testament, which they were wont to use, was an additional factor. It

[74] Brown, op. cit., p. 1.

told about a people not unlike the crofters, and the prophesies were being fulfilled before the peoples' very eyes. Is it any wonder that thousands gathered on the hillsides to listen to a minister whose dynamic appeals moved them to tears?

As the people turned to the new church and the emotionalism of the large outdoor gatherings, they continued to forsake their old customs and folklore. The songs, except in some cases the waulking songs which provided the tempo for shrinking homespun, and the tales were placed under clerical bann.[75] The ministers and the "Men" insisted on the prerequisite of gravity in all aspects of life for salvation.[76] The communion roles were purged. In Bracadale, for example, there had been 258 communicant members. Following the Disruption there were less than ten.[77] The same pattern was repeated elsewhere on the island.[78]

The religious patterns which had evolved were, nevertheless, reinforcing much of the traditional way of life. The "Men" of Skye had become elders in the Free Church. This status sanctioned their position in the community. Although the age structure of the population had not yet altered

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy. Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

wealth, rose above the indigent crofters and cottars.

These changes had a pronounced effect on the culture and the population. Economic hardship and evictions prompted emigration, forced many men and women to seek seasonal work away from home, and led to a reduction in the marriage rate. Crofting which had already become part-time agriculture now was a spare-time pursuit. The Sgiathanach was dependent on money, on the wider economy, for the satisfaction of most of his needs. The croft was providing no more than a few potatoes for the table and some oats for the cattle, the crofter's only export. Still, no landless working force appeared. Portree had grown and there was a woolen mill, but there does not seem to have been any marked movement into the village by the crofters.

While much of what was meaningful to the people was being lost, the religious Revival continued. The conservatism of the "Men" became an official policy of a new church. The emotional approach of the ministers and the "Men," who were now elders in the church, and the emotionalism of the large outdoor meetings functioned to restore the social disequilibrium. Although the extended family, township, and nuclear family suffered from instability, the people found intelligible roles within the religious sphere of activity. Their religion was reinforcing their way of life. The abhorrence of much of the old culture was accompanied by a strengthening of many traits which reaffirmed the desirable status values. The culture found a new focus in congregational religion and was able to maintain a continuity while the content changed.

Period IV (1886 - 1953)

The year 1886 is a chronological hinge in the culture history of the Sgiathanach. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be noted are two. The proprietors' influence in determining how the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were presented to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

[79] Napier Report, pp. 7-15.

people of the Island must have had a premonition of the calamity that was befalling them when they resisted the coming of Presbyterianism with all their might."[91] For him, the form of religion which splits up communities, divides families, and breaks villages into fragments can scarcely be regarded as Christian. Over the years, however, the battle has been won by one church or the other, as in Glendale where the Free Presbyterian Church is the only kirk, or the battle scars have been forgotten.

Unions of the churches replaced the former tendency toward disruption. In 1901 the Free Church joined the United Presbyterian Church, and in 1929 the United Free Church joined the Church of Scotland. On both occasions there were ministers who refused to become a part of either united church, and people who were reluctant to join new congregations. In Kilmuir, for example, the Free Church congregation split. Some joined the Church of Scotland, while others remained true to their sect. Although all the churches on the island are similar in outlook and to the uninvolved observer their differences are unimportant, doctrinal differences have remained important to the people. Nevertheless, the common tradition of conservatism, standing in opposition to the increasing impingements of the outside world, has been the paramount factor in reinforcing the values of the people. I repeat, the culture has maintained continuity through religion.

[91] Ibid., p. 212.

crofting districts. Shops, schools, inns, and churches increased in number, but they have not clustered to form a village nucleus. In more recent years the county has tried to stimulate village growth by building houses at a few centers. Someday they may succeed in altering the settlement pattern.

As a consequence of the increasing integration of the Sgiathanach within the national scene, government regulations have expanded and have come to be enforceable by a local police. Government services too have increased in scope. Many of the traditional functions of the family and the local group are now functions of an ever increasing number of government employees. Nevertheless, the traditional statuses of the members of the group have persisted and social control has not been reduced in favor of action by the state.

The class structure has changed several times. It has vacillated between a leveling of socio-economic differentiation and a growing polarity of status. At present there is no local class structure beyond the old polarity of landed gentry and crofters. Those who fall between these groups are ranked on prestige values of long standing. Even though many of the intermediate group would be working or middle class if they lived elsewhere in Britain, on Skye personal factors play a more important role in determining prestige than socio-economic differences. Leadership and political power remain in the hands of the gentry.

If the foregoing material suggests that there is evidence on Skye for Redfield's concepts of disorganization

and individualization, there is little, if any, reason to speak of secularization. Many of the existing features of the culture can only be understood when viewed from the perspective of the religious aspect. Certainly, the state church has been weakened by schism and rational practices have replaced superstitious rites and beliefs, but this has not produced a secular society. The religious patterns have reinforced the traditional culture, or those parts of it which were considered worth preserving, by giving the culture a suprasocial sanction.[93] Religion has bolstered the status values, especially those of the father in the family and the old men in the community. Religion has provided many of the occasions at which the people come together to find solidarity and security. Finally, religion has provided the focus for the culture. Although the factors of cultural change have led to modifications in the culture's content, there has been continuity. For a more complete understanding of how Skye has readapted to the higher level of socio-cultural organization and preserved its distinctiveness, I shall devote the remainder of the present study to an analysis of the contemporary culture.

[93] After writing the above account, I discovered that Arthur Geddes, a geographer at Edinburgh University, has recently discussed some of the evidence for cultural continuity on the Isle of Lewis and Harris, one of the Outer Hebrides. Although he takes important notice of the all-pervading influence of religion in the lives of the Hebrideans, past and present, I feel he overlooks the function of religion as an agent for maintaining cultural continuity. See Arthur Geddes, The Isle of Lewis and Harris: A Study in British Community (Edinburgh: Edinburgh University Press, 1955). A. [See 1: Geddes, this file--Analyst]

271
comers to the neighborhood, if not the island. Let us 554 182
turn to Portree to see how important status is in this
n village.

The Trade-Center Village

We come now to a consideration of the trade center 632
age of Portree. We have seen how this small settlement
created by a landlord in the early mineteenth century
now it has been fostered by the government. We have
seen how the village has assumed a host of important
tions. Primarily, it exists to serve the rural neighbor- 632
s and to provide a link with the outside world. For the 368
ting neighborhoods it is, in order of importance, an
nistrative, economic, religious, and social center. Here
found the Ministry of Labor, the Department of Agriculture,
National Assistance Board, the sanitary and road engineers,
local Registrar, the central police headquarters, the
post office and telephone exchange, the court of the
ice of the peace, and the seldom functioning sheriff's
t. It is to Portree that the Land Court comes to decide
uch important matters as rents and succession to the
t. As a seat of education, Portree's influence extends
wider, for it is the only secondary school in all of the
nds of the county of Inverness. For people on the southern
of the island the village exists only for administrative
oses.

The crofters of northern Skye are dependent upon the 600

299
miserable they have left the island. Adultery, as we have 626
seen, is an excellent illustration. Another example is
church going. Almost everyone goes to church. It is expected.
Several newcomers frankly admitted that they only go because
the people would talk about them.

Gossip has another important social function. It is a 626
means of social sanction, and as such reinforces the "unconscious 182
system of meanings," to use Herskovits' words.[40] Through its
positive and negative aspects, the use of gossip as a social
sanction contributes to the solidarity of the group by creating
a feeling of oneness. It can also accord status to individuals,
and it can either make an individual with high status more
secure in his belief of superiority or make a person of low
status feel less inferior.

The crofters relish stories of human failings among 554
those of high status. The landed gentry seldom give them 626
much to talk about, but the few unexpected things they do,
such as marrying outside their circle, are long remembered.
The villagers often provide them with choice stories. Anyone, especially a native son, who moves into Portree or returns to Portree and sets up a business is bound to be talked about. "Do you know what I heard? Well, I heard that he got his money down south and just beat the police out of town." Men who have shops which their fathers or grandfathers established escape, but the founder of the business is still remembered. "You know where the old man got his money? He was going home one night after a cattle sale with a group of

[40] Herskovits, Man and His Works, p. 222.

303
a question about a certain man I was told: "I can't help you 203
on that. Whenever I go into a shop or meet them on the street, 554
they change their conversation." Another told me I should ask 715
the doctor, "He's the one who really knows their problems."

Summary

The society of the Sgiathanach reveals additional evidence 182
for cultural continuity. In family structure, both nuclear 596
and extended, the patrilineal emphasis has been preserved. Even
though both suffer from chronic instability and the extended
family has become rather amorphous, kinship remains an important
regulator of interpersonal relationships. It involves obligations and privileges which few take lightly. Within the 182
social units based on territory, the township and neighborhood, 621 554
status continues to be ascribed on the basis of age, sex,
and kinship. Women have remained socially inferior to the
men. As the father controls his family, the old men of the
township and neighborhood exercise a power over their juniors
to force conformity to traditional ways. Fundamentally, all
of the same age and sex are equals. This status equality
underlies the entire social structure. There is no room for a
leader. When essential, the newcomer, normally the teacher or
minister, and the landed gentry are expected to assume the role
of leadership. In the village the emphasis on ascribed status
for the Sgiathanach is also important. The majority of achieved
statuses are left to be filled by newcomers. In the community,
as a whole, beyond the polarity of the landed gentry and the

crofters, an individual's prestige depends more on what he does for the group than on occupation. 182 621 554

The society has a strong degree of integration. This is shown by the requirement of unanimous consent on all undertakings, even in the village, and by the continued success of the group in exercising social control by positive concerted action and by employing gossip as a negative social sanction. The norms of behavior and the values have remained common and clear. 182 621 626

We are now closer to an understanding of how the Sgiathanach has maintained a continuity. For a full understanding of the social organization and to answer the question why there has been continuity we must take one final step. The religious aspect of the culture holds the key to the unanswered questions. 128

CHAPTER VII

THE ISLANDERS' RELIGION

Synopsis

The strength and vitality of religion on the Isle of Skye, and all along the West Coast of Scotland, has been an outstanding characteristic of the culture for well over a century. It is no less distinctive of the culture today than the crofting system and the socio-economic way of life which crofting embodies. Moreover, the religious patterns not only reflect a continuity of culture in themselves, but the religious aspect has provided the means by which the culture, as an integrated whole, has been able to maintain a genuine continuity. Here on the very fringe of Western Europe in one of the few remaining outposts of the Gael, Calvinism, as interpreted by John Knox and Andrew Melville, as refined by the Scottish Covenanters, and as modified by the influence of the English Puritans in the sixteenth and seventeenth centuries, stands as one of the few examples of marginal intensity in Western Civilization. 771 182 [795]

Until the nineteenth century religion was an indomitable acculturating influence. A new code of ethics, morals, and behavior was superimposed on the old. As the influence of the traditional leaders declined, the scope of the

ministers increased. The church became the most powerful institution in the Hebrides. In the nineteenth century the pattern of religious expression gradually changed. Although the acculturative process was still carried on, the approach became negative in regards to many aspects of life. The realization that the old folk beliefs had not been stamped out led to a renewed attack on all aspects of the culture which showed the slightest taint of pagan or Catholic belief. At the same time, conservatism became the underlying principle in Presbyterian practice. The ministers and their congregations were carried back to the persecution of the Covenanters under the Stuart kings, back to the days of Knox, and back to the very beginnings of Christianity. This conservatism has reinforced much of the religiously desirable fabric of the culture. Change or compromise has become unthinkable for the majority. 771 182 [798]

Various interpretations of the present day religion can be attempted. It has been characterized as "moribund theology," a spurious movement wrongly equated with Calvinism and no longer "en rapport with the mind of the twentieth century," by one minister of the Church of Scotland.[1] This reflects the view that the Highlanders' religion has been a form of "black Presbyterianism."[2] Others are wont to write of the "tyranny of religion" which has driven away the youth and destroyed social life, except the art of conversation.[3]

[2] Collier, The Crofting Problem, p. 54.

[3] Darling and Morley, "The Social Situation," The West Highland Survey, pt. VI, pp. 21-22.

The religion of the Sgiathanach may also be regarded as 771
the logical outcome of a movement which began two centuries 182
ago when the all inclusive bonds of kinship and affection were 178
replaced with tenets introduced from the wider contractual
society. This movement, as we know, bore its first fruits
over a hundred years ago. The people themselves turned from [793]
the ministers who were supporting symbols and values no longer
meaningful to the crofters. They embraced the preachers of a [793]
dynamic gospel as a means of consolation in their distress.
Thus, the religious pattern derived elsewhere and superimposed 184
on the Sgiathanach has been refined with logic and vigor. 771
It has become the one insurmountable barrier to assimilation 182
with Great Britain. No less than four times religious schism [798]
has demonstrated the essential unchangeableness of their
religion. The process has been carried on with such dedication
and success that it now disturbs the unsympathetic laity and
the clergy of the Church of Scotland no less than the re-
sistance of the people to Presbyterianism did in the remote
past.

We saw in Chapter IV how an understanding of the re- 128
ligious history of Skye is indispensible for the comprehension 121
of the larger problem, the means by which the culture has
maintained continuity. In Chapter V and again in Chapter VI
we saw how this continuity has been preserved. We have at
last come to the point at which we can ask why has there been
continuity. The following analysis is concerned with the
sanctions of the Presbyterian ethic, particularly as it
affects the social structure, religious behavior, and the
roles of the ministers and the religious laity in the

equality of the sexes. On Skye, where women are the social 585
inferiors of men, its omission is curious. The ministers have 562
taken the promise of the ceremony out because, as one said, "The 779
man may be a rogue, irresponsible, making it impossible for
the woman to obey." She nevertheless promises to be "loving,
truthful, and dutiful."

Election, as a passage rite, marks the attainment of the 794
status of the elderly. We already know that to become one of 888
the "elect" the individual, man or woman, must not only [626]
experience a soul-saving change but also manifest steadfast
conformity to the ideals of behavior which have religious
approval. These ideals are the habits and statuses which
the old people are striving to maintain. Thus religion 794
sanctions the status of the venerable old people. Their 888
interpretation of "Effectual Calling" functions to provide 626
the elders, the most eminent of the "elect" with an additional [182]
means to exercise their judicial and authoritarian roles.
There can be no rapid conversion. Whether or not the pro-
bationary period of three years imposed by the "Men" in the
last century is still enforced I do not know. The person who
believes he has experienced a saving change, "a visitation
from the Holy Spirit," is examined by the minister and his
elders. Like the father who is seeking baptism for his child,
such an old man or woman is judged on his knowledge of the
Bible and the Shorter Catechism and on his conformity to the
righteous life. No one can experience a saving change unless
he is known, by observation, to have lived an upright life.
The person who continues to pursue his own mundane pleasures

of Scotland in Portree. Only one girl appeared for instruction. 794
After the significance of her preparation had been fully explained 484
she declined to take the final step. She did not disagree
with the minister's view that she was prepared for membership
and communion, but she was afraid of what her friends in the
Free Church and Free Presbyterian Church might say. She was
probably wondering what the middle-aged adherents of her church
might have to say, too. When the Sgiathanach takes his first
Communion, in Glendale, Kilmuir, or Portree, the people must
be able to look up to him.

The second exception to the age-grade requirement rules 626
among the county people. Because of their social position 888
in the community, which rests on the expression of their statuses, 794
as roles, as landlords, village and neighborhood representatives 565
and leaders, and members of the national class system, and
because of their education in England, the county people
attain membership in the church at an early age. Some have
become elders of the church at twenty-one. To subject them
to the control of the crofters would, obviously, be incompati-
ble with their social standing. Although they are all Church [182]
of Scotland, here again religion is a reinforcing factor for
the structure of the society.

Dying, the final act of living, reveals a host of traits 743
which only receive covert expression during an individual's 829
life. While the youth is censured for his spontaneous
pleasures and the adult is criticized for his behavior, the
deceased is always respected. As one woman said, "It is the
one time in a person's life that the people have nothing but

eternity. If he was one of the "elect," he will enjoy eternal 763
life. If he was not one of these venerable old men and women, 554
he can expect to suffer eternal damnation. Although baptism 775
is a sacrament and removes original sin, it is only the initial [851]
step in the direction of salvation, which election alone con- [783]
firms. Neither the minister nor any member of the bereaved
family offers a prayer. "What more can you do than bury him," 764
one woman asked. An old man said, "They are just as well [793]
remembered without praying for them." In a community which [762]
is dominated by the old people, and in the crofting neighbor-
hoods where so many of the crofters are very old, death can
be expected to disturb the equilibrium of social interaction.
In Glendale during November and December of 1953 funeral
processions made their way through the glen no less than nine
times. The function of the minister is to restore the dis- [793]
turbed patterns, both in the family and in the neighborhood [182]
(or village). All work stops in the township for three days
from the time of death. Some of the cosmopolitans of the [369]
village, seeking to justify their deviating behavior, assert 829
that the lazy crofter looks forward to a funeral because it
means three days of idleness. In the village, of course, it [369]
is no longer possible to bring daily life to a standstill be-
cause the villagers serve a wide area. The "people" of the
deceased do stop work and close their shops. On the day of the
funeral all blinds are drawn until after the procession has
passed.

As he would if there were illness in the family, the 793
minister calls on the bereaved family and leads them in family 764

The Role of Religion on the Croft

As the prestige of the old people and the control of the 593
family-head elders over the social activities of the people has 771
persisted with religious sanction, the status of the father
within the nuclear family has been reinforced by the religious
expression of his role. As we know, the older inter-family
patterns of economic cooperation have been disturbed by the
changes stemming from the process of commercialization. This
has not disturbed the position of the father as the source of
authority and discipline. He continues to play a basic role
in establishing the tempo of interaction within the home, the
township, neighborhood, and community. He decides who will
do the work and when. He determines in what social activities
his wife and children will participate, always, of course,
ultimately guided by the venerable old men. His status is
confirmed at baptism, when he is judged, and it is commonly
reaffirmed every day in the home. For the majority of crofters, 764
though by no means all of any sect, the day begins with the 782
saying of grace before breakfast and the returning of thanks [512]
after breakfast. The same pattern is repeated at the taking
of any food, including a cup of tea. The form of grace may
be used to cast light on the religious outlook of the Sgiathanach:
"Gracious God, we have sinned against Thee, and are unworthy
of Thy mercy; pardon our sins, and bless these mercies for
our use, and help us to eat and drink to Thy glory, for Christ's
sake. Amen."

mainland villages and crofting areas. Ministers from 178
neighboring and even distant churches used to come to take 794
part in conducting the services. There was no church to hold 746
so many people, so the Communion was celebrated outside. Then,
of course, the population was much larger and the majority
belonged to one church, the Free Church.

The Communion Season is still marked by large gatherings 794
of people at each church in turn. The "elect" from the 746
neighboring churches and the ministers from churches near and
far exchange visits. The adherents also participate in the
celebration of the Lord's Supper. From Thursday until 794
Monday the homes of the people in the vicinity are open to 746
their relatives and friends who have come to partake of the 574
sacrament or who find the highly emotional atmosphere and
gregariousness stimulating. Some, especially the "elect"
stay for the five days. Others will spend one or more nights.
During the day and in the evening, whenever they are not [571]
attending religious services, they visit their "people" and
"friends" to renew ties which in many cases have been allowed
to languish since the last Communion. Thus, we find religion [182]
sanctioning the time-honored custom of Highland hospitality.
It is interesting to note that many a woman who depends on [485]
the tourist trade for a good share of her income will not accept
paying guests at this time. The local people have a further 794
share in extending hospitality to their visitors. All who 746
are able send food to the manse (parsonage) to lessen the 574
burden on the minister who extends hospitality to the 793
visiting clergy and as many of the laity as he can. This

for the approaching evening and many nights to come. 794

Saturday is a day of preparation. After a morning 796
service, those who have been examined by the elders and ad- 545
mitted to church membership, and the visitors who satisfy the 573
elders of the kirk that they are worthy to receive Communion,
receive tokens which will admit them to the Lord's Table on
the following day.

On the Sabbath the service is oriented around an "Action Sermon." The minister speaks of the sufferings and blessings of Christ. At the conclusion of the sermon, the Lord's Table is "fenced." Once all the Highland churches gave communion at a table with a rail around it. Now there is only one kirk on Skye with the fenced table, the old parish church in Bracadale. Today the first few pews are used. The minister 794
draws a sharp distinction between those who are entitled to 796
sit at the "table" and those who do not have the right to 573
partake of Christ's body and drink of His blood. The former are reminded of the dangers which neglecting to come forward involves. The latter are warned of their promised damnation as a consequence of partaking unworthily. Since only the 688
old men and women are worthy of the sacrament, the minister's 626
exhortations and denouncements function to sanction the prestige 693
of the old people before the congregation and the wider community. After reading from the Bible, offering a prayer, and 794
addressing the communicants on their humble position, the bread 796
and wine is distributed.

The Communion is concluded on Monday morning with a

control of the "elect" crofters. Today, are the "elect," 796
and their status is independent of the control of the venera- 545
ble old men. 626
594

Summary

Whereas the culture of the Griathanach was oriented 771
around the clan system in the remote past and was intelli- 178
gible only by an awareness of the all-pervasive influence of the clan, today congregational religion provides the focus for the culture. If we are to understand the Griathanach 127
we must fathom his religion, that is, the interpretation which he has given to Calvinism. Moreover, this highly 182
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics and social organization aid us in recognizing how cultural continuity has been maintained. Religion puts at our finger tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 554
been successful in sustaining their statuses and habits 182
through their position in the esoteric religious hierarchy. 626
By holding the father responsible for the spiritual welfare 593
of his family, and judging a man's spiritual enlightenment on his renunciation of mundane pleasures as well as his knowledge of religious tenets, the elders exercise judicial and authoritarian functions. At the same time, the status 593
of the father within the family is strengthened. After a

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 182
on those who seek salvation. The strength of age controls 626
is indicated by the continued ability of the elders to resist 178
all attempts to introduce secular innovations to the crofting neighborhoods. Even in Portree the majority of the people are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including those associated with death, function to restore disturbed patterns of interaction in the family, nuclear and extended, and the larger social groups and to establish meaningful relationships when large congregations gather for the celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and 782
attending Wednesday night prayer meetings. Every day of the week begins with a prayer and ends with family worship. All social activity outside the home is ideally limited to 52
the church, and the church is never used for mundane activity. Only in Portree are there a number of social activities to 349
tempt the people. Kilmuir has no more than a Crofters' 575
Club for men, and Glendale has no social activities, unless one would include the annual meeting of the share holders in the farm.

Although asceticism, epitomized in Sabbatarianism, 771
is a marked characteristic of the expression of the 785
Presbyterian ethic, it is not completely negative. It is 182
one of the means for sustaining cultural continuity. Religion has centered on the home and family. It has preserved the Gaelic. There have been significant changes 178
in the content of the culture, but by using asceticism as an observable test of spiritual enlightenment the limitations of the socio-economic life have been sanctioned. The form, the basic configuration, of the culture is still recognizable.

acceptance of the potato, a much more productive and dependable 161
subsistence item than grain on Skye, made it possible for more 175
people to live on less land. The introduction of a new industry 241
helping, provided many with employment and freed them from com- 363
plete dependence on a subsistence economy. Vaccination reduced 757
the mortality rate, especially among infants whose chances of 165
reaching maturity and procreating were thus enhanced. Another 541
important factor was the Skyeman's share in the general pros-
perity of British agriculturalists during the early years of
the Industrial Revolution and during the Napoleonic Wars. An 423
especially important factor was the practice of subdividing 592
the land which made early marriage possible, in particular after
the installation of the crofting system. Finally, but by no 161
means least significant, there was the persistence of many 175
typical features of the culture in the days of the clan. The 178
sentimental ties of kinship and attachment to the soil had 182
remained.

The population decrease, partially a result of the Skyeman's 161
involvement in the process of commercialization, was primarily 175
a result of a failure to fully adjust to the higher, more 178
heterogeneous socio-economic level. By the end of the second 189
period of the modern epoch, 1845, the people had become hostages
to the potato and their own fertility. When the potato failed
them, they had nothing to fall back upon, except the generosity
of their landlords. The cattle and kelp markets had collapsed
at the end of the Wars, and the subdivided land could not
produce sufficient grain. The belief of many that the pop-
ulation had over-run the limited local resources was confirmed.

The growth of the population ended with a prolonged famine. 161
The proprietors, finding that the people's only justification 731
for crowding the estates and looking to their landlords for 427
help were some nebulous customary usages, facilitated the
decline by disregarding custom and throwing as much land into
sheep farming as was possible. While evictions were not new, 427
only after the famine did they result in an absolute reduction
in numbers. The Griathanach, fettered by a lack of capital 182
and an inability to break with the past, could not make the
final adjustment required by the process of commercialization,
specialization. In addition to emigration, the Clearances 167
and general economic hardship forced a postponement of 582
marriage. There was neither land nor regular employment to 469
provide a livelihood.

Later in the nineteenth century new influences began 161
to play a role in the continuing decline of the population. 167
Following the passage of the Crofters' Act, the nature of 178
emigration changed. Seasonal migration became negligible. 427
The provisions of the Act, and ensuing legislation, made it 671
possible for a man to remain away during his active years and
return to the parental croft to spend his old age. The ex- 871
tention of education not only equipped the youth for life in
the larger society but also created demands for objectives
which could not be attained at home under the existing order.
Thus, as in the period of population growth, the persistence of 161
many features of the old traditional culture, and the renewed 167
importance of others, were factors of no little consequence. 182

On the one hand, they stimulated emigration, because the only 161
means of achieving upward mobility was through outward mobility. 167
On the other hand they deterred a complete abandonment of a 182
way of life which offered so few material rewards. This brings us face to face with the problem of cultural continuity.

Cultural Continuity on the Isle of Skye
A Restatement of Theoretical Considerations

In the opening chapter, I presented a series of theo- 121
retical assumptions on which I have based my analysis of the evidence for cultural continuity on the Isle of Skye. A review of my presuppositions and my approach to the problem may expedite my final quest for proof that marked population change is not a criterion of cultural discontinuity.

If society and culture are separate though complimentary concepts, cultural and social integration must be independent variables. They tend to find mutual expression, but they are not necessarily found together. Nor can they be measured by the same criteria. Cultures are considered integrated to the extent that their traits, complexes, patterns, and aspects are meaningful to the people. The content of all cultures is continually modified by the disappearance of once characteristic trait complexes and the addition of new ones. Old ways of doing things lose meaning and are disregarded; innovations find acceptance and are given meaning within the configuration of the culture. The form of the culture, its essential distinctiveness, persists. The carriers of a culture, or the

sanctioned the qualities which had given the people their characteristic strength of character.

The churches of Skye made conservatism an official policy in 1843, and in 1892 reaffirmed this policy. For well over 100 years religion has had a strength and vitality which has enabled the Skyeman to pass through times of extreme distress, not to mention chronic economic deficiencies. Among the most important religious sanctions are those which reinforce the status values of the culture. The father's status in the nuclear family was reaffirmed at a time when his socio-economic importance was declining. He has been held responsible for the spiritual welfare of his wife and children. The prestige of the old men, the family-head elders, and their control over the neighborhood group was similarly bolstered by making them the judges of a man's spiritual enlightenment. Spiritual enlightenment is weighed on a scale which will not balance unless a person's religious knowledge is matched by conformity to the ways the old men think a man should behave. Again we are not dealing with a completely negative attitude. In the place of frivolous amusements, religion has offered highly emotional, spiritual patterns of behavior. Religion has preserved the Gaelic language by using it in formal worship and within the home for family worship. In these and other ways religion has indeed enabled the culture to achieve a reorientation and maintain its continuity.

How similar Skye is to the Old Order Amish in this respect.[3]

[3]Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania.

Both have remained devoted to the old tradition which is epitomized by their religion. Further, they are each bound together by a common language and vocation and by strong ties of consanguinity and affinity. Moreover, the Sgiathanach and the Amish have similarly rejected the deviant. On Skye emigration has affected all levels of social organization, the conjugal family, the extended family, the township, the neighborhood and village, and the community. Still the Amish and the Skyeman have maintained social and cultural integration. Standing in a contrasting position is the town of Landaff, New Hampshire.[4] Although Skye and Landaff have experienced similar trends, including an original ecological adaptation, disturbance resulting from population pressure, an unsuccessful attempt to meet the crisis through commercialization, and a chronic high rate of emigration, especially by the youth, Landaff has been described as an example of social instability and cultural disintegration.[5] The farmer of Landaff remained only as long as his interests were compatible with those of his neighbors, and local opportunities existed to satisfy his ambitions. He had no attachment for the land to offset the inadequacies of persistent economic limitations. He abandoned the associations which had supported the community by giving the group a sense of security.

Like European peasants in general the Skye crofter has lost his former self-sufficiency and political autonomy, but he has retained a strong attachment for the land and its

[4]MacLeish and Young, Culture of a Contemporary Rural Community: Landaff, New Hampshire.

[5]Ibid., pp. 113-117

group.[6] He has maintained cultural integration and continuity. At the same time his conservative religion has not gone quite as far as the Amish Order.[7] The Sgiathanach has rejected only those patterns which would disturb the equilibrium of life in the neighborhood. The penalty for his failure to completely adjust is depopulation; others, like the people of Yap and the Aleuts, are paying a similar penalty.[8]

Further Evidence for Cultural Continuity

Various approaches to the problem of cultural continuity can be attempted in addition to the historical approach which has formed the point of departure for my study. The most obvious would be a comparative study of two basically similar people, the Welsh and the Irish. In the chapter entitled "The Setting" and throughout this study I have called attention to the similarities between the Skyeman, the Welshman,[9] and the Irishman.[10] In a host of cultural features the three are strikingly identical. Some of these common patterns may be remembered, for instance, the alien nature of nucleated villages, the strong patrilineal emphasis, the importance of the old man, and a pastoral

[10]Arensberg, The Irish Countryman; and Arensberg and Kimball, Family and Community in Ireland.

agricultural economy. Some may share my feeling that a further exploration of these similarities would reveal evidence indicative of cultural continuity. We have three peoples who have had ample opportunity for divergence and yet have retained many essentials of Celtic culture. Moreover, all have been losing population since the middle of the last century. Unfortunately, at the present time, I am not prepared to extend this comparative approach. I am deterred by a recognition of two facts.[11] First there is the difficulty that peasant peoples all over the world seem very similar despite their distinctive cultural and historical backgrounds. There is, of course, diversity within similarity. Second there is the truism that the higher socio-cultural level of which the peasant is a part influences the form peasant life may take.[12] Although Anglo-Saxon and Norman influence impinged on the Welsh several centuries before it seriously threatened the Irish and Skyemen, the three groups have been subjected to basically similar stimuli for several hundred years.

Another question which may be asked is, has the culture continued to provide meaningful patterns of interaction for the Sgiathanach? One means of answering this question is provided by Durkheim's theory of anomie. According to Durkheim,

[11]Cf., e.g., Oscar Lewis, "Peasant Culture in India and Mexico: A Comparative Analysis," Village India, ed. McKim Marriott ("Memoirs of the American Anthropological Association," Memoir No. 83, 1955), pp. 145-148.

[12]Cf., e.g., Wagley and Harris, "A Typology of Latin American Subcultures," American Anthropologist, LVII, No. 3, pp. 431-442.

a disorganized society has the following characteristics: a deterioration of the traditional patterns of interaction within the group, a low degree of social contact among the members of the group, and a loss of social control by the group over the individual members.[13] As a result, the individual is faced with a situation in which the norms of behavior and the sanctions for them become less common and clear. To restate my position, although cultural and social integration are independent variables, the absence of this condition of normlessness is evidence that the cultural disruptions of the past have, in each case, been followed by a reintegration within the culture, as well as within the society. In other words, if the norms and sanctions are common and clear and are those of a single tradition, the absence of anomie means the individuals, as an organized aggregate bound together by a network of relationships and a sense of belongingness, are fully enculturated. Moreover, it means the culture, the socially transmitted attitudes, behavior patterns, and techniques which are distributed among the members of the society in accordance with their status positions and sub-group memberships, has maintained continuity. In order to investigate the question of anomie, let us compare my evidence from Skye with the findings of several social scientists who have worked with this concept.

Homans has used Durkheim's theory to analyze a small New Hampshire hill farming community.[14] Hilltown, like its

[13]Durkheim, Le Suicide, pp. 272-282.

[14]Homans, The Human Group, pp. 336-367.

neighbor, Landaff, shares many features which have been found to characterize the Isle of Skye. These include a similar population cycle; a religion which is Calvinistic in tone; a period of religious schism; and original dependence on a subsistence economy. There are, of course, significant cultural differences between the two. The most important of these are the presence of English institutions of town government in Hilltown; the fact that the original settlers were individual nuclear families who were relatively free to develop their own reciprocal patterns without the limitations which long standing tradition might have imposed; and the "Yankee" lack of traditional attachment to the land. Obviously, it should not be forgotten that the one is a town and the other a much larger community.

Using an historical approach similar to my approach to the Sgiathanach, Homans traced the path of what he calls "community disintegration" and reached a number of conclusions about anomie. His first conclusion is that the number and strength of the sentiments that led the members of the group to collaborate had declined. There was a decrease in the number of activities that the individuals carried on together. Need for social self-sufficiency and mutual aid lessened. Schism disrupted the church. The town meeting ceased to be important. In short, the interests of the people were outside the town. His second conclusion is that there had been a decrease in the frequency of interaction in the internal sphere of activity. There was less visiting and fewer parties. Some people, especially members of the upper class, seldom saw anyone,

other than on business. The fraternal orders were gone. 171
Church attendance had become sparse and irregular. These 182
changes led to a decline in the strength of interpersonal
sentiments and a feeling of indifference toward one another.
His total conclusion is that these changes were followed by
a "decline in the extent to which norms are common and clear."
Since class membership is defined on the basis of interaction,
class activities are much alike, and the interests of class
members coincide. Ranking is based upon norms, in particular
the status and role of leadership in community affairs. A
decrease in community activity had resulted in a weakening
of both norms and ranking. His last conclusion is that the
changes in the intensity of everyday relationships have led
to a loss of social control by the group over its members.
Deviations were not punished by avoidance. All action was left
to the state. Here, then, is anomie. Let us compare the
contemporary behavior patterns of the Sgiathanach with the
Hilltoners.

There is evidence that the Sgiathanach no longer collabo- 178
rates in group activities as much as he once did. There has 182
been a decline in the amount of cooperation in the work of
crofting. In many activities, of course, the need has disap-
peared. The individual family can easily perform many of the
tasks, such as the ploughing of a few acres of land. In some
townships it has become the practice to pay the sheep club
stock shareholders to insure the presence of enough men and
women to handle the dippings and shearings. In others,

including almost all with private flocks, the crofters continue 178
to cooperate. The church has been broken by schism, not once 182
but four times. On Skye, however, the schisms have had as 785
their purpose conservatism, not greater leniency as in Hilltown. 782
Moreover, the schisms have been solidifying factors. The
progressively more dynamic world denying sects, after a period
of communal strife, have given the people an emotional unity.
The crofters have become dependent on the trade-center village 182
and the wider national markets. Many must seek employment beyond
the island. The interests of the Sgiathanach are not outside
the neighborhood, except in so far as events from the outside
affect them and, especially, to the extent that ties of kinship
and religious brotherhood reach beyond the local group. We
are hardly talking about the same situation as Homans. As we
continue to explore this condition we may also ask has there
been a decline in the frequency of interaction in the internal
sphere of activity?

The old ceilidh has disappeared under clerical bann, but 182
it has been replaced by "going to have a craic," going to visit 571
and gossip with one's friends and "people." The people may 179
no longer gather to hear the old men tell stories of clan battles.
They now discuss the latest local gossip and the news of the
outside world. The Islander has never been given to formal
social organizations; they half distrust such orders as the
Masons and Eastern Star. Still there are chapters of both in
Portree. In the crofting neighborhoods face to face relation-
ships continue to preserve strong interpersonal sentiments. The 243
postman's van and the grocer's trucks have relieved the people

from the necessity of daily calls at the post office and shop, 182
but the drivers serve the function of passing on the news of the 571
day at each stop. 703

Standing in the place of many of the traditional social 182
outlets which have disappeared or been modified, there are the 784
religious occasions for joining together as a small group. We
have found the Sgiathanach to be very religious. Everyone is 784
expected to go to church on the Sabbath, and everyone goes to
church. Irregular attendance soon becomes noticed by one's
neighbors, the kirk elders, and the minister. Concern over 626
what one's neighbors may think, in itself a strong motivating
factor, is reinforced by a forbidding fear of what the venerable
old men may do whenever an opportunity presents itself. There
are Wednesday night prayer meetings for further social inter-
course. Above all, there are the semi-annual Communions which, 182
except in Sleat and Strath and one Bracadale sect, bring to- 784
gether the people of the kirk, the members of the same sect from 784
other neighborhoods, and affiliates of the denomination from
the mainland. Even the adherent, the individual who has not
experienced a saving change because he is not old enough, normally
takes his vacation, if he is employed, at the time of the
Communions in order to attend.

The decline in interpersonal religious strife does not 182
mean that strong personal sentiments are not present. No one 571
other than the eccentric, is indifferent to his neighbors or 243
others with whom he may have dealings. The crofter and his 647
village cousin may not bother to vote, but they closely watch 665
and freely discuss their representatives. Gossip has retained

a tremendous strength. There are villagers who dislike the 182
crofters, but few would intentionally slight an old crofter's 571
wife because it might give her something to talk about. I 703
shall elaborate this point shortly when I come to social control.

If there had been a decrease in the frequency of inter- 182
action, the traditional norms and sanctions should have become 584
less common and clear. In particular, social ranking based 645
on leadership in communal activities should have become less 571
definite. Although anomie, as used by Homans, is an internal
condition, I shall introduce a consideration of cross-group
norms in order to present a clearer picture of the status
system. Despite the extreme fluidity between the county people
and the members of the intermediate social heirarchy in informal
clique groups, such as the bridge club, there has been no
tendency to obscure the lines of cleavage. The class structure,
in terms of the whole community, has remained rigid. The county
people are at the apex of the prestige status and class hierarchy.
They are, of course, members of a group which extends across
the length and breadth of Great Britain. In any neighborhood
where there is a member of the landed gentry resident, he is
always looked to for leadership. In Glenisle, a privately owned
neighborhood, a nearby landlord is their political spokesman.
In Portree the gentry have done more than uphold social ranking
based on leadership; they have created and introduced new
activities in which they express their role. Those are the
Skye Council of Social Service, the village council, and the
Old People's Welfare Committee. They may be aided by others,
but their decisions are the others to be followed. The gentry

maintain their position by intermarriage, by educating their 182
children in England, and by interacting with people of similar 571
status within the community and beyond. 545

The crofters continue to stand at the opposite pole. They
seldom achieve status within their neighborhood. Upward mobility
is possible only through outward mobility. Leadership fails
to find expression among them in the township or the neighbor-
hood. The rare exception is the crofter's son who becomes a 785
minister and returns to lead his people spiritually. When the 784
crofters must select a leader, from their own number, the
status is accorded to an elder of the church. The elder 784
already has high status because of his advanced age and his
position in the kirk. As I have said, the continued operation
of primitive democracy means a minimum of authority and a
maximum of equality.

The intermediate group in the social hierarchy cannot be 182
profitably used in this discussion. They are primarily newcomers 584
people from the Lowlands or England, who have joined with the 645
relatively few Skyemen who have left the croft. Sufficient time 147
has not elapsed for a class oriented structure to emerge. Then,
too, they are not a numerous group. Still, status is important
in the village. As in the crofting neighborhood, ministers,
doctors, and teachers achieve high status through their occupation.
For the remainder of the population of Portree, status depends
more on personal qualities and outside activities, especially
in the kirk, than on the way one may take his living.

While we are on the topic of status and ranking, let us 121
554

see what Linton, the most explicit exponent of the concept of 121
status and role, has to say about societies which are faced with 554
changing conditions and disorganization.[15] Linton believes that
such societies attempt to develop new social patterns by allowing
individual initiative, thought, and competition free rein. They
are characterized by a wealth of achievable statuses. With
adjustment, ascribed statuses again become common. The con- 584
clusion seems inescapable that Skye has adjusted. Perhaps a 626
few additional illustrations will make my point clearer. The
crofter who assumes a role of leadership is regarded as an
eccentric, someone to poke fun at no less than the village
idiot. The crofters' children who find their status too con- 584
fining must leave the island to achieve status. Some succeed, 626
to a limited degree, by moving to Portree, but they are never 147
free of suspicion. Since the majority of ascribed statuses
on Skye are left to newcomers, it might be said that the
Sgiathanach has selected place of birth as a means to ascribe
status. Not infrequently the newcomer's acceptance is followed
by his being placed in roles of responsibility in both formal
organizations and informal groups. The reader may remember
the case of the young man from the East Coast who found himself
on no less than eleven committees. In Kilmuir the people are
represented on the County Council by a minister and the Crofters'
Club is run by the school teacher.

I believes that the most important feature of the concept 626
of anomie is the loss of social control which is said to follow 182

[15] Linton, The Study of Man, pp. 113-131.

disequilibrium. I find it difficult to understand how any
group could have a low rate of interaction without a loss of
social control. Conversely, I feel that it is also hard to
conceive that a group could continue to exercise social cont
without a high frequency of face to face contact. On Skye
social control is a very potent factor. Gossip is a double
edged weapon. It not only continues to enforce acceptance
of the traditional norms by the Sgiathanach and, to a lesser
extent, the newcomer but also can be used to punish the
deviant. People have been known to leave the island after
a deviation which rendered them inacceptable. Gossip become
a source of misery from which there was no escape other than
flight. Exactly how powerful the dread of gossip is in Port
can be judged from the experience of my wife and myself. We
have played chaperons to people much our superiors in age.
Nor can one escape gossip by secrecy. The person who remain
a mystery is rejected as a deviant.

The amount and influence of social control, of course,
depends on the values of the Sgiathanach. Poaching is rather
good sport, but the theft of stock is a serious offense. The
one is the concern of the police and the justices of the peac
the other is a matter which the people prefer to handle them-
selves. It is quite wrong to burgle a home, but theft from
a shop is a different matter, especially when the store is
owned by a Lowland corporation. A similar dichotomy applies
in the case of illicit sexual activities. A pattern has
evolved to protect the unwed mother, but the married can or
woman who violates the taboo is severely censured. Ideally,
the offender is cast out by the community and his spouse, or

omie is an additional support for my position. With 121
theoretical assumptions in mind, we are prepared for
al interpenetration of the culture of the Sgiathanach.

Evidence for Cultural Continuity

If I were to view the Isle of Skye from the single 178
ective of the culture as it functioned two hundred years 182
in an organization-disorganization framework, I might
ally argue that there is evidence for cultural disorgan-
on. The clan system, which had pervaded all aspects
e culture, was rendered inoperative by the intolerance
e British government and the cupidity of the patriarchs.
tenure was divorced from considerations of reciprocal
dence and real or fictitious kinship. The contractual
iples of the wider commercial society, in which the
ords found a more satisfactory status, were introduced.
me, the customary rights of the tacksmen, who had supported
tructure of the clan, and the former clansmen were
icned and repudiated. The older folktales, songs, and
of the superstitions were obliterated. The traditional
ious and secular festivities associated with events in the
cycle were abandoned or allowed to survive in a much
ied form. The traditional customs of cooperating and
ing were either altered or disregarded. The list of
s and complexes which were dropped from the content of
ulture could be continued. It is, indeed, a long one,
t includes elements from every aspect of the culture. If

f tenure function to protect the individual from potential 178
buses by a landlord where customary usages once fulfilled the 182
eed. Moreover, even though the tenure of the cultivated soil 423 427
rants all the rights of a landholder, including the rights 657
o bequeath the house and land to a member of one's family,
or more than half the year it is used communally.

The Sgiathanach has never adjusted sufficiently to become 178
specialist, not even a specialized grazier. For him the 423
and has always had a more fundamental value than merely being
means of livelihood. It is the ancestral home. There is a
entimental attachment to the land which is an expression of
he affectionate bonds of kinship. The people have never lost
he tribal tie of the land and the group. Although the former
atriarchs disclaimed any sympathy with this point of view,
he landlords on Skye today have kept what little land they
ave only because of its sentimental value. Indeed the atti- [656]
ude of the largest landholder, the government of Scotland,
s that the crofting tradition is worth while preserving, if
or no other reason, because in the predominantly urban and
ndustrial civilization it has a romantic value. There are
ther reasons. The Islands have long been looked upon as a [702]
uman reservoir for the armed forces, and, more recently, for [464]
owland industry.

As a result of their partial adjustment to the higher 178
ocio-cultural level, there have been changes in crops and stock. 231 241
he British market has influenced the crofters' output, within 433
ecological limitations. The old subsistence crops of oats and

barley have been replaced by grass and hay. Conceivably, this 178
is a more complete adjustment to the environment, which has been 231 241
made possible by integration with a commercial economy, than 433
an adjustment to the demands of the outside world. Whereas
the objective of the local economy once was the export of
cattle, today the purpose is the breeding of cattle and sheep
for the national markets. We have seen that there are a host 182
of limitations and difficulties in the economic aspect of the 231 241
culture. Many of these are due to the persistence of con- 433
servative practices. Each crofter must keep pace with his [624]
tradition-practicing neighbors, with the old men of the town-
ship. Others are the result of an inhospitable environment.
The economy does not run smoothly, but this is not conclusive
evidence for disorganization. Integration does not mean
smooth functioning. In the spring and autumn the crofter is
confronted with a variety and succession of tasks which would
fill a specialist with dismay. Very often, these pastoral
and agricultural chores have to be carried on in conjunction
with outside employment. In return for his labor, the crofter [134]
receives a meager income, frequently supplemented by con- [657]
tributions from his children or the government. As a further [167]
result of the partial adjustment to the wider society and
culture, the people leave the island to seek employment and
to achieve an upward mobility impossible on Skye. Economically, [175]
Skye, along with most of the Highlands, may be viewed as
presenting a picture of the Lowlands of Scotland 200 years ago.
That is the extent of the economic adaptation of the Sgiathanach
to the national culture.

Additional modifications have been found in the division of labor. Although no Skyeman has shown a disposition to assume responsibility for domestic work, unless he lives alone, the women of Skye are expected to function in roles which once were filled exclusively by men. Old men and women for many years now have continued to perform tasks which formerly were their duties as youths and young adults. These changes, like those we have reviewed, are partially traceable to an incomplete adjustment to the contractual, commercial world. This has led to striking alterations in the age structure of the population for it is the youth who forsake the island and the aged who yearn to return. Nevertheless, there have been no observable changes in the status system of the rural neighborhoods. Primitive democracy, distinguished from our form of democracy by the principle of unanimous consent rather than majority rule, continues to operate in the townships. The existence of such an institution implies a maximum of equality co-existing with a minimum of authority. The continued ability of the crofters to maintain primitive democracy in a nation like Great Britain is possible only because there is a high degree of social integration. The simple system of ranking, on the basis of age and sex, has persisted. Men are the social superiors of women; old men are the social superiors of their juniors. I believe we shall understand how continuity of status has been preserved if we turn to a consideration of the role of religion on the island.

If I am right in asserting that a belief in clan brotherhood was an all pervading cultural pattern in bygone days and

that the clan ceased to provide a focus for the culture almost two centuries ago, the reader may ask how can a culture without a focus find continuity, how can a culture without a central theme, something around which to orient itself, achieve integration? Religion provides the answer. Congregational religion has taken the place of the clan.

The acceptance of the new religious focus curtailed many traits and complexes characteristic of the old culture. This is why the older folktales, songs and superstitions, the festive celebrations held at times of birth, baptism, marriage, and death, the traditional social patterns of visiting, and all frivolous activities were abandoned or modified. In a time of acute distress the Sgiathanach turned to religion as a means of consolation. His religion required circumspect behavior. Perhaps, the sheer impossibility of supporting the traditional forms of social interaction had forced a change in cultural content when the religious leaders placed these forms under censure. I have suggested that religion did no more than sanction poverty. This much is certain: religion provided the means for the culture to maintain its continued distinctiveness. The Scots of the Presbyterian image of the days of Knox, of the times of the Covenanters, and the year of the Glorious Revolution continue to exert their influence on the Sgiathanach. While the ministers and the venerable old men of the laity stamped out all practices which they considered pagan or Catholic, as well as modifying the social aspect of the culture, the process was not completely negative. The religious expression

were to adapt this argument, I might even be convincing, but 178 182
dissertation would have a fallacious conclusion. Emphatically,
reparable cultural disorganization is not a characteristic of
e culture history of Skye.

Continuity has been maintained through a reintegration. 178
part, Skye has made an adjustment to the higher socio-cultural 182 184
ganization of Great Britain and Western Civilization. This
ase of the culture's readaptation, however, is an incomplete
justment. The Sgiathanach has remained enisled geographically
d culturally. A readaptation has also been made in the older,
aditional culture.

The national culture has played no insignificant role in 178
e readaptation. Parliament turned back the process of com- 182
rcialization in 1886 and undertook to rechannel the trends 423
ward ever increasing commercialization of the land, ulti- 427
tely leading to the socialization of the land. The essentials of 657
e old system of land use and tenure were not only reaffirmed
t also given legal sanction to insure their stability. The
tion confirmed the customary usages. In many townships and
whole neighborhoods the crofting system was restored. As
r as the Sgiathanach is concerned, he has never known any
her economic structure than communal use and tenure of the
nd. There are only three significant differences between the
hrig farm, whether the farm was a tacksman's or the common
lding of several joint-tenants, and the crofting township.
e arable acreage is held in compact, permanent blocks instead
dispersed and shifting strips; the crofter pays a money
nt in place of goods in kind and services; and national laws

Whatever signs there were of social or cultural disorganization, or threatened disintegration, in the nineteenth century they have disappeared. Steward's theory that folk societies do not entirely disappear but are rather modified by way of a reshaping in the higher level of socio-cultural organization of which they become a part is borne out by the evidence from the Isle of Skye.[37] At the same time, on the basis of events in the culture history of the Reidhagaich, would qualify his theory by introducing a new condition. Isolated, relatively stable, kinship oriented societies and cultures which must achieve a reintegration if they are to preserve their continuity readapt, not only to the higher socio-cultural level, but also to the older way of life.

In conclusion, I regard Skye as a community which has 178 maintained a continuity of culture despite marked population 184 change. The continued distinctiveness has been made possible 187 by a reintegration of the culture and a restoration of the texture of relationships which make for harmonious living together. As in any socio-cultural group which has passed through a period of marked disintegration, the points of pain may be weak. Conflicts are tending to appear. The latter, who has refused to fully adapt to commercialism, is seasonally faced with a variety and succession of tasks in which agriculturalists in the wider society would tolerate. Yet in the desire of the youth, who are too few in number to form a sodality, for a share in the manifold pleasures of

[37] Steward, Area Research, p. 111; see also Bagley and Jarvie, Sociology, p. 441.

the world. So far, rather than having an influence on the norms of behavior, the youth have been faced with the dilemma of conform or leave. Cultural continuity on Skye has been a sad experience for many and an expensive proposition for the government. The youth leave; the aged return. If additional changes are made upon the culture, and there is no doubt in my mind that they will be, the culture and society may not be able to preserve the delicate warp and woof. The threads already hanging loose may unravel the basic fabric. Only time will tell.

At the present time, the culture is disturbing to many 178 people. The sensitivities in the Lowlands worry about the loss of the old songs and the decay of the informal ceilidh. Agricultural economists commonly look upon the crofting system with dismay. Ministers, some of them born Skyemen, express a dislike for the form which religion takes among the Reidhagaich. Well meaning associations are determined to create an "adequate social organization" by reinjecting a sense of the urban recreational facilities to Skye. Government commissions and agencies take a dim view of a system of tenure which allows the aged and the absentee to hold on to the land. They advocate the severance of the house and croft and a codification of the croft for security of tenure. If one or more of these changes are made, it may no longer be possible to conclude that the culture is growing old with the aging population. I do not believe that the culture will ever fully adjust to the national socio-cultural organization. Before it will do so, the Gael

291 The competition between the loom and the croft is
233 evident in the few communal township practices which
● 183 still exist. One of the rules of township organization
225 is that all households must bring their sheep in from
the moor on the same day. Other rules are that no one
[B31] should go out on the moor at any other time with a
dog, and everyone who has sheep should go out on the
day designated by the township officer responsible to
collect them. The moor is extensive, and the sheep
wander over a wide area. Only if a large number of men
go out together and come in with their dogs like a wide
net can the sheep be brought in with a minimum of effort
over the stream-cut, uneven ground. Anyone who goes
out on the moor to tend grazing animals and probably
drives them farther away from the village.

These rules have strong ethical import and are
233 much more than a set of procedural rules prescribed
185 by the Crofters Commission. "There is a code of ethics
which you learn as you grow up, as you go with your
[578] elders out to the moor. You can fight with a man over
a woman and make it up next week; but if you fight
with a man over a sheep, you won't make it up for thirty
[178] years." That these rules are weakening in importance
is indicated by situations in which only two or three
men have gone out in the early morning to bring in the

18) NORMS--native and scientific definitions of custom (e.g., an ideal pattern, an range of variation within limits, as statistical indications from observed behavior); positive and negative norms (e.g., folkways, taboos); verbalized and unverbalized norms; conversion of norms with affect and symbolic value (e.g., morse, idealization, sublimation, rationalization); ambivalence; norms; configurations of norms (e.g., culture complexes, institutionalized, the ritualized, the ceremonial . . . . . 200 Tones 56
Conformity to norms (e.g., ritual, ceremonial, etc.) 201 Transmission of social norms . . . 207
Legal norms 272

233 sheep. These men arrive back in the village hours
185 later to find the road lined with the cars of men who
178 have come to look for their own sheep among the flock
but who had not bothered to spend the time collecting
them. Many have gotten rid of their sheep to
"concentrate on the weaving."

2. Sheep vs. Cattle: As mentioned in the section
233 entitled "Changing Land Use" (cf. Chapter 2), a split
516 has emerged between those who keep cattle, and those
who keep only sheep. Cattle were once prominent,
but the number of sheep has greatly increased. The
conflict between raisers of sheep and of cattle extends
beyond the use of the reseeding schemes (see Chapter 2).

Cattle are usually brought in from the reseedings
or from the common grazing lands where they are tethered,
fed, and watered. Cattle require lower grazing land of
the township at the same time that the sheep are brought
in from the moor. In one township on the west side of
Lewis, the cattle were released a few days before the
fank,[1] which resulted in the formation of two groups,
sheep-only people and sheep-and-cattle people, which
opposed each other. At the fank held a few days later,

[1] The word "fank" refers to the process of bringing the sheep in from the moor, and to the wooden pen in which the sheep are gathered and claimed by their owners.

● 183 The generally low level of stimulation derives in
181 part from values which restrict opportunities for self-
[B21] expression. People are ready to gossip, i.e., to participate vicariously in the escapades of others, but are less
[628] ready to act. Stories concerning sad-sap adventures of
some villagers do not belie the existence of constraints
[166] imposed on expressiveness. One of the major reasons
given by young villagers for wanting to leave the island,
and by emigrants for why they left, is that, "There is
nothing to do. The place is dead."

In the everyday life of the village, a style of
156 indirectness and restricted communication is encouraged.
181 A man might be praised in an obituary by the phrase, "His
[B21] voice was never heard in the community." The encouragement
of a "low profile" behavior is characteristic of
communities in which people meet each other frequently
and know they will continue to meet and see things of
each other for a long time to come. Indirectness avoids
conflict arising from divergent expectations, and embarrassment from changes in plans.

A major feature of practices of child-rearing on
156 the island is inconsistency, which develops a style of
96 guarded watchfulness and hesitance to act or express
oneself. Children are teased by being offered things
which are then snatched away. Punishment is inconsistent.

secondary school, the 'Nicolson', has had since its inception a 632
formidable academic record. Back in 1907 work from the school 871
was included in the educational section of an International Ex- [648]
hibition held in Christchurch, New Zealand: this was appropriate [1479]
because emigrants from the west Highlands, mainly from Harris
and Lewis, were among the pioneers of New Zealand education
a century ago. In 1957 new extensions were opened, costing about
£300,000 and making the school the largest of its kind in the
Highlands area. It is co-educational, its primary and junior
secondary departments taking only Stornoway children and its
senior secondary department catering for those from both Storno-
way and rural Lewis. Many board out in the town during the
week, returning home at weekends.

In providing social facilities, the town has placed itself in the 632
position of an agent for those things deemed necessary for life, 871
and is a middle-ground between the rural repression of the Free [77]
Church and the city abandon of the mainland, with resulting 183
dilemma. The public houses, the cinema, youth clubs, dances and [1428]
juke boxes are all in direct opposition to the preaching of the Free
Church. The result is tension between the town's desire to act as
a host for tourists and its wish to fulfil its duty on a religious
plane; to instance this, the Stornoway Sabbath is less strict than [184]
the Lewis Sabbath. In keeping with the rest of Lewis, social
standards are extremely high. Home is the centre of life, as it
always was; the sense of community and communal responsibility 592
is there. Divorce is practically unheard of, and the incidence of 562
crime, as such, is extremely low. [674]

42 light, suggests that such lordship goes back to early con-
[42] quests of self-supporting agricultural and pastoral com-
[172] munities by well-armed raiders of many races, including
the Celtic-speaking swordsmen of the Iron Age. The last
and most notable of these conquering forces were the
Norsemen. Their influence was profound, whether, sailing
direct from the Scandinavian forest settlements and fjords,
they raided and settled as heathen Viking crews, or, at a
later stage, they invaded England from Normandy—that
fertile province which they had made theirs in fact and
name—under the panoply of civilization and with Papal
benediction. A generation after the Conquest they com-
menced the penetration of Scotland.

● 183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of mostly equalitarian thinking bound up with
121 tyrannical administration, is nowhere more
[64] marked than among the Gael. They sought to reconcile
these conflicting loyalties by claiming common ancestry for
chief and people, as the children (*clann*) of a hero of
history or myth. The years 1945–47, which formed a
centenary of the last of the desperate Jacobite Risings,
stood at the close of the latest of many wars in which fame
has been won for the symbol of clansfolk, and long
proscribed (by the Act of 1747) 'to every man and boy
in the Highlands'. At such a time, the Gaels' loyalty to
the death cannot be forgotten although old kings, old
121 chiefs have gone. But its paradox must not only be re-
[64] membered but understood, from its roots in communal
121 life and environment through history. Not until this is
185 done can important phases of our own time be under-
stood, such as the failure of Lord Leverhulme's seven
years' endeavour in Lewis; nor can the present opportunity of Highland renewal be grasped by the help of

● 183 democratic reorganisation, with loyalty to one's fellows and
181 to a leader.
185 Here again, Lewis-and-Harris may have something to
178 teach, as one of the last communities in Britain in which
185 much of ancient common right over land and sea has been
[174] upheld. Trust ownership of Stornoway estate has strength-
[174] ened the possibilities of rural planning there, while the
[423] fabrics are a public resource which are partially protected
by local fishermen inshore and further out are closed to
none. The useful Lewis Association has published models
of local survey for social and economic planning. At a
time when democracy is struggling so in its way towards
economic and social freedom, such communal initiatives
have more than local significance.

121 This sketch of comparisons and questions in rural life
131 raised by Hebridean evidence, through a wide and varied
182 region of the British Isles, must serve to indicate the geo-
graphic setting of the Island and relate the historic and
contemporary problems of its own community to wider
fields. This book is not directly concerned with the urban
and industrial problems of the fish-ladder and 'individual
plains' within the varied land of 'the North and West'
of Britain, deeply though they affect the hard-hit fishermen
of the Isles and the Island migrants—seamen or labourers,
tradesmen or factory workers, nurses, teachers or clergy.
Even for the migrants' sake, it is vital to maintain the
economic balance, and restore the cultural and spiritual
121 life within each industrial region, in order to maintain
185 that of Britain as a whole. It was not enough to schedule
'the murdered towns' of Tyneside, Wales, Lancashire
or Clydeside as 'Distressed', 'Special or Development
Areas'. The balance of Britain as a whole must be
restored.

In spite of 'the wrath to come', life had to go on, work be done, and social affection find an outlet in youth. How could the women wash the cloth without a chorus to keep their beating hands in time? Songs had to be allowed to the servants for this work in common. In a land where marriage was not an affair of dowries, but chiefly of love choice among the young folk, the old courting customs could not wholly be denied. Curiously enough, drinking was not severely looked upon by Scots rural Evangelicals; in one story in the Old Testament, it is not the drunkard, but the mocker whom the Lord punished! In a city, a drunk man is a prey to thieves and harpies; but in a township none will do him harm. But today there are Evangelical ministers who think that drink should be frowned on at weddings and *ceilidhs*, while song and dance might be tolerated.

Not all the people gave in willingly to the severity of the new creed. In Uig there is a cave, the 'Piper's Cave', to which a crofter was wont to resort on dark nights, his pipes in his arms, when the wind blew *from* the manse and *to* the cottage. In Harris, the last spelling were forced to give in, first, by the appalling threat of the refusal of communion, and secondly, by denunciation from the pulpit and the ostracism of the Elders. Much was destroyed that can never be recovered now, and many a fine heart saddened or broken. It was the most intimate expression of their lives, their religious love, which suffered most.[1] Yet something remains, preserved by the good sense,

[1] Carmichael gives an infinitely pathetic account of a conversation in a home in Nun about 1880–85. *Carmina*, pp. xxvii–xxxi.

people, although life in crowded quarters and daily concern with the rearing of animals make for a frankness not readily understood by strangers in Victorian times. The standard of morality in the Isles is high, and the rate of illegitimacy low. A courting custom, once common throughout the northern and western coasts of Britain, as in Norway and New England, was 'bundling', a preliminary to marriage, or bed-fellowship (*leapachas*). This is noted with disarming frankness by various writers.[1] After the ceremonial and festivities of the betrothal, *retainsh*, a young man was allowed to sleep beside his betrothed; but the strange experiment failed. The Lazdale School choir wins prizes at many a national gathering, but *Mod*, for their spirited singing of songs, many of them unpublished. Owing in part to their very isolation, these songs have remained as pure in form as in the Catholic Isles, whether in time and rhythm or in scale and mode. Thus the sub-intervals or 'quarter-tones' of the modal scale add subtlety to the melodic line of an air, as in the singing of Wales or of distant India.[2] These intervals are rarely heard on concert platforms, being unrecognized by many 'Mod medallists'. They are rarely known to professional musicians trained to the mechanical scale of the piano, and who are asked, as adjudicators, to award praise or criticism by alien standards.

Courtesy and modesty are noticeable among the young

[1] M. Kennedy-Fraser, *Preface, Songs of the Hebrides*, vol. i. Cf. Gilchrist, *Witchcraft and Second Sight* (Curwen, 1936). For India see A. H. Fox Strangways, *The Music of Hindoostan* (1914), p. 74; E. and H. A. Popley, *The Music of India* (1921), cf. A. Coomaraswamy, Marguerite Eliot, *Ethnomusicology*, 1937. While published phonographic records of Indian singing normally illustrate these intervals, those of Celtic Hebridean singers rarely do, as they are accustomed to *sheir* to suit a group.

COMMUNITY FROM PAST TO PRESENT *PT. II*

intuitive and traditional, of the people, and their love for the good and beautiful. Song collectors from outside the Island have found little and assumed that song had been swept away. Discretion is certainly needed for song collection! Years ago in Berneray I had been told of a pretty love lament I had not heard. Calling with my hosts to visit one house in their house that evening, we found the singer, a burly crofter of 50 or so. We had been about to mention the word 'song', when the word was checked on our lips by a swift, warning glance. The singer lived with his old mother and she was not be told that her son went out on such an errand! Nevertheless, Islanders themselves are collecting many unpublished songs, where strangers failed. The Laxdale School choir wins prizes at many a national gathering, but *Mod*, for their spirited singing of songs, many of them unpublished. Owing in part to their very isolation, these songs have remained as pure in form as in the Catholic Isles, whether in time and rhythm or in scale and mode. Thus the sub-intervals or 'quarter-tones' of the modal scale add subtlety to the melodic line of an air, as in the singing of Wales or of distant India.[1] These intervals are rarely heard on concert platforms, being unrecognized by many 'Mod medallists'. They are rarely known to professional musicians trained to the mechanical scale of the piano, and who are asked, as adjudicators, to award praise or criticism by alien standards.

In the Internal Carryout appears to be a good-sized village, carrying out communal industrial work, with income and outcome in over 40 years. The future in Carry is dependent on population increasing and

390

the spouse is likely to lose status. 626 684

The most powerful of all agents for social control are 626
old men of the neighborhood. Through their position in 882
church, a religious sanction for their prestige status, 794
enforce conformity to the norms of behavior which religion
sanctioned either positively or negatively. No one, nor
group, has been successful in questioning the right of
venerable men to maintain their habits and statuses
have been preserved over the generations. The baptism
man's children and his own salvation depends on acceptance
e authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there 182
anomie. The content of the culture has been greatly 178
ied, but the form, the underlying distinctive pattern,
een preserved. We are dealing with a single tradition
ich the norms of behavior and the sanctions for them
remained common and clear. This is all the more striking
se there have been periods in which cultural and social
tegration threatened to overwhelm the Sgiathanach. This
s us back to the role of religion in preserving cultural
nuity.

Loomis and Beegle have employed Durkheim's theory to 171
ze the growth and spread of fundamentalist religious 182
in contemporary United States.[16] They conclude: "It 771
mere coincidence that various types of emotional 786

lace men in one parish (Bracadale).

We know these and the other changes of this period. Significantly, 175
however, there was no simple correlation of revivalism and 178
population change. The Revival began during a time of population 182
growth and emigration; it reached effective proportions during 771
a period when emigration seems to have almost stopped; and it 786
found its culmination during years marked by destitution and
the beginning of depopulation. No purpose will be served by
repeating what I have already said about the nature of the
changes which accompanied the coming of the dynamic, evangelical
message. It is sufficient to emphasize that the ministers
and the Men reinforced the desirable fabric of the culture
and gave the culture a new focus.

The second period of anomie on Skye is less well marked. It appeared at the end of the "Clearances." Again destitution gripped the island. Although the vital, emotional religion had enabled the people to bear the hardships of the "Clearances" without overt resistance, they now openly defied the landlords and the state. More than a series of government commissions and committees came to Skye. A still more intense religion loomed on the horizon to reaffirm the focus of the culture. Once again it was no mere coincidence that the new church should have found ready acceptance by the people in the areas of greatest unrest, the areas which required the presence of police and Royal Marines. It was a fact of no little significance that the new denomination should have been founded on the Isle of Skye, the area of greatest unrest in all the Highlands.

286 By 1911, the number of looms in Lewis had increased to
44] 250-300 (Hunter 1964: 42).
175

[288] By the late 19th century small mills had replaced
•[184] domestic spinning and weaving in the Highlands on the mainland. Weaving continued to be a home industry in the Hebrides where it was encouraged by the support of non-profit-making organizations such as the Highland Home Industries and Arts Association, the Scottish Home Industries Association, and the Crofters Agency--all established at the end of the 19th century--and also encouraged by local merchants who had begun to act as middlemen in marketing the cloth. These merchants owned small general stores throughout the island and either bought the tweed from local weavers or gave them goods from their stores in exchange. Many of the tweed firms in Lewis grew from such small general stores and from the barter system.

288 1. The Harris Tweed Industry in Shawbost: Coinneach
195 Rod, a man who started a tweed business on the west side
159 of Lewis which eventually developed into a large mill
472 with equipment for spinning yarn and finishing tweeds, was said to have been a risk-taker, a man who lost the first L50 he borrowed, but borrowed another L50 and never looked back, a man who throughout his life gave fellow

574 on troubled waters," or bringing the two families
584 together.[2]

585 The most important of the ceremonies surrounding marriage was not the church service (posadh) but the wedding dinner and dance following the church service (banais, from bean meaning "woman" or "wife," and feis meaning "feast").

"House weddings," as they were called, were held
[431] in the home of the bride. For several weeks beforehand, neighbors and relatives brought gifts to the bride's house, where they were displayed in a room set aside for them along with the dresses to be worn by the bride and

---

574 [2]Morag Macleod of the School of Scottish Studies
584 describes a custom still existing on the Isle of
•184 Scalpey off the Isle of Harris, called reiteach mor (big reiteach), in contrast with the reiteach bheag (small reiteach) or simple dinner party which existed until fairly recently on mainland Harris. The reiteach mor is a dramatic event involving a humorous exchange between male speakers for "the groom's side," and male spokesmen for "the bride's side." The bride is hidden, and the groom's men ask for the bride indirectly. They desire a sheep, perhaps, or a length of tweed. The desired object constitutes a theme which is developed in humorous give-and-take between the two sides, as various females are brought out one by one by the bride's people, from the most undesirable old maid to the bridesmaid and finally to the bride. Until the bride finally appears, the groom's spokesmen must find something wrong with each female presented, along the lines of the chosen theme. The sheep's fleece is not curly enough, and so on. The bride sits at the table after she appears, is given a glass of whiskey which she sips and then passes to her fiance, and the performance is over.

197 English, no Gaelic allowed. I can beat you any time...."
191 One person observed, "People here make fun of each other
554 all the time. They're always trying to be superior, to
626 get one over the other person. Speaking English gives
578 you a feeling of superiority."
[529]

If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking English. Oh, I says to myself, lady, you're not for this place. You don't belong to this village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

The sanctions against speaking English when all
197 persons present speak Gaelic indicate the effect of inter-
191 action between a socially marginal group and the dominant
554 group. The effect is to increase the emphasis on uniform
571 behavior within the marginal group. The existence of a
•184 higher social stratum has diminished social differentiation
578 within the village setting. Individuals may move out of that setting and adopt the language and other forms of

197 behavior characteristic of the dominant group; but for
19 those that remain in the village, the language serves a
555 unifying function, although its form is limited in
571 diversity of elements.
•184
578

184 Jokes are most humorous when told in Gaelic; and
197 conversation is punctuated with Gaelic proverbs and old
538 stories. There is a vast oral lore, expressed in Gaelic,
[522] of the village and generations of its members and their
[521] characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone
[184] Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by contrast with the dominant society.

796 given at Christmas; in Lewis, Christmas is identified
431 with Catholicism, and is an insignificant event in
•184 comparison with New Year. To give two examples, a New
527 Year's dance is given, but not a Christmas dance; and
796 the mills continue working on Christmas if it occurs
184 on a week day, but close for at least two days at New Year's. In Shawbost, bannag is defined as a party associated with Hogmanay (New Year's eve).

527 In the recent past, until about ten years ago,
292 the boys dressed in women's clothes or wore masks. They
178 took turns wearing a cow's skin as they went from house to house. In each house, the boy wearing the skin was
[539] hit by the others as he chanted the rann na bannag (rhyme of the bannag):

Here I come again renewing Christmas.
(Or, in another version: This is the New Year's nigh
I'll take the bread without the butter,
And the butter without the bread,
And the cheese by itself.
Then we won't be empty-handed.
One thing I refuse is a mangy potato.
It gives a heavy feeling.
It's not healthy.
If you don't give me my bit of butter and my lump of cheese,
Everything you possess will be gotten by the crows on St. Patrick's Day.

527 As the balaich na bannagan left the house in which
431 they had received gifts, they blessed it. All food and
178 money was given to the woman who prepared the bannag.
[788]

Today children tend to receive money more often than food, and use some of the money to buy sweets at the post

527 office or general store, preferring to divide the rest
178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag
like we used to. They get this kind of rich food all
527 the time." The practices of wearing costumes and speaking
178 the rhyme are disappearing. Children used to have the
bannag until they left school at age 14 or 15; now only
the younger children go. "Children grow up more quickly
today."

527 New Year's is celebrated perhaps most intensively
562 by the men, who after seeing the New Year in by watching
273 a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
• [184] custom of "first-footing" on New Year's eve is found
throughout Scotland; but in the Hebrides such visiting
and heavy drinking may last from New Year's eve until
the following Sunday. During this time, the woman of the
house, who usually refrains from drinking and to some
extent controls the drinking done by the males in her
house, relaxes her attitude, and may even participate.
The comment, "It's only once a year," is often heard.
[589] During this time, the shyest and most retiring bachelor
becomes a Romeo; this is the only time of year he may
be heard to mention the word marriage. For example, one
bachelor in his 60's chooses a "bride" each New Year, and
takes her with him on his all-night visiting.

B. The Bible

771 1. The Free Church: "A man in my great-grandfather's
175 time," said a 65-year-old man, "talked about the great
178 change within his generation, from the days when fanks
were held on Sundays to such strict observance on the
Sabbath that not even a cow could be tethered."

175 The first evangelical minister on Lewis came to the
793 parish of Uig in 1824. The Rev. Alexander Macleod belonged
795 to the Church of Scotland, but joined the Free Church when
it broke away from the Church of Scotland in the "Disruption"
of 1843. When he came in 1824, he found "superstition,"
"spiritual darkness," and "polluted remains of Popery,
since it was the religion in this place...the only notion
they had of Christianity (Beaton 1925: 7-8)." The southern
795 isles of the Outer Hebrides are still Catholic, but in the
829 Protestant isles of the north, holidays associated with
• 184 Catholicism are avoided, and stories are still told of the
798 burning of Protestant martyrs by Catholics. Catholics are
disliked "because they believe that they can buy their
way out of sin," or that the bread and wine of Communion
is really the blood and body of Christ. "A Catholic is
anointed with oil and left to die without food or water.
We are privileged that we are not like them."

175 In the Disruption of 1843, about one-third of the
795 people and 39% of the ministers left the established church

796 miscarriage occurring before marriage also requires
851 standing even when the child to be baptised was conceived
626 by the couple after marriage. A married man who has
849 impregnated a woman who is not his wife must undergo
[837] this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to
ensure that this punishment is carried out. On one occasion,
the minister forgot to lecture a couple, and afterwards
sent them a note that they would not have to stand; but
they insisted, afraid that people would say that they
were getting special treatment.

[203] According to one minister, the manse is a kind of
[521] "research center" to which all gossip is reported. Some
[793] ministers use this information in the pulpit, chiding
[794] people and calling attention to wrong-doings in front of
the congregation. In contrast, a different attitude exists
• [184] in parts of Stornoway, where villagers have approached
[759] doctors in the maternity ward for information regarding
miscarriages and premarital births only to be told that
this information is confidential. The ordeal of standing
[178] in church does not exist in Stornoway. In 1971 a person
in Shawbost was accidentally exempted from this ordeal
and his exemption was seen by some as providing an
opportunity to stop what is considered by many to be an
archaic custom.

796 service, believers remain in the church where they
794 receive tokens given to them by the elder of their st
These are pieces of metal on which is printed the nam
of the church and village, and a verse from Corinthia
"Do this in remembrance of me." Communicants plannin
to take Communion in other villages take with them to
which they have received from their own minister, or
the local minister for one.

The Communion Services begin on Sunday morning
about 11:30. Persons not taking Communion sit in the
back of the church or in the balcony. Communicants
their tokens to the elders who stand in the aisles,
are allowed to sit in seats in the front section of
church, which are marked off from the other seats by
tableclothes. The service lasts for three to four h
Many communicants also spend a half hour to an hour
informal prayer before the ministers arrive to begin
[178] service. In the past, a prayer meeting was also hel
• [184] 8:00 in the morning, a custom still practiced in som
places, such as the island of Scalpay.

Sunday is the only day of Communion on which st
ized selections of Biblical verses are spoken and p
are sung. On other days the ministers are allowed
variation in the contents of their services. On Su
Psalm 22 is followed by the reading of Isaiah 53, a

his occupation matters very little. Unlike the Welsh,[35] the Sgiathanach does not particularly look up to the man who prospers. Indeed, the people are more than likely to attribute his success to dishonesty or find fault with his character. I shall have more to say about this when we consider the topic of gossip.

3 At the same time, occupation is a factor in the formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use theremote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population. There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

[35] Rees, op. cit., p. 127.

6: Ducey E-4,5 (1953-1954) 1956 ES10 Highland Scots ES10 Skye

685 then, is theft handled?

685 625 The police who are charged with the responsibility of protecting and restoring the property of the local citizens are faced with many difficulties. To begin with, the local people will not always complain to them. Even if the help of the police is sought, the person seeking it will not tell who might have committeed the crime. Even if he knows who is guilty, he will not tell. The police must build their case with care. If the facts are clear and straightforward, the 685 692 defender invariably confesses. One reason for this is the fact that a confession means a local trial by a justice of the peace rather than one before a sheriff. The defendant can hope for sympathy, and he rests secure in his knowledge that his sentence will be lighter because of statutory 685 625 limitations. If witnesses are required, the police must almost put words in their mouths, and they are never free from the possibility that a witness may change his story when he is put on oath. One policeman said, "They hold their church services up there," pointing to the court room, which was being used by one sect while their church was being repaired, "on the Sabbath from 10:30 until 2:00 and they're back again at 6:30, but they tell the damnedest lies in the same room."

685 183 We are dealing with a dichotomy like that we noted in the case of poaching. As far as I was able to determine, those cases which come to court involve activities which do not affect the norms of the group. There was for example, a girl in Portree who stole the equivalent of some five or six thousand dollars in cash and material over a period of two

6: Ducey E-4,5 (1953-1954) 1956 ES10 Highland Scots ES10 Skye

685 183 years from her employer, an outside concern. She spent t money on clothes and holidays in London, and gave the mat to her friends. She was brought to trial and given a sen of six months. Upon her return, she was welcomed with op arms. The sympathy of the people was with her rather tha the organization with its main office in far off Edinburg As they said, "Poor Jane, she was a good girl." "Poor Ja died not long after being released.

When traditional norms are involved the situation i handled quite differently. There was another young girl the village who was guilty of a similar petty crime, on a smaller scale. During the last war, one of the local min organized a group of girls from the school hostel to make door to door collection for a charity. One of the girls, "foster child," had never been given any spending money. temptation was too great. She spent her collection. To replace the money, she stole from a fellow hosteler. Whe was found out, she was expelled from the hostel. The sch year had two remaining weeks, at the end of which she was graduate. Not one Sgiathanach, including her "people" an "friends" of her relatives, would have anything to do wit As far as they were concerned she had exiled herself. She an outcast.

685 627 Now let us turn to the crofting neighborhood to see a crime is handled there. In most cases the neighborhood the fundamental locus of social control,[38] is able to dea

[38] Cf. Murdock, op. cit., p. 84.

685 deviants without recourse to the court. Indeed in Kilmuir
627 they do so well that I never heard of any theft. Still, there has been some theft in Glendale. Shortly before each cattle sale the shepherds on the club farm found one or two cattle had disappeared. At first they thought the cattle might have gone over the cliff, but coincidence soon indicated they had a thief in their midst. One of the crofters, a retired Glasgow policeman, took a hand in discovering the guilty party. At length he found out who it was. At the annual meeting several weeks later, he stood up and told the shareholders exactly what he had seen. Here were the facts, in detail. He did not, however, name the guilty person. After he had finished, the crofters calmly asked him to retell several parts of his story, and then there was a period of silence. Finally, the man publicly confessed and expressed repentance. He was not cast out or handed over to the police -- I doubt if the police know of this even now. His humiliation was sufficient punishment.

682 Among such crimes and the forms of social control which
[74] they prompt, however, murder is almost unknown, deterred by the tales which tell of being plagued by the man's ghost to the grave, and suicide is extremely rare, with only three cases in many, many years. Much more important, however, is the influence of social control over public behavior.

683 During my stay on Skye, I was struck by the lack of overt
183 aggression. Aggression was an outstanding characteristic of the
157 culture during the days of the clan, as the Crown ruefully

683 discovered on many occasions. I once entertained the thought
183 that its absence was indicative of a decadent culture. Then
157 I discovered that it was a traditional norm of behavior. Only once during the modern period has there been any aggressive behavior, during the closing years of the "Clearances." Some who remember these "old warriors" who were not afraid to stand up for their rights wonder why their descendents have changed.
[793] Today only the ministers are aggressive in their dealing with their congregations, and they reserve their aggressive pose for their Sunday sermons. Naturally, the people quarrel among themselves and a couple of drunken men may come to blows with each other or the policeman who interferes. In any group situation or in any dealings with outsiders, however, dislike or resentment takes the form of placid resistance. The Islander
683 remains courteous and suffers in silence. This is "affect
183 suppression," resultant from Protestantizing the crofters.[39]
157
626 Even the talkative individual, unless he stands among the gentry or has achieved prestige status through his profession, is considered an eccentric. He must stand the snickers of the group and bear the title of a "worthy," a man who does not act his age.

152 Real anger, manifested by a loud or quavering voice, or
626 table pounding, clenching one's fist or other recognizable signs,
156 is not characteristic of the Sgiathanach in public. The man who forgets himself is always taken in hand by the minister, an old man, or a teacher. He may feel righteous indignation, but if he

---

[39] I am indebted to Conrad Arensberg for calling my attention to this fact.

rol of the "elect" crofters. They, are the "elect," 796
their status is independent of the control of the vener- 565
old men. 626 554

Summary

Whereas the culture of the Sgiathanach was oriented 771
d the clan system in the remote past and was intelli- [178]
only by an awareness of the all-pervasive influence
e clan, today congregational religion provides the
for the culture. If we are to understand the Sgiathanach, [121]
st fathom his religion, that is, the interpretation
he has given to Calvinism. Moreover, this highly 182
rated and systematized aspect of his culture has pro- 771
the means for preserving cultural continuity. Economics
ocial organization aid us in recognizing how cultural
nuity has been maintained. Religion puts at our finger
the how and the why.

The basic status values have held good because religion 771
anctioned them. The old men of the neighborhood have 554
successful in sustaining their statuses and habits 183 626
gh their position in the esoteric religious hierarchy.
lding the father responsible for the spiritual welfare [593]
s family, and judging a man's spiritual enlightenment
s renunciation of mundane pleasures as well as his
edge of religious tenets, the elders exercise judicial
uthoritarian functions. At the same time, the status [593]
e father within the family is strengthened. After a

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 183 626
on those who seek salvation. The strength of age controls [178]
is indicated by the continued ability of the elders to resist
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and [782]
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to [52]
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to [369]
tempt the people. Kilmuir has no more than a Crofters' [575]
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

178 of the normal capitalist farmer in the West; but in
241 crofting areas, these practices reveal a strain between
476 communal and individual tendencies.

a. Fencing:

233 Although run-rig was replaced by fixed, compact
[178] holdings, the method of animal husbandry was not affected
[417] until the land began to be fenced. A single dry-stone
[333] dike enclosed the township, keeping livestock on the
moor and away from the arable land. In different parts
[184] of the Hebrides, various types of herdsmen were hired
to protect both the livestock and the growing crops
(cf. Owen 1958-59 for a discussion of cattle, calf and
sheep herdsmen in North Uist).

175 The township Constable had a great deal of power,
625 which included the right to evict people from their
crofts, to enforce rules of good husbandry. The last
Constable of Shawbost, who died at the turn of the century,
has been credited with a number of ignoble actions, such
as forcing an old woman with a sore leg to take her cow
to the moor along with all the others. Old widows who
had no one going to the fishing and hence no means of
paying their rent might be evicted in favor of other
persuasive, land-hungry members of the village.

178 The number of cattle diminished as milk became
231 available by other means; and when the township reseeding
234 schemes came into existence, the need to go to the
233 sheilings for an "early bite" was removed. The sheilings
178 that remain in use today are huts of tin, wood and
342 concrete within easy walking distance from the highway,
used on weekends and during summer holidays. Most of
these modern sheilings are close to Stornoway, and serve
as summer retreats for the relatively harried urban
[184] dwellers such as publicans. On the west side, the
sheilings are no longer used, but remain as a theme of
songs and in nostalgic memories.

C. The Loom

175 Clo Mor, the big cloth, was woven in the Highlands
286 and Islands for hundreds of years. Martin Martin,
who travelled through the Outer Hebrides in the late 17th
century, describes the export of "plaiding," and the
practice of waulking or shrinking the woven length of
cloth (Martin 1716). Weaving was done on wooden looms,
and produced only for local markets until the middle of
the 19th century.

[731] By the middle of the 19th century, the failure of
[735] the kelp industry, decline of fishing, and destruction

lens a family, newcomers to Skye, prevailed on the local 191
chool teacher to hold a Sabbath school for the children. 771
he local missionary objected. If they were going to have 621
abbath school, it should be in Gaelic. His prestige and
ontrol over the population secured his position. The
hildren of the people who originated and organized the
rogram were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191
se of Gaelic as the language of religion is the difficulty 793
f securing a minister. Traditionally, it was an ideal to [183]
end a son to study for the ministry. This ideal remains, [874]
ut in the last few years only one young man from Skye
as shown a desire to become a minister. Indeed, the
ajority of ministers on Skye are not Skyemen. I believe
he only minister who serves his own neighborhood, the
eighborhood in which he was born and raised, is the Free
resbyterian minister in Glendale. It is becoming more
nd more difficult to fill charges as they go vacant.
ach year several Highland charges are changed from "Gaelic
ssential" to "Gaelic preferred." If we go beyond the role 121
f religion as it orders human relationships, through its 771
ore formal aspects, and consider the influence of religion 626
n the secular behavior of the Sgiathanach, we can come 178
loser to an understanding of why the youth are slowly
urning away. At the same time we shall be able to round
ut our picture of the expression given to the Presbyterian
thic on Skye.

asceticism is fundamental to the peoples' lives. A brief 785
discussion of the Sabbath will serve to conclude my discussion [796]
of religion and to indicate some additional difficulties which [128]
the Sgiathanach faces in his attempt to preserve his culture.

Sunday does not exist on Skye. There is the "Continental 796
Sunday" and the Sabbath. On any other day of the week, the [576]
greeting is, "It's a fine day," or, more often, "It's a wet
day." The Sabbath, however, is "no day to be speaking of [576]
days." Keeping the Sabbath is almost a fetish among the
people. It is a readily observable test of an individual's
religious capacity. All unnecessary work, all unnecessary
words, and all unnecessary thought is taboo. Only the
barest minimum of worldly activities are permissible. This
does not mean a day spent in idleness; the time should be
spent in public worship at the kirk, private spiritual con-
templation and family worship. The Skyeman's estimation of [183]
a newcomer may depend on his keeping the Sabbath. One man
was very surprised to learn how long a memory the people have
when a man deviates from the expected. A visitor asked a
crofter what kind of a man a certain newcomer to Kilmuir
was, to which the crofter replied, "He's all right, except
six years ago he played the pipes on the Sabbath." Most
newcomers, including the few Catholics, respect the Sabbath.

No crofter would ever think of doing any work on this [461]
day beyond feeding his cattle as an act of mercy. After [231]
weeks of rain, the crop of oats or hay may be ready for 796
harvesting on the Sabbath, but he will not touch it. A man 241

174 to notice the absorption or suppression of rights held in
62 common in 'the North and West', together with the
63 abolition of the duties of fellow-workers to one another.
178 Too frequently they have not troubled to enquire into the
184 former existence of common rights and fellowship duties, the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

178 Indeed, the profound character of that revolution makes
184 it hard to recognise the common origin of features which
428 may differ greatly today. To choose four examples, the
166 long succession from father to son, found from end to end of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern
181 England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of
191 the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago.
171 And in the remoter religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

• 184 Comparisons at the present day are most illuminating.
191 In the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively
121 recent divergence in religion is marked. Such Island evidence, present and past, forces one to re-examine conclusions upon life in the Lowlands accepted until recently, and to seek for the truth upon earlier forms of life in common and for their meaning today throughout 'the North and West'.

175 Ancient elements of unity, and later ways in which
172 these were broken, adapted or remade, region by region,
427 are being unravelled. 'The Old Estate Plans, made at the outset of the agricultural revolution, show these immedi-
62 ately before the re-planning of fields and farms (*circa*
176 1750–90). These plans also reveal the existence of still
184 earlier types, not otherwise recognisable even on the spot. With their rentals (when available) they reveal the ways in which old joint farms were placed under a single tenant, as in Lothian, or were split up among several tenants, as in Ayrshire.[1] From such geographical data, both the economic and the deeper social aspects of rural life emerge with new clarity. Such data may be linked to Planning Surveys of land and rural life for tomorrow.

62 Now, although so fundamentally equilitarian within
427 themselves, these hamlet communities of a Gael were subjected to the overlordship of a chief or laird, either directly or through an intermediate gentleman-tenant, a
174 tacksman'. History, with archaeology read in history's
172 [1] For Lothian, see Arthur Geddes (1938 and 1951); for Ayrshire, see
113 J. H. G. Lebon, *Scot. Geog. Mag.*, Vols. 62, 1945 (pp. 7-13); 63, 1946 (pp. 100-110). Further references in Bibliography.

62 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral communities by well-armed raiders of many races, including
194 the Celtic-speaking swordsmen of the Iron Age. The last
172 and most notable of these conquering raiders were the Norsemen. Their influence was profound, whether, sailing direct from the Scandinavian forest settlements and fjords, they raided and settled as heathen Viking crews, or, at a later stage, they invaded England from Normandy—that fertile province which they had made theirs in fact and name—under the panoply of civilisation and with Papal benediction. A generation after the Conquest they commenced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of stoutly equalitarian thinking bound up with fervid admiration for an aristocracy, is nowhere more
614 marked than among the Gael. They sought to reconcile these conflicting loyalties by claiming common ancestry for chief and people, as the children (*clann*) of a hero of history or myth. The years 1945–47, which marked a centenary of the last of the desperate Jacobite Risings, stood at the close of the latest of many wars in which fame has been won for the symbol of clanship—the tartan, long proscribed (by the Act of 1747) 'to every man and boy in the Highlands'. At such a time, the Gaels' loyalty to the death cannot be forgotten although old kings, old
121 chiefs have gone. But its paradox must not only be re-
182 membered but understood, from its roots in communal life and environment through history. Not until this is
• 184 done can important phases of our own time be understood, such as the failure of Lord Leverhulme's seven years' endeavour in Lewis; nor can the present opportunity of Highland renewal be grasped by the help of

121 And region by region, a fairer balance must be struck
185 between country and town. In Lewis, the part of Storno-way town, with its population nearing 5000 (in 1951), is
162 important. Its port, its fisheries, its spinning mills for the crofters' hand-loom weaving, its merchants' shops, and its
• 184 local, administrative and professional services, are essential to the Island. Its economic and social evolution, too, are
162 interesting. Stornoway's plans for the future are active and ambitious, and these, it is realised, depend upon the prosperity of the 19,000 crofting people of Lewis proper.

121 But the subject of this book is primarily rural. It is to
128 see with fresh eyes what, from our Harris mountain-top, we viewed as a unit at the core of 'the North and West'. After the island has been described in terms of its physical and human geography (Part One), the endeavour (in Part Two) will be to give a completer account than may yet have been given of the nature of Gaelic community, with
621 its temporal duties and its spiritual sanctions. The three concentric circles of community are described: the family, the farm team and boat's crew, and the larger township groups. The relations of this threefold grouping of livelihood and society to Chiefs and Church are studied, and followed out in later evolution, until today. Elsewhere I have endeavoured to show how the Island can worthily maintain itself, and thereby find a new freedom. The final chapter returns to the broader aspects of society and region touched on here.

If this intensive study of a single isle and community can throw fresh light upon certain essential characters of the less-understood region of the British Isles—that lying outside the south-eastern 'Plain'—it may help to con-
121 tribute to more than economic reorientation. The significance of the Island life—not so much for the past, which

121 cannot be changed, as for the future which can—lies in
the intensity of its communal traditions, extinguished else-
178 where. Much has gone—many of the fishing crews are disbanded and team-work has weakened—but much lives
• 184 on, and much has been learned. The Gaels have still to make their full offering to English-speaking civilisation. To do so, they must find their own fulfilment within the framework of the Highlands of Scotland.[1]

2. *Scottish Crofts, Farms and Labour-teams: the Rural Unit Today*

184 When, in thinking of Scots countrymen, we differentiate
105 between the men of the Highlands and Isles, the Lowlands and the Borders, what stamp of occupation, society and economic class bestows best characters the three regional types? The differences we note between them are due not only to their place of birth and region, but to their occupational
433 discipline and social ways. Imagine, for example, a Gael, a Lowlander and a Borderer, all three of whom follow the same calling—say, a trio of farmers, of shepherds or farm servants, or of independent, full-time small-holders. When brought together each trio would find they shared similar interests and aims in their work, and all that follows from it. In fact, they might have more in common than three Gaelic-speaking men who differed from one another in vocation, although, as Gaels, the latter group would find a bond in culture and kinship. But a fourth type of Scot, the crofter of the North-west townships with whom this book is concerned, would stand out, distinctively, from any other, whether his home were Zetland or the Hebrides. Thus not only their home or region differentiates Scots countrymen, but their calling or class; and their families
113 [1] A. Geddes and F. D. N. Spaven, *The Highlands and Isles* (1949).

• 184 share their characteristics. So to gain a sense of pro-
165 portion from the start, we must map the location of Scots
countrymen, their numerical importance, and their types
128 of grouping. Let us begin with the first of these three aspects, their regional location (Fig. 2).

102 The base map on which the data are plotted shows the
boundaries dividing the hill massifs of the Highlands and
102 Southern Uplands from true 'lowland'. This hill country
13 is mostly covered by rough pasture (left blank on the map)
311 within which lie strips of 'Isolated Arable' with other improved land in the valleys and along the outlying coastlands (shown in black). This hill country includes the Scottish Isles, with the exception of Orkney, which falls
241 rather into the category of 'lowland'. It is largely devoted
429 to sheep farming and crofting, or left to grouse and deer. The lowland area from the Orkneys to the Tweed and Solway is devoted to mixed and dairy farming with lowland types of small-holding, except, of course, for 'Industrial Regions', which include most of the urban area of Scotland.

226 Within the 'three-mile' territorial limit from the coast
lie the inshore waters, in which local fishing was once
important, and might again become so; these are left
white on the map (Fig. 2). By contrast to their narrow extent on the East Coast, their width is notable in the Northern Isles and on the West Coast.

102 The problem set in making this map is to show two
13 different worlds, as it were: the Highland and the Lowland.
184 The two are always envisaged together, and much confusion
of thought and policy results. To master the map, the
128 reader may scrutinise first one part, the Highlands (cover-
182 ing the other with one hand), then the other part, the Lowlands (in the same way): thus each will appear clearly in turn. Both can then be envisaged together.

FIG. 2.—Map to show (i) the use of land and sea in and around Scotland, with special reference to the Crofting Townships Zone of the NW. Highlands and Isles, and (ii) the average size in each country of labour-teams of farms and small-holdings in the Lowlands

182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are
concerned. Economically the crofters' 'living space' is
311 the narrow interrupted belt of improved land (shown black)
[241] which is generally fronted by the sea and its inshore waters,
[427] and is backed by the Crofters' Grazings (enclosed by line
[361] C on the map). Some 700 crofting townships or com-
munities are found in Zetland, the North-west mainland
and the Western Isles, each with its Common Grazing;
the line C also encloses a small area devoted to other
grazings. Deer forests predominate on the eastern, main-
land, side of the line. On the remainder of the hill country
are to be found the hill-sheep farms, with other small farms
and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
62 team on land formed the communal units contained within

Key to use of Land and Sea
(Highland, Island and Urban Areas)

1. The dotted line C . . . . . C encloses the Crofters' Grazings, mainly 'Common'.
2. Black areas: strips of 'Isolated Arable' within the rough pastures of the Highlands and Southern Uplands (left blank).
3. Horizontal ruling: open sea, outside the 'three-mile' belt of inshore fishing' (left blank).
4. Vertical ruling: urban and industrial regions.

102 *Key to Size of Labour-Teams of Farms and Small-Holdings*
131 *(in the Lowlands)*
133
311 The symbols show the average number of employees per team in
each county.
[241] (1 symbol = 100 teams)
[362] (a) Per Mixed and Dairy Farm
= 2·2 to 3·6 (3·1)
◆ 4·1 to 5·6 (4·9)
◆ 6·4 to 8·2 (7·1)
(b) Per Full-time Small Holding
◆ 0·7 to 1·0 (0·85)
(The numbers in brackets are the averages for Scotland.)

174 the township; and to each were allotted the rights of the
226 common grazing and the fishing grounds. For more than
241 a century the croft has been held individually, though in
423 the townships the common grazing is still held in common.
427 Beyond these 'homely' limits lie wider horizons, in the
62 past those of seafaring and of droving or the chase, and
632 today of fishing and gilleing at home, or of ocean journeys,
[178] urban occupations or colonisation.

In the Lowland parts, each symbol represents 100
182 holdings. For (A), a[1] mixed and dairy farming', the par-
184 ticular type of symbol shows the average number of workers
241 employed on a farm-holding in each county. On each
farm the employed workers form what may be called the
'Labour-Team'. A team may be 'small', 'medium' or
'large'. The Scottish averages of these three types (indi-
cated in the inset key to the map) are roughly three, five
and seven workers per team. Four 'casual' workers are
counted as equivalent to one 'permanent' worker, but
farmers' wives are excluded. Under (B), for the same
Lowland counties and areas, full-time small-holdings are
[543] shown separately. The Scottish average of less than one
full-time worker employed, most often a son or daughter
of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of
[162] farms and small-holdings in Scotland, true agricultural
land-holders number 68,000, of which fully one-third hold
part-time holdings (like the Island crofters), one-third
'full-time farms', and rather fewer (one-fifth) hold 'full-
time small-holdings'. The remainder accounts for other
types of less importance. The farms predominate in terms
[311] of improved land, full-time employment, and of course of
[364] production. As to area, farms cover 80 per cent of agri-
[162] cultural land. The farmers employ nearly 90,000 workers,

i [refer to map p. 16 .. analyst][28]

24 with its tied cottages and frequently a 'bothy' for the un-
32 married. Next to this comes the full-time small-holding,
[184] important in the North-east and the Southern Highlands
of Scotland. Great as are the differences between these
types of unit today, they go back, to a considerable extent,
[174] to common origins. The sites of the farms are ancient.
And their people, though since divided into masters and men,
are the successors to those who were once the 'kindly co-
operators' of older 'farm groups', of Lowland *ferm-toun* and
[184] Gaelic *baile* (pronounced like 'ballie'). The island counter-
part of these, and their life, will be described in Part Two.
Hence, before we turn to further analysis of the Highlands
and Isles, a word more should be said of Lowland types.

241 An important social index in the Lowlands of Scotland
361 is the number composing the farm labour-team, averaged
464 for each county. Villages and even hamlets are few,
largely because farmers and farm servants live on the farms.
[171] Compared to those of most of England, Scots labour-
[184] teams are small. Yet, as the map indicates, there is a
wide range from the 'large' teams of South-east Scotland,
through the 'medium' teams of adjacent areas, to the
'small' teams of the West and North-east. Not only do
the contacts of employer with employees partly depend
upon the number in the team, but so do the farm servants'
relations to one another. On the whole, the larger the
team, the more formal its organisation; and the smaller
[554] the team, the greater a worker's own responsibility. The
[178] 'family farmer' of the West and North-east is often an
ex-farm servant. From Burna's time, his character and
enterprise have been recognised in Scotland, and in the
last forty years have become well known in South-east
England. But the isolation of these little farms brought
its problems and its hardships.

i [see map p. 16 .. analyst][29]

174 The historical aspect of these regional facts is extremely
184 significant to the evolution of Scots social life, and to
241 developments of Presbyterian worship led by Elders in
78 farm-town and Kirk; although suggested by comparisons
55 throughout this book, they have still to be seriously followed
128 out. As to the future, regrouping of our somewhat
scattered agricultural population has been strongly urged
121 in planning for post-war housing and community life.
185 But sound planning must be based on survey, long over-
due; though elementary, this key map appears to be the
first of its kind for Scotland (Fig. 2). It is from these units
of farm-team and township that Scots rural society must
be rebuilt, region by region.

184 One further contrast between the farming and the
crofting communities demands attention: it lies in the
175 types of migration—one is tempted to say, of semi-
198 nomadism. Crofters, though they move to and from their
241 croft and township—to the city, the sea, or the New World
361 —return home to their native township when they can,
166 and to no other. Many farm servants, on the other hand,
though they usually spend their lives in the county or
155 region of their birth, have been on the move from farm
to farm, year after year. What is true of Lowland Scotland
seems rather true of North-east England, but not of 'the
[164] English Plain'. Unmarried Scots farm servants were hired
for the half-year, and frequently moved after each new
hiring, the married once a year. Families were annually
[122] uprooted—if indeed they could be said to strike root at all!
[178] The war-time 'Standstill' Order for Scotland began to
check this migratory life; but its effects remain. Hence
many men have few ties, their wives still fewer. The
children could not grow up with their schoolmates: they
could look back to no "Auld Lang Syne", of which the

i [see p. 16 .. analyst]

184 verses would ring false to them! Before 1939, two-fifths
241 of the rural pupils of most non-crofting counties came or
361 went in the school year—most of them the children of
farm servants. Their schooling suffered, and their
166 teachers might be reduced to despair; indeed it is to
educationists, rather than to agriculturists, that we owe a
[182] survey of these facts. When they leave home to be 'hired',
[811] the young folk learn to fend for themselves but may suffer
in the learning: stability of character and endurance in
[156] attachment are hard to form.

It would be difficult to overstress the tragedy of the
long-continued break-up of rural communities in the Low-
lands. From the later years of the English invasions, as
when Major wrote with his knowledge of Scotland in 1500,
[178] this break-up continued through the early, largely unre-
241 corded phases of the agricultural revolution, down to the
361 later phases from 1750 or 1800 to the present day. No
one who has worked with fellow-servants on Scots farms
166 will under-estimate their sterling qualities. But the break-
155 up, the tragedy, happened. It was boldly sketched by the
Rt. Hon. Thomas Johnston (to 1929) and verified by
[114] Miss I. F. Grant (1924 onward). Beginning from intimate
study of well recorded and surviving ways in the Highlands
and the Hebrides, Miss Grant realised the significance of
earlier Lowland life in the farm-hamlet or ferm-toun, as
Lowlanders themselves could hardly have done. Compre-
hension of this break-up of community brings out the
value of the enduring elements of communal life still
recorded, remembered and surviving in the 'Outermost'
Hebrides, at the core of 'the North and West'.[1]

[1] Ideas outlined in this section are developed in A. Geddes (1938-54). Detailed references will be found in the Bibliography.

3. *The Significance of Lewis-and-Harris*

181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
from the Lowlands—the other mainly of farming, living
101 nearer to the Lowlands and in touch with them. Through-
[197] out the North-west, Gaelic is still the common speech,
even of the children. The old community feeling is
[178] strong; it is that, indeed, which keeps the people attached
to the villages.

From the plains and cities of the South it is a far cry
101 to *Ultima Thule*, as Lewis, like Zetland, is sometimes called
131 even by its own people. Lying some twenty-five to thirty
miles across the Minch from the mainland, its nearest links
[184] with the South lie even farther away. From Stornoway
it is some seventy-five miles to Kyle of Lochalsh, the rail-
head for Inverness and North-east Scotland, and 100 miles
to Mallaig, the railhead for Fort William and Glasgow.
To reach Stornoway over the moors from the west coast
[504] townships is itself a journey. Stornoway is the Island's
[171] only port, though passengers are put off at Tarbert, at
Stockinish and at Rodel in Harris. Isolation has always
been a dominant factor in the Island's life. From pre-
[178] history through the Middle Ages to modern times, that
factor played its changing part.

178 In Lewis, conditions had changed less than elsewhere
during the last century; for example, the *New Statistical*
Account of South-west Argyll in 1830-35 reads like a
description of conditions in Lewis as they were until after
1914! Hence, as already said, the contrasts are very great
indeed in the aspect of the country, its fields and houses,
and in the number, character and ways of the people. It

233 according to the relief, as explained. Thus the Barvas
182 parish with its smooth topography permits of ploughing,
231 and there is, or rather was, one horse between two crofts,
or one pair between four or five. In rocky Uig or in Lochs,
however, there is only one pony between ten or twelve crofts.
487 Lending or hiring of horses has still to be practised, but
420 within manageable limits, though the increase in 'cars' had
lessened the number of horses, even before the war-time in-
troduction of tractors. Hiring is often done for cash, though
this conflicts with older communal custom. Yet lending
had its difficulties: "The borrowed horse", says the lender
bitterly, in the Gaelic proverb, "is never tired!"

233 The number of sheep per holding is noticeably highest
184 in Harris, with over 300 sheep per holding. The sheep
pasture of North Harris was well spoken of by Dean
Monro, and the link with the home industry of Harris, its
weaving, is evident.

241 Comparisons with the western mainland show, in
311 holdings of similar or rather large size, the diminished
amount of cereals now grown there even by crofters. The
increased proportion of grass reflects both the greater
dependence on bought provisions, and also the fact that
the West is not a land to ripen crops, but that it can grow
grass for stock.

4. *The Moors as Pasture: Game and Sport*

311 In order to estimate the relative value of the rough
531 grazings of Lewis and Harris, it will be well to compare
these with the moors lying across the Minch and east of
Cape Wrath. There also may be found crofting communi-
ties whose economics are similar to those of Lewis, so
that the stock carried on their pastures will furnish some

121 From prehistory to the present day, these geographic
178 zones have played their parts as factors in evolution,
174 although the border-lines have changed at different historic
182 crises, and have been modified by economic and social
184 phase. At times the Hebrides have been more closely linked to Ulster or to Norway than to Central Scotland. In viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the revealing character of Island life lies not only in static survivals, in what Sir Arthur Mitchell found in the Isles and vividly described as " the Past in the Present ". Island life is characterised still more by the dynamic strength of its continuity—notably of early or primitive Christianity—and also by the late occurrence of changes when, at last, they came.

18 The social consequences of these regional differences
62 in evolution are profound. In the ' Plain ', to the south-
174 east of the Severn-Tees line, large village communities
[423] with ' common fields ' prevailed, forming the later manor villages. To the north and west, the more varied, hillier
[192] lands encouraged the continuance of hamlets. These hamlets housed close-knit groups of families, often of no more than four or five to a dozen relations or ' friends '—
—in Scots even today (much as in Gaelic) the word ' friend ' frequently implies kinship. Each small group
[462] formed a team. Together the men ploughed their mingled
[476] rigs (or ridges) and herded their stock in common, and on the coast they rowed their boat as its crew. The
[241] women, too, did much together, as when they spun their
[286] yarn, and fulled or ' waulked ' the cloth that one of them had woven, helping by turn in childbirth and child-care.
[423] Usually several of these teams were linked in a larger

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

18 pastoral group, the germ (in the Hebrides) of the present
621 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
[423] These 'sociable hamlets', or 'little commonwealths', as they were called by understanding writers on the Highlands, lived on in the Hebrides almost until a century ago. Features of their form and life have long been known, but their life has not yet been envisaged in its full dynamic significance.

127 The homesteads, informally grouped in these small
36 hamlets, have been mistakenly described as solitary or
174 'dispersed' by scholars accustomed to larger and more compact grouping. The mistake was made by geographers
[423] of the nineteenth century, such as Meitzen with reference to the hamlets of Brittany. Similarly, because of the
[476] small number composing a typical joint team, the vital fact of team-work and joint holding has frequently been overlooked; yet a fundamental mistake is made when such close-knit team-work and joint tenure are described as
174 'individualistic'. Moreover, these teams were linked to-
62 gether in larger, more loosely bound pastoral communities
63 of township and district. In Scotland and elsewhere, it is true, such hamlets came historically to be split up in various
[241] ways, into smaller farms and scattered cottages. The larger link of common life was also superseded by the
[178] proprietor's estate. Indeed, the twofold revolution involved caused a fundamental regional cleavage within 'the North and West'.

[182] Partly as a result of their small size, the tenure of farm-
[184] hamlets was frequently informal. In northern England, the hamlets and their lands were not entered in Domesday Book; still less are early entries complete in Scotland.
[178] For this and other reasons, jurist and historian may fail

ing, 73 per cent have the language, which has been introduced by immigrant country folk and their descendants.

HEALTH AND HOUSING

Despite the harsh conditions of centuries, the physical health of the island was good in early times. Epidemics were rare due to isolation, though on occasion smallpox carried away many children. The commonest diseases were fevers, jaundice, dysentery and diarrhoea. Bloodletting (as in many another more advanced community) was the usual cure for fevers and dysentery. For coughs the people took a 'brochan' or soup of roots of nettles and reeds boiled in water with yeast; the meal of a black bean, mixed with boiled milk, was a useful cure for dysentery. Reports describe the folk as being well-proportioned, free from bodily imperfections and of good stature; healthful and strong-bodied.

But privations, particularly the frequent recurrences of near-famine, coupled with the primitive housing conditions, began to take their toll. The increasing sickness rate aroused the concern of authority. The most primitive dwellings had but one room, with the cattle at one end and the family at the other. In 1830 Seaforth sought at least to put an end to this, ordering that a partition must be erected between beast and man, 'and that more light should be admitted into the dark recesses of their habitation'. This type of one-room dwelling was not confined to the island, being found with many variants throughout the Highlands and Islands area. The old Lewis house was, as a rule, an oblong structure, varying in length according to the means and requirements of the occupier. It had but one door, and frequently had no windows. Chimneys did not find favour, mainly because any opening for the escape of smoke from the centrally-sited hearth tended to reduce the quality of soot produced; and soot was regarded as a valuable manurial product. If there was a hole in the roof to admit some light, a small pane of glass was fixed into it: this soon had a coating of soot, and the sole source of light was the doorway—when the door was open. The family and the cattle used the same entrance; and the cows' dung was removed once a year in the springtime.

secondary school, the 'Nicolson', has had since its inception a formidable academic record Back in 1907 work from the school was included in the educational section of an International Exhibition held in Christchurch, New Zealand: this was appropriate because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the position of an agent for those things deemed necessary for life, and is a middle-ground between the rural repression of the Free Church and the city abandon of the mainland, with resulting dilemma. The public houses, the cinema, youth clubs, dances and juke boxes are all in direct opposition to the preaching of the Free Church. The result is tension between the town's desire to act as a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social standards are extremely high. Home is the centre of life, as it always was; the sense of community and communal responsibility is there. Divorce is practically unheard of, and the incidence of crime, as such, is extremely low.

The Harris Tweed industry is lauded as an industry which is compatible with crofting. Because weavers are self-employed, they can set their own schedule of work and thus continue to participate in croft work and fulfill various township obligations. The effects of this industry on the township as a social boundary system were investigated. The income available from weaving is unpredictable, which encourages the retention of crofting practices and other patterns of behavior, such as "occupational pluralism," that were found to be adaptive in the past. Such strategies also strengthen township boundaries; for example, they encourage mutual aid and communal township practices. But weaving also offers a high level of income; and some weavers, preferring to spend most of their time weaving, have neglected crofting, or have invested in tractors or other motorized transport which enables them to harvest crops, cut peat and perform other activities independent of other township members.

The fundamentalist Free Church constitutes an important boundary-maintaining mechanism, serving to exclude various external influences of the larger society from the township. However, a smaller network of persons engaged in the religious sphere of social activity, a subsystem within the township system, also exists which has the appearance of a firmly bounded system. These are members of the clique

105 of the converted, who occasionally neglect township and
794 neighborly duties in favor of religious activities. The
621 increase in private transportation during the past 25 years
632 has facilitated the maintenance of closer ties within the
184 clique. The existence of such a strongly bounded subsystem
[494] is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserve the township as a bounded system.

105 People come and go from the township, but this appears
632 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the township
166 can be performed outside it, and conformist behavior
184 reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

[528] Township members who have settled away from the island come back periodically for recreation and a sense of
[829] belonging. They increase the value of the township and its way of life in the eyes of the inhabitants, and provide them with subject matter for conversation until the next holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
632 boundedness that, over the past 100 years and especially
621 since the second world war, has decreased in strength but
184 is nevertheless strong today.
[178]

is nevertheless strong today. The relatively strong boundedness derives from a number of factors. Important among these are economic adaptations to modern conditions, which consist in part of the retention in modified form of traditional economic activities in response to various constraints and incentives presented by larger British society. Also important are institutionalized bonds of affect, particularly of kinship and community, and ties of religious affiliation and identification. These ties continue to be functionally important in part because of the geographical and social marginality of the crofting township. This combination of factors has resulted in the persistence of a relatively strongly bounded system which retains distinctive features in an extensively urbanized and industrialized nation.

B. Theoretical Considerations

In the United States, the concept of "peasant" has provided the main conceptual tool by which rural communities which are structurally integrated with the larger nation-state may be studied (cf. Foster 1967, Wolf 1966). The Scottish crofting township has some of the characteristics of a closed corporate peasant community (Wolf 1957), but it is difficult to apply the word "peasant" to such a community. Cultivation for subsistence is minimal, and in

little sign of Norse blood, can hold their own as fishers with the men of Nesa.

Third, it is still commonly stated not only that the 'great majority' under the clan system were "without any legal status", but that their tenure "depended on the good will of the chief or tacksman".[1]

As the last lps books of the Clan were taken from Lewis by its first mainland lord in 1611—never to be heard of again—it would seem that, as recognised in the Northern Isles, so in the Western Isles, permanent tenure was permanent according to regional law. In practice, mere 'goodwill' is an uncertain a property, but if this statement had been true, it is hardly credible that communities could have remained so stably rooted as their race-types show them to be. Evictions of groups or individuals at the whim of chief or tacksman would have broken down their homogeneity of race. In the Highlands, where eviction had become so frequent by 1500 and insecurity for the tenant of the country people has prevailed ever since, such fluctuations of race would be unthinkable and do not exist except in certain fishing communities who possess a pride, almost a caste-code, of their origin. Northern fishers within Edinburgh remain apart, with a dialect and a dress of their own. Great stability of tenure—in fact as in customary claim—is shown by the racial homogeneity of Gaelic communities.

Lastly, it is common to state that the nobility and gentry of a countryside constitute its 'old' or 'original' families. It is true that some land-owning families seem 'old' compared to recent purchasers—successively the merchants and lawyers, venturers and planters of the

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUITY OF COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group combined in a glen or along a shoreland, are, in ascending order, the concentric units whose social relations and ships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special features, can only be understood in terms of past needs and the relationships they evolved.

Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of such units of land and sea. Lewis and Harris contained European, indeed world, history and prehistory. Here the people could trace back the meaning of 'clansfolk' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

CH. V FAMILY, FARM GROUP AND TOWNSHIP

rent-rolls record something of more vital and enduring concern, the unit of community life in the Island. This was the 'conjoint' or 'group' farm of the labouring peasantry—though it was confined in parts of the Island by the formation of tacks held by gentlemen-tacksmen.

Both rolls are Judicial Rentals, that is to say, the tenants, great and small, were convened by the Government Commissioners and examined on oath as to the rents they normally paid; the accounts were then entered and tendled. Because of the Jacobite rebellion, the small amounts of rent and the maladministration of the Forfeited Estates, the rentals were not drawn up in 1716 but in 1718. A second rental was therefore compiled in 1726, upon a different system, which confirms the correctness of the first.[1] Both were annual rentals, including chief shares of 'valuation'.

Owing to the Island's comparatively smooth land surface and access to the sea, the people could group themselves as they chose. Whereas in the Highland mainland many a pocket of land is very broad, whereas more than two or three families alive and no fishing grounds are available, in Lewis and Harris the people could group together in twos or threes, to stock a hamlet-farm or penny-land, definable as a joint-farm of unit size, and to man a boat with "four to row and one to steer".

The first point of interest is the equality of the shares, each man paying exactly the same as his fellow-tenants for his 'farthing'—a fourth, or other equal share of the farm. The average share of rent was a little over 20 shillings sterling with additional payments in kind, though not fixed (or

[1] A. Geddes, "Conjoint Tenures," *ante*, *Econ. Hist. Rev.*, Second Series, Vol. I, No. 1, p. 62. The rents were compiled, running largely back into space to that of the Revest Report (1492). Appx. D, and that of 1726, edited by J. R. N. Macphail (1918).

CONCLUSION

The importance of the industrial movement is inter-regional and inter-national. The development of the island, international order is required for its fisheries to recover, and for its weaving to find purchasers abroad as well as at home. This in turn could allow small-building to find an Island market in its little Burgh, Stornoway. Without this triple basis of fishing, weaving and crofting for its economy, Island society will break up and its culture vanish, not evolve. It is no less true that only by the best interests of each regional and international, country and society as we first them, will profiteers be held in check and powerful peoples cease to exploit the worst of others.

A pioneer Ayrshire Report acknowledges the debt of regional survey to the Ruhr. Coal not only in France and Germany, but in a group of practical idealists, of geographers, lachapin and academics, Ruhr Report, is long as their names were duly inscribed at Stornoway Labour Exchange as sending fresh opinions, to ensure that the less alowness in its execution, and in the mobilization of regional resources for social ends. The chief end of our planning must be the creation of a Scotland, as in Britain it is not always evolved that in the great developments of the New Deal the execution of concrete schemes which include civil engineering, industrial expansion and agricultural conservation, is accompanied by a social development. Not certain total misapprehension of relief. As a result, through no real fault of their own, many men began to lose independence and self-respect. This general problem for youth was widespread in years of depression, and is not particularly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the "depressed areas" of northern and western Britain, of which the Isles form the outermost fringe.

fragments of sports and "medical" ability lacking on credit and more were picked up and carefully allotted. So, after 1929, from the wreckage of modern industry, bones on the ground-swell of 'Depressions', there came to the Islands the frail raft of unemployment relief, doled out like driftwood long ago.

Some assessment is therefore required. The total number of Insured Persons under National Insurance Fund. After a couple of months of wage labour at road-mending, harbour repair, or the like, young men were qualified for 'the dole'. Furnished with this, they returned to the croft when paid employment gave out, to cart in their peat, cultivate their land, or to seek employment with a rod for a little fishing from the rocks. All this was done 'on the dole', with unemployed for as long as their names were duly inscribed at Stornoway Labour Exchange as sending fresh opinions, to ensure that the less alowness in its execution, and in the mobilization of regional resources for social ends. The chief end of our planning must be the creation of a Scotland, as in Britain it is not always evolved that in the great developments of the New Deal the execution of concrete schemes which include civil engineering, industrial expansion and agricultural conservation, is accompanied by a social development. Not certain total misapprehension of relief. As a result, through no real fault of their own, many men began to lose independence and self-respect. This general problem for youth was widespread in years of depression, and is not particularly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the "depressed areas" of northern and western Britain, of which the Isles form the outermost fringe.

only the place but the people are to be understood, regional and global.

The planning movement is gathering impetus in Britain, as in areas as far apart as from Ireland to Sutherland, embracing regions as a whole. It is certainly destruction to the Islands that it be allowed to find purchasers abroad as well as at home. This in turn could allow small-building to find an Island market in its little Burgh, Stornoway. Without this triple basis of fishing, weaving and crofting for its economy, Island society will break up and its culture vanish, not evolve. It is no less true that only by the best interests of each regional and international, country and society as we first them, will profiteers be held in check and powerful peoples cease to exploit the worst of others.

APPENDIX II

200 houses, with nearly 30 built by "private enterprise"; in addition the Authorities built 1 house in the immediate "suburbs" (of which 30 were temporary), a total of over 230 houses, or approx. 1 house for every 1 in 1 of the town's population. If we give a round total of £115,000 as the value

for an average year (such as 1953) for Local Authority Housing, we may allow half this to net output of local materials and to wages earned by Lewisians, some £60,000, of which rural Lewis would receive a fair share.

For crofters and cotters, however, in 1953, a fairly typical year, the income from the Crofting Grant, £50,000 by help of 180 lines and grants from the Department of Agriculture for Scotland, totaling £80,000 for new houses or house improvements (with a very few steadings). £80,000 may be for imported materials and as labour paid or given by householders themselves.

APPENDIX III

for planning preceded by adequate survey became publicly known, and was taken up by the spirit of the people, and the generative policy on the part of the Trust. It led to the choice of a Lewis man, Mr. Murdo Macleod, as Planning officer, and to a general searching of heart and mind in the community.

Meanwhile, a new spirit was stirred in Stornoway which had spread from the bombed cities to the rest of the country, led to a closer co-ordination of planning since Second World War the Trust and the Town Council, and there is real hope of progress in collaboration with the Trust's officers and the statutory planning authority.

In brief, the opportunity arose for the Trust to frame a comprehensive policy, one binding together the objects separately based in the Trust's Deed of Trust, and the natural and social welfare of the community". The' material' provisions of the Trust Deed are: "Fishing, Crofting, Agriculture—including fishing, of course—of agriculture and afforestation, and of communications by land, sea and air, and of the Harbour as well fingerpiers. The encouragement of social life and education in the Island, and the provision of a fund for special capital projects scholars to proceed to secondary schools and universities.

The Trust's Deed of Trust, and the spirit in which it was drafted be properly co-ordinated. Development of resources and social life in the Island, and the mobilization of resources and material deliberately designed to equip young people to return to the Island and use their experience to serve their own community. Thus among the development schemes which have been started are the reforestation of peat, the reclamation of the sandy inlet just north of Stornoway, and local afforestation. The Trust's Deed of Trust, and the spirit in which it was drafted and skilled foreman or working head. Bursaries might take the form of apprenticeship to the rural trades. The 'report' of taken may be necessary when no outlet is possible at home, but in the end it is not good for the Island community. Hence a policy for the return of talent is required. For fishing, for industrial development, for the weaving arts, training is required in preparation for possible careers at home. Lately

CHAPTER II

A FIRST IMPRESSION OF SKYE

131 Scotland includes among her distinctive characteristics
33 the possession and jurisdiction of more islands, 787, than any other nation in Europe. Stretching along Scotland's west coast for 200 miles in an inner and outer archipelago, the Hebrides account for over 500 of these islands. The Isle of Skye is the largest of the Inner Hebrides. Reference to the map (Figure 2) will show that Skye is forty-nine miles long and from three to twenty-two wide. The coastline measures
1350 miles. The total area is 643 square miles. Although less than a mile separates Skye from the mainland at Kyle Akin and Kyle Rhea, the inhabitants are enisled geographically by the sea and culturally by the peripheral position of the Island to the main stream of British society and culture.

The isolation of Skye is due to two basic facts. The topography of the Highland region, with its scenic valleys, cut by sea lochs and flanked by precipitous mountains, has created natural barriers to communication with the cities of Lowland
87 Scotland and England. The second fact is that the transportation
31 facilities of the Western Highlands have never been integrated
33 with Great Britain's main communication system. The problem, then, is not as much one of distance from the centers of

[TEXT CONTINUED ON PAGE 30]

tradesmen are respected, but since most are crofters, they are 554
treated like all other men.

The Village. The village contains a heterogeneous population. 621
At least a third of the families have arrived in the recent 162 167
past. They have come to fill positions in the county and national government offices; in Lowland directed banks or business houses which have extended their field of operations to Skye; and in the professions as doctors, lawyers, ministers, and schoolteachers. A few have come to Skye to open a shop or offer their services as tradesmen. The remainder are either Skye folk who have recently moved into the village to see employment or families that have been in Portree for one or more generations. Very few families seem to have lived in the village for more than three generations.

While there are many opportunities for an individual to 554 184
achieve status in Portree, the cultural heritage and the economic limitations under which the Sgiathanach labors has not allowed him to compete with the newcomers. His ability to compete is further restricted by the prevailing policy of the government and the national corporations to bring in managerial and, often, clerical personnel from the outside. All share one socio-economic trait; they are non-crofting. As 565
yet there is no class structure beyond the polarity of the landed gentry and the crofters who participate in village life. There is verticality. Highest prestige status is accorded to those who have been accepted among the local aristocracy. Below them rank the ministers, doctors, and school teachers.

or the remainder of the population, as a general rule, it may 534 184
e said that a person's status depends on personal qualities
ather than on occupation. This is especially true of men who
ake an active part in the church. In terms of interaction,
he social hierarchy is extremely fluid. People who elsewhere [545]
n Britain would be "working" or "middle" class not infrequently
oin with members of the "upper" class in both formal and in-
ormal social groups.[22] This underlying equalitarian pattern [57]
as always characterized the interpersonal relations of Skye's
ociety. There is, of course, cleavage between the upper [582]
evel of the society and the bulk of the population; inter-
arriage is impossible.

The social life of the village revolves around the new- 571 184
omers and the landed gentry. In addition to the social 554
ircles based upon age, sex, kinship, and religion, the indi-
idual belongs to several small groups of friends and, perhaps,
few formally organized clubs. When the native-born take
art in the formal activities they do so as participants rather
han as organizers or directors. The necessary roles of leader- [565]
hip are left to the newcomers or to the landed gentry. The
atter, in particular, are responsible for community affairs,
ust as the chief and his kinsmen were formerly looked to as
he leaders of the people. Occasionally, an influential new-
omer gives them able assistance. The influence of the old [888]
en is not as marked in the village as in the crofting communities,

inly because there are enough young people to form a strong 571
e grade of their own. The more liberal outlook of the 184
llagers is, however, tempered by the old men. 554 888

Religion

The attachment to the past embodied in the social and 771
conomic aspects of the culture carries over into the religious
fe of the Sgiathanach. He is a Presbyterian who continues 775
worship and view the world within a pattern which charac-
rized the Scots of the sixteenth and seventeenth centuries.
e doctrine and theology are derived from the teachings of
lvin as interpreted by John Knox and refined by the Covenanters
the seventeenth century. To the original ethical code
strong measure of influence from the English Puritan move-
nt has been added. The guiding principles are still fore-
lination and election. The dominant motivating factor is [785]
eticism.

One of the outstanding features of the island today is 348
large number of churches for such a limited population. 775
serve the 8,600 people there are 21 churches with ministers
13 mission stations. A hundred years ago, when the [178]
ulation was almost triple the present number, there were
y seven ministers on Skye. The present abundance is the out- 775

*175 sufficiently to make age controls an irresistible force, the
*178 prestige status of the small number of the "elect," those
182 795 who had experienced a saving change, and, in particular, the
793 554 elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in
[64] focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

*175 Summary. The third period of the modern phase of Skye's
*178 culture history saw the culmination of the process of
427 423 commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much
[233] deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy.
[167] Newcomers with the incentive and ability to introduce improved
[184] methods of land utilization were replacing the conservative
[311] and impoverished crofters and cottars. As the commercial
[621] farmers consolidated their holdings, the communal townships
[554] were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

178 agriculturalist, and when he does seek employment, it is typica
as an unskilled laborer.

It is far easier to point out the traits and trait-complexes he has lost than those which he has accepted during the two hundred years since 1745. The sad economic condition under which he labors is not conclusive evidence for disorganiz Integration does not mean smooth functioning. Nor do the changes, important as they are, point to discontinuity. The contemporary economic system reveals a fundamental continuity. As I remarked at the beginning of this chapter, there is some-
[28] thing far deeper involved than economic considerations. Let us now turn to the social aspect of the culture in order to seek an answer to the question why has the Sgiathanach remained in the face of all the inadequacies and insufficiencies we have reviewed.

575 (a Gaelic group), the Masonic Order, the Eastern Star, and a post of the British Legion, which have representatives
574 from all walks of life. But by far the most interesting
575 group is the village bridge club. If bridge clubs in America are status conscious, those in Britain are especially aware of "social" and "cultural" distinctions. In Portree such
574 differences matter very little. Like all of the above
575 mentioned organizations, the membership of the bridge club
167 is predominantly newcomers. It includes members of the gentry, teachers, shop keepers and shop assistants, office workers, and a mechanic. Once a week they come together for an evening of cards and a few drinks. In all formal organizations, the roles of leadership are left to newcomers or the gentry. One young man, to give an extreme example, wondered one day why he spent so much time attending committee meetings. On reflection, he found that he was an officer in no less than eleven clubs. It is to the gentry, however, that we must turn to see the real expression of leadership.

The County Families

565 The landed gentry have been considered separately be-
184 cause they belong to the neighborhood in which they reside; to the trade-center village, where they spend much of their time either visiting each other or performing some social service; and to the community as a whole. Even more than belonging to Skye, they form a part of the national class system of Britain. They are the "county families." Next

565 184 to the aristocracy they are among the foremost citizens of the nation, and two of the local gentry are included among the nation's peerage. Although I doubt if any of these land owners can validate a claim to being direct descendants of the clan chiefs or descendants of the cadets of the clans, several of them are related in one way or another to the central derbfine of the old clans.

Occupying the highest status positions, the county families manifest many social and cultural expressions which distinguish them from the remainder of the population. The men are always given the distinction of a military title; they are major, colonel, or general. One man has not seen 565 184 576 military service, but he is given a rank anyhow. In indirect speech their title often includes their residence or estate, such as Col. Macleod Mulgrave or Mrs. Macleod Mulgrave. Behind their backs, they may be referred to by their first name, prefixed by the title, but never in direct speech. 565 184 795 Religiously, many tend to be Episcopal sympathizers, in contrast to the staunchly Protestant crofters. The men all attend the local kirk of the Church of Scotland and serve as elders of the kirk, but their outlook is quite different from that of their conservative tenants. One family is 565 184 423 Catholic. As would be expected, all are property owners. This is not a question of socio-economic status as much as one of social differentiation. The loss of large parts of their estates, under the pressure of debt contracted by their ancestors, has not reduced their prestige.

184 565 There must be enough interaction between the relatively small number of people of similar standing within the local group and beyond if the consanguinial and affinal basis of the class is to be maintained, and they are not [582] to lose their identity as a group apart. They must not only interact with other county families, but the county families 184 565 535 584 must be endogamous. Once a year the county families of Skye are given this needed opportunity to reaffirm their solidarity, to cement their relationship with the upper class of British society, and to arrange suitable matches for their sons and daughters. A Skye County Ball is held in November. The "county people" come from near and far to attend the affair, one of a series of local balls held throughout the nation. If anyone has any doubts about his acceptance among the holders of highest status, he receives his simple but explicit answer at this time. He must be invited to the ball. For three days and two nights the festivities continue. High society has come to Skye and has brought with it its caterers from Edinburgh. The local people say the "Ya-ya's" have taken over Portree.

On the first night of the ball, the young people are escorted from the homes of the Skye aristocracy, who act as hosts, or the more fashionable hotels to the Skye Gathering Hall by their parents. During the dance and the supper which follows, suitable introductions are arranged for their sons and daughters. On the second night of the ball, the young people appear in couples. cannot be spiritually enlightened. The individual who is asked 794
about the nature of his visitation is not judged on his ability 888
626
to raise his family in the nurture of the church. He is rather
judged on his preparation to carry on the tradition. He must
be worthy of the respect due to one of his status. While old [562]
women are numbered among the "elect," their exclusion from any
active role in the church has kept them socially inferior to
the old men.

I wish I could give some examples of the nature of this 124
"visitation;" however, Skye is a land where the direct question 576
is not used. One can ask a direct question without offending,
but the code of hospitality requires an either affirmative
answer or the answer you think your guest expects. My
circuitous promptings on this topic only succeeded in arousing
concern for my soul.

Two groups escape from the control of the elders as it 626
is exercised through acceptance of an individual into the 888
794
"elect." As mentioned earlier, the newcomers to Skye have 167
come from different backgrounds. Beyond the Highlands, the [184] ●
meaning of "Effectual Calling" has changed over the years. The
youth attend a young communicants' class in which they are
taught the meaning of church membership. Notestein, writing
about the national character of the Scot, maintains that
interest in "election" has disappeared.[14] Most of the members
of the Church of Scotland in Portree would no doubt agree with
him. One attempt has been made on Skye to hold a young 794
communicants' class. It took place, of course, in the Church 779
184

[14] Notestein, op. cit., p. 153.

322

of Scotland in Portree. Only one girl appeared for instruction. 794
After the significance of her preparation had been fully explained 779
she declined to take the final step. She did not disagree
with the minister's view that she was prepared for membership
and communion, but she was afraid of what her friends in the
Free Church and Free Presbyterian Church might say. She was
probably wondering what the middle-aged adherents of her church
might have to say, too. When the Sgiathanach takes his first
Communion, in Glendale, Kilmuir, or Portree, the people must
be able to look up to him.

The second exception to the age-grade requirement rules 626
among the county people. Because of their social position 888
565
in the community, which rests on the expression of their statuses, 79
as roles, as landlords, village and neighborhood representatives
and leaders, and members of the national class system, and
because of their education in England, the county people
attain membership in the church at an early age. Some have
become elders of the church at twenty-one. To subject them
to the control of the crofters would, obviously, be incompati-
ble with their social standing. Although they are all Church [182]
of Scotland, here again religion is a reinforcing factor for
the structure of the society.

Dying, the final act of living, reveals a host of traits 763
which only receive covert expression during an individual's 829
life. While the youth is censured for his spontaneous
pleasures and the adult is criticized for his behavior, the
deceased is always respected. As one woman said, "It is the
one time in a person's life that the people have nothing but

worship. If the deceased is a Sgiathanach, the minister will call every night, if he can. Otherwise, he may call only once. His participation in family worship helps to refocus the patterns of interaction within the nuclear family and within the small circle of "people," "friends," and neighbors who come to visit and take part. Some sophisticated villagers take this opportunity to justify their own deviations, such as going to a concert; for them this is all "a religious ceilidh with all their psalm singing, praying, and greeting." The people do not keen, as they do in Ireland, but the women are seldom dry-eyed. Again the villager may comment that the minister at least should say a few kind words about the dead, "just to comfort his family."

On the day of burial a second and more inclusive rite of intensification is held. On this occasion the function of the minister, often aided by an elder, is to restore the equilibrium within the total sphere in which the deceased habitually moved during his life. If the person had High prestige status, the ministers of two churches conduct the family worship. All the "people," "friends," and neighbors, both men and women, attend. The minister begins with a prayer for the family, asking God's guidance. This is followed by the singing of a few verses of psalm by all who have gathered. Next the minister reads from Scripture. He concludes with another prayer for the family. If there are two ministers, or a minister and an elder present, they alternate in leading the group. If there are any present who do not "have the Gaelic," they also alternate between English and Gaelic. We have seen how

much more productive and dependable 161

The belief of many that the pop-
mited local resources was confirmed.

I were to adapt this argument, I might even be convincing, but my dissertation would have a fallacious conclusion. Emphatical irreparable cultural disorganization is not a characteristic of the culture history of Skye.

Continuity has been maintained through a reintegration. In part, Skye has made an adjustment to the higher socio-cultur organization of Great Britain and Western Civilization. This phase of the culture's readaptation, however, is an incomplete adjustment. The Sgiathanach has remained enisled geographicall and culturally. A readaptation has also been made in the older traditional culture.

The national culture has played no insignificant role in the readaptation. Parliament turned back the process of commercialization in 1886 and undertook to rechannel the trends toward ever increasing commercialization of the land, ultimately leading to the socialization of the land. The essential the old system of land use and tenure were not only reaffirmed but also given legal sanction to insure their stability. The nation confirmed the customary usages. In many townships and in whole neighborhoods the crofting system was restored. As far as the Sgiathanach is concerned, he has never known any other economic structure than communal use and tenure of the land. There are only three significant differences between the runrig farm, whether the farm was a tacksman's or the common holding of several joint-tenants, and the crofting township. The arable acreage is held in compact, permanent blocks instea of dispersed and shifting strips; the crofter pays a money rent in place of goods in kind and services; and national laws

culture which can hardly be distinguished from that of the Lowland rural areas, but it has by no means disappeared.

Socially, these changes, particularly the introduction of national laws of land tenure, involved a leveling of the social hierarchy. The old polarity of the land lord and tenant, with an intermediate group of doctors, ministers, and tradesmen, was restored. The place of the tacksman, of course, has been filled by the government. The bulk of the population was once again undifferentiated socially or economically. Land lost much of its commercial value for the proprietors. It once again had more of an intrinsic value, almost as in the days of the clan. The status of the proprietors, locally and as a horizontal segment of the total British population, depended on land ownership. The graziers and the proprietors who had appeared during the "Clearences" withdrew, selling out to the national government.

These changes did not work to halt the continuous outward flow of the Sgiathanach. To the contrary, increasing integration with the national culture created new needs, such as a demand for a higher standard of living and an opportunity to achieve status, and provided the training necessary for the youth to find roles more suitable to their talents elsewhere in the world. The young men and women of Skye journeyed to the Lowlands to join the national labor force, to enter the professions, or to seek other permanent employment. Thus, emigration changed from a movement by families to a movement by individuals. At the same time, the benefits of the crofters' legislation and the program of government assistence made it possible for the

Summary: The Cultural Trends

During the fourth period, in which the crofter re-emerged as the characteristic feature in the social and economic aspects of the culture, all the influences necessary for a readaptation to the wider socio-cultural level of organization were functioning for the Sgiathanach.[92] These influences were the presence of potential exports, access to markets, credit facilities, and a gradually improved technology. Several of these go far back in the local history. Cattle were being exported in the sixteenth century, being received by the clan chief and his tacksmen as partial payment for rent. Access to markets was available by the droving trade, but the subsistence economy precluded dependence on imports. Credit in the form of loans to the clan chiefs, on security of the clan territory, could be obtained, but it was directed to the support of the dignity of the clan rather than to agricultural improvements. At the close of the first period of the modern era sheep became commercially important. By the third period men with capital and the incentive to adopt new techniques were replacing the indigent tenantry. Communications had been improved. Access to markets by road, rail and steamship replaced the old drove roads, which would not serve for sheep. It was not until the government stepped in to halt the process of commercialization of the land, however, that the Sgiathanach was given an opportunity to directly benefit

---

[92] I am indebted to Julian Steward for the point of view which follows. Those who are familiar with his conclusions on cross-cultural regularities will discover many correlations between the cultural trends on Skye and those described for Puerto Rico.

from these influences. Now the government provided the capital, by grant, subsidy, and loan, and the guidance necessary for a fuller utilization of the land. The crofters who had already seen their subsistence economy disappear became a part of the national system of commerce. What effect have these influences had on the culture?

175* 178* 184 241

Throughout the modern epoch there has been a tendency to increase the production of exports, first cattle and then sheep, at the expense of the traditional subsistence crops. Within ecological limits, the national markets have determined what the Sgiathanach might produce. Since the environment has made Skye a pastoral land and agriculture is a poor risk in the best of years, abandonment of a subsistence economy has meant dependence on stock breeding for export. Commercialization of the land and increasing dependence on imported food has resulted in a growth of the importance of money. The decline in household industries, caused by economic deterioration, has also played its part in the people's dependence on currency. As a measurement of values, however, the importance of money has declined since the period of the large sheep farms. The crofter's margin of profit is small, and his opportunities to earn a wage are limited. Economic differentiation no longer affects the traditional status values, except within the traditional polarity of landed gentry and tenant.

175* 178* 439 175* 178* 439 436 [554]

In a comparable way, the utilization of more efficient methods of production is less important now than it was during the period of the "Clearances." Techniques have improved for the majority in so far as labor saving devices are available, but the achieving of modern efficiency is precluded by the

175* 178* 427 241

*175 *178 crofting system. Both the communal nature of the system and the smallness of the crofts deter improvement. Although the 427 241 government reversed the trend toward making the land an im- [84] portant source of wealth and individualization of the land, by replacing customary forms of tenure with national laws of tenure, and has tried to correct the disadvantages under which the crofter labors, if not always successfully, the Skye crofter has made only a partial adjustment to the larger, [31] specialized national culture. In fact, the land is used less systematically than it was in the past, in the times of the [31] shielings. The crofters have not only ceased trying to reclaim arable but also have allowed much of the arable to go back to grass.

*175 *178 464 Ever since the closing years of the first period of the modern era, Skyemen have sought employment as a part of the national labor force. During the third and fourth periods, they joined the landless labor force in the Lowlands. There is practically no local opportunity for a landless man to support a family. The majority must remain pastoral agriculturalists who depend on seasonal employment, or some other form of financial assistance, to augment their income.

*175 *178 361 Improved communications and the ensuing development of commerce has brought a village to the island. It functions as a market center and as the administrative center for the island. It has not served to bring the island together; it is still something alien to their heritage. Accompanying the growth of the village, there was local development in the

SINCE THE SECOND WAR

pared to make fishing their career, together with financial assist- 228
ance to those who satisfactorily completed their training and 452
who wished to acquire boats of their own. This Scheme is now 654
run by the Highlands & Islands Development Board. The Board's participation in the expansion of the fishing potential around the island has been first-class, with commensurate results from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted 685
the unscrupulous, those for whom the word 'conservation' has no 226
meaning, and who are careless of the dangers of over-fishing. 175*
Illegal trawling began around the year 1894 and by now has [185]
drastically impoverished the inshore fishings to which the Harris and Lewis crofters once looked for a supplement to diet and income. The rapid adoption of efficient trawlers was attended by an increasing number of reports of their poaching within the three-mile territorial limit. Though the islanders tried many times to involve the Government's cruisers for the protection of their shores, the poaching went on, and still continues today. Even some of the violence which attended the early attempts to clear the scum from the sea, as it were, continues, part and parcel of the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring 228
Industry Board has been converted into a fish-processing factory.
This facility, of great value to the port, is run by Rolf Olsen A/S, [648]
a long-established Norwegian company with a successful background in fish processing. The company has received investment aid from the Highlands & Islands Development Board, the Highland Fund and the Stornoway Trust; the latter's interest is significant in that it is the first time in which the funds of the Trust have been invested in a private concern, to help retain Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry is the processing of prawns (scampi, or *nephrops norvegicus*). Two firms buy the prawns at the pierhead, shell, cook and freeze them,

THE OTHER ISLANDS

* 175 *Account*, there was one family there, that of the person employed
162 by the owner to look after the livestock. The owner was a Ness
[427] tacksman who paid £4 sterling rent per annum. The island produce was corn, butter, cheese, a few sheep and sometimes a cow, and some wild fowl and feathers.

*175 In 1844 Rona was evacuated, its last inhabitant being, in the
166 seventh year of Queen Victoria's reign, the 'King of Rona', Donald MacLeod, who lived in almost prehistoric conditions. Rona was without inhabitants until 1884, when a last attempt
[185] at resettlement was made by two men from Ness. This was a self-imposed exile, after a difference of opinion with the minister of their parish; in penance, they hied themselves off to Rona. In 1885 a relief boat called and found both men dead, one from natural causes, the other from starvation and exhaustion after nursing his friend. By the fireside of their hut was a pot ready for the preparation of a meal they never ate.

236 Today, man's connection with the island is maintained by the
221 small party of Lewis shepherds who each year make the journey to shear the sheep which still graze on the green slopes around the now-ruined village. Otherwise, only the occasional traveller now
659 lands there. In June 1956, North Rona with its associated rock,
185 Sulasgeir, was declared a National Nature Reserve on account of its importance as a breeding ground for colonies of oceanic birds—guillemots, puffins, kittiwakes, and fulmars—and for its seal colony.

Sulasgeir

133 Sulasgeir is twelve miles west of North Rona, a lonely rock in
[131] the Atlantic, bleak and grassless, and tunnelled by caves and gullies. The only life it has ever supported is seabirds—officially.
[346] Yet one of the old buildings is said to be a chapel and is called
173 'Tigh Beannaicht' (House of Blessing). According to Ness tradition, Sulasgeir was once used as a prison for sheep-stealers, and it is also said that Brenhilda, sister to St Ronan, was left on the island to perish. Yet another tradition claims that it was at this rock that Prince Charles Edward made his first contact with his Scots clansmen, when the ship that carried him to Scotland was spoken to by a Ness boat making for North Rona.

ISLAND LIFE

178 and practical support, could win through to make marks on the island scene.

• 185 A significant event occurred in 1964: the establishment of
654 the Highlands & Islands Development Board. This was Britain's
433 first regional development authority run by members who are either full- or part-time. The Board is grant-aided and has two broad functions: to improve the social and economic condition of the Highland people and assist in making the region more significant in a national context. The Board's attention in the Western Isles has been concentrated in the expansion of the fishing industry and the development of tourism. In both these [484] fields there has been a considerable success: upwards of 100,000 [505] visitors per annum visit the islands; and a fleet of over thirty boats, equipped with the latest gear, operate out of Stornoway.

433 Also in 1964 was produced the Development Plan for the
185 County of Ross & Cromarty. So far as Lewis was concerned, the Plan was based on an average decrease in population of some [167] 1,500 persons for every year in the future of the island. This, if carried to its logical conclusion, will see complete desertion in fifteen years or so! However, even if nothing further is done to halt emigration, particularly in the landward areas of the island, the population will remain around a stable 15,000. The County Development Plan contains much food for thought, but as with most county plans, does not indicate actual development projects. Rather, it lists all the resources of the island for the attention of those concerned. Potential developments include the setting up and exploitation of predominantly-fulltime crofts, shell-fishing, and inshore white fishing, herring and offshore white fishing, forestry, tourism and holiday accommodation, minerals, peat utilisation, hill-land improvement, marine reclamation and seaweed resources. This list is significant and merits the attention of the Highlands & Islands Development Board.

Harris, on the other hand, presents possibilities on a much smaller and limited scale. However, there are expansion potentials in tweed, knitwear, and craft industries, with tourism promising to be a good base for the island's economy. As the age-structure of the crofting population changes, there will be a useful re-organisation and enlargement of existing holdings to make for

LIFE TODAY

better economic units. There could well be plants for fish meal 433
and canning, working in conjunction with fish-farming ventures. 185 •

Perhaps one of the most significant events which have occurred was the formation in 1972 of the Lewis Development Fund Limited. The Company has the following aims:

1. To strengthen and expand the economy of Lewis and in consequence that of the Western Isles by promoting and encouraging the development of all the natural, economic and industrial resources of Lewis and the Western Isles.
2. To encourage the repopulation of the Western Isles and to encourage industries in the island to obtain the necessary staff and labour.
3. To encourage the building of shops, factories, public works, churches, places of amusement and any other works which the company might think fit.
4. To encourage tourism.
5. To promote and carry on businesses such as building, fishing, buying and selling, agriculture and manufacturing, etc.

The Company has given itself wide powers to lend and borrow money. A target of £150,000 is envisaged, which funds will then be used to help all kinds of economic and socio-economic ventures.

Surveys carried out in the Minch area in 1971 by British 315
Petroleum and the Gas Council have indicated the possibility of oil. While there are no signs of the traditional anticlines—the dome-shaped geological structures—which normally signify the presence of commercial quantities of oil or gas, there are hopes for secondary sources in the more complicated rock-structures which could be oil-bearing. The sea-bed of the Minch is young rock of the type which bears oil in other parts of the world.

The assumption, in 1974, by the Western Isles Regional 185
Authority of most of the functions of the mainland local authori- 433
ties is thought by many to be a chance to sink or swim. Having been for so many decades under the thumb of external influences, the islands now are being given the opportunity to devise relevant methods for ensuring their socio-economic viability in the future.

All in all, the island is going through a period of re-stocking,

oth have remained devoted to the old tradition which is 183
pitomized by their religion. Further, they are each bound 771
ogether by a common language and vocation and by strong ties
f consanguinity and affinity. Moreover, the Sgiathanach [184]
nd the Amish have similarly rejected the deviant. On Skye [167]
migration has affected all levels of social organization,
he conjugal family, the extended family, the township, the
eighborhood and village, and the community. Still the Amish
nd the Skyemen have maintained social and cultural integration.
tanding in a contrasting position is the town of Landaff,
ew Hampshire.[4] Although Skye and Landaff have experienced
imilar trends, including an original ecological adaptation,
isturbance resulting from population pressure, an unsuccessful
ttempt to meet the crisis through commercialization, and a
ronic high rate of emigration, especially by the youth,
ndaff has been described as an example of social instability
d cultural disintegration.[5] The farmer of Landaff remained
ly as long as his interests were compatible with those of
s neighbors, and local opportunities existed to satisfy his
bitions. He had no attachment for the land to offset the
adequacies of persistent economic limitations. He abandoned
e associations which had supported the community by giving
e group a sense of security.

Like European peasants in general the Skye crofter has
t his former self-sufficiency and political autonomy, but
has retained a strong attachment for the land and its

288 at work producing tweeds which it then tries to market.
441 The latter method requires the investment of a great deal
491 of capital to make the tweeds and pay the weavers before
a buyer is found. The small mills require an immediate
return for their capital investment, which is ensured
[434] by not investing unless there is a definite order. The
fortunes of the weavers oscillate with the luck and skill
of the mills in soliciting orders; thus, the mills do
not provide a constant, stable source of income. The
288 nature of the tweed, as a high-priced luxury item rather
434 than a basic necessity, contributes to the instability of
the demand. When fashions change or when world-wide
economic depressions come, the high-priced tweed with
its specialized image as a cloth for aristocratic,
• [185] sporty dress is forgotten for awhile. Efforts are being
made to change this image; but the product's status as
a high-priced luxury item persists.

288 An extremely small business can survive periods of
441 depression when capital outlay in the form of machinery,
458 running costs, and so on is not large. An extremely
large business that has cornered a large share of the
market can often survive an erratic schedule of orders
because it has a larger accumulation of capital, but a
medium-sized business has too much overhead to survive
long periods of depression. Examples of all three exist

592 unmarried sibling. Eleven households consist only of
siblings who have never married, men and women who in
1971 were 45 years old or older. Two widows live with
[589] their unmarried siblings. Sixteen widows or widowers
live alone, and sixteen unmarried persons live alone.

241 The large number of households occupied by single,
592 elderly people reflects the use of the croft as a place
423 of residence rather than as an agricultural unit, a
671 view of the croft that was given legal expression in
888 1968 by the Miscellaneous Provisions Act. Before 1968,
[428] the croft went automatically to the eldest son if a
crofter died intestate. Since 1968, the rights of
different claimants must be considered and tenancy by
a new person must be confirmed. District and county
councillors argued for this change, saying that a widow
was often left on the croft and her security endangered
because the eldest son was usually far away from the
island, in Canada or some other country. In other words,
rather than an agricultural unit which should naturally
be taken over and worked by the male head of the house-
hold, the croft is seen as a place of residence for
the infirm and for the aged, and especially for the aged
female.

657 The Crofters Commission has suggested that elderly
• 185 people be allowed to rent small plots of land on which
423
888
311

657 their houses are located, and that most of the land be
185 freed for use by more active crofters, but the ideology
423 associated with possession of the croft makes such a
888 plan extremely difficult to implement. "The croft is
311 your base, the only thing you have. You don't want it taken away, even if someone else is using it already anyway. Our county councillor suggested amalgamating the unused crofts at a recent meeting. No one said anything, but no one wants it."

592 Of the five households that have the use of three
241 crofts each, one consists of a bachelor who uses the
311 crofts for grazing a large number of sheep. A second household is composed of two brothers who had stayed at home to take care of their aged parents. One of these brothers recently married, after the last parent died. These men keep cattle and sheep, and both weave.

592 A third household is headed by a married man who
241 has recently sold most of his livestock in order to
311 "concentrate on the weaving." His father, who used to
288 haul peat with a horse and cart in exchange for the use of grazing land so that his family never had to go to the sheilings, died a few years ago. "My father was a crofter only. The weaving didn't start until the 30's. He was wounded in the war. He got a pension and sold a cow or a few sheep each year. But I didn't

197 One of the
793 richest sources of Gaelic vocabulary now available is
779 the Gaelic Bible, but many villagers, especially the younger ones, complain that they are unable to understand many of the Gaelic words used by the minister in his sermons.

197 Although provision for teaching Gaelic in the schools
871 was made in the Education Act of 1918, only within the last ten years have schools incorporated classes in which Gaelic is taught at both primary and secondary levels. Gaelic is taught as a foreign language like French or Latin, rather than used as a medium of instruction, which would require a much larger vocabulary than most teachers possess.

[875] The present schoolmaster in Shawbost differs from past
[551] schoolmasters in that he addresses the children by their Gaelic names,[2] and devises projects intended to encourage a sense of pride in "Celtic culture."

873 The Department of Celtic Studies at the University of
197 Glasgow, which includes in its staff a Lewis poet and
185 several Scottish Nationalists, is described as "progressive." According to an islander who is a student in the Department, "They believe that if Gaelic is to survive as a language, it must be written as it is spoken. At school we were taught to write 'proper' Gaelic, Gaelic that's considered

[2]Persons who come from Gaelic-speaking areas are addressed and referred to by Gaelicized names, such as "Murchadh" rather than "Murdo," and usually these names take the form of patronymics, which may or may not include nicknames (for example, Iain Dhomhnuill Bhain, i.e., John the son of fair Donald).

873 old-fashioned if you were speaking it. I wrote like that
197 in my first few papers, and my professor stroked through
185 words and asked, 'Would you say that?' We can even put in an English word now and then."

197 One result of this restriction in the scope of
185 experience in which Gaelic is used, and of the treatment of Gaelic by government bodies and voluntary associations as a rare zoo animal that must be preserved rather than allowed to change, is a decline in written creative
197 expression in Gaelic. There are perhaps three major
536 writers of Gaelic plays in Scotland, whose major battle is to be considered serious writers rather than colorful freaks or queer saints out to redeem Gaelic culture. "Once you become self-conscious about the language you speak," says one writer, "the language is dead." It has then become an artificial showpiece, a museum relic instead of a living, changing, flexible human tool.

197 Outside the village the maintenance of the Gaelic language
186 and other customs identified with "Celtic culture" occurs
[571] mainly as a result of interaction between "Gaels" and "Galls" (a Gaelic word meaning outsider or foreigner), as Gaelic speakers become self-conscious of their distinctiveness and either abandon their heritage (for example, MacIver 1968) or invest in it.

Lewis and Harris

ISLAND LIFE

185 to recover from the inhibiting influences of centuries-old history,
432 economic isolation, and the ravages of two world wars. The emergent community, though smaller, will be as rich in quality and personal ideals as it has ever been. To say that of an island, of any island, indicates that its community is more than worthy of support in its endeavours to remain true to itself and its long-standing heritage of island life and living.

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

183
181 democratic reorganisation, with loyalty to one's fellows and
• 185 to a leader.

Here again, Lewis-and-Harris may have something to
178 teach, as one of the last communities in Britain in which
185 much of ancient common right over land and sea has been upheld. Trust ownership of Stornoway estate has strength-
[174] ened the possibilities of rural planning there, while the
[423] fisheries are a public resource which are partially protected for local fishermen inshore and farther out are closed to none. The useful Lewis Association has published models of local survey for social and economic planning. At a time when democracy is struggling to see its way towards economic and social freedom, such communal initiatives have more than local significance.

121 This sketch of comparisons and questions in rural life
131 raised by Hebridean evidence, through a wide and varied region of the British Isles, must serve to indicate the geo-
182 graphic setting of the Island and relate the historic and contemporary problems of its own community to wider fields. This book is not directly concerned with the urban and industrial problems of the firth-sides and 'included plains' within the varied land of 'the North and West' of Britain, deeply though they affect the hard-hit fishermen of the Isles and the Island migrants—seamen or labourers, tradesmen or factory workers, nurses, teachers or clergy.
121 Even for the migrants' sake, it is vital to maintain the
185 economic balance, and restore the cultural and spiritual life within each industrial region, in order to maintain that of Britain as a whole. It was not enough to schedule 'the murdered towns' of Tyneside, Wales, Lancashire or Clydeside as 'Distressed', 'Special or Development Areas'. The balance of Britain as a whole must be restored.

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

121 And region by region, a fairer balance must be struck
• 185 between country and town. In Lewis, the part of Storno-way town, with its population nearing 5000 (in 1951), is
[162] important. Its port, its fisheries, its spinning mills for the
[184] crofters' hand-loom weaving, its merchants' shops, and its local, administrative and professional services, are essential to the Island. Its economic and social evolution, too, are
[162] interesting. Stornoway's plans for the future are active and ambitious, and these, it is realised, depend upon the prosperity of the 19,000 crofting people of Lewis proper.

121 But the subject of this book is primarily rural. It is to
128 see with fresh eyes what, from our Harris mountain-top, we viewed as a unit at the core of 'the North and West'. After the island has been described in terms of its physical and human geography (Part One), the endeavour (in Part Two) will be to give a completer account than may yet have been given of the nature of Gaelic community, with
[621] its temporal duties and its spiritual sanctions. The three concentric circles of community are described: the family, the farm team and boat's crew, and the larger township groups. The relations of this threefold grouping of livelihood and society to Chiefs and Church are studied, and followed out in later evolution, until today. Elsewhere I have endeavoured to show how the Island can worthily maintain itself, and thereby find a new freedom. The final chapter returns to the broader aspects of society and region touched on here.

If this intensive study of a single isle and community can throw fresh light upon certain essential characters of the less-understood region of the British Isles—that lying outside the south-eastern 'Plain'—it may help to con-
121 tribute to more than economic reorientation. The significance of the Island life—not so much for the past, which

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

174 The historical aspect of these regional facts is extremely
184 significant to the evolution of Scots social life, and to
279 developments of Presbyterian worship led by Elders in
55 ferm-toun and Kirk; although suggested by comparisons throughout this book, they have still to be seriously followed
128 out. As to the future, regrouping of our somewhat scattered agricultural population has been strongly urged
121 in planning for post-war housing and community life.
• 185 But sound planning must be based on survey, long overdue; though elementary, this key map appears to be the first of its kind for Scotland (Fig. 2). It is from these units of farm-team and township that Scots rural society must be rebuilt, region by region.

184 One further contrast between the farming and the
241 crofting communities demands attention: it lies in the
361 types of migration—one is tempted to say, of semi-
466 nomadism. Crofters, though they move to and from their croft and township—to the city, the sea, or the New World —return home to their native township when they can, and to no other. Many farm servants, on the other hand, though they usually spend their lives in the county or region of their birth, have been on the move from farm to farm, year after year. What is true of Lowland Scotland seems rather true of North-east England, but not of 'the
[464] English Plain'. Unmarried Scots farm servants were hired for the half-year, and frequently moved after each new hiring, the married once a year. Families were annually uprooted—if indeed they could be said to strike root at all!
[722] The war-time 'Standstill' Order for Scotland began to
[178] check this migratory life; but its effects remain. Hence many men have few ties, their wives still fewer. The children could not grow up with their schoolmates: they could look back to no "Auld Lang Syne", of which the

i [see p. 16 -- analyst]

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

178 follows that as the descendants of the crofters of the South-
west and East Highlands could and did change their ways within the space of a lifetime, so those of the North-west
114 Highlands and the Isles can change too. Given the co-
178 operative leadership which is arising in the twentieth century and was totally lacking in the ideals and training
• 185 typical of the nineteenth, that change may be not only for the better in the development of 'individual' qualities, such as the power to do hard work for 'success'; change may also maintain and develop what still remains of the old characteristics which gave the community life of the Gael, with all its faults, elements of beauty and sanctity.

In an article on "The Human Geography of Lewis", A. Stevens (1925) described the Island and people. His comparison of the cold, wet 'desert' of Lewis and its corn-patch 'oases' with the desert of heat and drought
[182] and its oases of palms, is ingenious and suggestive. One
[241] might follow up the analogy and compare irrigation to the drainage of moorland and its fertilisation, which form the means of reclamation at home, and draw parallels between their immediate results on the land and the ultimate effects on work and social life.

194 Until the agricultural revolution, the unwritten story
241 of Scotland was in great part that of a long, uneven struggle
134 to make sour soils fit for cultivation and productive of a livelihood. Most of all is this true for North-west Scot-
178 land; moreover, there, for eighty years past, the struggle has been a losing one, in the sense that arable land has been
241 decreasing and rough pasture deteriorating. In spite of
134 subsidies, the 'marginal farms' of Scotland have a tough fight. Yet lands from Scandinavia to Finland and North
178 Germany are giving a lead in peat-reclamation, where
[654]

Scotland had begun to lag since her pioneering effort from 1750 to 1880.

Fortunately, Scotland is now recognising that in peat reclamation, on the one hand, and the improvement of rough grazing, or at least its maintenance, on the other, there lies a problem of national importance. More than half the land surface of the country consists of mountain and heath land used for grazing, not including 'deer forests' from which sheep had been altogether excluded. The arable land of Scotland is less than one-sixth of the whole, with about one-twelfth in addition under permanent grass. Moreover, since most of the enclosed land is distant from the area of rough-grazing, the latter is partly wasted. The difficulties of soil and sea and of the whole economic situation are great, and must be understood.

(B) THE ISLAND LANDSCAPE, LAND-FORMS AND GEOLOGY

1. *Aspects of the Isle*

Lewis-and-Harris, the most northerly isle of the Outer Hebrides, and the largest, is roughly lozenge-shaped. Although only thirty miles in width, it is over sixty miles in length. Attached to Harris parish is the little isle of Berneray, half a dozen miles farther south. It puzzles the stranger that, while the archipelago of the Outer Hebrides is best known to the inhabitants as "The Long Island", Lewis (or the Lews) and Harris, which actually form one island, are spoken of as separate islands.[1] Yet nothing could be more natural. Before the making of

[1] "The Long Island", Gaelic *An Eilean Fada*, as a name for the Outer Hebrides has the sanction of traditional usage, as Alexander Carmichael noted in his Introduction to *Carmina Gadelica* (vol. i, 1900; and 1928).

2. *Plant Life in Lewis-and-Harris*

Lewis has been dismissed by many as a floating peat bog, and its name has even been derived from *leodus*, a bog! For good or ill, peat influences the Island, its history, the distribution of its people and the economic and social features of their life. In Lewis, peat once covered everything except the narrow fringes of sandy machar, the surface of the inland waters, jutting rocks and steeper hills where drainage is rapid. Man's encroachment on that carpet has so far been mere nibbling. Except for the machar lands, every acre of ground occupied or cultivated by man has been reclaimed from peat.

The Map of Vegetation and its Key portray the distribution of the main plant communities (Fig. 8).[1] All plants are of low habit with small leaves, well protected from excessive transpiration. They are mostly perennials or biennials; annuals are comparatively few. There is no burst of flowering save where the heather blooms on better-drained slopes, or where shell sand has blown, enabling clovers, vetches and meadow-sweet to give colour and scent. Moss, sedge and dwarfed heather prevail widely in tussocks.

Constant cropping by sheep and cattle, and also deer, tends to keep vegetation low, but on the wide, boggy moors this is a minor factor. Nor is there much systematic heather-burning. Even upon the islets of inland lochs, untouched by grazing animals, and in spite of better drainage due to the undercutting of the waves, growth is not really luxuriant. Bracken, however, is found on the islets, and a little on some former sheep farms, but not on the heavily grazed common pastures, for cattle keep down bracken.

[1] [see p. 50 -- analyst]

blows away, no doubt because the humus rots and quite fails to bind the sand. These two types together form the true machar.

(c) From the machar rise the slopes of drift-covered rock which bear a top dressing of blown shell fragments, more or less mixed with the soil by treading and cultivation, and imperceptibly giving place to the undiluted 'black soils' of moor and croft with their corresponding vegetation or crops. The shell-sand is often blown onto the rough pastures high above a bay.

Where a portion of the true machar has been cultivated it is allowed to seed itself. A sprinkling of weeds is followed by the re-establishment of a mixed flora. In both the sand and the consolidated sand-covered drift grow wild white clover and vetches; and among the grasses are rye grass (*Lolium*), Yorkshire fog (*Holcus*), cat's-tail (*Phleum*) and meadow grass (*Poa*). Other plants include familiar weeds and wild-flowers like yarrow, cow-parsnip, golden rod (*Solidago*), silverweed, wild carrot, thyme, plantain, sorrel, yellow rattle, harebell, eyebright, pansy and many more. Arrival from the bare brown moorland to the sand-blown slopes or dells is made a pleasure by stream-side flowers like meadow-sweet.

Woods and Cultivation.—In addition to the woods indicated on the map,[1] in Stornoway Castle policies, shelter-belts or plantations occur at certain lodges. Cultivation, as will be explained in the section on crofting, is rarely continuous; and the map shows areas as cultivated which are far from being either continuous crop land or even permanent grass of the first quality. Yet since this map was drawn the improved area has been extended somewhat

[1] [see map on p. 50 -- analyst]

by reclamation, notably at the Macaulay Demonstration Farm on the 'peat moss' of Arnish Moor (south of Stornoway), then too small to be shown, and in South-west Harris where new crofts were laid out in the thirties.

The six main types of vegetation in the Island may be grouped as three. First are the Hill Pastures and Moors: (1) 'Rocky' among the bare hill-tops of Harris and Uig, and (2) 'Fair' on favourable slopes, which merge into (3) 'Marshy Grass Moors' of coarse grass and sedges, heath and rushes. Secondly come (4) the vast brown 'Peat Mosses and Moors', either smooth and wet, with sedge and cotton grass, or channelled and cut up into hags; near the broken edges of the island cliffs this expanse is often fringed by (5) the 'Heather Moor'. Thirdly, by the sandy bays, are (6) the 'Machar lands', *i.e.* the 'Sandy Pastures', rich with clover; though narrow, this coastal plain is all important to stock-rearing and potato-growing, and so to settlement. In traditional terms, these three groups form hill moor, peat moss and sandy shores: *monadh*, *mòine* and *machair*.

(C) CROFTING AND THE CROFTERS' YEAR

1. *Place of Settlement and Choice of Work—Past and Present*

Lewis and 'Harrey', as they were called four centuries ago, were well described by Dean Monro,[1] and his description is fundamental to the present scene. "Harrey is very fertile and fruitful for corne, store and fishing, twice mair of delving is in or of teilling", which appears to mean

[1] Dean Monro, *The Western Islands of Scotland . . . in 1549*, reprinted by A. Mackay, Stirling, 1934.

THE SEASONS

(ch. II)

115 that the spade and foot-plough (*cas chrom*) were used for
311 double the area ploughed. Even in the Mounts and from the
311 precise Statistical Accounts of the eighteenth century, it is
182 clear that pony-drawn ploughs were unknown in most parts of Lewis. In North Harris are 'abundance of Peat'. We must not forget here that 'faire' and fertile are comparative terms for the West. "Lewis is fairer and well inhabit at the coste, are fertile and fruitful countrey, for the maist part betes [battles], with a Pareolse Kirke." There is "are cattell enough, ... ane ... with 3 salt lochs, very fear for take of herrings . . . [and] infinite fresh water lochs. In the Lewis there are 8 lochs with lake of salmont. . . ." There were also "Whales . . ." In "a cove a fadoma deep at the ebb sea, uses Whytuns (whitings) to be taken with huks," there were "very many haddocks and Men with their wandes setting [as today] upon the Craigos of that cove, and Ladds [boys and Women] also. . . ." In this He there are many Sheip for it is very guid for the same. For they lay furth ever one maers were plots of grass and never eaten in a hunst and thif tied in bot anes in the zeire pluckit off them in some fashion." In Zetland wool is still plucked, not shorn.

The description of reclamation is specially worthy of note: "In this country all is peit noualand at the Sea side, and the place where he wins his peitte this zeire [year] . . . there he sawes his corne the nixt zeire, after that he guidds it well with Sea ware" [*i.e.*, improves or manures it with seaweed]. On Tiree Colin Campbell (an oilet apparently on the east coast of Stornoway at the mouth of Loch Erisort) Maclaird of the Lewis has his own barley Orchard, and he that is Gardener hat that Ile [rent] free. . . ."

Around the coast of Lewis no absolute limit is set to

ISLAND, WORK AND PEOPLE

Pt. I

reclamation, which Dean Monro has described as we saw it. Technique and economic return must be balanced against the factors of nature. Although natural conditions are difficult, they may not form a complete explanation of the relative arrest of reclamation in the nineteenth century; for here separation from the agricultural advances of the Lowlands by barriers of mountain and sea caused the retention of unprogressive methods until the wave of agricultural improvement had spent itself by the middle of last century. To this cause must be added other influences contrasted to those leading to peasant advance in the rest of Western Europe. In Zetland's history of the Gardens after 1745, the revolution in land tenure and in the social life of the upper classes, the commercial prosperity and imperial development of Great Britain. All these factors help to explain the contrast offered to the Lews by western Denmark and western Norway, lands in the same latitude and climate are comparable to those of the Island. Yet reclamation is proceeding, as in Aasness and Stryn, Stornoway shopkeepers have also been apportioned their share of blame; and while all of them welcomed the advent of Leverhulme as sure to bring increased trade, their crofters' pockets to their own tills, it is possible that, later on, some of them did grieve Devil's Advocate, having come to fear the rise of competition by co-operative or other large-scale concerns, should the town expand at a rapid rate. Stressing other factors of character and incompatibility, one popular Scots author went so far as to praise the Lewis crofter for preferring a spiritual life with poverty on a croft, to any work for a high wage. Perhaps, if he had run a story, well vouched for, which might seem to confirm this. After Leverhulme had built houses upon "waste for wages", in a township where there had been pressing

159 weighed the estimated expenditure necessary to complete
311 the unfinished projects, and their prospects of success,
311 comparing these with similar conditions on the East Coast
182 and at Fleetwood, and with the trend of prices. His decision was to close the venture, and Harris was sold. The skeletons of the works were left to rot beside the quay, while the wreck of a coal steamer was left unshipped, to break up slowly upon the rocks outside, a symbol of a lost enterprise.

2. An All-Round Policy for Sea and Land

185 From the 'start' in Lewis, the first Lord Leverhulme
311 showed his vision and grasp as a pioneer. Surrey proceeded plan, and decisions were swiftly put into action.
151 Why then had abandonment and failure followed? Ter-
311 Lewis Leverhulme have been over-stressed. Crofters have been accused of stubbornness, the Scottish Office of procrastination and Leverhulme of impatience or obstancy. Stornoway shopkeepers have also been apportioned their share of blame; and while all of them welcomed the advent of Leverhulme as sure to bring increased trade, their crofters' pockets to their own tills, it is possible that, later on, some of them did grieve Devil's Advocate, having come to fear the rise of competition by co-operative or other large-scale concerns, should the town expand at a rapid rate. Stressing other factors of character and incompatibility, one popular Scots author went so far as to praise the Lewis crofter for preferring a spiritual life with poverty on a croft, to any work for a high wage. Perhaps, if he had run a story, well vouched for, which might seem to confirm this. After Leverhulme had built houses upon "waste for wages", in a township where there had been pressing

COMMUNITY FROM PAST TO PRESENT

Pt. II

185 applications for shares in the division of a farm, but where
311 Leverhulme now felt sure of his success, an old crofter
311 spoke up slowly: "My Lord, what the crofter wants is
182 *Cumhalaigh*." Now, familiarity for contemplation is found not only among crofters as they age, but among older fishermen all round the shores of Britain, even if it mellows in the Isles especially. Yet, as Leverhulme saw for himself, there was abundant activity among men in their prime, who had yet to settle down on their return. In 1919 hope, not contemplation, was their prevailing mood: hope for an active, fulfilling life.

Amongst Europe's peasants human factors on the side of common effort at the start, why then did differences of opinion show his vision and grasp as a pioneer. Surrey proceeded plan, and decisions were swiftly put into action. Why then had abandonment and failure followed? Ter-

COMMUNITY FROM PAST TO PRESENT

Pt. II

In 1919, when the men came home to Lewis they could
115 still see matters for hope. "They found a strange proprietor,
311 known first for his outstanding—some said ruthless—
159 business ability, and, only secondly for his philanthropy. They heard his plans and were inclined to listen.
311 Yet, remembering their pre-war losses and the notorious fluctuations of prices and employment in the fisheries, they wished for a policy of insurance, as it were; so, if their home by agriculture and fishing, of which they had long meant to claim a share, they claimed this forthwith. Only
185 too soon after, in the early years of Leverhulme's adventure, they fell in mind and body and spirit, the latter from sheer
151 loss to the keenest and hardest working of the fishermen, and to their financial backers in Stornoway. Those men warned others of the uncertainties of fishing. Now the fall in the fishing industry is not so much as mentioned in the geography of Lewis, yet it made his plans, and word of it in Leverhulme's speeches. One finds no data
311 to show a substantial share in the fishing industry, but
311 the operation with Leverhulme in framing policies either to change the trend of European markets or to make local adaptations to counter the downward trends. The Fishery Reports certainly record the losses, year by year. As for the Island fishermen, they shared that feeling expressed by other Scots fishermen, that the old markets across the North Sea, eastward to what had been St. Petersburg, could and should be reopened, not closed. For party reasons by English politicians. Although ostensibly Leverhulme ignored it, he cannot really have been unaware of the effect of the downward trend of the fishing industry in his own prospects of success, and upon the hopes and confidence of the fishermen. Having been so outspoken upon the shortcomings of Government with regard to local

COMMUNITY FROM PAST TO PRESENT

COMMUNITY FROM PAST TO PRESENT

Pt. II

185 reports of early speeches by Leverhulme, Professor Patrick
311 Geddes had quickly come to feel that his old acquaintance,
473 Leverhulme the industrialist, might have overlooked such
311 agricultural potentialities as existed, and that he had quite
311 overlooked the social significance of land. Reports, in May or June 1919, Geddes proposed that a survey be made by one who knew the Highlands botanically, who was experienced in agriculture, and who had some knowledge of Highlanders at home and of sociological factors. Geddes
123 recommended Dr. M. Hardy for the task. Leverhulme forthwith accepted the suggestion and commissioned Hardy. The survey proceeded, an intelligent and well-fed Scots
311 Examination of the Island, so hotly debated, showed that they possessed little or no initial superiority over neighbouring crofting counties. It was clear that farms were placed in the best coastal tracts for agriculture is true, but their shares are at the same time the poorest in harbours and fishing facilities. As a result, the Lewis dwelling near the farms along parts of the same stretches and smooth bays were "quite a new phenomenon" in Scottish crofting, a fisherman with a house-site and a potato patch. As Hardy wrote (in his MS. Report): "The chief superiority of the Island lies in its distinct advantage in climate and life, and landlord and farmer, sixty or seventy years before. The improved land both of farms and adjacent crofts was reclaimed from peat and moorlands, or from an admixture of both. "How then", asked Hardy, "did so much value come to be attached to the farms? The traditional grievance (of eviction) led neighbouring crofters to turn their eyes towards the green patches of the abandoned villages and towards the good land with special interest. After the Crofters' agitation of the 'eighties, successive Boards came with their eyes already focused on the farms, by the

COMMUNITY FROM PAST TO PRESENT

Pt. II

185 Leverhulme grasped the problem in this fresh way, comple-
311 menting his first policy of the sea for the seamen by one
311 of the land for the landsmen, he could cheerfully have allowed the Government to honour their promise to divide the farms, and thus he would have brought peace to all.
311 In giving up the farms he would surely have had to reconcile himself to additional imports of fresh milk from Easter Ross, at an extra cost of a penny an imperial pint. To do Leverhulme justice, experiments on peat were begun (about 1920) upon a small scale, partly, it is understood, as a result of his interest in the Island, and partly to make this reclamation an integral part of his plans, in refusing to adopt Sunday observance given and to agree to the wishes of many applicants, Leverhulme had a deep-rooted peace to be wrecked. Why he should have stopped work in Lewis in order to move to Harris is not clear. There is nothing to show that crofter-fishermen in the creeks of Lochs and other fishing tracts of Lewis believed less firmly in fishing than those of the Bays of South Harris." Nor was there extensive land for dairying in Harris. To make a sound profit on farms, "intensive", involving fresh expense, at Obbe (on the exposed south-west coast), a much less favourable point on the Island than Stornoway, was to court disaster, not to plan his way through the difficulties of falling markets to success.

Leverhulme, it is true, had made use of the "all-round policy required: the need for a plot of land for the Lewis fishermen and his family. In Hardy's words, "A
311 Thousand souls of the sea should not perish from lack of
311 century knowledge and equipment. Slopes were to be found, favourable to reclamation, where peat had been cleared by cutting, where it was shallow for good drainage, or lighter in texture from admixture with sand. Had

CH. II BETWEEN TWO WARS, AND AFTER

cotters' claims." Thus a few of the settlements reclaimed out of the common peat by some scores of people, hundreds of years ago, long worked by joint tenants, then by subtenants, "and later turned into modern farms, came to be regarded as the only available land open to crofters in the Island."

Hence, Hardy concluded, it was important to tackle some reclamation of peat or of land partially covered by peat, along with the development of the main commercial industry, fishing. The specialisation of commercial fishing was "a most problematical and fundamental departure in a constructive policy framed to deal with the Island as a whole. One saw that the formula "All Lewis-men are fishermen" was an exaggeration. That the farms were placed in the best coastal tracts for agriculture is true, but their shares are at the same time the poorest in harbours and fishing facilities. As a result, the Lewis dwelling near the farms along parts of the same stretches and smooth bays were "quite a new phenomenon" in Scottish crofting, a fisherman with a house-site and a potato patch. As Hardy wrote (in his MS. Report): "The chief superiority of the Island lies in its distinct advantage in climate and life, and landlord and farmer, sixty or seventy years before. The improved land both of farms and adjacent crofts was reclaimed from peat and moorlands, or from an admixture of both. "How then", asked Hardy, "did so much value come to be attached to the farms? The traditional grievance (of eviction) led neighbouring crofters to turn their eyes towards the green patches of the abandoned villages and towards the good land with special interest. After the Crofters' agitation of the 'eighties, successive Boards came with their eyes already focused on the farms, by the

CH. II BETWEEN TWO WARS, AND AFTER

corner he can call his own', a kailyard or garden. His womenfolk might wish to keep poultry, and even a cow. More than this . . . might tend to make the old amphibious life begin over again." Where Hardy went further was to use the need for a complementary policy; the development of crofting into skilled craftsmen. Semi-particularly, he went on, "the development of small-holdings, by those who chose the land for a money or, should not prevent his spending a leisure hour fabing fifim the shore, or in a neighbour's boat, for haddock, saithe, or flounders for the marrow's dinner." Yet the aim of all, need for a higher standard of living involved new emphasis on one chosen occupation, and Leverhulme gives and is agree to the wishes of many applicants, Leverhulme had a deep-rooted peace to be wrecked. Why he should have stopped work in Lewis in order to move to Harris is not clear. There is nothing to show that crofter-fishermen in the creeks of Lochs and other fishing tracts of Lewis believed less firmly in fishing than those of the Bays of South Harris." Nor was there extensive land for dairying in Harris. To make a sound profit on farms, "intensive", involving fresh expense, at Obbe (on the exposed south-west coast), a much less favourable point on the Island than Stornoway, was to court disaster, not to plan his way through the difficulties of falling markets to success.

Leverhulme, it is true, had made use of the "all-
311 Thousand souls of the sea should not perish from lack of
311 century knowledge and equipment. Slopes were to be found, favourable to reclamation, where peat had been cleared by cutting, where it was shallow for good drainage, or lighter in texture from admixture with sand. Had

[1] In his father's biography, the second Viscount suggests that there was a difference of character between the (nineteenth) men of Lewis and the (twentieth) men of Harris. The Lewis men were independent, the Harris men were more inclined to follow. This may be comparable to any similar tracts of Lewis, but in neither were they important.

COMMUNITY FROM PAST TO PRESENT PT. II

present writer) came to the Island in August 1919, and still more by November 1919 when Hardy's Report had been completed. Leverhulme had begun to fight for his plan, rather than use it in a supple way. Yet there was still a chance to put things right had the concept of a balanced community been clearly visualized by Government and people, by working fishers and crofters and the educated. Had an active 'Lewis Association' existed at that time, it might have turned the scales.[1]

Lastly, during the war and after it, Leverhulme had said, again and again, that it was his admiration of the people which had called him to the Lews. By means of this 'all-round' plan, the very root of Island character could have been renewed, namely, communal life. The fusion with their communal life in mind that Hardy—in spite of his horror of bad husbandry and of the physical dirt of the byres and black houses—wrote, first, that "rural life

[1] Quotations from the MS. Report having been published (unpublished) in extenso, I deal with them here. Perhaps the following extract from the conclusion should be made to show to discourage the need for survey and collaboration with Leverhulme in the first three years of his proposed plan, and the importance of survey for action today. In 1919 Mr. W. C. Mackenzie (to whom hospitable remembrance lovers of Lewis owe so much) had published his belief that "Under the new proportionship . . . the results [of development] will be at once fruitful and far-reaching", without the slightest any constructive movement. By 1932 he wrote very differently, criticising Leverhulme's policy and also Hardy's (unofficial) report. At that later time, Mr. Mackenzie would have it that 'the Lewismen' was a crofter and fisherman in one, and that for him to become "mainly a fisherman" or "mainly a crofter" (in Hardy's words) would be false to his character and tradition. Surely, the contrast of opinion between the two men, Hardy and Mackenzie, shows how differently the Lewis and Harris 'Man' of Hebrides have long been rather different from the fisher-crofter of Barvas, or of Coll and Tiree. Specialization was strongly marked by 1919-23. It still is. Further, Hardy (and the present writer) had not pled for complete diversion of the two occupations of sea and land. We urged that crofting be given its chance as well as fishing; and that the two callings should be complementary. Allowance being made for a quarter of a century of change, the facts and the steel remain. Cf. W. C. Mackenzie, 1919 (p. 187) and 1932, for the contentious given.

CH. X BETWEEN TWO WARS, AND AFTER

185 construction of the Island must rest upon the improvement of the land"; and secondly, that by this means "it was imperative to revive the traditional community spirit, the essential feature of Hebridean civilisation". Those words still hold good. Yet the land itself is too barren and the soil too poor to provide a living for many by export of fresh agricultural produce to the mainland. Only a local market could pay a fair price for most of the products of intensive small-holding. Judging from the free, untrammelled trade before 1914, Leverhulme held that fishing could be set upon a commercial basis in the Isles; and there could be the better judges of commercial possibilities than this keen industrial thinker and organiser. If he was right, as surely he was, to begin with, then the local market to be created, or rather enlarged by growth of population and prosperity at Stornoway, could have purchased the fresh milk and eggs, the fresh greens and fruit, raised on enlarged small-holdings and marketed co-operatively.

An final comment remains to be made. The community spirit of Scotia fishers from Berwickshire to Barra has gone 185 with the co-operation among the men of the crews in a living thing. 'Work for Wages' offered little outlet for this, indeed it virtually suppressed it; and 'co-partnership' on the Port Sunlight model was a very different matter from the co-partnership of a crew. Even if at that time it had been proved impossible to organise free co-operation in fishing, co-operation in small-holding township might have kept the communal spirit alive, for later renewal at sea.

It is too early to assess the after-effects of Leverhulme's activity. Leverhulme certainly helped hundreds of families 185 to the provision of wages for the building or rebuilding of roads and other works, of which some were completed

CHAPTER XI

CONCLUSION

ISLAND, REGION AND NATION. REGIONAL SURVEY FOR COMMUNAL SERVICE IN THE NORTH AND WEST

THE AIM of this study has been the survey of a region for the service of its society. Survey is fundamental. As treatment should follow diagnosis, so should decision for action be based on balanced knowledge. Until now this has too seldom been the case. In Scotland particularly our land and resources are as yet imperfectly surveyed; our activities are still too haphazard and chaotic. There is work to be done and many 185 are hands to do it, but they have been kept unemployed; the workless slackened in body and mind, and their spirits failed; and our communities are still without plan and 185 in common. The first five years of peace have seen an increased awakening to integrated planning. Planning knowledge, based by survey and be linked to international order; it must be aimed towards better living and finer purpose. This study is part of a world-wide movement of survey and planning, directed not first to private gain but to common ends. In Western Europe until the war, in the United States and (in a different way) in the warravaged Soviet Union, men and women of good-will have striven to prepare for a 'New Deal', region by region.

CH. XI CONCLUSION

The importance of the 'regional' movement is interregional and indeed international. In the case of the Island, international order is required for its fisheries to recover, and for its weaving to find purchasers abroad as well as at home. This in turn could allow small-holding to find an Island market in its little bough. Stornoway. Without this triple basis of fishing, weaving and crofting for its economy, Island society will break up and its culture 185 will not evolve. It is less true that only by the best utilisation of each regional environment, economy and society as we find them, will profiteers be held in check at home; and powerful peoples cease to exploit the sweat of others.

A pioneer American Report acknowledges the debt of regional survey for the New Deal not only to France and Germany, but to a group of practical idealists, of geographers, biologists and sociologists in Britain.[1] If nationwide planning be proved to succeed and survey assist in planning, we must own, until recently, to humiliating slowness in its execution, and in the mobilisation of regional and social survey. The chief end of planning should be the re-making of society. In Britain it is not always realised that in the great developments of the New Deal the value of concrete schemes which include civil engineering, ...dustrial expansion and agricultural conservation, is accompanied by real cultural achievements, both urban and rural. Not only are geographers and economists, technicians, industrialists, and officials called to survey and plan the Tennessee Valley, but sociologists and nationists are required to complete the work. Not

COMMUNITY FROM PAST TO PRESENT PT. II

only the place but the people are to be understood, respected and helped.

The planning movement is gathering impetus in Britain, as it spreads outwards from bombed towns to countrysides, embracing regions as a whole. It is certainly destruction in war that has stabbed the nation's spirit 'broad Anglia', awake to features of economic and moral disintegration that preceded actual warfare. The realisation that defeat of the common enemy called for common effort round the nation to face its enemies of want and confusion at home. Yet the seeds of the planning movement were sown in peace, and only in peace can they grow to fruition. Planning, prepared for by the survey of each region as a whole, must lead towards the freeing of its people not only from physical want but from the frustration. Based on the provision of work and a livelihood for individuals, planning should envisage the common weal and attempt to realise the deepest craving of social life—equality of social or fostered, and bureaucrats may be provided to enable deserving 185 people to proceed to secondary and university education.

It is felt by far-sighted citizens that these aims should be properly co-ordinated. Development of resources and social life, they feel, should be co-ordinated. The chief end of planning deliberately designed to equip young people to return to the family and use their capacities to serve their own community. Thus among the development schemes which have been mooted are the reclamation of peat, the reclamation of the sandy inlet just north of Stornoway, and local afforestation. All these technical jobs require training, at the levels of engineer and skilled foreman or working hand. Bursaries might take the form of education for such rural tasks. The 'export' of such talent may be necessary when outlet is provided for home, but in the end it can drain away the community's youth. Hence a policy for the return of talent is required. For fishing, for industry and particularly for the weaving arts, training is required in preparation for remote careers at home. Lastly

APPENDIX III

for planning preceded by adequate survey became publicly recognised, this crofter seems to have caused a change to constructive policy on the part of the Trust. It led to the election of a new member of the Trust on a planning platform, and to a general searching of heart and mind in the community.

Meantime the movement for town planning which had spread from the bombed cities to the rest of the country, led to a closer co-ordination of planning aims between the Trust and the Town Council, and to a real hope of progress in collaboration with the County Council as the statutory planning authority.

In brief, the opportunity arose for the Trust to frame a comprehensive policy, one binding together the objects separately listed in the Deed, "to promote the material and social welfare of the community". The 'material' provisions of the Deed allow for the promotion of industry—including fishing, of course—of agriculture and afforestation, and of communications by land, sea and air. Medical service is not forgotten. The disabled citizens in time of war, that forgotten or 185 It is felt by far-sighted citizens that these aims should be properly co-ordinated. Development of resources and social life, they feel, should be co-ordinated. The chief end of planning deliberately designed to equip young people to return to the family and use their capacities to serve their own community. For fishing, for industry and particularly for the weaving arts, training is required in preparation for remote careers at home. Lastly

APPENDIX III

185 for the social arts, education could be won abroad by those who have imbibed at least some part of their native heritage but who cannot easily learn how to make the best of their birthright. At this time, change of outlook must be radical for all, but most of all perhaps for those communities who are in process of changing from one tongue to another, and for whom there is therefore so much to lose, so much—potentially —to keep, and so much to be gained.

In the Island there is a strong feeling that reorientation is required to direct surveys which may enlighten policy and lead to action in consequence. It was as a result of this that the Lewis Association came to be formed.

(a) THE LEWIS ASSOCIATION

In the constitution of the Lewis Association are embodied 'six fundamental principles' which illustrate the feeling quickened among thoughtful citizens in time of war, that first Christian considerations require the guidance of the spiritual. They run as follows: "(1) There is a law of God, to which all men must conform in their social, economic and political relationships. (2) The Resources of this Island should be used as God's gift and for future generations. . . . (3) Every citizen should by 185 subjects discussed, and their relation to issues which had aroused heated public argument and even led to lawsuits. It was thought that conveners of committees might have difficulty in maintaining harmony, but this had not been the case; discussion had been frank and warm, but not overheated. Preparatory discussions, followed by publicity, had done much to arouse the townsfolk, in particular, to questions of planning. The result contributed to greater keenness in the elections to the Trust, and led to new activity in Trust and Council. As a local association such as this is somewhat unusual as yet, is it an early sign, as one would hope, of a widespread movement for survey and service? Their example is being followed elsewhere.

When formed, the personnel of the Association, compared to that of many war-time bodies, was comparatively young; and prominent members found a welcome and a role to fill on their return from the Forces. The Association owes its inception both to men and women, to natives and residents of long standing, and to comparative newcomers. The first Chairman, a minister of the Church of Scotland with experience of local government in a great Lowland county, was the Rev. Ian Carmichael, D.S.O., M.C. The Honorary Secretary, Mr. J. B. Grant, is the editor of the weekly *Stornoway Gazette* in succession to his father. An able journalist, Mr. Grant is reputed throughout Scotland as a writer of plays on themes rooted in national life. To start with, the membership was largely urban, though country schoolmasters and others whose duties lie in the landward townships took an active part. Meetings were then held in villages to enlarge the rural membership and justify the name and aims of the Association, by making it truly "representative of each district in the island of Lewis". In publications are models of their kind.

CONTINUED FROM PRECEDING FICHE

[Re-Structured] [Horizontal] [Lower]

Highlanders and Highlands are collectively known by the Gaelic-speaking people of Scotland as the Gaidhealtachd. Highlanders are distinguished by the regional heating lodge of the Scottish Gaelic Centre, which is a meeting place for Highlanders and Highlands. Highlanders are distinguished by the Highland Games, which are held every year in Glasgow. Highlanders are distinguished by the Highland Dancing Competition, which takes place every year in the Tartan Dancing Competition and then each other every year.

[illegible]

Highlands, also consisting of three crofts, is further situated on the Park and South Lochs road. The three houses are situated on a relatively big open space, half-way between the road and the shore. And the three crofts are so better land and greater accessibility has led to greater prosperity and comfort.

Highlanders are distinguished by their dress, which is a kilt and a tartan plaid, together with a sporran and a sporran.

tenure in vassalage.[12] By the time Skye was placed under the [175A]
sovereignty of Scotland, the old tribal organization had
completely disappeared, and the nation was sharply separated by
a hierarchy which imitated English use. There was, however,
an important difference between the feudalism of Scotland and
England. Although the landed aristocracy was Anglo-Norman,
the Normans had not conquered Scotland. They were unable to
work out the refinements of feudalism, essentially the manorial
system.[13] There was also an important difference in the form
of the two governments. The Scottish king granted his charters
and ruled with the advice of his bishops, earls, and barons,
leaving the Parliament almost devoid of power, while in England
Parliamentary government had been firmly established even the
two nations were placed under a common monarch. Nor had the
Scottish Parliament become any more important when it was
united with the English body in 1707.[14]

It is against the background of this varied history [175B]
that the Scottish culture must be viewed. We may expect to find
features which are reminiscent of the old Celtic tribal organi-
zation, Norse influence, and Scottish feudalism. English [175C]
influence would have appeared too late to be counted as a
factor in the moulding of the culture, and the demand dislike
of the Highlanders for the English, evidenced by their
successive rebellions and their persistent effort to support

[14] Terry, op. cit., p. 37.

the Scottish kings against the demands of the English Parliament, [175D]
would have restricted English influence to a negligible role
until the final Highland uprising was crushed in 1746.

Social and Political Organization

The characteristic unit of the social and political organi- [175E]
zation of the Isle of Skye during the Feudal period of Scottish
history was the clan. All who have theorized about the clan
agree that it was a social, political and economic entity.
There is, however, no single, universally accepted interpre-
tation of the nature of the clan. Unfortunately, interest in
its structure and function is late. Many assertions suffer
from the prejudices and sympathies of the authors toward the
Highlands at the time of the eighteenth century rebellions
or the nineteenth century land clearances. Leaving Scottish
sources, historians turned to the Irish codes of law and
imposed the Irish clan system without asking whether or not
four centuries of Norse domination might have resulted in
at least a partial assimilation of the old Celtic tribal
organization with the Norse political organization. Nor has
allowance always been made for internal development during
the five centuries in which the clan was the dominant
organizational unit. Today historians are almost apologetic
about the Highland clan system. The subject has become the
province of amateur antiquarians.

Anthropologists apparently look upon the clan as a
social unit hardly worthy of comment. As far as I know,

employment as hands on fishing vessels. The young women [175F]
followed these fleets seeking work as gutters and curers in
the ports. Soon may have made their way to Portree, where
a woolen mill had been erected by the Highland Destitution
Committee. The population of Portree increased from [175G]
[illegible] from 750, in 1841, to 893, in 1881, but this can hardly
be regarded as a significant trend.

The really striking aspect of this period is the almost [175H]
complete lack of protest by the Kniathmach against the
infiltration of his presumptive right to the land. The disappearance
of the Kniathmach, of course, had left the people without their
counselors and leaders in secular affairs, and many of the
ministers, especially those who were themselves sheep farmers,
counseled submission to the will of God. Then, too, the ethos
of the Skyeman would not allow them to ventilate their grievances.
Very despised the Sassenach and felt that "the Lowland was
bad enough, but the factor was the Devil himself." Still
those who knew them well and those who rumbled by their cottages
wrote unanimously of a people who endured overwhelming sufferings
in patience and resignation.[69] The betrayal of any weakness,
especially before the cursed Sassenach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to
leadership. Throughout the nineteenth century there had been
widespread and growing discontent all over Europe with the

[70] Norman Macleod, op. cit., p. 136.

wealth, rose above the indigent crofters and cottars. [175I]
These changes had a pronounced effect on the culture and
the population. Economic hardship and evictions prompted
emigration, forced many men and women to seek seasonal work
away from home, and led to a reduction in the marriage rate.
Crofting which had already become part-time agriculture now
was a spare-time pursuit. The Kniathmach was dependent on
money, on the wider economy, for the satisfaction of most
of his needs. The croft was providing no more than a few
potatoes for the table and some oats for the cattle, the
crofter's only export. Still, no landless working force
appeared. Portree had grown and was still growing small,
but there does not seem to have been any carried movement into
the village by the crofters.

While much of what was meaningful to the people was being [175J]
lost, the religious Revival continued. The conservatism of the
Skyeman was not affected by the social upheaval. The
approach of the ministers and the "Men," who were now elders
in the church, and the emotionalism of the large outdoor
meetings functioned to restore the social disequilibrium.
Although the extended family, township, and moieser family
suffered from instability, the people found intellectual roles
within the religious sphere of activity. Their religion was
reinforcing their way of life. The abhorrence of much of the
old culture was accompanied by a strengthening of many traits
which reaffirmed the desirable status values. The culture
found a new focus in congregational religion and was able to
maintain a continuity while the content changed.

[illegible] 450 respectively.[illegible] [illegible]

Within the township, the neighborhood typically has no [illegible]
formal organization and is not necessarily a cooperating, [illegible]
economic, or even social unit. Always, of course, there is the consciousness
of common interest. In the case of Glendale this is spiritually [illegible]
symbolized by the church and economically, by the large club [illegible]
farm in which all the owner-occupiers have a share. In Kilmuir [illegible]
there are two churches, standing close together, and the crofters [illegible]
have a somewhat economic focus in the drained loch which all use [illegible]
in equal shares for seaweed. There is also a crofters' club. [illegible]
Further symbolization of their common interest is provided [illegible]
by traditions, memories of notable happenings and events [illegible]
peculiar to themselves. Always, the consciousness of common [illegible]
interest is expressed by a feeling of superiority over the [illegible]
members of other neighborhoods. [illegible]

There is but one trade-center village on the island, [illegible]
the village of Portree.[71] It is the only true nucleated settle- [illegible]
ment. Built on the square, but still retaining the appearance [illegible]
of an elongated main street, it is a small community with commercial,
cultural dwellings, government offices, churches, shops, a school, [illegible]
and the homes of those who make their living by serving the [illegible]
rural area. In addition to its function of providing goods and [illegible]
services for the surrounding neighborhoods, it also links the [illegible]
island with the outside world. Although thirty-six miles from [illegible]
the mainland, it is the entry port for the government officials, [illegible]

[illegible] Bennett, loc. cit.; and Linton, loc. cit.

[illegible] For a discussion of the importance of the trade-center village, see Lemmin and Beegle, Rural Social Systems, pp. 108-197.

tourists, and newcomers who carry with them ideas of reform. [71]
Further, as well as being mutually dependent economically, the
crofters and the villagers interact formally and informally
to avoid, or minimize, conflict and, more positively, to maintain
the consciousness of common interest of the villagers, however. [72]
stems more from a knowledge that they are different from the [73]
crofters than from any common symbol. The 3000 villagers [74]
are from diverse backgrounds. They find solidarity in being
different and more than in "neighboring" or all attending the
same church. The village also lacks the time depth of the
rural settlements, being a creation of an individual in the
last century.

For community I prefer an inclusive definition: the [75]
order of Redfield's, A community is characterized by con-
ventional understandings, the occupation of a territory, and
the possession of a culture. Thus, we shall refer to the
Isle of Skye as the community.

It will be noted that I have not used the term parish. [76]
Although the parish is a meaningful unit politically and religiously, [77]
the older baronies were replaced, it lost these functions [78]
in 1929.[72] People reside within parishes and they, along with
their crops and stock, are enumerated by parishes, but the
parish is now little more than a statistical convenience. Church
organizations and political administrative units cross-cut
the parishes, but in the entry port for the government officials, [79]
ever-thought of themselves as members of a parish.

[72] Chapple and Coon, Principles of Anthropology, pp. 386-399.

during the "clearances." [73]

Strong in-group feeling is manifested not only in a belief [74]
that people of other neighborhoods are not quite as good some-
how, but also by the tendency to address strangers as "Mister."
There is, for example, a family of newcomers in Kilmuir. One
day when they were being discussed one old crofter remarked,
"Well, when they have been here as long as Jock over there,
they will be just like one of us." It turned out that Jock's
family had come to Kilmuir three generations ago. Even then
one was reminded of the story of the Yorkshire man who moved
from one village to another. He persisted in calling every-
body a foreigner, and when asked why, he replied, "I've lived
here sixty years, and they still call me a foreigner." The
newcomer to Skye is common only by his nationality. The few
Polish war refugees are "the Poles." The man from England is
"the Englishman" or, in Gaelic, Bassanach, a term also applied
to Lowlanders. They have no real place in the scheme of things.

Within the neighborhood, there are invariably established [75]
social circles which are almost always in pairs, some three in [76]
the eldest barones were replaced, it lost these functions [77]
in 1929.[72] People reside within parishes and they, along with [78]
their crops and stock, are enumerated by parishes, but the [79]
parish is now little more than a statistical convenience. Church
organizations and political administrative units cross-cut
the parishes, but in the entry port for the government officials,
ever-thought of themselves as members of a parish.

[72] Chapple and Coon, Principles of Anthropology, pp. 386-399.

duty of a wife was to weave her winding sheet. Nor is the cost [74]
of burial merely buying a coffin. As at birth and marriage, [75]
the people who attend a funeral must have their dram. Just as [76]
they do not want nakedness to begin life, they do not want to
be buried with public assistance. They hoard their money, even
if it is only a few pounds, to assure thousands of a decent
burial. Another thing that disturbs the welfare officers is [77]
the determination of the old and infirm to remain on their [78]
croft in spite of all efforts to move them to a "Twilight
Home." Some of these people may have returned to Skye for
no other reason than the feeling, "If I could get back to Skye
to die it would be fine." I know many people who had come to
America as young adults and "liked it fine." Why did they
return? The answer is always the same, "I was drifting, you
know, and began to think of home." This, of course, is another
expression of the sentimental attachment for the land and its
identity with one's "people."

Paradoxically, for a people who are so aware of death [79]
and look upon it so significantly, the churches, one and all, [80]
have refused to consecrate burial. There [illegible] prayers for [81]
the dead. There is no service for the dying [illegible] the grave
as the body is lowered into the soil. The ritual which accompanies
this final act of living is better described as a rite of
intensification rather than as a passage rite, to adopt the
terminology of Chapple and Coon.[73]

[73] Chapple and Coon, Principles of Anthropology, pp. 386-399.

Religion has done more to keep the Gaelic language [75]
alive than any of the numerous outside agencies dedicated [76]
to the preservation of the language, such as the Common [77]
Guidebaidh, a national organization which sponsors a series
of local, regional, and national programs in an attempt to
maintain and stimulate an interest in the Highlands and their
songs and stories. Except in Portree and at Dunvegan, church [78]
services are mostly conducted in Gaelic. The newcomer who [79]
wishes to attend church services in the crofting areas, and
he had better, must either learn Gaelic or be content with
the few words the minister may speak in English for his
benefit if the minister is aware of the presence of someone
who does not "have the Gaelic." Some might feel that this
is rude since most Sayeann are bi-lingual, but the crofter
seems to think quicker in his own tongue. Many crofters' [80]
children learn English only when they begin to attend school
or pick it up from an older sibling who is going to school.
Family relations are almost always in Gaelic, unless there is [81]
a visitor. We have already seen that the family relationship
at the time of death is in Gaelic or in Gaelic and English.
Again we have a parallel with Wales, in that Welsh has been
mainly preserved through religion.[74]

[74] Regarding the Gaelic language of their religion has [81]
however, had its several problems. It has contributed to the [77]
solidarity on occasion. There are many isolated townships
beyond the reach of a minister. In one of these such

[74] Ibid., p. 129

COMMUNITY FROM PAST TO PRESENT PT. II

175 as some Indian pedlar one meets on the road may seem
433 now. An older packman's tale of his long tramps, of the
374 people's poverty and hospitality, must have resembled
413 the mingled plaints and praise one hears from an Indian
191 pedlar today! But in the past only a speaker of Gaelic
197 could find his way among the people. Almost until 1900,
if not still later, Gaelic speech was to prove a social bond,
but ignorance of English speech an economic barrier.

The transition to increased exchange, with migration,
175 permanent and temporary, tended to make for specialisa-
433 tion. About 1795, *Statistical Accounts* enumerated, for
413 every hundred families, two or three smiths, wrights (or
178 carpenters), a shipwright or some boat-makers, a few
weavers, tailors, and perhaps a miller. Each of these held
some corn land, individually or in shares, with rights on
the common. The line between plain crofters (to use a
later term) and crofter-craftsmen was not easily drawn, and
different writers wrote as they judged best. In Lochs,
80 per cent were fishers and net-makers. On the open
shores of the west, in Barvas parish (in which three-fourths
of the men were also 'fishers'), kelp-making was a seasonal
(429) occupation. In Stornoway parish, where sub-tenants paid
30s. to 60s. in rent, with twelve days' service, they sold ling
to their tackesman at 5d. each, earned £1 a month on herring
boats, made kelp at 30s. per ton, and roads at 8d. a day.

175 In Harris in 1795 the eight 'bred' (or trained male)
283 weavers worked only for 'the gentry': the laird, the
462 tackesman and their families. The rest of the weaving
was done by the women, giving a ratio of only one male
weaver to fifty-five families. But in Lewis male weavers
were commoner—one to every twenty to thirty families
was the ratio—as if the practice of home weaving by the
women was less universal there, even at that date.

367

Religion has done more to keep the Gaelic language 771
alive than any of the numerous outside agencies dedicated 191
to the preservation of the language, such as An Comunn 771
Gaidhealach, a national organisation which sponsors a series 121
of local, regional, and national programs in an attempt to
maintain and stimulate an interest in the Highlands and their
songs and stories. Except in Portree and at Dunvegan, church 191
services are mostly conducted in Gaelic. The newcomer who 794
wishes to attend church services in the crofting areas, and
he had better, must either learn Gaelic or be content with
the few words the minister may speak in English for his
benefit if the minister is aware of the presence of someone
who does not "have the Gaelic." Some might feel that this
is rude since most Skyemen are bi-lingual, but the crofter
seems to think quicker in his own tongue. Many crofters' 191
children learn English only when they begin to attend school
or pick it up from an older sibling who is going to school.
Family worship is almost always in Gaelic, unless there is 782
a visitor. We have already seen that the family worship
at the time of death is in Gaelic or in Gaelic and English.
Again we have a parallel with Wales, in that Welsh has been
mainly preserved through religion.[19]

Making Gaelic the language of their religion has, 191
however, led to several problems. It has weakened township 771
solidarity on occasion. There are many isolated townships 121
beyond the reach of a minister. In one of these remote

[19] Ibid., p. 129

368

191 ● sions a family, newcomers to Skye, prevailed on the local
771 school teacher to hold a Sabbath school for the children.
121 The local missionary objected. If they were going to have
Sabbath school, it should be in Gaelic. His prestige and
control over the population secured his position. The
children of the people who originated and organized the
program were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191
use of Gaelic as the language of religion is the difficulty 715
of securing a minister. Traditionally, it was an ideal to 103
send a son to study for the ministry. This ideal remains, 370
but in the last few years only one young man from Skye
has shown a desire to become a minister. Indeed, the
majority of ministers on Skye are not Skyemen. I believe
the only minister who serves his own neighborhood, the
neighborhood in which he was born and raised, is the Free
Presbyterian minister in Glendale. It is becoming more
and more difficult to fill charges as they go vacant.
Each year several Highland charges are changed from "Gaelic
essential" to "Gaelic preferred." If we go beyond the role 121
of religion as it orders human relationships, through its 771
more formal aspects, and consider the influence of religion 178
on the secular behavior of the Gràidhannaoh, we can come
closer to an understanding of why the youth are slowly
turning away. At the same time we shall be able to round
out our picture of the expression given to the Presbyterian
ethic on Skye.

377

sanctioned the qualities which had given the people their 178
characteristic strength of character. 182
771
The churches of Skye made conservatism an official 777
policy in 1843, and in 1892 reaffirmed this policy. For well
over 100 years religion has had a strength and vitality which
has enabled the Skyeman to pass through times of extreme
distress, not to mention chronic economic deficiencies. Among 182
the most important religious sanctions are those which reinforce 771
the status values of the culture. The father's status in the 595
nuclear family was reaffirmed at a time when his socio-economic
importance was declining. He has been held responsible for
the spiritual welfare of his wife and children. The prestige 182
of the old men, the family-based elders, and their control over 559
the neighborhood group was similarly bolstered by making them 777
the judges of a man's spiritual enlightenment. 191
Spiritual
enlightenment is weighed on a scale which will not balance
unless a person's religious knowledge is matched by conformity
to the ways the old men think a man should behave. Again we 182
are not dealing with a completely negative attitude. In the 771
place of frivolous amusements, religion has offered highly 149
emotional, spiritual patterns of behavior. Religion has pre- (149) ●
served the Gaelic language by using it in formal worship and
within the home for family worship. In these and other ways
religion has indeed enabled the culture to achieve a reorien-
tation and maintain its continuity.

How similar Skye is to the Old Order Amish in this respect,[3]

[3] Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania.

Chapter 2

HISTORY OF THE CROFTING TOWNSHIP

A. "Crofting"

241 The word "croft," meaning an enclosed field, comes
429 from Old English. In 1363, a rental of the bishopric
175 of Moray mentions the lease of two crofts (Grant 1930:
● 192 272). Walker (1812: 51) refers to "cottars or crofters"
as subtenants of Highland farms. The word croft appears
in Gibbon's historical novel, A Scots Quair, and is still
in common use around Aberdeenshire. In the Hebrides,
a number of Gaelic words are used to refer to units of
land (e.g., faich, feorann, fiadhairn, and riannaq),
but the word for "croft" remains in Gaelic vocabulary
as a foreign word, slightly Gaelicized as croit or lot
(from "allotment").

(522) A cynical definition of a croft, given by some
academicians and administrators concerned with crofting,
and supposedly first proposed by the son of a crofter,
is "a piece of land entirely surrounded by legislation."
241 Crofting, as a particular method of land use, was
429 introduced by "progressive" landlords in the mid-18th
175
(476)

132

469 on the island she had spoken English in school and had
197 not given much thought to which language she was speaking.
186 "I suppose it was because the other girls couldn't under-
571 stand us. They always used to mimic us, making noises
like they were talking it. It was nice to be able to
talk about things and not have anyone else understand,
especially when they teased us so much."

197 But on the island itself, the number of persons
178 speaking Gaelic is declining; and the scope of the language,
● 192 i.e., the range of situations to which it applies (as
reflected in the diversity of vocabulary used), is becoming
(196) more restricted. A psychological experiment in which the
(191) semantic differential was used to study the organisation
of English and Gaelic vocabulary in the cognitive processes
of Gaelic speakers suggests that Gaelic speakers are not
bilingual but monolingual in particular situations (Macleod
197 1966). Gaelic is the language of hearth, home, family and
191 community. English is the language of education, the
business world, and various transactions with the larger
197 society. Most Gaelic speakers spoke only Gaelic when they
191 entered school, but were required to speak only English in
the classroom. One islander recalls, "The first English
(196) words you learned were 'Sit' and 'Stand.' Those were the
ones you got strapped if you spoke any Gaelic." Children
000 were addressed by their full English names. One of the

ENVIRONMENT AND LANDSCAPE

121 From prehistory to the present day, these geographic
178 zones have played their parts as factors in evolution,
although the border-lines have changed at different historic
174 crises, and have been modified by economic and social
182 phase. At times the Hebrides have been more closely
184 linked to Ulster or to Norway than to Central Scotland.
In viewing these zones, we shall not find simultaneity in
historic events, but comparability in stage and transition,
even at differing periods. From the evolutionary point of
view, the revealing character of Island life lies not only in
static survivals, in what Sir Arthur Mitchell found in the
Isles and vividly described as "the Past in the Present",
Island life is characterised still more by the dynamic
strength of its continuity—notably of early primitive
Christianity—and also by the late occurrence of changes
when, at last, they came.

18 The social consequences of these regional differences
62 in evolution are profound. In the 'Plain', to the south-
174 east of the Severn-Tees line, large village communities
with 'common fields' prevailed, forming the later manor
178 villages. To the north and west, the more varied, hilly
182 lands encouraged the continuance of hamlets. These
● 192 hamlets housed close-knit groups of families, often of no
more than four or five to a dozen relations or 'friends'—
—in Scots even today (much as in Gaelic) the word
'friend' frequently implies kinship. Each small group
462 formed a team. Together the men ploughed their mingled
476 rigs (or ridges) and herded their stock in common, and
on the coast they rowed their boat as its crew. The
241 women, too, did much together, as when they spun their
429 yarn, and fulled or 'waulked' the cloth that one of them
268 had woven, helping by turn in childbirth and child-care.
475 Usually several of these teams were linked in a larger

175 545 622 words are used for neighbourly help among crofters and
175 587 for services to the chief.[1]

Full freedom of choice in marriage prevailed among the people, who honoured marriage and enjoined continence; but the position of the chief placed him apart from the rest of the community. Now, the more equalitarian the community, the more free are a couple to choose one another on grounds of mutual affection, passion and respect; the parents, too, are more likely to encourage or support a suitor for their child because of character and virility, rather than means.

The lads of the clan, chief and people, grew up together in an isle or glen. But in manhood, while a labouring lad sought a wife from the girl playmates of his childhood and
175 545 582 his fellow-workers at the peats, at the harvest, or in the shielings, a chief's choice was confined to his own clan. In pre-feudal clanship, tanistry, *i.e.* the choice of a chief among the higher kin, gave a wider choice for marriage near home than feudal primogeniture, irrespective of the wishes of the chief's kin except in extreme cases of unfitness. In Scotland, tanistry prevailed even in the royal line until the eleventh century. But with the dominance of primogeniture, the young chief chose a bride outside his own community for reasons other than those of human feeling, honoured by Gaelic lyrical and religious tradition and even by the Church.

As a result, the chieftain's son was granted a licence forbidden to the rest, a temptation to maidens and a bad

[1] *Ceiel* (cognate with *geale*) means a portion, lot or share, or what is one's own (*e.f.*, *gen. ceileach*); and the associated verb (*ceileth*) means not simply to share but entirely to help. The expression *ceileth* by lodging given to the chief and his 'tail' of 'lads' was the 'ceileachy'—*ceil-eilibh*; while the famous motto of the Seaforth Highlanders is *Help the King!—Ceileih an Righ!*

788 241 facing the sun, he cut a handful of corn. Putting the
[175] [178] handful three times round his head, the man raised the '*Iollach Buana*', reaping salutation,—and the whole family then took up the strain.[1] While these notes by Carmichael describe the custom after the abolition of the farm-team, he also tells of "all the people of the Townland going together to reap" (*Carmina*, No. 89, cf. Note to No. 90). In the days of close partnership this was no doubt a team blessing, said by the chief reaper among his neighbours in mutual aid.

780 261 [114] Grace before meals survives in Presbyterian households; and ancient graces are recorded in *Carmina*, vol. iii. The unpublished examples given here are from Miss Annie Johnston (or Niclain), Barra, to whose knowledge Gaelic lore owes so much :—

1. O God, bless our portion, and our people.
2. O God, be about the beginning of our life (or food) and about the end of our life (*lit.* of our world).
3. O God, let nothing enter our bodies that may harm our souls.

A Dhia, beannaich ar cuid 'us ar cuideachd.
A Dhia, le mo dhia ar bith (or bidhe)
'us mu dhéireadh ar saoghail.
A Dhia, na leig dod 'n ar cohsion a ni lochd do'r n'anam.[1]

[1] 'The reader will note the meaning in translation : but he should also scan the Gaelic, and the assonance of the vowels. In the lyric and abstract lines the Gaelic play upon sound and meaning : *ar cuid 'us cuideachd*—" our share of things and our (share of) people, friends and family ". In the second line Miss Johnston thinks there may be a play upon the words 'lith' and 'fuad' (of which the sound is almost the same), reminding one that food is the means of life and of all that life means. In the third the opposition of ideas is characteristically emphasized in the pattern of the assonant vowels : the words '*dod 'n ar cohsion a ni lochd do'r n-anam* ', here again the form, by means of which it could change, the sense the heart, made in native again. Contrast with these the translation into Gaelic of a common English Grace, as it is in the English original, its prose lacks poetic form : *Tha sonn a mart tuing dhuit, d' Thigerna, airson nan tiodhlacanan a tha Do nabachd a' bailtachadh sinn, trueich Fear Crionda ar Tighearna.* Amen.

172 178 314 [174] 175 814 [217] of the isles, and in which the people met, though far from any clergy. On the southern mainland most trace of shrines and chapels seems to have been lost, so small are the rings of unhewn stone that marked their sites. Little was recorded by salaried clergy about the services conducted there ; those who approved tended to let well alone. Hence written accounts have come down chiefly from those who were out of touch with rural needs or ignorant of the language spoken in intimacy, and whose alien training had removed them from sympathy.[1] As for those whose private interests, stipend or subservience to patrons bound them to prelate, lord or king, they roundly condemned free congregations.

175 814 [184] Nevertheless, fragmentary records have come down, such as those of Martin, who visited St. Kilda in 1697 and described the little church where the people still kept a fine brass crucifix and worshipped together, without the presence of a clergyman. Naturally, the curiosity stimulated by Kilda's fabulous isolation led Martin to describe its little community more fully than any other ; but he mentions similar worship elsewhere. Thus in lonely
[183] North Rona, inhabited by only five families, Martin had

[1] 'The difficulty of imitation to intimate usage of language is exemplified in a clearly and patriotic work, the *Dictionary of the Gaelic Language* (Gaelic—Gaelic, and English-Gaelic) by Malcolm Macleman, D.D., 1925. This standard work incorporates all the words of three previous dictionaries, with some additions.[2] Yet how words of the people's religious heritage, of immemorial age, of living usage, and recorded a generation or so before in the collections cited here, are either absent, or are given the more remote or debased of two shades of meaning (not the higher). See " calm, a case, shaath " or *shetse* : " *sionagaun*, a beginning " (*a definition*) : *sorra, Hell* or *sulkanion*. " *ora, orra*, or *orbe*, a charm . . . *amulet* . . . or *talisman* of any kind . . . *Ora* is the word used in the version—from Latin, *orbis* " (*orbe* proper in 'Irish' *ordyl*) : and other vital words. According to a job analysis of the entire dictionary, the total of the meanings in Gaelic of Gaelic religious tradition, Carmichael's *Orthe son Guidhael* (Latin, *Carmina Gadelica*), is to be 'a unfamed, not *Prayers*, but " *Charms* . . . or Impetrators . . . of the Gael ".

869 538 867 869 . . . of whole-souled loveliness . . . of winning speech." Then, after the tender image of the brown swan and farewell on departure to a new home, comes a string of exquisite comparisons : to shade and shelter in need, to safety of isle and strength of fortress, to gift of health for the ailing. Each grace, each image, expresses not simply individual qualities but relationships and service for others. After eight choice lines in praise of the girl's womanly gifts—from "Thine is the faith of Mary", through chosen attributes of Bride, the Fairy Woman, Penelope, Emir, Darthula and Maeve, to "the charm of the sweet singer (*Bónne-Mewl*)"—the poem, in Gaelic that is sonorous and succinct, passes beyond the realm of comparison with things or even personal qualities. It acclaims her joyous girlhood as one with the powers of life-giving, life-abundant things, and as a reflection of the Divine :

Thou'rt the joy in every delight,
Thou the mirror of Bride's radiant light ;
Thou't the gate of a welcoming chief,
Thou the clearest star to lead ;
Thou'rt the step of the deer on a height,
Thou the pace of a steed ere the fight ;
Thou'rt the calm of a gliding swan ;
of longings thou'rt the loveliness.

The lovely likeness of the Lord
Is in thy pure face,
The loveliest form
Was ere on earth.[1]

[1] Poetic form is integral to the conception ; hence this translation in verse. But alternatives to Carmichael's choice of English prose may complement his own, in bringing out the meaning. Line 1, '*joy*', *mean*—and a delightful or a delight—is a better word than '*gem*' or '*ornament*' in line 1 : *dá*, guidance, land-mark, way : l. 6, *steed*, steed, would imply, in *blár*, 'a field' of battle, and, by contrast, l. 7, *steak ad*, calm (rather than 'peace') of a floating, swimming swan ; l. 8, *ros*, secret incitation, longing, and hence too, a person beloved ; ll. 9, 11, *crush*, force, shapeliness (and by implication),

538 867 869 And so, after every good wish for days, years and life, the Invocation closes : "Peter has come and Paul" . . . the Disciples and the Archangels. . . . Jesus the mild and the Spirit of guidance have come.

And the King of kings has come on the helm,
To bestow on thee their affection and their love,
A bhuineadh duit-se gráidh sa ruin.

The ideal of choice maidenliness which this Invocation portrays, culminates in the thought of the beauty of that was Christ. It rises, too, to stirring virility : "the island
867 [539] at sea, the fortress on land ", or " the step of the steed on the plain ". Yet when all is said, it is a womanly image which prevails : after the fortress comes the well in the desert, and after the charger's step, the gracious calm of a floating swan. It is all the more significant that the Invocation was addressed both " to boys and girls ' in one tale, and ' to youths and maidens ' in another. Not simply was boyhood taught to honour girlhood : ideal womanhood was invoked to raise manhood itself to fullness.

885 [212] 585 [539] Upon marriage, the husband replaced the maiden's mood of grace that had her concerned hair by the widely kerchief, *am breid*. Folded diagonally, its three-cornered shape came to symbolise the Trinity, in benediction on the bride's head.[1] A poem to a bride, now forgotten, was
[538] [192] 142 [192] sung in her honour. The short second stanza gives small note of the poem, having attained in climax by a rhythm sustaining the upward, successive movement, is hushed by its few simple words. In *From the Hebrides*, Mrs. Kennedy-Fraser rearranged one or two of these lovely stanzas, as one of her lyrics with refrain. Cf. A. Gaskin, *The Songs of Craig and Ben*, 1931, 192.

[1] The kerch is spoken of in many songs, in which a lover hopes to place it on his bride's head. In Barra, it was a husband who placed the kerchief on his wife. When first I knew the Lews, the kerch was still commonly worn under the more recent head-dress, and either fastened round a young face, or as a floating, swimming swan ; l. 8, *ros*, secret incitation, longing, and hence too, a person beloved ; ll. 9, 11, *crush*, force, shapeliness (and by implication), of old sea, charmingly. The two have not quite vanished, though memories of what the kerch once symbolized are hard to find.

[172] [142] 142 142 142

64 on the island she had spoken English in school and had
197 not given much thought to which language she was speaking.
86 "I suppose it was because the other girls couldn't under-
71 stand us. They always used to mimic us, making noises
like they were talking it. It was nice to be able to
talk about things and not have anyone else understand,
especially when they teased us so much."

But on the island itself, the number of persons
197 speaking Gaelic is declining; and the scope of the language,
178 [92] i.e., the range of situations to which it applies (as
reflected in the diversity of vocabulary used), is becoming
more restricted. A psychological experiment in which the
[196] [191] semantic differential was used to study the organization
of English and Gaelic vocabulary in the cognitive processes
of Gaelic speakers suggests that Gaelic speakers are not
bilingual but monolingual in particular situations (Macleod
197 1966). Gaelic is the language of hearth, home, family and
191 community. English is the language of education, the
business world, and various transactions with the larger
197 society. Most Gaelic speakers spoke only Gaelic when they
871 entered school, but were required to speak only English in
191 the classroom. One islander recalls, "The first English
[876] words you learned were 'Sit' and 'Stand.' Those were the
days you got strapped if you spoke any Gaelic." Children
were addressed by their full English names. One of the

197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 554 status. If an English speaker mispronounces Gaelic words,
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased mercilessly.
[551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with
each other in speaking English. "See how good you are in

197 English, no Gaelic allowed. I can beat you any time.
191 One person observed, "People here make fun of each o
554 all the time. They're always trying to be superior,
626 get one over the other person. Speaking English giv
578 you a feeling of superiority."
[524]

If a Gaelic speaker chooses to speak English in
village situation where there are no officials prese
other cues which make English-speaking appropriate,
indicates that he considers himself a cut above ever
else. "I went to help Calum pull his tractor out of
mud, and Malina was there with her husband. She was
speaking English. Oh, I says to myself, lady, you'r
for this place. You don't belong to this village."

In evaluating whether or not a particular woman
"snobbish," villagers may decide, "She must be; whe
I've seen her in the post office, she never speaks a
Gaelic."

The sanctions against speaking English when all
197 persons present speak Gaelic indicate the effect of
191 554 action between a socially marginal group and the dom
571 group. The effect is to increase the emphasis on un
184 behavior within the marginal group. The existence o
578 higher social stratum has diminished social differen
within the village setting. Individuals may move ou
that setting and adopt the language and other forms

behavior characteristic of the dominant group; but for those that remain in the village, the language serves a unifying function, although its form is limited in diversity of elements.

Jokes are most humorous when told in Gaelic; and conversation is punctuated with Gaelic proverbs and old stories. There is a vast oral lore, expressed in Gaelic, of the village and generations of its members and their characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories. Thousands of place names are known, and behind every place name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by contrast with the dominant society.

emphasis is laid on evangelical preaching. The Free Church claims 'the free exercise of all its spiritual functions, while it fully admits the State authority in purely temporal concerns'.

THE GAELIC LANGUAGE

Closely tied in with the background of the island folk is the Gaelic language. For many years this has been dying, yet it is still vigorous enough to make a significant contribution to the mental make-up of the people. It is a living language in that it is used for personal communication, though English is often and universally resorted to when the talk turns to technical subjects. As the Gaelic language stands today, by itself it is agreed by most Gaelic speakers to be a barrier to economic progress. The Gaelic-speaking child who also knows English, however, is found to be at no significant disadvantage over the monoglot; indeed, tests have shown, particularly in other multilingual countries, that the bilingual child tends to assimilate knowledge at a greater rate and to a greater depth. Two decades ago a pamphlet issued by the Scottish Council for Research in Education showed that while there were no 'statistically significant' differences between the four areas into which they divided Scotland, the Highlands and Islands came out best in a study of the average level of intelligence :

	Mean	*Standard deviation*
The four Scottish cities	100·86	15·29
The industrial belt	99·19	16·18
The rural areas	100·92	14·52
The Highlands and Islands	101·79	13·13

The pamphlet comments: 'It is interesting that the mean of the most remote and isolated districts is the highest, and the standard of deviation the lowest.'

The Hebrides are now the only area in Scotland where the language, once Scotland's national language, is spoken by a Gaelic-characterised community. On average 95 per cent of the inhabitants of all the island districts are Gaelic-speaking; even in the town of Stornoway, never regarded as wholly Gaelic-speak-

2. The Exiles: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are maintained. It is said that gossip about Shawbost travels more quickly in the district called Partick Hill in Glasgow than it does within Shawbost itself. It may be argued that the "exiles," with their Lewis and Harris Societies and pilgrimages back to the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the Eminent Person writing his inevitable book in the romantic solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

Within the village, especially during the long, dark winter, complaints are often heard of the "sameness" of things. A common phrase, almost a greeting, is, "Anything fresh?"—implying that the usual mode of existence is stale, sour, exhausted, and mucky with overuse. Although the villagers have access to the range of information available to all Britishers through forms of mass media such as newspapers, radios and television sets, very little of this information is considered relevant to village life, and thus is not attended to.

good to say about him." Death is one of the two occasions for 763
an extended family gathering. Indeed, a man's prestige is best 829
seen at his funeral. Without exaggeration, death is the most 584 584
significant event of living. It is constantly visualized and
discussed. "Second Sight," the ability to foresee future 763
events, is mainly concerned with the death of one's "people"
and friends. Since the ministers have been striving to wipe
out this belief, it is difficult to get the people to talk
about it, except in retrospect. Still most of the people,
including many of the newcomers, and not a few of the ministers,
continue to believe that some old people,—they are always
old men and women,—are afflicted with this power. There
was an old man in one township who would not go out at dusk
for fear of seeing a funeral, and there was an old woman who
foretold her daughter's death. Lights seen in strange places
also tell of death. Even the sophisticated Sgiathanach who
has been born and raised in Portree sometimes forgets himself.
A current story on the island tells of a "ghost bus." The
headlights suddenly appear behind a driver on the Sligihan
road. For the newcomers this is a fanciful tale, but for
several of the natives it has a meaning, death.

All plans are prefixed with the phrase "if spared." 763
"If spared, we'll shear the sheep on Thursday." "If spared, 195 ●
I'll go down to see my brother soon." Many of the newcomers
are made to feel very uneasy by this habit, which is as much
a form of speech as greeting people with, "It's wet," or,
"It's cold." When a Sgiathanach asks to have something done

or inquires about a person's plans, he says, "You'll do it 763
tomorrow, then, if spared." 195 ●

Occasionally, a man's prestige status can be judged by 764
the foretaste the people have of his funeral. This, too, is 584
disturbing for the newcomers who prefer to face death when
the time comes. There is one member of the county people who
is extremely popular. Many speak of him as a "true Skyeman."
One day he was being discussed by a small group of women.
After talking about his interest in Skye and what a good man
he was, one summed up their estimation by saying, "Aye, what
a wonderful funeral he'll have." What higher compliment could
there be? The number who attend a person's funeral and,
recently, the number who drive to his funeral are indicative
of his status. Even though having a car does not give the 893
owner prestige - to the contrary it may give the people cause
to wonder where he got his money - to have "friends" with cars
does give prestige. When 200 or 300 men join in the funeral
procession to carry the body to the grave, all the "people"
of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life 764
which puzzles the newcomer, especially the government officials, 454
more than anything else. The old people hoard their money.
Welfare workers frequently say, "You never know how much they
have until they die." There are a few crofters, mainly returned
exiles, who are known to have money but continue to live in
tumbled down houses. The newcomer says, "They must like to
live that way." Quite to the contrary, the Sgiathanach has 741
traditionally prepared for death early in life. Once the first

196

196 SEMANTICS--general problems of meaning and linguistic symbolism; semantics of morphological and lexical elements; affectual connotation (e.g., tone of voice, rapidity of delivery); multiple contextual definitions of words and phrases; semantic drift; etc.

000 "natural neighborhoods" in crofting areas). The
363 northernmost street of North Shawbost is called Carnan
103 (carn = a heap of stones), and the street parallel to
it, by the loch and the sea, is Baile Stigh ("the town
within," i.e., in toward the sea. In everyday speech,
● 196 one goes "in" to the sea and "out" to the moor, a
reference which probably derives from the days when
fishing was extremely important. The sea was then the
focus, from which the village expanded "outward." Today
the road is the source of goods and transport). Part of
the Baile Stigh is sometimes called Gearraidh Buidhe
(buidhe means "yellow"; gearraidh is the land from which
peat has been stripped). The Baile Stigh intersects
the main road and continues toward the moor, where it
becomes New Shawbost. New Shawbost, once called New North
Shawbost, is also called Pairc, referring to a farm which
existed there before the land was turned into crofts.

632 The neighborhood regions of South Shawbost are less easily
363 recognizable as the land is not divided into linear
103 streets. To the people of North Shawbost, South Shawbost
is simply Baile Thall, "the town over yonder." (Residents
of South Shawbost also refer to North Shawbost as Baile
Thall, but also frequently refer to the different streets.)
Within South Shawbost, several neighborhoods are
distinguished on the basis of the clustering of houses,

464 on the island she had spoken English in school and had
197 not given much thought to which language she was speaking.
186 "I suppose it was because the other girls couldn't under-
571 stand us. They always used to mimic us, making noises
like they were talking it. It was nice to be able to
talk about things and not have anyone else understand,
especially when they teased us so much."

197 But on the island itself, the number of persons
178 speaking Gaelic is declining; and the scope of the language,
192 i.e., the range of situations to which it applies (as
reflected in the diversity of vocabulary used), is becoming
● 196 more restricted. A psychological experiment in which the
191 semantic differential was used to study the organization
of English and Gaelic vocabulary in the cognitive processes
of Gaelic speakers suggests that Gaelic speakers are not
bilingual but monolingual in particular situations (Macleod
197 1966). Gaelic is the language of hearth, home, family and
191 community. English is the language of education, the
business world, and various transactions with the larger
197 society. Most Gaelic speakers spoke only Gaelic when they
871 entered school, but were required to speak only English in
191 the classroom. One islander recalls, "The first English
876 words you learned were 'Sit' and 'Stand.' Those were the
days you got strapped if you spoke any Gaelic." Children
000 were addressed by their full English names. One of the

121 individuals; rather, causal primacy in human action is given to the sociocultural environment, which determines what choices are available to be made and what behavior is valued. Because the exercise of choice is a human universal, i.e., a constant, it cannot be used to explain variation (cf. Barth 1966).

Actors within a community which is marginal to a larger industrial society make choices within an environment characterized by constraints and incentives which derive from both the local sociocultural system and the larger system. The state of boundedness of the local system is maintained or modified as a result of the strategies adopted by its members. I have suggested that the Scottish crofting township persists as a relatively strongly bounded system not because it is inherently static, isolated, or resistive of change, but because of the constraints and incentives stemming from the larger society. For example, the [657] British government has provided various incentives to • [197] encourage the persistence of crofting and township [554] communalism; and to a certain extent, Gaelic speech or English spoken with a "Hielan'" (Highland) accent constitute social stigma (Goffman 1963) by which a person from the Highlands and Islands is assigned a somewhat lower social status in British social structure.

634 The Outer Hebrides, a chain of islands over a [137] hundred miles long which lie to the northwest of the Scottish mainland, are part of "Ross and Cromarty" and "Inverness," two of the seven crofting counties of Scotland (see Map A). The seven crofting counties [103] (Argyll, Inverness, Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland) constitute the scenically beautiful but agriculturally marginal land often referred to as the Highlands and Islands of Scotland. 101 The word "Highland" also refers to features of social • 197 life such as crofting tenure, strong community feeling and Gaelic-speaking which are characteristic of many communities in both the Highlands and Islands as well as in cities such as Glasgow in which persons from the Highlands and Islands have settled. For example, a Gaelic speaker whose parents came from the Islands and settled in Glasgow may be called a "Glasgow Highlander." The first four crofting counties listed above have a large percentage of Gaelic speakers. In the national [162] census of 1961, 82.3% of the 32,607 inhabitants of the Outer Hebrides were Gaelic speakers.

131 Lewis and Harris, a single body of land which is 133 sometimes referred to as two islands because the mountainous southern section called Harris differs markedly from the flat, northern moorland of Lewis, is the northernmost island in the Outer Hebrides (see Map B).

000 24,863 acres. The value of this boggy property, as 423 far as the landlords are concerned, is determined by 427 its fishing potential. The landlords generally reside 226 away from their property, and brave the buffeting gales several times a year to return to fish for trout and [463] salmon. For the rest of the year they hire river- [685] watchers to prevent their tenants from poaching. As [171] in Wales (Emmett 1964), the islanders continue to poach, in part as an expression of their identity as independent countrymen, a minority group in a nation-state.

161 Lewis is the most populated area in the Outer 162 Hebrides, containing 21,934 of the 32,607 Outer Hebrideans 634 numbered in the 1961 census. It is part of the County of Ross and Cromarty, whose headquarters are on the 632 mainland near Inverness. Lewis has four administrative areas called civil parishes in which births, deaths and other vital statistics are recorded. Stornoway • [197] parish is the largest, containing the town of Stornoway on the east side of the island in which many non-Gaelic speakers live. Of the other three parishes, the largest [162] is Barvas which stretches along the west side of the [197] island and contains 4,331 persons, of whom 94.6% are Gaelic speakers. The people of Stornoway refer to someone [186] from the west side as a siarach (west-sider), a term which connotes rusticity.

764 the deceased or the remaining family assist in preparing 574 endless cups of tea, using the provisions that are brought by the visitors. The newcomers enter, exchange greetings, memories, sighs and moral judgements in rapid whispers. "Oich, oich... that should teach us, we're all going to go. That's how it was meant to be. It makes you wonder why we live at all, well, well." They recall other deaths. "That was a bad death. His liver was bad, and he turned yellow, then all black...." [152] They weep, circumspectly observe the appearance of the • [198] room and its occupants, and speak only in Gaelic, the language of hearth and heart.

764 The minister usually attends a prayer meeting which 793 is held in the tigh fhaire around midnight of the night before the funeral, but his presence is not necessary. The prayer meeting may be conducted by the elders. The elders may also hold the service which precedes the burial. The minister may walk for a short distance in the funeral procession or speak a brief few words at the graveside, but his role in the community drama is minimal.

764 At least one person from all households within the 621 village is expected to go to the tigh fhaire of someone 592 who has died within the village, "to show respect." The male head of the household is expected to attend the

241 Crofting constitutes a dormant strategy which can 178 be mobilized if deterioration of land has not proceeded too far, and if the skills of land use are not lost by succeeding generations who have grown up in an environment which presented them with more appealing strategies.

B. Social Marginality

166 1. Linguistic Distinctiveness: Social marginality 464 began when the Highlander had to leave his place of origin and go to the cities of the south in search of • [197] employment. The feature which most distinguished him was his Gaelic speech.

101 In Glasgow the common word for Highlander is 186 "teuchter," a slang word with derogatory implications 648 which, according to one theory, developed when Gaelic speakers coming into English-speaking cities mispronounced the word "sugar" so that it sounded like "teuchter."

[829] Glasgow Highlanders have developed their own defensive explanation: when the civilized Highlanders came down among the uneducated barbarians of the south, they came as tutors, a word which their uneducated Lowland pupils mispronounced.) According to a university student from the islands, the word was once used by the English to refer to the Scottish Lowlanders.

177 "I was in the Navy during the last war. We were
156 in Norway, and got an invitation to visit the palace.
I didn't go. I was afraid I'd make a mess of things."

"This place has an inferiority complex. It's mainland-oriented; so you feel outlandish."

575 The new director of an association which promotes
• 197 the speaking of Gaelic is a Lowland Scot who learned
186 Gaelic when he was in England. He was working in England
[181] and, as a Scotsman, felt so much like a foreigner that he decided "to be a real foreigner"--so he studied Gaelic. Motives which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

[175] An Comunn Gaidhealach, the Highland Association which promotes the speaking of Gaelic, was founded in 1891 in a town on the mainland, and has always been urban-based. Eighty years passed before the association established its headquarters in Stornoway; but the headquarters were relegated to hindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support.

[173] The organization is condemned by ministers on the island, who see it as an organization that sponsors light-hearted
[214] singing. The magazines and books which it publishes or sponsors are seldom read by the rural islanders. The

575 organization receives a large proportion of its funds
• 197 from the Scottish Education Department, whose statutory
186 duty is to foster the speaking of Gaelic in Gaelic-
[659] speaking areas. In 1970-71 a series of evening meetings were sponsored by An Comunn in Stornoway; but the serious meetings, such as readings of Gaelic poetry, were attended largely by schoolmasters.

Associations which sponsor Highland dancing and the opportunity to get together with other Gaelic speakers thrive in Glasgow, London, Toronto and Detroit, everywhere
[648] but in the Gaelic-speaking Highlands. Such associations serve important functions in situations of interaction between Gaelic speakers and members of the dominant society; they provide identity and self-defense against those who react to them as members of a lower-status minority group.

535 A girl who teaches Gaelic in Glasgow and comes home
186 to the island only for holidays never goes to the island
648 dances, but loves going to the dances sponsored by the Lewis and Harris Society in Glasgow. All the young people from the islands come, and dance away accumulated insults in a fiery sense of belonging.

464 A girl who worked in hotels on the mainland found
197 herself speaking Gaelic with her fellow workmates who
186 came from Lewis or other Gaelic-speaking areas, although
571

464 on the island she had spoken English in school and had
• 197 not given much thought to which language she was speaking.
186 "I suppose it was because the other girls couldn't under-
571 stand us. They always used to mimic us, making noises like they were talking it. It was nice to be able to talk about things and not have anyone else understand, especially when they teased us so much."

197 But on the island itself, the number of persons
198 speaking Gaelic is declining; and the scope of the language,
[492] i.e., the range of situations to which it applies (as reflected in the diversity of vocabulary used), is becoming
[196] more restricted. A psychological experiment in which the
[191] semantic differential was used to study the organization of English and Gaelic vocabulary in the cognitive processes of Gaelic speakers suggests that Gaelic speakers are not bilingual but monolingual in particular situations (Macleod
197 1966). Gaelic is the language of hearth, home, family and
191 community. English is the language of education, the business world, and various transactions with the larger
197 society. Most Gaelic speakers spoke only Gaelic when they
891 entered school, but were required to speak only English in
191 the classroom. One islander recalls, "The first English
[876] words you learned were 'Sit' and 'Stand.' Those were the days you got strapped if you spoke any Gaelic." Children ooo were addressed by their full English names. One of the

• 197 One of the
793 richest sources of Gaelic vocabulary now available is
779 the Gaelic Bible, but many villagers, especially the younger ones, complain that they are unable to understand many of the Gaelic words used by the minister in his sermons.

197 Although provision for teaching Gaelic in the schools
871 was made in the Education Act of 1918, only within the last ten years have schools incorporated classes in which Gaelic is taught at both primary and secondary levels. Gaelic is taught as a foreign language like French or Latin, rather than used as a medium of instruction, which would require a much larger vocabulary than most teachers possess.

[875] The present schoolmaster in Shawbost differs from past
[551] schoolmasters in that he addresses the children by their Gaelic names,[2] and devises projects intended to encourage a sense of pride in "Celtic culture."

873 The Department of Celtic Studies at the University of
197 Glasgow, which includes in its staff a Lewis poet and
185 several Scottish Nationalists, is described as "progressive." According to an islander who is a student in the Department, "They believe that if Gaelic is to survive as a language, it must be written as it is spoken. At school we were taught to write 'proper' Gaelic, Gaelic that's considered

[2] Persons who come from Gaelic-speaking areas are addressed and referred to by Gaelicized names, such as "Murchadh" rather than "Murdo," and usually these names take the form of patronymics, which may or may not include nicknames (for example, Iain Dhomhnuill Shain, i.e., John the son of fair Donald).

873 old-fashioned if you were speaking it. I wrote like that
• 197 in my first few papers, and my professor stroked through
185 words and asked, 'Would you say that?' We can even put in an English word now and then."

197 One result of this restriction in the scope of
185 experience in which Gaelic is used, and of the treatment of Gaelic by government bodies and voluntary associations as a rare zoo animal that must be preserved rather than allowed to change, is a decline in written creative
197 expression in Gaelic. There are perhaps three major
536 writers of Gaelic plays in Scotland, whose major battle is to be considered serious writers rather than colorful freaks or queer saints out to redeem Gaelic culture. "Once you become self-conscious about the language you speak," says one writer, "the language is dead." It has then become an artificial showpiece, a museum relic instead of a living, changing, flexible human tool.

197 Outside the village the maintenance of the Gaelic language
186 and other customs identified with "Celtic culture" occurs
[571] mainly as a result of interaction between "Gaels" and "Galls" (a Gaelic word meaning outsider or foreigner), as Gaelic speakers become self-conscious of their distinctiveness and either abandon their heritage (for example, MacIver 1968) or invest in it.

•197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 554 status. If an English speaker mispronounces Gaelic words,
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased mercilessly.
[551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with
each other in speaking English. "See how good you are in

•197 behavior characteristic of the dominant group; but for
191 554 those that remain in the village, the language serves a
571 unifying function, although its form is limited in
183 578 diversity of elements.

184 Jokes are most humorous when told in Gaelic; and
197 538 conversation is punctuated with Gaelic proverbs and old
stories. There is a vast oral lore, expressed in Gaelic,
[522] of the village and generations of its members and their
[521] characteristics and escapades, a dense map of human events.
All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When
speaking of today's children who do not go to the sheiling,
a man says sadly, "They won't have our memories; this
place will mean less to them than it does to us." The
moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains,
lochs and headlands tend to have Norse names, from the
days when the Norsemen raided and settled along the island
coasts; but the smaller hillocks and fields and bends in
the stream have Gaelic names, for example, Sheiling of
the One Night, Field of the Slaves, Slope of the Stone
[184] Boys, Hillock of William's Sheiling. To know these place
names and their histories is to participate in a distinct
community, which has been made even more distinct by contrast
with the dominant society.

795 collected, and an annual report on morals, which usually
condemns drinking and "the decline in moral standards."
Ministers are trained in a college in Edinburgh. Many
•[197] are Gaelic speakers, although the number is said to be
declining.

794 When a congregation loses a minister because of death
793 or other reasons, it issues a "call" to some other minister.
The congregation is familiar with the names and preaching
styles of a number of ministers, who have in the past
visited the community as guest speakers. The congregation
votes for a minister from a list made by the lay officers
of the church. The minister may or may not accept the call.

795 The Free Church and the Free Presbyterian Church, two
[198] fundamentalist Protestant sects which have survived the
tendencies toward unification evident since the turn of
the century, are strongest in the Highlands and Islands.
Shawbost contains a few people who belong to the Church of
Scotland, but most villagers belong to the Free Church.

795 The only church (in the sense of a building in which sermons
346 are preached) is a Free Church which was built in 1883,
[193] supposedly after men from Shawbost helping to repair the
fence at the minister's manse in Carloway, where they then
attended church, were refused boiling water for their oatmeal
"brose" by the minister's wife. A building in which
members of the Church of Scotland worshipped was built

FIRE AND SWORD

FIRE AND SWORD

Recorded history begins with the Icelandic sagas. In 1098 Magnus 175
Bareleg plundered Lewis and devastated the island with both fire
and sword. A skald named Bjorr Cripplehand, who accompanied
Magnus on the expedition, reported that 'Fire played in the fig-
trees of Liodhus; it mounted up to heaven. Far and wide the
people were driven to flight. The fire gushed out of the houses.'
The *Irish Annals* tell us that Skye was pillaged by the Norse in
794, and no doubt Lewis did not escape their attentions, then or
earlier. Towards the end of the ninth century a stream of Norse 174
folk left their homes to start the work of colonisation. Iceland, 648
the Faroes, the Orkneys, the Shetlands and the Hebrides soon 167
became thriving communities in which the earlier native popula-
tion were as thralls, serving ruthless masters.

By about AD 1000, the island, with others as far south as Man,
was in the sure and steady grip of men of Scandinavian or semi-
Scandinavian origin, who were destined to become premier
clans such as Clan Donald. It was not until the Battle of Largs in
1263 that this grip was loosened. In 1266 the Western Isles
were ceded by Norway to Scotland, following which event the
Gaelic people and their former Norse masters were soon to be
merged in the marriage bed. As for the common language, it was [19
the Celtic elements which took over after, one supposes, some
generations of suppression. The result in any case was a highly
individual people, strong in character, and resilient enough to
take the rough times with the smooth.

In the thirteenth century, Harris was in the possession of the 17
MacLeods of Harris, and Lewis belonged to three powerful clans: 61
the Morisons in Ness, the MacAulays in Uig, and the MacLeods [55
of Lewis in the remainder of the island. Other smaller clans were
the MacIvers, the MacRaes, and the Nicolsons. The Harris Mac-
Leods were allied by kinship to the Lewis MacLeods, though the
relationship was to become quite distant—and their destiny more
fortunate. History from this time is one of disputes, internecine
warfare, murders, and similar crises deemed to be of the highest
importance by the clans, both inside the island and between the
islanders and strangers. An enormous amount of blood was spilled

369 of the place, even the schoolmaster and ministers being
632 mostly Islanders, in Stornoway an important minority of the officials and business men hail from the mainland, and some of them from the Lowlands. New blood has undoubtedly been needed to promote enterprise, to foresee new possibilities, and even, at times, to make the best of the past. At the same time, the cleavage between town and country is marked in ways of thought and feeling as in
369 livelihood. To take a single criterion, that of speech, most
632 of the children of the town speak no Gaelic and many hardly understand it. While the percentage of Gaelic
197 speakers was 95 in the three outlying parishes in 1931, in the burgh only 70 per cent could still speak the old tongue. By 1951 the ratio, still almost unchanged in the outlying parishes and townships, had considerably lowered in the burgh.

369 The attempt to harmonise the interests of country and
632 town forms a hopeful aspect of the activities both of the Stornoway Trust, which holds the rural and urban property
[656] presented to the people of Stornoway parish by the first
[427] Lord Leverhulme, and of the Lewis Association, formed in 1943 to undertake studies of the Island to guide action
[654] for the future. The maintenance of the town's prosperity will depend greatly upon its industries of fishing and of
[228] spinning; and these are almost inseparable from the
[288] maintenance of the rural population for whom Stornoway acts as regional centre, and who weave with the yarn spun in the mills. Unity in constructive purpose could go far to build up the prosperity of the community.

361 With the recognition of the need for planning aroused
369 by the problems which faced the country with the return of peace, it is proposed, at the centre of the Burgh, to
632 rebuild the whole of the peninsular area of Point Street,

175 as some Indian pedlar one meets on the road may seem
433 now. An older packman's tale of his long tramps, of the
[326] people's poverty and hospitality, must have resembled
[443] the mingled plaints and praise one hears from an Indian pedlar today! But in the past only a speaker of Gaelic
[191] could find his way among the people. Almost until 1900, if not still later, Gaelic speech was to prove a social bond,
[197] but ignorance of English speech an economic barrier.

The transition to increased exchange, with migration,
175 permanent and temporary, tended to make for specialisa-
433 tion. About 1795, *Statistical Accounts* enumerated, for every hundred families, two or three smiths, wrights (or
463 carpenters), a shipwright or some boat-makers, a few
[178] weavers, tailors, and perhaps a miller. Each of these held some corn land, individually or in shares, with rights on the common. The line between plain crofters (to use a later term) and crofter-craftsmen was not easily drawn, and different writers wrote as they judged best. In Lochs, 80 per cent were fishers and net-makers. On the open shores of the west, in Barvas parish (in which three-fourths of the men were also 'fishers'), kelp-making was a seasonal
[427] occupation. In Stornoway parish, where sub-tenants paid 30s. to 60s. in rent, with twelve days' service, they sold ling to their tacksmen at 5d. each, earned £1 a month on herring boats, made kelp at 30s. per ton, and roads at 8d. a day.

175 In Harris in 1795 the eight 'bred' (or trained male)
286 weavers worked only for 'the gentry': the laird, the tacksmen and their families. The rest of the weaving
462 was done by the women, giving a ratio of only one male weaver to fifty-five families. But in Lewis male weavers were commoner—one to every twenty to thirty families was the ratio—as if the practice of home weaving by the women was less universal there, even at that date.

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

and savings were sent by emigrants who remained faithful to parents and home.

If it be asked why most of the people kept to their Island home in spite of its poverty and earned so little away from it, one answer must be that their native tongue formed a barrier encircling them as a community at home and cutting them off from the rest of the nation. Seventy-five years ago the new Education Acts were not yet in full operation. Comparing the relative well-being in the Shetlands with the extreme poverty in the Hebrides at that time, a northern agriculturist wrote that in Scotland, only in the Hebrides "is the food obtained by the peasant occasionally so scanty" as to be unable "to maintain a labouring man in vigorous health". Inquiring why there should be so great a difference between the Shetlanders and the Hebrideans, living in similar, distant isles, he wrote, "We think the answer may be given in one word—*language*. . . . The population of the Hebrides cling to their ancient Gaelic with consequences most disastrous to themselves. . . . It handicaps them in the race for life . . . is a hindrance in the cities and a check to the emigration of both sexes to those world-wide regions where all who speak the English tongue find themselves at home."[1] He concurred with the Census Report of 1871, which stated: "The Gaelic language may be what it likes, both as to antiquity and beauty, but it decidedly stands in the way of the civilisation of the natives making use of it, and shuts them out from the paths open to their fellow-countrymen who speak the English tongue". The Report concludes: "It ought therefore to cease being taught in all our national schools. We are one people and we ought to have but one

Lewis and Harris

language." Many Islanders would agree with the statement that Gaelic was a barrier to economic progress. It was not only Lowland schoolmasters, ignorant of Gaelic but an educated, sensible class of men in their day, who used the strap on the palms of the little children "for their good" because they could not understand English. An active Lewis country schoolmaster, who had considerable rural knowledge and experience, said to me: "I know what I have suffered through life from being brought up on Gaelic. If I had my way, I would *punish* [with the strap] every child I heard speaking Gaelic in the playground!" Had the Island School Boards wished Gaelic to be consistently taught with English, they could have prevailed.

One may not only disagree strongly with the means—the strap—but hold that enlightened bilingual teaching is both worth while culturally and also of assistance to intelligence without interfering with use in English of the three Rs, and of secondary and higher education. Yet in Lewis recent non-verbal tests in English and Gaelic show a mean intelligence quotient depressed by about 15 points.[1] The conclusion seems to be that under the present system the Gaelic school child is still at a disadvantage compared to other school children. But even more important to the child's development would seem to be the expression of his response to his rural environment in his own tongue. For this the school tests and the educational code do not fully provide; nor do the tests of life when the adolescent Islander suddenly finds himself at work in a Glasgow factory or abroad in city streets. What concerns us here is the economic drawback of a lack of ready English among

[1] Christina A. Smith, M.A., B.Ed., *Mental Testing of Hebridean Children in Gaelic and English*. (Scot. Council on Research in Education, vol. xxvii (London, 1948); J. L. Campbell, *Gaelic in Scotland* (2nd ed.) (Edinburgh, 1948).

166 2. The Exiles: An important source which supplies 138
this sense of contrast is the large number of persons
settled away from the island, often in "ghettoes" or
neighborhoods in cities in which village ties are main-
[521] tained. It is said that gossip about Shawbost travels
more quickly in the district called Partick Hill in
166 Glasgow than it does within Shawbost itself. It may be
621 argued that the "exiles," with their Lewis and Harris
Societies and pilgrimages back to the village during
the holidays, do a great deal to sustain the strong
boundedness of the village as a sociocultural system.
They and non-Gaelic-speaking outsiders (the Eminent
Person writing his inevitable book in the romantic
solitude of an isolated manse) help to maintain a feeling
of worthwhileness in a place rife with feelings of
ambivalence and negative comparison with the larger society.
181 Within the village, especially during the long, dark
621 winter, complaints are often heard of the "sameness" of
[195] things. A common phrase, almost a greeting, is,
"Anything fresh?"--implying that the usual mode of
existence is stale, sour, exhausted, and mucky with
621 overuse. Although the villagers have access to the
● 20 range of information available to all Britishers through
829 forms of mass media such as newspapers, radios and tele-
vision sets, very little of this information is considered
relevant to village life, and thus is not attended to.

4: Moisley et al. K-5 (1959) 1962 ES10 Highland Scots ES10
Uig

632
361 strips running across the slope, which are interchanged each year, whilst a large part of
427 the common grazing lands are divided into interchangeable sections ("quarters") to
311 accommodate each of the groups of crofts. See Figures 22 and 23.
[233]

[133] The cultivable croftland at Kneep is relatively flat and the natural drainage is poorly
developed; the quality of this land, depends to a very great extent on the upkeep of a dyke
[312] running across the croftland from a small marshy loch to the sea. This dyke has not been
cleaned for several years, and as a result a large area has been invaded by reeds. Other
parts of the croftland have been similarly overrun by 'wild rhubarb'. Such deterioration is
almost inevitable when land is so fragmented.

The crofts at Reef are grouped in three separate localities. Crofts 1, 2 and 3, on the
edge of the machair have probably never been occupied since the crofts were allotted in
1921 and are now used only for grazing. The main body of the crofts (nos. 3 - 13) face
south - they are more compact than those in Valtos and Reef, but they vary in size from
2.9 to 13.25 acres and their boundaries are irregular in shape. Two crofts (14 and 15)
are separated from the main parts of Reef: they are both small (2.5 acres) but the size
is compensated by their situation on the level terrain of the machair. The old farm house
[241] is used as the dwelling for both 14 and 15. Much of the cultivation at Reef, except on the
[407] machair crofts, is on lazy beds - but many of these have decayed with the advent of horse
and tractor ploughing; 35% of the land is cultivated by spade, and the remainder by horse
plough.

433 The crofting economy is probably at its lowest ebb in Reef. Only eight of the fifteen
crofts are occupied and of these five are worked by disabled crofters or crofters over
[729] sixty-five. The Reef crofts were settled in 1921 by returning ex-servicemen and today
seven are being worked by the original settlers; there is little evidence of a desire among
the younger generation to succeed to the crofts.

[233] Until 1956, crofters on Reef used to graze both sheep and young cattle on the Flannan
Islands, fifteen miles west of Uig.

162 Fig: 24 shows the age/sex structure of the population in the three townships. It tells
a story familiar to crofting townships: 55% of the resident population are over forty-five
years of age; 9% of the total population are permanently away; and since 1939 the popu-
lation has declined by at least 15% as the result of emigration alone. But perhaps the
163 most significant fact is the very small proportion of women of a child-bearing age and the
consequence that only three children are being born each year to replace the older genera-
tions.

131 By their very position, the townships of the Valtos peninsula are isolated. Fifty years
● 20 ago communication with the rest of Lewis was by boat. The road to Valtos and Kneep
was built originally to bring the mails from the pier at Meavaig; the motor road to Reef
was completed in 1956. Shopping facilities are provided at Valtos, for the people at
[443] Valtos and Kneep, and at Meavaig which serves Reef, Uigean and Cliff. These are
supplemented by travelling shops which call once per week, by Indian dealers and by the
local 'bus-driver who makes purchases in Stornoway on behalf of customers on the
[346] peninsula. The school for the whole area is situated mid-way between Cliff and Valtos
and two kirks and the doctor's house lie at the junction of the Valtos and Reef roads.

In part to avoid disappointing the vast number of relatives who by custom must be invited but for whom there is now not enough room, many weddings are held away from the island in places such as Inverness and Glasgow. Gifts are still given in great numbers and displayed, despite the decrease in numbers attending the wedding dinner and the feeling that only those who are invited to the wedding should give presents. The custom still exists of neighborhoods or entire villages placing flags outside their homes on the day of a villager's wedding (except when the wedding is held away from the island); isolated flags within a village signify that the household is related to someone in a neighboring village who is getting married. And when the wedding car has picked up the bride and is leaving for the hotel in town, the road is often littered with barrels and other barriers.

Couples now often leave the wedding dinner and dance and go to undisclosed destinations for their honeymoon. But when they return to the community they must undergo a simple rite of passage that gives sanction to their new social status. On the first Sunday following their return, they are expected to come to church with the other members of the bridal party, a process called kirkadh (a slightly Gaelicized rendition of Scottish "kirking").

203

203 DISSEMINATION OF NEWS AND INFORMATION--informal verbal transmission (e.g., rumor, grapevine); criers and heralds; bulletins and newsletters; etc.

bridesmaid(s). The house was filled each night with visitors bringing new gifts or coming to see the latest additions. Enough presents were given during this time to set up a household. Invitations to the wedding were issued verbally, by persons going around to each house. Anyone could come to the church ceremony, which was relatively informal and jovial, but only the "closest" relatives were invited to the sumptuous wedding dinner which followed the service: the bride and groom, their parents, aunts and uncles, first cousins and usually second cousins. Many more were invited to the wedding supper which started after the dinner, at about 10:00 p.m., and continued throughout the night.

585 252

Three main nights were distinguished, although preparations and festivities might go on for weeks. The first night was the night before the wedding, when women of the village brought hundreds of chickens, which they plucked and cooked. Meat, usually mutton, was also cooked and sliced. Butter was rolled into balls. Neighbors brought milk and other provisions and assisted in the baking for a week beforehand.

585 [535] [533] [273]

On the second night, hundreds of villagers ate the chickens and mutton prepared for the wedding supper, and danced to the music of a piper or other musicians. Many young boys had their first taste of beer or whiskey on these occasions.

STORNOWAY

going concern to a trust which was set up to receive the gift and whose first object is to assist aged and infirm residents in the burgh. In effect, all profits earned by the shop are passed to the trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local authority. The Town Council has never been afraid of rooting out unfit houses. By 1937, under the 1930 Slum Clearance Act, one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed areas of other towns and cities. The Council also supports private housing by taking up sites, clearing and servicing them and then feuing them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100 per cent. A vigorous housing policy is important to the town, as its population is now over 5,300 and still growing, mainly at the expense of the rural areas. Development plans at present envisage a 1981 population of about 9,100 persons within the parish boundary and including the burgh.

Stornoway is an island town and is an island's town: its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban outlook. In this context, Gaelic is the language, though English is the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

Apart from its industrial opportunities, Stornoway has many of the more sophisticated urban facilities that people everywhere seem to crave, particularly with regard to education. The senior

3. *The Significance of Lewis-and-Harris*

181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
101 from the Lowlands—the other mainly of farming, living
nearer to the Lowlands and in touch with them. Through-
[197] out the North-west, Gaelic is still the common speech,
even of the children. The old community feeling is
[178] strong; it is that, indeed, which keeps the people attached
to the villages.

101 From the plains and cities of the South it is a far cry
to *Ultima Thule*, as Lewis, like Zetland, is sometimes called
131 even by its own people. Lying some twenty-five to thirty
miles across the Minch from the mainland, its nearest links
[496] with the South lie even farther away. From Stornoway
it is some seventy-five miles to Kyle of Lochalsh, the rail-
head for Inverness and North-east Scotland, and 100 miles
to Mallaig, the railhead for Fort William and Glasgow.
To reach Stornoway over the moors from the west coast
[504] townships is itself a journey. Stornoway is the Island's
only port, though passengers are put off at Tarbert, at
[177] Stockinish and at Rodel in Harris. Isolation has always
been a dominant factor in the Island's life. From pre-
[178] history through the Middle Ages to modern times, that
factor played its changing part.

178 In Lewis, conditions had changed less than elsewhere
during the last century; for example, the *New Statistical*
Account of South-west Argyll in 1830-35 reads like a
description of conditions in Lewis as they were until after
1914! Hence, as already said, the contrasts are very great
indeed in the aspect of the country, its fields and houses,
and in the number, character and ways of the people. It

emphasis is laid on evangelical preaching. The Free Church claims 'the free exercise of all its spiritual functions, while it fully admits the State authority in purely temporal concerns'.

THE GAELIC LANGUAGE

Closely tied in with the background of the island folk is the Gaelic language. For many years this has been dying, yet it is still vigorous enough to make a significant contribution to the mental make-up of the people. It is a living language in that it is used for personal communication, though English is often and universally resorted to when the talk turns to technical subjects. As the Gaelic language stands today, by itself it is agreed by most Gaelic speakers to be a barrier to economic progress. The Gaelic-speaking child who also knows English, however, is found to be at no significant disadvantage over the monoglot; indeed, tests have shown, particularly in other multilingual countries, that the bilingual child tends to assimilate knowledge at a greater rate and to a greater depth. Two decades ago a pamphlet issued by the Scottish Council for Research in Education showed that while there were no 'statistically significant' differences between the four areas into which they divided Scotland, the Highlands and Islands came out best in a study of the average level of intelligence:

	Mean	*Standard deviation*
The four Scottish cities	100·86	15·29
The industrial belt	99·19	16·18
The rural areas	100·92	14·52
The Highlands and Islands	101·79	13·13

The pamphlet comments: 'It is interesting that the mean of the most remote and isolated districts is the highest, and the standard of deviation the lowest.'

The Hebrides are now the only area in Scotland where the language, once Scotland's national language, is spoken by a Gaelic-characterised community. On average 95 per cent of the inhabitants of all the island districts are Gaelic-speaking; even in the town of Stornoway, never regarded as wholly Gaelic-speak-

ing, 73 per cent have the language, which has been introduced by immigrant country folk and their descendants.

HEALTH AND HOUSING

Despite the harsh conditions of centuries, the physical health of the island was good in early times. Epidemics were rare due to isolation, though on occasion smallpox carried away many children. The commonest diseases were fevers, jaundice, dysentery and diarrhoea. Bloodletting (as in many another more advanced community) was the usual cure for fevers and dysentery. For coughs the people took a 'brochan' or soup of roots of nettles and reeds boiled in water with yeast; the meal of a black bean, mixed with boiled milk, was a useful cure for dysentery. Reports describe the folk as being well-proportioned, free from bodily imperfections and of good stature; healthful and strong-bodied.

But privations, particularly the frequent recurrences of near-famine, coupled with the primitive housing conditions, began to take their toll. The increasing sickness rate aroused the concern of authority. The most primitive dwellings had but one room, with the cattle at one end and the family at the other. In 1830 Seaforth sought at least to put an end to this, ordering that a partition must be erected between beast and man, 'and that more light should be admitted into the dark recesses of their habitation'. This type of one-room dwelling was not confined to the island, being found with many variants throughout the Highlands and Islands area. The old Lewis house was, as a rule, an oblong structure, varying in length according to the means and requirements of the occupier. It had but one door, and frequently had no windows. Chimneys did not find favour, mainly because any opening for the escape of smoke from the centrally-sited hearth tended to reduce the quality of soot produced; and soot was regarded as a valuable manurial product. If there was a hole in the roof to admit some light, a small pane of glass was fixed into it: this soon had a coating of soot, and the sole source of light was the doorway—when the door was open. The family and the cattle used the same entrance; and the cows' dung was removed once a year in the springtime.

rural Islanders throughout the nineteenth century and even today.

From 1887 the State made efforts to improve the crofters' lot. Crofters' claims to stake shares upon the only available reclaimed land in the Island, that of a few farms, had been refused in the 'eighties, but came to be granted, in principle and in fact, after 1900. During the war of 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

When war broke out in 1914 over 5000 men left Lewis to join the Services, and corresponding numbers left from Harris. Others, too, served in the Merchant Marine, exposed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss. The last blow to the Island came after anxiety had ceased. Early in 1919 the transport *Iolaire* struck a rock and sank at the entrance to Stornoway harbour; and 200 men who had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

hinterland with the outside world, Portree is a center for tourists during the summer. Due to the people's dependence on tourism and also the presence of newcomers, the villagers participate in a number of social activities which are not tolerated elsewhere on the island because of religious asceticism.

Glendale and Kilmuir are crofting communities, each with a population of about 300. All, except the ministers and school teachers, are dependent on the breeding of cattle and sheep and the growing of a limited amount of grain, potatoes and hay for all or a large part of their livelihood. All are bilingual, speaking Gaelic and English. Neither community has a village nucleus, but both have an economic focus. Glendale has a cooperative farm, and Kilmuir has a drained loch which has been divided among the small farmers. The significant differences between them are three. The Glendale people are land owners. In this respect they are rather unique in the Highlands. The Kilmuir residents, like most Highlanders, rent their crofts. The second difference is religious. Glendale is religiously homogeneous while Kilmuir includes church-goers of three Presbyterian sects. Finally, no formal social activities other than an annual meeting of the share-holders in the farm is allowed in Glendale, but Kilmuir has a club organization for the men who gather for lectures and discussion of economic problems.

70 is, perhaps, one reason for the government's attitude regarding deferments.

192 561 [197] Since the majority of the people converse among themselves in the Gaelic, I should like to conclude this study of the crofting family with a brief discussion of status in Gaelic terminology. The Gaelic language reveals the significance of several aspects of the relationship of family members and clearly marks the changing status of the individual. At birth both boys and girls are leanabh. If the parents are feeling protective towards the child, at time of illness or some mishap, they use this term until the age of three or four, but, normally, at two the children are called clann. Specifically, a small boy is balach, and a small girl is caileag. At puberty, when the clann and their associates become conscious of the physical changes accompanying adolescence, a boy becomes gille, and a girl, nighean. With this change, the boy puts on his first pair of long trousers, and the girl receives her first long skirt. Gille and nighean apply until marriage. A brother and sister, however, often use them throughout life, as synonyms for bràthair (brother) and piuthar (sister). There is one additional fact which we should note at this time. Nighean means both girl and daughter. Boys, on the other hand, are distinguished. Any boy is gille, but a son is mac. Only at marriage does the gille become a duine, a man, and the nighean, a bean, a woman. Just as the girl and daughter are not distinguished, neither are woman and wife. Bean means both. A man is not only a duine; he is also a fear, a husband. In the Gaelic, many people who have all the physiological

20

20 COMMUNICATION--general statements dealing with several aspe
munication over space. For communication over time, by means
see 21.

585 For some weeks after returning, the couple goes visiting
178 with a bottle. The scope of visits seems to have narrowe
to close relatives unable to attend the wedding, and
sometimes the custom is referred to as old-fashioned.
[431] The bride usually mails pieces of bridal cake to
[205] relatives who were unable to attend the wedding.

758 2. Death: At a time of illness or injury, an
574 individual may see persons he has not seen for years.
The house is filled with a constant flow of visitors,
and the visitors recount every detail of a sick person's
[763] pallor and movement. The room is usually occupied by
visitors when a person breathes his last.

763 In the past, work ceased in every house in the
46 surrounding neighborhood when a person died. This no
[178] longer occurs. (The story is told of a weaver who calle
[288] a mill in Stornoway to say that he could not finish an
urgent tweed because there had been a death in the
village, and was told, "You keep on weaving till the
[535] weaver dies.") However, dances in the village are
[444] cancelled, and the bothan (an isolated hut in which
liquor is sold illegally) may close. Outdoor work, such
as peat-cutting, which would be widely seen is avoided.

763 Word of the death spreads throughout the village an
[203] beyond within a few hours. From an immense, accumulated
inventory, memories of the deceased are brought out,

796 miscarriage occurring before marriage also requires
851 standing even when the child to be baptised was conceive
626 by the couple after marriage. A married man who has
848 impregnated a woman who is not his wife must undergo
[837] this ordeal before he can have his own children baptised

It is the responsibility of the entire community to ensure that this punishment is carried out. On one occa the minister forgot to lecture a couple, and afterwards sent them a note that they would not have to stand; but they insisted, afraid that people would say that they were getting special treatment.

[203] According to one minister, the manse is a kind of
[521] "research center" to which all gossip is reported. Som
[793] ministers use this information in the pulpit, chiding
[794] people and calling attention to wrong-doings in front o the congregation. In contrast, a different attitude ex
[184] in parts of Stornoway, where villagers have approached
[759] doctors in the maternity ward for information regarding miscarriages and premarital births only to be told that this information is confidential. The ordeal of standi
[178] in church does not exist in Stornoway. In 1971 a perso in Shawbost was accidentally exempted from this ordeal and his exemption was seen by some as providing an opportunity to stop what is considered by many to be an archaic custom.

162

23 pouses not too long ago. Perhaps, more than any other
actor, it is the tendency of the aged parents to hold on
o the croft until they die that is strongly the kinship
ystem. Still the extended family is a strong mutual aid
roup. Anyone with a recognised degree of kinship is
ntitled to hospitality. When the exiles return to visit
he Misty Isle, they always try to make the rounds of their
insmen. This is more than a question of not becoming an
conomic burden on a favorite aunt; they do not want to
e guilty of slighting anyone. There is reciprocity here.
o return for food and shelter, the visitor freely gives
s Kinsman all the news he has gathered about the activities
f their distant kin. He acts like a roving reporter, cementing
he solidarity of an otherwise fragmented group.

The expression given to the degree of consanguinity and
finity is revealed most completely at a funeral. As one
f the two occasions on which the extended family comes to-
ther, the other being a wedding, it reveals a host of sig-
ficant features. The first thing I noticed was that although
e inavailability of land and the illegality of subdivision
forces neo-local post marital residence, burial is ideally
tirilocal. On more than one occasion the steamer came in at
ight with a body which had been shipped home from Glasgow or
isburgh for interment in the deceased's neighborhood. This
so means that the husband and wife remain integral members
their respective families. The founding of a family of

23 Morgan Macleod, Reminiscences of a Highland Parish, p. 196

163

522 added that the stories are frequently heard elsewhere in
the Highlands. This particular tale is also told in the Outer
Isles, where the central figure is a famous drover, drovers
still being important in the Outer Island cattle trade.

Stories about well-liked doctors getting the best of
ministers are also told by members of the Church of Scotland.
There is, for example, the tale about the doctor who went to
the service of one of the seceder ministers. The sermon was
on the Immoral dress of women. After church the minister asked
the doctor how he liked the service. Holding up his Bible,
the doctor replied, "I enjoyed it fine, but I brought the
wrong book. I should have had one of those mail order catalogues."

We should not, of course, overlook the fact that gossip 203
is the main form of communication on Skye. There are few
aspects of life which do not interest the people enough to
become matters of gossip. Now, then, does gossip travel? All
are carriers of gossip, but several occupational groups are
primary carriers, especially the food van drivers, bus drivers
and tradesmen. Perhaps, it is a widespread phenomenon that
the gossip spreader does not know his role. One day a tradesman
returned from the far end of the island. Following the pattern,
he was asked "what's fresh?" and replied "nothing" and then
proceeded to give the news he had picked up. After he had
finished, he paused and said, "you'd wonder where those people
get all the news."

In its less emotional aspect, gossip has been formalized 204
by one agency, the Skye Clarion, a local monthly newspaper.

164

Founded in 1951 as a single sheet of 200 words it has grown 204
to sixteen pages. It has the distinction of being the only
news magazine in Great Britain written in Inagnaeh. The 203
shopkeepers also pass along the local ben, as it is called.
There is a common belief that the telephone operators are
another source. I have known people to drive several miles
to make a call from a box in another exchange district because
they were sure the people of their neighborhood would have the
news before they had hung up the receiver, if they made the
call locally. The post office is also said to be a transmitter 275
in the bush telegraph; some say the post mistresses steam open 208
their letters. On shopping days in Portree the women carry
home more than the week's groceries. Down at the square at
night, they gather in small groups to transmit their tantalizing
tidbits of news and, perhaps, scandal.

Two status groups are left out of the normal gossip 203
cycle. These are the county people and the ministers. The 554
former may get a bit of ben from time to time, but much of the 715
local news passes without reaching them. The ministers'
information is generally limited to questions of health, events
in the life cycle, or cases of moral or religious backsliding
on the part of their congregations. The degree to which the
landed gentry participates in the verbal spread of news and
rumor depends to a great extent on personal qualifications.
There are one or two who have contacts through whom gossip
carries across the lines of cleavage in the social hierarchy.
Ministers are probably the least well informed of anybody on
the happenings of everyday life. Once when asking a minister

165

a question about a certain man I was told: "I can't help you 203
on that. Whenever I go into a shop or meet them on the street, 182
they change their conversation." Another told me I should ask 715
the doctor, "He's the one who really knows their problems."

Summary

The society of the Baithanach reveals additional evidence 182
for cultural continuity. In family structure, both nuclear 576
and extended, the patrilineal emphasis has been preserved. Even
though both suffer from chronic instability and the extended
family has become rather amorphous, kinship remains an important
regulator of interpersonal relationships. It involves obli-
gations and privileges which few take lightly. Within the 182
social units based on territory, the township and neighborhood 641
status continues to be ascribed on the basis of age, sex, 554
and kinship. Women have remained consistently inferior to the
men. As the father controls his family, the old men of the
township and neighborhood exercise a power over their juniors
to force conformity to traditional ways. Fundamentally, all
of the same age and sex are equals. This status equality
underlies the entire social structure. There is no room for a
leader. When essential, the newcomer, normally the teacher or
minister, and the landed gentry are expected to assume the role
of leadership. In the village the emphasis on ascribed status
for the Baithanach is also important. The majority of achieved
statuses are left to be filled by newcomers. In the community,
as a whole, beyond the polarity of the landed gentry and the

166

including almost all with private floods, the crofters continue 182
to cooperate. The church has been broken by schism, not once 571
but four times. On Skye, however, the schisms have had as 715
their purpose conservatism, not greater leniency as in Stilltown. 712
Moreover, the schisms have been solidifying factors. The
progressively more dynamic world despising sects, after a period
of communal strife, have given the people an emotional unity.
The crofters have become dependent on the trade-crofter village 192
and the wider national markets. Many must seek employment beyond
the island. The interests of the Baithanach are not outside
the neighborhood, except in so far as events from the outside
affect them and, especially, to the extent that ties of kinship
and religious brotherhood reach beyond the local group. We
are hardly talking about the same situation as Lomnas. As we
continue to explore this condition we may also ask has there
been a decline in the frequency of interaction in the internal
sphere of activity?

The old ceilidh has disappeared under clerical bann, but 182
it has been replaced by "going to have a craic," going to visit 571
and gossip with one's friends and "people." The people may 715
no longer gather to hear the old men tell stories of clan battles.
They now discuss the latest local gossip and the news of the
outside world. The Islander has never been given to formal 575
social organizations; they half distrust such orders as the
Masons and Eastern Star. Still there are chapters of both in
Portree. In the crofting neighborhoods face to face relation-
ships continue to preserve strong interpersonal sentiments. The 243
postman's van and the grocer's trucks have relieved the people

167

from the necessity of daily calls at the post office and shop, 182
but the drivers serve the function of passing on the news of the 243
day at each stop.

Standing in the place of many of the traditional social 182
outlets which have disappeared or been modified, there are the 774
religious occasions for joining together as a small group. We
have found the Baithanach to be very religious. Everyone is 716
expected to go to church on the Sabbath, and everyone goes to
church. Irregular attendance soon becomes noticed by one's
neighbors, the kirk elders, and the minister. Concern over 626
what one's neighbors may think, in itself a strong motivating
factor, is reinforced by a forbidding fear of what the venerable
old men may do whenever an opportunity presents itself. There
are Wednesday night prayer meetings for further social inter-
course. Above all, there are the semi-annual Communions which, 182
except in Glest and Strath and one Broadale sect, bring to- 571
gether the people of the kirk, the members of the same sect from 716
other neighborhoods, and affiliates of the denomination from
the mainland. Even the adherent, the individual who has not
experienced a saving change because he is not old enough, normally
takes his vacation, if he is employed, at the time of the
Communions in order to attend.

The decline in interpersonal religious strife does not 182
mean that strong personal sentiments are not present. No one 571
other than the eccentric, is indifferent to his neighbors or 243
others with whom he may have dealings. The crofter and his 646
village cousin may not bother to vote, but they closely watch 664
and freely discuss their representatives. Gossip has retained

204 PRESS--newspapers and magazines; gathering of news and information (e.g., reporters, press releases, news services); content (e.g., news, stories, features); publication and distribution; ownership, organization, and personnel; financial support (e.g., subscriptions, advertising, subsidies); regulations, etc. See also:

139

000 Pulevant to village life, and thus is not attended to.
517 Comedies, soap operas and westerns constitute the
(207) favorite television programs. Many of the men read
(508) adventure stories--war, western and detective--on the
(204) quiet Sunday afternoons. Magazines and newspapers most often received include The Daily Express, The Sunday Mirror, The People's Journal, The Stornoway Gazette, The Oban Times, and True Romance, documents dealing with local events or with scandal and dramatic personal accounts. In general, the news of the mass media to 521 which this audience attends is gossip writ large. Such 181 news, like local gossip, is discussed endlessly, in elaborate detail, until mapped of all potential to excite or until new events capture the attention of the village audience.

517 Events which occur in the open, treeless countryside
181 are vivid and dramatic. The generally low level of stimulation enhances their dramatic effect. A man appears on the hillside or a car along the horizon, and all ears and eyes attend. The British system of perennial number plates on cars makes it easy to identify the shifting cast of characters even at night. Even children memorize long lists of number plates. There is a perpetual audience looking for a play.

166 The image of the island 149
484 as spiritual home is fostered by The Stornoway Gazette,
823 and by nostalgic songs, most of which were written by
104 islanders who emigrated to Canada in the first quarter
533 of the century.

632 The crofting township as a strongly bounded network
241 continues to exist, although crofting as a socioeconomic
pattern which evolved in a situation of limited social
and geographical mobility, low cash reserves, and the
restriction of a large population to a region of limited
resources, is very different from crofting as defined by
an office in Inverness. As far as the crofter is con-
cerned, to be defined as a crofter by the Crofters Commission
and other government agencies is to have access to
resources which affect the environment in which he makes
his living.

241 The individual is faced with the semi-security of
288 crofting and weaving, in contrast with the exciting but
risk-laden opportunities offered by the dominant urban-
654 industrial mainland. Crofting and Harris Tweed have been
protected by government legislation. Various subsidies
and loans are available. In times of unemployment, social
745 security is available. Extremely important as contributors
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human community; he is given

BRICKS, PRINTING, WHISKY

800 tons and had a steam-driven winch. The ship has also 396
vanished—except for the name of the Parent Ship Wool Mills, 795
which produce Harris Tweed.

Other small industrial activities in the island during the nine- 195
teenth century included the business of Alexander MacPherson, 204
chemist, druggist, stationer and printer, who set up in Stornoway
in 1842. He brought across the Minch with him Lewis's first
demy-size hand printing press, which was still in use on 1 January
1889 to produce the first issue of the short-lived *The Lewisman*.
Copies of this earlier Lewis newspaper can be seen at Stornoway
Public Library. Early in the 1890s Thomas Nicolson also
set up as a printer.

Whisky was once an important product, not only for local 273
consumption but also for export. One of the Port Ellen distilling 741
main indicators against the islanders in the Hebrides in 1622 175
was that they mixed any cargo of wine and aqua 'beide dayis and 431
nightis in thair excessie of drinking'. The council therefore ordained
that masters of vessels sailing Hebridean waters should carry no
more wine than was suggested that this and other measures
were responsible for the beginning of illicit distilling, which in
Lewis continued overtly as late as 1827. One of the two principal
stills established by Lord Seaforth in the island at that time
was at Coll, a few miles from Stornoway, the other at Grean, a
few miles further on. Such was the fame of these stills, both for
output and quality, that it was hard to choose between 'Coll' or
'Grean'. Sometimes the product passed as an article of exchange 536
in the island, and the factor received a considerable part of the 431
rents in it instead of money; but the stills were closed about 1870.
The Inverness Courier of 14 November 1827 remarks virtuously: 431
'Owing to the vigilance of Captain Oliver, of the Revenue cutter
"Prince of Wales", and the new Excise Officers on shore, smuggling
is so completely put down in the Long Island that there is
actually not a drop of illicit whisky to be got from the Butt of
Lewis to Barra Head; and there is probably at this moment a
larger supply of legal whisky from Greenock for the supply of
Stornoway alone, than was ever imported into the Hebrides before.'

CH. X BETWEEN TWO WARS, AND AFTER

Soon after it. After 1914-18, the Rector of the Nicolson 771
Institute, Stornoway, proposed village halls for village 341
education and recreation.[1] The scheme was never fully 540
realized except in one township, Sandwick, near Storno- 540
way, owing to the strength of puritanical opposition. In 540
particular, dancing by young folk was considered as 540
'dancing upon the graves of their brothers". This atti- 540
tude is breaking down; social standards, in becoming less 540
repressive, may encourage young people to stay.

Broadcasting—a factor of change everywhere—came to 176
the townships as a revolution. Newspapers had already 431
filtered in; but for the first time the Gaelic-speaking 741
home was entered and dominated by an English-speaking 741
voice. It has made itself heard there almost ceaselessly 431
ever since—in broadcast talks, discussions, announcements
of news, entertainment, singing and prayers. Only the 176
Sabbath imposes general silence. In the Scottish Home 176
Service great trouble has been taken to meet all tastes at 176
the highest level for each, from 'low-brow' to 'high- 176
brow' and from Clydeside to the Isles. To a thoughtful, 176
selective Island listener the new opportunity for comparative
human contacts and for initiation of all kinds is immense.
And the purely Gaelic listener is not forgotten. He wel-
comes Gaelic song or story; and worship in Gaelic has
reached many an elderly person's bedside. 176

Yet few listeners select: much broadcasting is designed 176
for those whose only picture-galleries are advertisement 176
hoardings and whose only drama and music are to be found 176
in "Pictures". And through no fault of the B.B.C., 176
the Sports News offers temptations for those in poverty to
wager upon the horses (in spite of the Betting Tax) to
seek wealth innocently through luck in a football pool,

[1] W. J. Gibson, "Social Amenities in the Western Isles", *Sociological Rev.* (Jan. 1950).

301

added that the stories are frequently heard elsewhere in 521
the Highlands. This particular tale is also known in the Outer
Isles, where the central figure is a famous drover, drovers
still being important in the Outer Island cattle trade.

Stories about well-liked doctors getting the best of
ministers are also told by members of the Church of Scotland.
There is, for example, the tale about the doctor who went to
the service of one of the sander ministers. The sermon was
on the immoral dress of women. After church the minister asked
the doctor how he liked the service. Holding up his B.Bible,
the doctor replied, "I enjoyed it fine, but I thought the
wrong book. I should have had one of those mail order catalogues."

We should not, of course, overlook the fact that gossip 203
is the main form of communication on Skye. There are few
aspects of life which do not interest the people enough to
become matters of gossip. How, then, does gossip travel? All
are carriers of gossip, but several occupational groups are
primary carriers, especially the food van drivers, bus drivers
and tradesmen. Perhaps, it is a widespread phenomenon that
the gossip spreader does not know his role. One day a tradesman
returned from the far end of the island. Following the pattern,
he was asked "what's (news)?" and replied "nothing" and then
proceeded to give the news he had picked up. After he had
finished, he paused and said, "you'd wonder where these people
get all the news."

In its less emotional aspect, gossip has been formalized 204
by one agency, the Skye Chronicle, a local monthly newspaper.

Founded in 1951 as a single sheet of 200 words it has grown 204
to sixteen pages. It has the distinction of being the only
news magazine in Great Britain written in longhand. The 203
shopkeepers also pass along the local news, as it is called.
There is a common belief that the telephone operators are
another source. I have known people to drive several miles
to make a call from a box in another exchange district because
they were sure the people of their neighborhood would have the
news before they had hung up the receiver, if they made the
call locally. The post office is also said to be a gossip source
in the bush telegraph; some say the post mistresses steam open
their letters. On shopping days in Portree the women carry
home more than the week's groceries. Down at the square at
night, they gather in small groups to transmit their tantalizing
titbits of news and, perhaps, scandal.

Two status groups are left out of the normal gossip 203
cycle. These are the county people and the ministers. The 203
former may get a bit of news from time to time, but much of the
local news passes without reaching them. The ministers'
information is generally related to questions of health, events
in the life cycle, or cases of moral or religious backsliding
on the part of their congregations. The degree to which the
landed gentry participates in the verbal spread of news and
rumor depends to a great extent on personal individualities.
There are one or two who have contacts through which greatly
increase their knowledge of events in the social hierarchy.
Ministers are probably the least well informed of anybody on
the happenings of everyday life. Once when asking a minister

205

74 may need just one more dry day to finish his harvest. If the
241 next day is the Sabbath, his one dry day may be two or three
weeks away and the hay a sodden heap. But God the Brikthanich,
in my personal with a croft, change during the war despite
all the pleas of the government for full agricultural pro-
duction. This is the one time that the Older Order Amish
slogan "And be not conformed to this world" fully applies
to the island. Circumspect behavior on this day functions
to disassociate people of all the negations and all the sanctions
which religion has bestowed on the community.

178 As in the case of Communions, there has been a gradual
431 lessening of the importance of Sabbitarianism, especially
since the return of many young men and women from the war.
Laxity, the rather spontaneous relaxation of the rules is
most common in Portree. It does not have the enforcement
of the ministers of any church nor the elders of any church,
542 except the Church of Scotland. Thirty or forty years ago
the ministers and the kirk officers had enough influence
to stop the running of trains throughout the western Highlands,
shipping in the Western Isles, and the Kyle-Kyleakin ferry
on the Sabbath. Public transportation is still at a stand-
178 still on the first day of the week, but the Sunday papers
appear in Portree after the evening services, despite all the
efforts of the ministers. They come by car from Inverness, by
car both ways from the sleepers in the social hierarchy.
178 Before the war no one in Portree would let their
267 children out of the house, except to go to church with their

Whatever the rationalization, cobbler fathers begot
cobbler sons. The present postmaster's grandfather was
the first postmaster in Shawbost, and when help is needed
in delivering the mail it is the postmaster's first
105 cousins who are likely to help out. As late as the 1950's,

230 visitors when a person breathes his last.

In the past, work ceased in every house in the
surrounding neighborhood when a person died. This no
longer occurs. (The story is told of a weaver who called
163 at a cobbler's in Stornoway to say that he could not finish an
202 urgent tweed because there had been a death in the
village, and was told, "You keep on weaving till the
536 weaver dies.") However, dances in the village were
431 cancelled, and the bothan (an isolated hut in which
liquor is sold illegally) may close. Outdoor work, such
as peat-cutting, which would be widely seen the evening
463 of the death spreads throughout the village and
202 beyond within a few hours. From an immense, accumulated
inventory, memories of the deceased are brought out,

For some weeks after returning, the couple goes visiting
with a bottle. The scope of visits seems to have narrowed
to close relatives unable to attend the wedding, and
sometimes the custom is so old-fashioned.
The bride usually mails pieces of bridal cake to
relatives who were unable to attend the wedding.

clipper bow, figurehead, and bowsprit with ornamental carving at both bow and stern. The *Clansman* left Glasgow every Monday and arrived back on Saturday mornings, a regular pattern maintained from 1870 to 1909. She was 211 ft long, 27 ft broad, with a draw of 13 ft of water, her engines having a nominal horsepower of 171; her gross tonnage was latterly 619.

The SS *Locheil*, two-masted with a straight stem and single funnel, in her early career ran the Stornoway mails from Ullapool, in the late 1870s. In 1884 she was fitted out for a three-months' cruise in the neighbourhood of Skye, a gunboat in attendance with a view to suppressing any riots likely to result from the then recently-initiated legislation introduced by the London Land Reform Association. She was also on the Dunvegan service, via Harris and Lochmaddy. In 1907 she ran aground at Portree and was afterwards broken up.

In 1879, David MacBrayne became sole partner and owner of the fleet of David Hutcheson & Co, and the name of the company was changed to David MacBrayne Limited. The first ship built for the fleet by MacBrayne was launched in July 1881 : the iron screw steamer *Claymore*. Her machinery consisted of a heavy two-cylinder compound engine supplied with steam from a pair of single-ended Scotch boilers; she never attained her full speed of 15 knots, at least not in service. She was 227 ft long, 29½ ft broad and drew 14½ ft of water. Her gross tonnage was latterly 776, and the indicated horsepower of her engines 1,400. She was sold in 1931 for breaking up. So high a regard did those on the west coast have for the *Claymore* that many parts of the ship went to places throughout Britain as souvenirs.

The PS *Great Western* was among MacBrayne's bought tonnage. This ship belonged to the GWR and spent most of her time on the Milford/Waterford route, though from 1878-85 she was transferred to Weymouth and ran across the Channel to Cherbourg. She came to northern waters as a straight-stemmed, two-masted, and two-funnelled cross-Channel steamer—both funnels being abaft the paddle boxes. MacBrayne placed her on the Stornoway mail service from Strome Ferry, which she maintained until being withdrawn temporarily in 1893 for a facelift in the MacBrayne standard design, emerging renamed *Lovedale*. was served by a number of ships
ned and built for the Glasgow/

501 Inverness cargo and passenger service, and the SS *Chieftain*. This
505 latter was over 1,000 tons gross, with a clipper bow, single funnel,
*175 two masts, extensive passenger accommodation, triple-expansion engines, and silent-working electric winches.

• [205] In 1929, the TSS *Lochness* was put into commission for the Mallaig/Kyle/Stornoway mail service. Of 777 tons gross, and built of steel, she was 200 ft long, 34 ft broad and drew 10½ ft. Her propelling machinery consisted of two sets of 150 nhp triple-expansion engines supplied by steam from single-ended, oil-fired Scotch boilers. These gave a full speed of about 14 knots. Many questions were raised in Parliament about the alleged inadequacy of the *Lochness* accommodation, particularly for third-class passengers, and the complaints led to the promise of a better ship. But the second world war intervened and it was not until 1945 that the *Loch Seaforth* (TMSV) was ordered. She was on duty in December 1947 and the *Lochness* transferred to the Islands route from Oban.

[205] MacBrayne's mail contract of December 1938 stipulated that the company would provide two vessels, one to be for the Stornoway mail service. This proposed ship was delayed until 1945 when the order for *Loch Seaforth* was placed with Messrs Denny's shipyard. This vessel was the first of the MacBrayne fleet to be fitted with radar and was much larger than any of her predecessors on the Stornoway mail service. She had a gross tonnage of 1,089 and was 229ft in length. In 1972 the *Loch Seaforth* was withdrawn from the Stornoway service. Her place was taken by the *Clansman* ferry for a short period until the *'Iona'* took over to inaugurate a new ferry service between Ullapool and Stornoway rather than the traditional Kyle-Stornoway link. The facilities on the *Iona* for vehicles are good but the passenger accommodation is indifferent.

The first official hint of the coming of drive-on/drive-off car ferries for the Western Isles was made at the commissioning of David MacBrayne's *Loch Arkaig* in 1960. Under the Highlands and Islands Shipping Services Act, 1960, three vessels were built for the Secretary of State for Scotland, and were chartered by him to David MacBrayne Ltd for the new ferry services. One of these ships is the *Hebrides*, a twin-screw passenger and vehicle ferry

[TEXT CONTINUED ON PAGE 73]

Lewis and Harris

boat-builders; many of the bodies were 'fearfully and wonderfully made', an understatement that did not go unnoticed by those who had to travel in the emergent public transport. Combined interests led to the formation of the Lewis Motor Owners' Association which agitated for better roads; existing highways were being pot-holed with alarming and uncomfortable rapidity to the detriment of their vehicles. 491 493 175*

Very slowly did public transport become co-ordinated for the benefit of the travelling country folk. Routes were planned and approved. In 1932 there were daily tours for visitors to the island, a series begun by the late John Mitchell, a pioneer in the provision of bus services, with Stornoway as the 'Rome' of Harris and Lewis. In 1935 he was granted permission by the Traffic Commissioners to run daily services between Stornoway and Rodel. 494 175*

The expansion of the Harris Tweed industry was responsible for developing transport, both for conveying yarn to weavers throughout the island and for mill-workers. In May 1933 John Mitchell began a suburban bus service for the people of Stornoway, though more for the conveyance of workers in the fish trade; tweed-mill workers and others were not slow to take advantage of it. In the following month, June, Mitchell ran a bus from Stornoway to the Market Place just outside the town at Bannadrove (Beinn na Drobh—hill of the market), for a 6d fare. In October of the same year, Peter MacAulay provided a twenty-seater Bedford bus for the Carloway to Stornoway run, and this vehicle was not a home-made affair. Meanwhile in Stornoway, a traffic census showed that, on average, 628 vehicles crossed Cromwell Street, the main thoroughfare, every day—and 799 pedal cyclists. [288] [493]

POSTAL SERVICES

Until the late years of the nineteenth century, the lack of postal facilities were not considered a great disadvantage: few people wrote letters. 205 175*

The *Scots Magazine* in 1756 noted that 'A Post Office is to be established at Stornoway, in the island of Lewis, from the fifth of July next, with packet-boats for maintaining a regular com-

205 *175 munication with the mainland. The mail will be dispatched from Edinburgh every Thursday at eight o'clock at night, and should arrive at Edinburgh every Tuesday morning, but the arrival will sometimes be uncertain.' The development of a postal service in the hinterland of Stornoway was slow. In 1833 only one mail packet ran each week to Lewis, sailing from Poolewe to Stornoway, weather permitting (see Chapter 8), and the island still had only the one post office. By 1880, of course, more contact with the outside world was expected and there were eleven post offices in rural Lewis, with Stornoway's promoted to Head Office status. [454] The latter had been for some time equipped with a money order and Savings Bank department. The telegraph had also been introduced, though no connection to any of the country offices existed; 205 206 *175 telegrams for all parts of the island other than Stornoway were, as a rule, forwarded by the first mail dispatched after the receipt of the message. By 1902 there were twelve telegraph offices in the country districts of Lewis (Harris was incommunicado with Stornoway, coming under the Inverness-shire arrangements). Some of these offices were set up under orders of the Highlands & Islands Work Board, the service being carried on by the Post Office without guarantee against loss. The office at Port of Ness was subsidised by the Fishery Board and Lloyd's, who had a signalling station at the lighthouse there.

205 *175 Until 1926, when the long-universal red vans appeared, all mail was transported between the rural areas and Stornoway by private contractors, who used horses and latterly Albion coaches. [494] A motor-launch operated between Callernish and Bernera; mails [505] for South Lochs were conveyed across Loch Erisort from Crossbost to Cromore, and from Laxay to Kershader. In the early [494] 1930s this area was served by mail van working between Stornoway and Lemreway. In 1950 full use was made of the existing [509] BEA air service and, in order that mail from the rural areas could be included, additional main vans were outstationed at Lemreway, Callernish, and Port of Ness. These worked in to meet others working out from the town.

The Harris area was taken under the control of the head postmaster at Stornoway in 1937, having before this date been served by the head postmaster at Lochmaddy, North Uist. A mounted

craft belonging to the Midland and Scottish Air Ferries Limited came down at the golf course near Melbost; three or four attempts were made to land, but each time it touched down a small boy ran out to meet it and it was forced to rise again. The directors of the company were interested in establishing an air contact with the island. In September of the same year a giant RAF seaplane landed in Stornoway Bay, the S1589, the largest naval flying boat in the world at the time. 509 506 175*

In 1933, Highland Airways Limited proposed an air link between Stornoway and Inverness. The following year, in March, saw the first commercial flight, piloted by an air pioneer in the north of Scotland, Captain E. E. Fresson. The service was intermittent, however. Then in September 1935 there was an agreement between the trustees of the Stornoway Estate and Captain Glyn Roberts of the West of Scotland Air Services Limited to establish an air service between Renfrew and Stornoway as soon as possible. The trustees gave this company the sole right to operate the service from the landing ground of Melbost golf course for a period of five years. Initially the service was to be thrice weekly, at £3 4s single fare. The interesting connection here was that Captain Roberts was the first man to operate an air mail service on behalf of the Canadian Government, along the route of the MacKenzie River, discovered by Stornoway's Sir Alexander MacKenzie; he carried mails to many of the settlements along the river which had previously been served irregularly. At the same time, survey flights over Lewis were being carried out by Captain Fresson of Highland Airways. These led to the construction of 600-yard runways at Melbost, with a radio station to be installed when the airport was complete. 509 175* [508]

In March 1938, the *Lochgarry*, an old cumbersome, single-screw vessel, was on the Stornoway run. When a sixty-mile an hour gale blew up she was unable to leave Kyle of Lochalsh. The Post Office, with commendable enterprise, chartered a Highland Airways plane to fly the mails from Inverness to Stornoway and return with island mails. But no regular air service for mails on this route was introduced until 1948. No special mark was introduced by the GPO, but first covers were marked 'First Lewis Air Mail, Feb 16th 1948. Stornoway to Inverness'. 509 205 • 175*

COMMUNICATIONS

There were, of course, other types of flights before 1948. In 1937, Captain Fresson took the first sick person off the island on charter—the beginning of the air-ambulance service so valuable to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

The history of overland communications in the island is a short one, though it does, like American history, have many characteristic highlights. In early times getting from one place to another was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination. Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

The report of the Rev James Headrick (prepared for Lord Seaforth in 1800 and published about 1820) indicated that the provision of roads would be of great benefit to the island. A footnote in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth. There is a bitter complaint that though the Seaforth property bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

COMMUNICATIONS

and footpaths. Until this time, the greater part of the district of Park was accessible only on foot. Roads were 'at best rough narrow paths where rushes and grass grew between the tracks'. The Act improved the old *frith-rathad* (rough tracks) to such an extent that, says a report of 1902, 'a marked improvement has taken place in school attendance by their formation'. The opening up of the island certainly benefited the people. Though the moor tracks might give a more direct route to Stornoway, the roads at least offered a hard surface for horse-drawn cars and carts. The numbers of vehicles accordingly rose, and for long after the turn of the century the horse enjoyed a monopoly. Motor cars were beginning to be read about in the days-late newspapers brought to the island, but not until 1917 were the first complaints heard about cars tearing up the surfaces of the roads. Slowly but surely the inevitable pioneers emerged with their 'tin lizzies'. By 1925 there were an estimated 250 vehicles in Lewis—and traffic congestion was beginning to be a problem. The relative speed of cars was still something to be wondered at too: it was progress indeed to be able to travel from Ness to Stornoway and back again between a late breakfast and an early tea. But for all this progress, one could still buy a good dog-cart in excellent condition, to seat six people, for £9. A two-seater trap could be had for £6 10s; a set of harness cost 30s. And as for fuel—the best quality oats were 10s 6d per cwt. Indeed, it was not until 1943 that Stornoway Town Council sold its last horse—and only because no one could be found to look after it.

When Sir James Matheson came to Lewis in 1844 there was only one horse-drawn vehicle on the whole island. By 1872 eighty-seven wheeled vehicles were using his new roads. A pioneer of the wheel-carriage service, D. K. Henderson, began business in the 1850s. He was the first to carry mails and held a contract for the Stornoway to Tarbert run until the GPO introduced its own vehicles. As the motor took hold Henderson changed over and was the first to establish a motor-transport business on the island. Not all the local vehicles were of recognised makers' designs. A writer in the *Stornoway Gazette* in the mid-twenties commented on the fact that only the engine and the chassis of the local buses were imported. Bodies were then erected by carpenters . . . and

POSTAL SERVICES

A mounted postman was at that time working between Tarbert and Floddabay, halfway down the east coast of South Harris. Before this transfer there was no direct mail link between Harris and Lewis. With the introduction of a bus service, a local mail was introduced between Stornoway, Tarbert and Leverburgh, and up to 1955 all mails for Harris were dealt with at Tarbert and Leverburgh, being dispatched to and received from mainland offices direct on a three-days-a-week basis. In 1955 a daily delivery service was introduced throughout Harris (with the exception of Scarp), all its mails being handled at Stornoway. 205 • 175* [492] [494]

TELEGRAPH, TELEPHONE AND RADIO

The first telephone in Lewis was installed in 1897. The first telegraphic cable was laid in 1872; its continual breakdowns were a constant source of annoyance, particularly to local businessmen and fishcurers. Another cable for morse telegraph was laid about 1910, between Broad Bay in Lewis and Inverasdale on the Scottish mainland. This worked duplex to Aberdeen, the 'B' leg of the cable being used for an Inverness link. At about the same time, a morse-operated Stornoway-Lochmaddy-Castlebay (Barra) telegraph circuit was introduced which had to be balanced every morning before sending could begin. This was the last morse link in Scotland until its withdrawal in 1948. Though latterly it went only to Lochmaddy, originally it worked with one wire to Castlebay, Lochboisdale, and Lochmaddy, and thence to Tobermory and Oban. It was a four-wire circuit to Tarbert and single-wire to Castlebay; the batteries were housed in the attic of Stornoway Post Office. A new trunk telephone service between Lewis and the mainland began on 21 March 1933, celebrated by an inaugural call from the Provost of Stornoway to the GPO in Edinburgh. A four-core cable was laid between Loch Erisort and Staffin in Skye, complemented with some 25 miles of overland wire. It had to be balanced after every shower of rain! The first teleprinter was worked over this cable in the early 1930s. The use to which the fishing trade put the connection can be gauged by the fact that at the height of the fishing season up to 20,000 messages were handled each month. The first trans-Atlantic call came in 206 175*

STORNOWAY

701 men served in the various regiments at the front in South Africa, and over 300 in the Royal Navy.

*175 In 1796 there were sixty-seven slated inhabited houses in the 632 burgh, twenty-six of which had been built since 1784. Before this (362) date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly (205) once a week with mail and passengers. No place in the North of (505) Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

COMMUNICATIONS

*175 Mention of the sailing packet indicates the tedious manner in 206 which mails came to the town for subsequent distribution in the 632 island. Letters went by mailcoach north to Dingwall, thence by 505 mail-gig west to Achnasheen. Because there was no road from (188) Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

*175 In 1844 seventy boats, ranging from 15 to 150 tons, were work- 439 ing out from Stornoway. The *Gazetteer* for Scotland for that year 632 says, 'The grand trade of the place consists in the exchange of (501) the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.

A HARRIS VIGNETTE

316 Fourteen employees were directly concerned, with another six in 464 the services sector.

The potential of the tourist industry is only beginning to be 484 tapped. Mr Grayne's drive-on drive-off car ferry, with a capacity (505) of 50 cars and 600 passengers, makes two or three trips a day between Uig in Skye and Tarbert, the journey taking less than two hours. The mainstays of tourist accommodation in Harris are 484 the Tarbert and Rodel Hotels, both well appointed and owning 485 fishing rights for salmon and trout. Sea fishing is another tourist 629 attraction. Crofters participate in the holiday trade by offering (226) full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. 484 A rough, stony track, one of the most tortuous and exciting in 187 Britain, takes its leave from the main road over a ridge. It twists 529 and turns in and out of gullies, over cliff sides and across the steep heather-clad slopes of the Toddun, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The (205) seven-mile track is the only marked route, though crofters take a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village 504 relies on its sheltered harbour with a good natural rock pier: 361 most communication is by water, all food and fuel coming that 505 way. In past times every household owned a boat for lobster and 501 shell fishing to supplement both diet and finances. Today the 226 interest in fishing has declined, as has the population. But in 1946 485 Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

HARRIS'S OFFSHORE ISLANDS

The small shop 443 stocks essential household items, and extensive use is made of mail-order. A few years ago a telephone to the mainland was supplied, 206 much valued in emergencies.

Scarp in fact has a small place of its own in the history of com- *175 munications: on 28 July 1934 one of three British rocket-mail 205 experiments (for which special stamps were printed) was held 713 there. The inventor of the rocket, Herr Zucker, was later to become prominent in V-rocket work during the second German war. Herr Zucker personally conducted the firings. His rocket, a large cylinder with pointed nose, something like a heavy shell, was 3 ft long and weighed 30 lb, with capacity for several thousand letters. The motive force was ordinary high explosive contained in a large cartridge about 18 in long; the device was designed to burn with a series of rapid explosions and produce a flight speed of 1,000 mph. The firing apparatus was a flimsy wooden structure providing a runway rising at an angle from the ground, an elastic sling giving the rocket an initial impulse. The first rocket was fired on Scarp, to the mainland: it exploded prematurely and most of the mail was damaged. The postmaster applied to the backs of the damaged covers a three-line cachet in violet: 'Damaged by first explosion at Scarp—Harris.' In order that this mail should be actually flown, it was re-transmitted by the second firing made in the opposite direction, Harris—Scarp. The whole experiment was deemed a failure, however. The route taken by the mail addressed to Kirkwall was unique; rocket, ferryboat, motorcar, mail steamer, railway train, and finally by Highland Airways to Kirkwall.

Depopulation in Scarp was encouraged by the lack of 166 employment prospects, and centralised education, of the type 891 which has already played havoc with remote rural communities (464) elsewhere, is felt to be a black cloud darkening the future. Much the same problem faces Scalpay Island, mentioned later. Children are removed from their home environments for higher secondary education at a central school: for Harris children this is at Portree, Skye. Many islanders argue that the scheme tends to destroy the family unit, urbanising the children so that they become unsuited to, and with no inclination for, rural life. Some sympathy must be felt for the education authorities, of course, as the pro-

CH. X BETWEEN TWO WARS, AND AFTER

167 left the Island. Yet after 1931 many returned, owing to losses and unemployment both in British towns and overseas. When emigrants began to come home the 'Harris' (288) tweed industry had spread to Lewis and offered increasing (182) employment. Some men still fished in family-owned (464) Island boats, and others as paid hands (on boats from (226) the East Coast), though losses and unemployment were suffered.

178 Inter-war changes were hastened not only by movement 177 beyond the Island—an influence at work for three or four 493 generations before—but by mobility within it. In 1919 a small mail car made its way daily from Stornoway along (205) each of the five main roads, with an occasional passenger. When crofters crossed the Island to Stornoway they went on foot or took the pony and cart at a slow walk: it was a day's journey. Ten years later, Ford vans, bought second-hand, ran daily to Stornoway from every township. Frequency, ease and relative cheapness of movement came late in an Island with no railway: the mobility of the motor for marketing and shopping brought rapid change.

178 'Hand-loom' weaving had become an important, if 286 precarious, resource, important because of the capital (433) invested and the labour employed, yet precarious because (462) of its dependence upon name and sentiment, not only upon intrinsic value. In Harris many women had spun and woven for sale for over a generation before 1914, mostly weaving pure hand-spun yarn, and they continued to do so. For many years before 1914, an occasional weaver was to be found in villages in Lewis too, generally weaving a handspun weft upon a mill-spun warp. By 1939 it was estimated that there were about 1200 looms in the Island, chiefly weaving mill-spun yarn, most of it spun in the two principal Stornoway mills. A carding mill

Uig

184 Breanish, at the end of the tarred road which also serves Islivig, is forty miles from
[illegible] Stornoway. On the thrice weekly bus the return fare to Stornoway was £1, and freight
[illegible] about half-a-crown for a hundredweight, but because of competition from privately owned
[illegible] vans the bus service ceased in 1960. Mangersta is reached from the same road by about
[illegible] a mile of unfurrowed side-road of indifferent quality; formerly the only access to it was by
[illegible] the footpath over the sands to the south. General merchandise, fish and meat are supplied
[illegible] by weekly vans; there are no shops. There is a post-office at Islivig: banking facilities
[illegible] are supplied by a mobile bank.

31/ The majority of the crofts are long narrow strips, with those in Mangersta being some-
472 what more compact. The area ranges from two to nine acres, with an average of about
[illegible] four acres. Breanish and Islivig each have about half is usually arable. All the crofts - or
[illegible] croft-units - are fenced, the work having been completed in Breanish in 1959. There are
[illegible] twenty-nine crofts in the rental for Breanish, ten for Islivick and thirteen for Mangersta;
[illegible] in all, owing to amalgamations of various kinds the number of operative units is considerably
[illegible] less - fourteen in Breanish, five in Islivick and ten in Mangersta. There are no cottars.

134 As soils are reasonably good and comparatively free from rocky outcrops, the arable
[illegible] patches are large enough to be cultivated with a horse or tractor. There is a tractor in
[illegible] Breanish, and four horses, a horse in Mangersta and two in Islivick. All of these are
123 hired for ploughing and carting peats. Very little work is done with the spade, unlike
[illegible] many of the other Uig townships.

233 While the general rhythm of township work through the year is similar to other areas,
[illegible] horses like sheep are wintered up on the hills; some crofters winter lambs on their crofts.
[illegible] Breanish crofters are allowed to winter eight sheep, (or sixteen hoggs, or four year-old
[illegible] heifers), on Melaleata Island - hoggs are usually sent since their loss, by falling over the
[illegible] cliffs, is less serious than the loss of heifers. Eilean Molach is used by Mangersta
[illegible] crofters, who are allowed two sheep each in summer.

241 The only crops grown are potatoes and oats, with 'black oats' (Avena strigosa) on the
[illegible] sandy soils in Mangersta. Since seed for 'black oats' is unobtainable commercially,
[illegible] the crofters save their own. A grass mixture is sown by the majority of crofters for hay,
[illegible] to qualify for the subsidy.

233 The extensive hill and mountain pastures are not separately fenced; sheep from all
[illegible] three townships graze over all. If the total sheep stock of the township (about 3,300) is
[illegible] compared with the sowing figures it is found to exceed the sum by about 5.0%. On the
[illegible] other hand, fewer cattle and horses are kept than formerly so that taking the total stock
[illegible] for all animals (horses, cattle and sheep) and comparing with the actual stock now carried,
[illegible] the area carries only 87% of the stock which the sum allowed. In the two older townships
[illegible] the sowing was reduced accordingly; otherwise it has to be sold early, the ewes and hoggs
[illegible] sheep for each £1. In Mangersta, however, the sum was one horse, three cows, one
[illegible] heifer, two stirks and twenty-five sheep for each croft.

Lambing percentage is about 80, and ewes form about 60% of the total sheep numbers
234 (excluding lambs). In this district some wedders are kept for three years and then sold
235 for meat, but the main income is from wool, about three pounds weight from each sheep,
which sells at up to four shillings a pound.

231 Most crofters keep one or two cows, and the calves are normally sold in the autumn
or spring sales. Breanish and Mangersta each have a bull, and in the three townships there
are sixty-seven cattle and thirty calves. Shielings, formerly used for about seven weeks in

4: Moisley et al. K-5 (1959) 1962 ES10 Highland Scots ES10
Uig

361 Many of the original houses are ruined or used as byres. Figure 14 shows that new
497 houses have been built near the sites of the old ones but sometimes nearer the road - all
[illegible] but four houses have easy access to the road. Crowlista is linked to the main road by
[illegible] two miles of rough gravel side-road, and by a footpath and ford via Timaspirry. Vans call
[illegible] but there is no Post Office, store nor bus service. At present water supplies are poor -
[illegible] two wells only are in use.

Carinish is served by a short unmetalled road and all houses have good access to this. The
[illegible] supply is good; water may be stored on the high part of the crofts and piped into the houses.
[illegible] The roads serving Timaspirry too, are unmetalled, but the main road is less than a mile
[illegible] away. The 'main road' from Carinish to Stornoway runs through Ardroil and all
[illegible] except one of the houses not near to it have good drives suitable for lorries. Ardroil has
[illegible] a store and Timaspirry a Post Office. One butcher's and two grocers' vans call weekly
[illegible] and the travelling bus formerly, but the thrice-weekly bus service to Stornoway (fares
[illegible] are almost £1) ceased in 1960 because of competition from privately owned vans and cars.

The cultivated land is in strips usually large enough for horse or tractor work; the
241 smaller potato patches are hand dug. Few horses are kept now. Timaspirry, Ardroil and
[illegible] Carinish have one each and Crowlista none. Crofters hire these horses or tractors from
[illegible] Breanish or Enacleit. Oats and potatoes are the only crops grown in quantity, small
[illegible] patches of turnips are sown and most crofters grow root vegetables. Kale was seen growing
[illegible] on one Ardroil croft; this was an experiment and seemed to be very successful. Peas
[illegible] and rye are no longer grown. Grass mixtures are sown in order to qualify for cultivation
[illegible] grants. Oats are undersown, or grass seed may be sown after the cut harvest, and left
[illegible] for hay for several years - some sown twelve years ago was said still to be giving very
[illegible] good hay, but on the whole very little grass is sown in Crowlista. The area of
[illegible] natural grass cut for hay varies a good deal with the weather and the time and labour avail-
[illegible] able. Crofters find the difficult to estimate as well, as often small irregularity shaped
[illegible] places are cut, and the figures, therefore, may not be accurate. (Appendix A).

One excellent garden showed that a rich variety of vegetables, fruit and flowers can be
grown if adequate shelter is provided and the time for cultivation is available, but few
crofters have the necessary knowledge or interest.

242 Lime, dung and artificial manure are widely used, though on some Crowlista crofts
[illegible] the compound fertilizer was used for the first time in 1959. Shell sand is used on the
[illegible] crofts which have peaty soil. Although it is agreed that seaweed and dung are the ideal
[illegible] fertilizers for potatoes, seaweed is only occasionally used. It is becoming difficult to
obtain locally and much heavy work is involved.

231 Each of the thirty-five operative units which carry any stock at all has a cow for do-
mestic milk supply and manure. If the family is large or many visiting relations stay on the
croft during the summer the number of cattle may be increased accordingly. The regular sale
cattle sales in September or May. Only eight crofters had two cows; fifty years ago four
were commonly kept. Only thirteen of the units had young cattle other than calves. One
crofter was rearing a bid for milk.

The bull supplied for these townships and Mangersta is an Aberdeen Angus which is
wintered on the Ardroil machair.

It was sometimes difficult to obtain factual information about sheep and it is difficult
233 to generalise. Operative units without sheep were those where no suitable labour was
available. In a few cases crofters considered that sheep were 'not worth the trouble' -
but others were building up their sheep stocks. Individual flocks ranged from ten to two

133 The 1,700 acres of common pasture stretch to the east and west of the crofts, across
the peninsula which terminates in Gallan Head, extending to those of Crowlista and Valtos
233 in the south. The whole coast is broken and rocky, the land island is peaty, and Aird
65 lacks the advantages of the machair land found further west. To the north of the village
there is now an R.A.F. radar station on Rudha Cuil, built on what was part of the common
pasture. It dominates the landscape and makes a considerable difference to the life of the
inhabitants.

34 The township, though isolated, is reached by a good road which leaves the main road
99 at the western end of Glen Valtos. Grocery vans call on Wednesday and Friday, a
99 butcher's van on Saturday, and the local people are also allowed to shop at the R.A.A.F.L.
93 within the Camp. The road through the village approximately follows the line of the 100
ft. contour; all the houses are built directly on to the road, with byres, weaving sheds
and other buildings behind, whilst in most cases hens are kept on the steeper slopes below
245 the road. Thus the settlement has far more of the appearance of an English village than
most crofting townships, but there is no shop or post office. The majority of the
305 houses are stone with slate roofs and lately large, though some of them have been built for
35 more than fifty years. All have electric light and their own water supply and several have
312 modern byres.

427 There are ten crofts, as the enlargement of one of the original nine was subsequently
split off to make a separate croft. Of these, one tenant is an absentee and another an
374 elderly woman who does no cultivation. In both these cases, grazing is let to others so
that there are actually eight operative units. The crofts are fenced in their upper portions,
449 but in most cases the fencing does not extend down to the river and there is free access to
the single concrete footbridge which spans the stream.

24 The only crops now grown are oats and potatoes and a few vegetables, with some sown
grass; natural grass provides most of the hay crop. Lime and shell sand and artificial
fertilisers are used; the two former particularly on the machair land near the village. No
140 cultivation is in narrow strips separated by drainage ditches and ploughing is done by horse.
Most of the cultivated land is on the gentler slopes behind the houses, where the use of a
246 tractor is possible. Before 1914 most of the land within the original turf dyke was culti-
vated; here was grown and ground at the mill for meal for barley bread. Seaweed was
82 extensively used as a fertilizer and most of the families kept eight or nine cows, so that
there was a more plentiful supply of manure. Now, six of the families each keep one cow
for domestic milk supply (two of the others each keep a goat). The township possesses
no bull, but make use of those at Valtos or Ardroil.

253 On the other hand, the sheep scum is generally exceeded; instead of the entitlement
of about 200, the total flocks grazed on the township pastures are approximately 500. The
lambs are weaned early in August and put on Rudha Cuil (Air Force use has not permitted
this) and wedders are usually sold at the age of two or three years in Stornoway - many
in October to reduce the numbers that must be pastured during the winter.

162 The total resident population of Aird consists of fifteen males and sixteen females.
Of these, twelve are over 65, six are aged 55 - 64, 11 are in the 15 - 44 age-group (there
are only three married couples) and there are two children under 15. Nevertheless, most
of them are complete families: only one person lives alone; no members are reported as
166 periodically working away, no man and only two women are permanently away. Neither
has there been much emigration since 1939 - five women only have married out of the
parish. The tenants of seven of the crofts are over the age of 65, the only one in the 15 -
44 age-group is a new-comer to the district and does little croft work.

[Marivig]

231 There are only fifteen cows, two yearlings and four calves in the township, and the crofters with
no saw rate on neighbours, or on them, for their milk supply. A bull two of the crofters keep
cheap, there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hundred
and thirty-four lambs belonging to the township. The common grazing (including the off-shore
islands which are grazed by five different crofters each year) is used for the sheep in summer, while
180 all but one of the crofters winter their sheep within the township dyke on the croft. Most crofters
keep hens, and surplus eggs are sold to the Stornoway vans.

Peats cut on the common are transported by lorry to the crofts, while peats from the north end of
the peninsula separating Loch Marivig from the sea must be carried in creels.

Nearly every crofter owns a rowing dinghy which is moored in the loch off the end of his croft,
228 and with this supplements the family food supply. One herring boat, operating slightly from Stornoway
and returning to Marivig at weekends, is all that is left of a fairly large fleet which was regular
before the war. A second boat, owned for two years, lies shored up on the beach, and two others
are wrecks. Over fifty years ago there was a curing station at Marivig. One crofter fishes inshore
during the winter and marketes them in London.

Of the other crofters, only two supplement their income by weaving, one by working on the
roads (while several men work partly on the crofts) and one by periodic work in the township. Marivig is a fairly
flat, flashing, or on hydro-electric schemes. Several others are in the Merchant Navy. The gradual
migration of the young from Marivig, especially of the young people, is reflected in the high average age of the
permanent residents, and in the numbers in the school - over one hundred pupils in 1920, thirty-nine
(including pupils from Calbost) in 1946, but only nine from Marivig in 1958. The young
people leave the township to train or work on the mainland (generally in Glasgow) or in Stornoway,
while their elders accept the view that "there is nothing for the young people here".

The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a
shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. There
is a daily bus from Gravir via Marivig to Stornoway and back; the return is over 10/-. The road
which reached the township from the west in the late 1920's has a tarred surface in much
better than the later road southwards to Gravir which is untarred. There is no church in Marivig
and most of the population attend the Free Church in Gravir.

Within the township the two arms of the township road serve all but two of the crofts and the
sites of the newer houses, few of them more than thirty years old, tend to be near the road, while
the related houses found on most crofts are those to the rear. Only two bungalows remain
and the other inhabited houses are built of stone roofed with asbestos slate, or of corrugated iron.
All the crofts are supplied with electricity from the grid, but very few have a piped water supply;
rainwater is collected from the roofs and piped for washing, with a separate piped supply from a
well for drinking. All other houses draw water from wells.

The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the
drift of population away from the crofts, but those who remain have little incentive to work the
croft more efficiently owing to the very hard labour involved. It is suggested that with more
intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk,
potatoes and eggs could be marketed in Stornoway - the milk replacing that at present brought
from the mainland. Such developments, perhaps on a co-operative basis, together with a revival
of the fishing industry and introduction of a tourist industry, by building a small hotel or guest
house and attracting anglers as well as those who simply wished scenic beauty, might bring pros-
perity back to a township which otherwise may well be derelict in the next twenty years. But the
capital required for the two latter enterprises is not available within the township.

[Lemreway]

229 The West Highland Survey Township Card describes Lemreway as "pre-dominantly a fishing
195 township". The remains of an old curing station are visible today and until 1947 there were twelve
boats operating from Lemreway. A declining market, increasing cost of gear for deep-sea
645 and the lack of a landing stage led to the decline of the industry in this township. Today there is
249 one fishing boat which lands its catch in Stornoway: working with modern equipment, drift and ring
netting, it provides a regular income for a crew of six.

181 An examination of the population statistics proves interesting, especially when compared with
182 those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large
considering that there are six unoccupied crofts. Eleven of the crofts have more than one house
and the extra population forms over a third of the total residents. More than two-thirds of this
resident population is in the two important age groups - between 15 and 54. With over forty
resident males in the working age group, Lemreway provides a striking contrast to other trawling
townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancillary
occupations such as weaving, fishing and crofting. A further eight supplement their croft work with regular
197 employment - a postmaster and a postman, a bus driver, a lorry driver and several weavers. Just
195 twenty people work away from the township permanently. Fourteen in the Merchant Navy and
nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1939.
Nevertheless, Lemreway has a larger proportionate resident population than most township.

Only four thatched houses are occupied and housing conditions generally are good. Every house
has electricity, but, with four exceptions, water has to be carried from springs and wells. Most
of the present houses were constructed in the 1930's and they are usually near to the road. Ruins
of the old houses remain, some being used as byres, and there were built either along the shore or
up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs.
Today supplies of food, peat and even seaweed are brought by road.

Mention must be made of the possibilities of the tourist trade in Lemreway with its most
attractive beaches and reasonable road connections. An approach has been made to the Scottish
Youth Hostels Association and while hostellers could not greatly increase the income of the residents,
they would stimulate interest in the area. Accommodation for summer visitors, other than relatives
of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considerable
enterprise is being shown. A Ferguson tractor, bought this year by a man returning from obtaining
an example. It is to be hired out and could be put to good use in some parts, especially on the
machair. The attempt to improve the common pasture and the new extensive tenancy of Ardroil
will reflect a combined effort to improve conditions. The old economy of crofter-fisherman is
being adapted into modern times with crofter-weaver, crofter-postman and crofter-bus driver are the
contemporary employment combinations.

181 The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this
is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions,
it may be able to combat the 'drift to Glasgow' and continue as a successful community.

[Orinsay]

Beth Blowers, Brenda Turner and John Wearmouth

151 Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of
a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards
241 of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access
to the individual Township Cards, which are a storehouse of information. For detailed con-
tents of the cards, see West Highland Survey, p. 247.

302

Founded in 1951 as a single sheet of 200 words it has grown 204
to sixteen pages. It has the distinction of being the only
news magazine in Great Britain written in longhand. The 203
shopkeepers also pass along the local ken, as it is called.
There is a common belief that the telephone operators are
another source. I have known people to drive several miles
to make a call from a box in another exchange district because
they were sure the people of their neighborhood would have the
news before they had hung up the receiver, if they made the
call locally. The post office is also said to be a transmitter 275
in the bush telegraph; some say the post mistresses steam open 276
their letters. On shopping days in Portree the women carry
home more than the week's groceries. Down at the square at
night, they gather in small groups to transmit their tantalizing
tidbits of news and, perhaps, scandal.

Two status groups are left out of the normal gossip 203
cycle. These are the county people and the ministers. The 554
former may get a bit of ken from time to time, but much of the 775
local news passes without reaching them. The ministers'
information is generally limited to questions of health, events
in the life cycle, or cases of moral or religious backsliding
on the part of their congregations. The degree to which the
landed gentry participates in the verbal spread of news and
rumor depends to a great extent on personal qualifications.
There are one or two who have contacts through whom gossip
carries across the lines of cleavage in the social hierarchy.
Ministers are probably the least well informed of anybody on
the happenings of everyday life. Once when asking a minister

A street which leaves the main road and cuts into the
moor, or common grazing land, is called Grinanbhat, from
the name of a nearby loch.

511 The presence of a large Harris Tweed mill in
348 Shawbost has contributed to a high standard of living
208 within the village. It is estimated that only 25% of
493 the households of rural Lewis have cars; about 50% of
the households in Shawbost possess them. In 1970
342 Shawbost had only one occupied tigh dubh, or "black
house" built of dry stone and roofed with thatch, which
many islanders symbolizes a past life of poverty and
adverse times. Modern appliances such as refrigerators
404 deep freezers and electric toasters are common in
251 Shawbost. Most homes also have television sets, and
207 many have telephones.
206

288 The mill in Shawbost employs between 60 and 70
463 persons to dye, card and spin yarn, to prepare the yarn
in warps which are then delivered to weavers who work
in their own homes, and to darn, wash and market the

205 munication with the mainland. The mail will be dispatched from
*175 Edinburgh every Thursday at eight o'clock at night, and should arrive at Edinburgh every Tuesday morning, but the arrival will sometimes be uncertain.' The development of a postal service in the hinterland of Stornoway was slow. In 1833 only one mail packet ran each week to Lewis, sailing from Poolewe to Stornoway, weather permitting (see Chapter 8), and the island still had only the one post office. By 1880, of course, more contact with the outside world was expected and there were eleven post offices in rural Lewis, with Stornoway's promoted to Head Office status.
[454] The latter had been for some time equipped with a money order and Savings Bank department. The telegraph had also been intro-
205 duced, though no connection to any of the country offices existed;
• 206 telegrams for all parts of the island other than Stornoway were,
*175 as a rule, forwarded by the first mail dispatched after the receipt of the message. By 1902 there were twelve telegraph offices in the country districts of Lewis (Harris was incommunicado with Stornoway, coming under the Inverness-shire arrangements). Some of these offices were set up under orders of the Highlands & Islands Work Board, the service being carried on by the Post Office without guarantee against loss. The office at Port of Ness was subsidised by the Fishery Board and Lloyd's, who had a signalling station at the lighthouse there.

205 Until 1926, when the long-universal red vans appeared, all
*175 mail was transported between the rural areas and Stornoway by
[494] private contractors, who used horses and latterly Albion coaches.
[505] A motor-launch operated between Callernish and Bernera; mails for South Lochs were conveyed across Loch Erisort from Crossbost to Cromore, and from Laxay to Kershader. In the early
[494] 1930s this area was served by mail van working between Stornoway and Lemreway. In 1950 full use was made of the existing
[509] BEA air service and, in order that mail from the rural areas could be included, additional main vans were outstationed at Lemreway, Callernish, and Port of Ness. These worked in to meet others working out from the town.

The Harris area was taken under the control of the head postmaster at Stornoway in 1937, having before this date been served by the head postmaster at Lochmaddy, North Uist. A mounted

h month. The first trans-Atlantic call came in

COMMUNICATIONS

• 206 The first trans-Atlantic call came in
*175 1935, when the Lewis Woollen Mills were called up by a Toronto
288 mill.

Beam radio came in 1938-39 with two circuits. The stations
207 were on Bennadrove Hill, outside Stornoway, and at Ullapool.
*175 In 1942 a twelve-channel link was opened to Gairloch. Outlying
villages worked into Stornoway on single-wire circuits, with an
earth return, Great Bernera being the last exchange to be served
[206] single-wire. One of the island's most remote inhabited satellite
[167] islands, Scarp, received its first telephone service only in 1947.
Scarp was deserted by its native population in 1971.

206 The rate of increase in the use of telephone services in the
island has been considerable. In 1965 some 1400 customers of
the Post Office made almost 250,000 trunk calls. In 1972, the
number of subscribers was 2,300. The projected number for 1975
is in the region of 3,500 subscribers who will make an estimated
500,000 calls per annum. In each case, the figure for local calls
is very much higher. Every telephone exchange on the island
has grown in size; of the twenty-one exchanges, the three
largest are at Back, Carloway and Shawbost. In 1964 the Post
Office set up a working party to examine the development o
the telephone service in the Highlands and Islands. As a resul
of the party's report a scheme of improvement involving
capital expenditure of £7½ million will be spent on new building
and access roads, exchange equipment, underground cables an
radio equipment.

Stornoway has been provided with a new telephone exchange
and underground cables have been laid both in the town an
in the outlying districts. Smaller exchanges in the country area
[207] will have new equipment fitted. A modern radio system be
tween Stornoway and Tarbert is being constructed. To link th
island with the South, a new underground cable, costing £
million, will link Inverness to Ullapool and Gairloch. It is est
mated that by 1975 most townships in Lewis and Harris (th
latter through a new Exchange building) will be on STD, at
cost of £500 for every connected subscriber in the island.

632 distinctive geographical features, and nearness to the
362 sea: Ceann a Stigh (or Ceann a Stigh Bhaile, or Baile
102 Stigh, the "town" at the "head" of the road "in" by the sea), Buailebhir (an area identified with the keeping of cattle), Gearraidh Mor, Creagan, Pluic, and Mach a Chul ("out the back," by a road built relatively recently). A street which leaves the main road and cuts into the moor, or common grazing land, is called Grinnbhat, from the name of a nearby loch.

511 The presence of a large Harris Tweed mill in
318 Shawbost has contributed to a high standard of living
208 within the village. It is estimated that only 256 of
193 the households of rural Lewis have cars; about 50% of the households in Shawbost possess them. In 1970
342 Shawbost had only one occupied high rubh, or "black house" built of dry stone and roofed with thatch, which to many islanders symbolizes a past life of poverty and adverse times. Modern appliances such as refrigerators,
1404 deep freezers and electric toasters are common in
1251 Shawbost. Most homes also have television sets, and
207 many have telephones.
2206

Chapter 5

GEOGRAPHICAL AND SOCIAL MARGINALITY

182 Despite the growth of the Harris Tweed industry and the gradual disappearance of some of the techniques and expectations associated with heavy reliance on the land and the sea, an important factor which helps to sustain some of these patterns is the social and geographical marginality of the islanders.

175 When the young men who survived the second world
1728 war returned to the island, most households still had
1251 horses to cultivate the croft, but a few years later
1604 the tractors replaced the horses. The labor government,
175 which came into power after the war, passed legislation
457 which extended the processes of centralization that had proceeded since the breakdown of the clan system. The National Health Service was established. Free milk
1871 became available in schools. More scholarships (called "bursaries") became available for further schooling.
1207 Television came in the 1950's. In short, the islander was exposed to a number of new alternatives.

182 To the extent that persons became involved in these possibilities, the island became peripheral or marginal. The island has become more dependent upon central

COMMUNICATIONS

THE PEOPLE

SOCIAL LIFE

571 In common with other aspects of island life, the social side has
188 undergone considerable change. The world has been brought nearer the crofter's home by radio, television and film screen, reducing the social need for meeting with neighbours and friends for the ceilidh. The ceilidh was once the principal means of re-
574 creation and instruction. There is no precise English equivalent
198 for it, and it may be loosely described as an "at home" to which all are welcome. It may be held in any house; in the past, the favourite resort was a home where the head *(far an tigh)*—man of the house was an intelligent, communicative man; and if he had a number of eligible daughters so much the better. Ceilidhean were held after nightfall. Old tales were told, and songs sung, and public questions of the day were discussed. All women attending took with them an ample amount of work, sewing or knitting, to see them through the evening. Ceilidhean nowadays tend to be more organized, using the form of popular 'concerts' which did
1415 not take root in the island until the turn of the century, though they were a common way of entertainment on the mainland at the time. Social life in the past was thus very intense, and was a natural evolution from the basic desire to forget the day's work and to have some pleasure of a kind.

546 The pattern of recreation facilities has since become fairly varied. Films came early to Lewis, or rather Stornoway; the first Picture House was located in Keith Street, and presented both
1536 fictions and stage turns. A new Playhouse was opened in 1934 with *The Good Companions* and *Falling for You*, starring Jack Hulbert and Cicely Courtenedge. Films in the rural districts were a rarity, however, until in 1946 the Highlands & Islands Film Guild came into existence to bring the magic of the screen to scattered communities. This body ran several mobile cinema out-
1207 fits in the deep crofting areas, until the advent of television in the region killed it off in 1971. While it existed, however, the Guild provided an essential service to remote communities and brought not only the world to their doorstep but ensured that they felt part and parcel of a much larger scheme of things.

207 The first television service in Lewis began in 1959, 'piped' by

178 or after it. After 1914-18, the Rector of the Nicolson
571 Institute, Stornoway, proposed village halls for village
771 education and recreation.[4] The scheme was never fully
1583 realised except in one township, Sandwick, near Storno-
1342 way, owing to the strength of puritanical opposition. In
1345 particular, dancing by young folk was condemned as
1583 "dancing upon the graves of their brothers". This atti-
1675 tude is breaking down; social standards, in becoming less
538 repressive, may encourage young people to stay.

178 Broadcasting—a factor of change everywhere—came to
207 the townships as a revolution. Newspapers had already
204 filtered in; but for the first time the Gaelic-speaking home was entered and dominated by an English-speaking voice. It has made itself heard there almost ceaselessly ever since—in broadcast talks, discussions, announcements
178 of news, entertainment, singing and prayers. Only the
207 Sabbath imposes general silence. In the Scottish Home
795 Service great pains have been taken to meet all tastes at the highest level for each, from 'low-brow' to 'high-brow' and from Clydeside to the Isles. To a thoughtful, selective Island listener the new opportunity for imaginative human contacts and for initiation of all kinds is immense. And the purely Gaelic listener is not forgotten. He welcomes Gaelic song or story; and worship in Gaelic has reached many an elderly person's bedside.

178 Yet few listeners select: much broadcasting is designed
207 for those whose only picture-galleries are advertisement
572 hoardings and whose only drama and music are to be found at "the Pictures". And through no fault of the B.B.C., the Sports News offers temptations for those in poverty to acquire wealth innocently through luck in a football pool,

[4] W. J. Gibson, "Social Amenities in the Western Isles", *Sociological Rev.* (Jan. 1932).

SOCIAL LIFE

an enterprising radio firm in Stornoway; its customers receive 207
both BBC and Grampian Television programmes.

Some youth organisations are represented on the island. The 583
first troop of Boy Scouts was connected with the Stornoway 575
YMCA and was founded by forty boys in 1921. Founded (in 583
1912) on the island's close association with the sea was the Boys' 675
Brigade (Naval), later to become the Stornoway Naval Corps and the Stornoway Boys' Naval Brigade. Its objects were to provide instruction in drilling, signalling, seamanship and first aid; and to foster a spirit of manliness and comradeship among its members. The founder was Canon H. Anderson Meadows, of the Episcopal Church in Stornoway (St Peter's). During the first war the boys acted as signallers at the Stornoway Battery.

But the provision of recreational facilities for 529
young people on the island has long been a thorny question. After the first world war, the Rector of the Nicolson Institute, Stornoway, proposed that village halls be built for village education and recreation. This scheme was never fully realised—except at Sandwick, just outside Stornoway—mainly because of the strength of puritanical opposition. This attitude has been breaking down 178
however, and it is now generally realized that the wealth of any community is based on its youth. Most of the efforts to set school activities for young people began after the second war; the work was hard and challenging with not a few failures on the way; perseverance has won to the extent that there is now a full-time youth leader. Most of the cultural and recreational activities are to be found in Stornoway, with a full range of interests. Evening non-vocational classes during the winter are also widely attended for a variety of subjects.

In 1965, an excellent Youth Hostel was established at Stock- 485
inish, Harris, with the help of the Inverness-shire Education Department. In its first season it recorded between 600 and 700 visitors (1,070 bed-nights). Also involved in the establishment of 515
the hostel was the Harris Society of Social Service; practical help was given by the 2nd Stornoway Boy Scouts, who made a wall map, cleared up grounds and shifted furniture. A group of English enthusiasts have in previous years arranged a hotel at Rhenigidale, Harris (see Chapter 9), which provides for some fifty to

178 so creating a small leak in the purse and in the mind,
207 leaving both a little emptier, week by week. Surveys made
525 by teacher-members of the Educational Institute of Scot-
1270 land describe the effects on listeners in Highland parishes as pernicious, in the main. The reports of the B.B.C., on the other hand, emphasise their cultural endeavours, and the lightening of house-work and of rural monotony or solitude. Every effort is needed to aid a happy selection in home and neighbourhood.

72 Experiences undergone in war were of very differing
721 types. Many men spent the war years in the Navy, without contact with decent town life, or others in the Merchant Marine. Of combatants in the land forces, the Territorials of the original 51st Highland Division experienced a few months of relative inactivity in France, then of a brief but bitter campaign, followed by long years in prison camps, while other soldiers underwent prolonged training in Britain, followed by severe fighting for long periods, far afield. Lastly, a limited number of men served in engineering or other works of war-time industry, though labouring work, at high wages, kept many of the older men employed at
1462 home. Of the women called up for service, some were posted to the Forces, some to the Land Army, and some were
1462 sent to factories. The greater opportunities for women to earn a living wage away from the Island tend to equalise the ratio of the sexes.

178 An experience new to the Western Isles came with the
207 establishment of Air Bases. Not only did their construc-
1464 tion provide high wages for labouring for the older resident crofters, brought daily to the Bases by bus from their townships, but for the first time a heterogeneous mass of men from every part of urban Britain was put down at the doors of these quiet communities—at a time when

the Lord that his prayers had been answered.*) Another bothan was started in an old bus.

Today only one bothan exists in Shawbost. It is a small concrete structure, lit by gas and heated with coal, which is burned in an expensive fireplace. Like most bothans, the one entrance faces away from the main road. Unlike most bothans, it has a small window which is curtained but nevertheless reveals whether or not the light is on inside. Most bothans present blank, windowless and doorless faces that give no indication whether or not the building is occupied.

Every three years a poll may be taken within a parish to determine whether the parish should be wet or dry. However, has had many ups and downs since the dawning of the Christian era in the Hebrides. Though it is impossible to ascertain to what extent the common folk participated in the knowledge imparted by the early Celtic monasteries, there are many references to a class of cleric called 'scolocs', whose learning was accessible to the upper classes of the empire; likely the sons of chiefs and next in line to succeed their father, there being no male the poor searcher after knowledge who received education in the monasteries in return for service as labourer on the church lands, and who appears in monastic records as late as the fourteenth century.

As late as the sixteenth century, however, after the influence of the Church had diminished, the inhabitants were almost wholly illiterate. When the Fife Adventurers came to Lewis in 1598, they brought a schoolmaster with them; though it can be taken that his services were intended for the improvement of the clan, it cannot rather than the isleifolk. Old Roderic MacLeod, doughty chief of the MacLeods of Lewis at the time of the Fifers' arrival, was unable to sign his name. Two of his sons, on the other hand, were

231 Recent trends also point to a decline in the numbers of sheep, although more are kept now
[288] fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great de
this increase must have been a result of the ewe subsidy, but part at least may be connected w
the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numb
had already begun to decline and have since fallen steadily. This year the township has only 3
breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the futu

221 All the crofters keep some sheep although individual stocks vary from 15 to 150. For mos
233 the year these sheep are grazed on the common pasture on the moor or on the eighteen acre is
in the bay. In August, however, the lambs are gathered in for weaning and dipping; in Novem
the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft
boundaries. If necessary they are given fodder, but from the beginning of January they are en
ged to return to the moor, although the gates are not 'officially' closed until May.

311 The total area of the common pasture exceeds 1500 acres, but most of this consists of hum
233 waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700
sheep now graze this area and the apparently large common pasture is in reality drastically ov
stocked, a process which must inevitably harm the animals as well as the land.

231 No pigs or horses are to be found in the township and each crofter keeps very few hens, no
235 just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are
435 to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is fa
from profitable.

434 It can be appreciated that crofts of this size and quality can neither provide the crofter and
464 family with sufficient income, nor fully occupy the available labour force. As a result, people
228 in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "pri
a fishing township". Today the herring fishing has disappeared entirely and only one crofter s
does a little lobster fishing, sending his catch direct to Billingsgate.

161 There are now 45 people resident in Orinsay but an examination of their ages reveals that
162 than half of them are between 15 and 64 years. Indeed there are only six resident males betwe
these ages, and three of these spend at least part of their time working away from the townshi
the Eishken estate.

366 As there is neither a school, post office, shop nor garage in Orinsay, there is no availabl
368 occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 a
166 are permanently away in the Merchant Navy, returning home only for holidays, while another
167 are seasonally away with the whalers. Similarly almost half of the females of similar age wo
464 domestic service in Glasgow. It must be realised that most of these people working away assi
505 their families at home, and that a large part of the croft incomes are made up of money sent h
228 together with pensions and other allowances. Emigration from Orinsay to other areas has con
462 steadily, twenty people leaving the township since the war.
352
434

On the whole, housing conditions are good, due to relatively recent construction. There is
372 only one traditional black-house, and even this house has electricity: only one house is withou
372 Water supply is not so certain as wells and springs are the only source. The township lacks a
206 telephone and a shop, but is served by travelling vans. A good road, constructed within the la
366 decade, connects Orinsay with Gravir; entering the township via the valley to the north-east,
491 serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty mile
494 distant.

161 Like so many other crofting townships Orinsay, above all else, gives an impression of con
162 gestion. The self-same hills that provide shelter also restrict cultivation. The crux of the
situation is that land, extremely marginal in character, is being worked by too many tenants o
holdings too small to be economic. With three residents to every two acres of cultivated land,
Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twe

The small shop stocks essential household items, and extensive use is made of mail-order. A few years ago a telephone to the mainland was supplied, much valued in emergencies.

Scarp in fact has a small place of its own in the history of communications: on 28 July 1934 one of three British rocket-mail experiments (for which special stamps were printed) was held there. The inventor of the rocket, Herr Zucker, was later to become prominent in V-rocket work during the second German war. Herr Zucker personally conducted the firings. His rocket, a large cylinder with pointed nose, something like a heavy shell, was 3 ft long and weighed 30 lb, with capacity for several thousand letters. The motive force was ordinary high explosive contained in a large cartridge about 18 in long; the device was designed to burn with a series of rapid explosions and produce a flight speed of 1,000 mph. The firing apparatus was a flimsy wooden structure providing a runway rising at an angle from the ground, an elastic sling giving the rocket an initial impulse. The first rocket was fired on Scarp, to the mainland: it exploded prematurely and most of the mail was damaged. The postmaster applied to the backs of the damaged covers a three-line cachet in violet: 'Damaged by first explosion at Scarp—Harris.' In order that this mail should be actually flown, it was re-transmitted by the second firing made in the opposite direction, Harris—Scarp. The whole experiment was deemed a failure, however. The route taken by the mail addressed to Kirkwall was unique; rocket, ferryboat, motorcar, mail steamer, railway train, and finally by Highland Airways to Kirkwall.

Depopulation in Scarp was encouraged by the lack of employment prospects, and centralised education, of the type which has already played havoc with remote rural communities elsewhere, is felt to be a black cloud darkening the future. Much the same problem faces Scalpay Island, mentioned later. Children are removed from their home environments for higher secondary education at a central school: for Harris children this is at Portree, Skye. Many islanders argue that the scheme tends to destroy the family unit, urbanising the children so that they become unsuited to, and with no inclination for, rural life. Some sympathy must be felt for the education authorities, of course, as the pro-

[Marivig]

231 There are only fifteen cows, two yearlings and four calves in the township, and the crofters with no cow rely on neighbours, or on tins, for their milk supply. All but two of the crofters keep sheep, there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hundred and thirty-four lambs belonging to the township. The common grazing (including the off-shore islands which are grazed by five different crofters each year) is used for the sheep in summer, while [235] all but one of the crofters winter their sheep within the township dyke on the crofts. Most crofters keep hens, and surplus eggs are sold to the Stornoway vans.

314 Peats cut on the common are transported by lorry to the crofts, while peats from the north end of 482 the peninsula separating Loch Marivig from the sea must be carried in creels.

228 Nearly every crofter owns a rowing dinghy which is moored in the loch off the end of his croft, 501 and with this supplements the family food supply. One herring boat, operating nightly from Stornoway and returning to Marivig at weekends, is all that is left of a fairly large fleet which operated before the war. A second boat, unused for two years, lies shored up on the beach, and two others are wrecks. Over fifty years ago there was a curing station at Marivig. One crofter fishes lobsters during the winter and markets them in London.

363 Of the other crofters, only two supplement their incomes by weaving, one by working on the 364 roads while several men work partly on the crofts but are periodically away whaling in South Georgia, fishing, or on hydro-electric schemes. Several others are in the Merchant Navy. The gradual 366 migration from Marivig, especially of the young people, is reflected in the high average age of the 367 permanent residents, and in the numbers in the school -over one hundred pupils in 1900, thirty-nine 362 (including sixteen from Calbost) in 1946; but only nine (none from Calbost) in 1958. The young 371 people leave the township to train or work on the mainland (generally in Glasgow) or in Stornoway, while their elders accept the view that "there is nothing for the young people here".

205 The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a 206 shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. There 366 is a daily bus from Gravir via Marivig to Stornoway and back: the return is over 10/-. The road 490 which reached the township from the west in the late 1920's has a tarred surface and is much 488 better than the later road southwards to Gravir which is untarred. There is no church in Marivig 491 and most of the population attend the Free Church in Gravir.
346

363 Within the township the two arms of the township road serve all but two of the crofts and the 361 sites of the newer houses, few of them more than thirty years old, tend to be near the road, while the ruined houses found on most crofts are often nearer the sea. Only two thatched houses remain 342 and the other inhabited houses are built of stone roofed with asbestos slate, or of corrugated iron. 379 All the crofts are supplied with electricity from the grid, but very few have a piped water supply; 312 rainwater is collected from the roofs and piped for washing, with a separate piped supply from a well for drinking. All other houses draw water from wells.

829 The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the drift of population away from the crofts, but those who remain have little incentive to work the 900 crofts more efficiently owing to the very hard labour involved. It is suggested that with more intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk, potatoes and eggs could be marketed in Stornoway - the milk replacing that at present brought from the mainland. Such development, perhaps on a co-operative basis, together with a revival of the fishing industry and introduction of a tourist industry, by building a small hotel or guest house and attracting anglers as well as those who simply wanted scenic beauty, might bring prosperity back to a township which otherwise may well be derelict in the next twenty years. But the capital required for the two latter enterprises is not available within the township.

213

BEYN IN THE DAYS OF THE CLAN

If we are to understand the continuing distinctiveness 121
a contemporary culture, we must attempt to reconstruct
culture of the twenty past and point out the plausible
ns for the more distinctive traits and patterns which,
ebeating integrated, became characteristic of the culture.
nsequer, then, is devoted to a description of the social 128
tatic, economics, and religion of the Eriskimbopb
n the influence of the commercial and rapidly expanding
rial society of Great Britain assumed significant
ctions.

Sources of Information

There is an almost complete dearth of information about 127
nternal conditions in the Hebrides before the eighteenth
ry, except for sharp accounts of intrigues and rebellions
st the Scottish Crown. A combination of causes is re-
nsible. First is the relative lateness of the introduction 127
writing. Second, there is the fact that the Western Isles 128
cluded by the Norse from the ninth to the thirteenth century,
d the destruction of Scottish records. The ecclesiastical

214

CH. X BETWEEN TWO WARS, AND AFTER

159 of the owners—but farmers knew it was futile to protest,
173 and they suffered with a wry smile and a shrug of the
133 shoulders. After all, most of the farmers had stayed at
127 home and their affairs had prospered, in war-time; whereas
all but the older crofters had had years of seafaring or
fishing, and the nation's debt to them had not yet been
forgotten. The farmers kept quiet and waited.

151 Meantime, Leverhulme made public war upon the
Government. Speaking in Edinburgh in November 1919,
666 he declared that "Reports, thick as leaves in Vallombrosa,
433 have been the dominating feature of Government policy
in the Highlands and Islands . . . but the invariable rule
seems to have been, whenever expenditure of public money
was recommended, for the Government either to ignore
the reports or to cut down expenditure so penuriously
as only to result in waste . . . by not spending to the
full amount . . . Lewis and Harris have too long been
(213) the Cinderella of the Government pantomime."[1] The
crofters, reading this in the daily papers, and again in the
weekly *Stornoway Gazette* a day or two later, chuckled
with glee, rolling the phrase on their tongues. They
might not all have been able to explain the strange words,
like Vallombrosa or Cinderella, though they sounded fine;
but all knew what a pantomime, and some might even
have seen one, without saying too much about it to the
minister. About 'penurious expenditure' they could
have no doubt. Yes, a fine speech, they felt! Yet in
spite of the string of truth contained in such orations, these
did not make it easier for Government to co-operate with
the orator, to prevent raiding or to deal with it should it
begin.

000 Raiding did begin in the spring of 1920. Applicants

[1] Lecture at Edin. Phil. Inst., 1920. Quoted in Leverhulme (1927).

130

"I was in the Navy during the last war. We were
in Norway, and got an invitation to visit the palace.
I didn't go. I was afraid I'd make a mess of things."

"This place has an inferiority complex. It's
mainland-oriented; so you feel outlandish."

The new director of an association which promotes
the speaking of Gaelic is a Lowland Scot who learned
Gaelic when he was in England. He was working in England
and, as a Scotsman, felt so much like a foreigner that
he decided "to be a real foreigner"—to be studying Gaelic.
Motives which prompted legislation protecting crofting
also lie behind the development of organisations which
attempt to protect and preserve the Gaelic language.

An Comunn Gaidhealach, the Highland Association
which promotes the speaking of Gaelic, was founded in
1891 in a town on the mainland, and has always been urban-
based. Only recently has it established a branch in Lewis; it
established its headquarters in Stornoway; but the head-
quarters were relegated to hindquarters when the director
found that he needed to be on the mainland to exert
pressure on influential organisations for aid and support.
(213) The organisation is condemned by ministers on the island,
who see it as an organisation that sponsors light-hearted
singing. The magazines and books which it publishes or
sponsors are seldom read by the rural islanders. The

COMMUNITY FROM PAST TO PRESENT PT. II

175 growth followed the increase in potato-growing and fish-
178 ing, in income and food production, and the introduction
434 of vaccination against smallpox, which had formerly taken
1 in every toll of child life.[1] This increase found an outlet
433 in emigration to the Colonies, often led by departing tacks-
(75) men though discouraged at first by the Island lairds. For
example, in July 1773, 840 people sailed from Lewis.
"Alarmed by this, their master . . . came down from
175 London to treat with the remainder of his tenants. What
428 were the terms asked, think you? 'The land at the old
(74) rents, the augmentation paid for three years back to be
refunded, and his Factor to be immediately dismissed!'"
(214) Although the *Edinburgh Evening Courant*, from which this
quotation is taken, went on to say that it was incorrect that
the demands would be acceded to, or the Island would
become a desert, the Factor was retained.

The pressure of population can be imagined when the
appalling conditions of transport overseas are remembered.
A case in point of 19th century Scottish emigrants setting out from
the Clyde across the Atlantic in a vessel for which the
maximum human cargo of negro slaves permissible was
(122) 130. The regulations governing the transport of slaves
did not apply to the transport of "freemen." In connecting
this case, D. F. Macdonald suggests that while it was in
the interest of slave-owners that their slaves should arrive
in the Plantations alive, it was rather in the interest of
manufacturers to discourage emigration so as to keep a
supply of labour at home with which to meet their growing
demands and fill the gaps due to a high mortality, par-
ticularly among workers newly arrived from the country.[2]
It would also seem as if it had not been in the interests of
landlords to encourage emigration at a time when
(112) the Napoleonic Wars were at their height.

HISTORY

175 scriptions flowed in. In 1709 the Queen granted Letters Patent
(74) under the Great Seal for erecting certain of the subscribers into
(243) a corporation. Thus did the SSPCK come into being, with an
initial capital fund of £1,000. Its progress was rapid. In 1711, it
supported twelve schools; in 1795, 323 schools. In addition to
paying the teachers' salaries, the Society supplied the children
with school books, established public libraries in various parishes,
and defrayed the expenses of printing Gaelic Bibles and other
books.

Harris here enters in an interesting sideline. In the records
(217) of the Presbytery of Moll, 1730, it is reported that 'Mr M'Aula . . .
carried off the library to Harris, because he was not paid for his
expenses in bringing them [the books of the Society] to Coll.' This
MacAulay was the great-grandfather of the English man of letters,
Lord Macaulay.

The Gaelic School Society was founded in 1811 and existed
until 1892. It supported a large number of schools, as the desire
for education had exceeded the capacity of the SSPCK. In 1790
(174) there were two schools and a spinning school in the parish of
(174) Stornoway. The minister of Barvas, writing in that year, says
that there had not been a parochial school in that parish for many
years, but that there was a Society school at Ness, attended by
about twenty pupils, instead of twelve that number had all the
(174) children been made to attend. The minister of Uig stated that
the spinning schools were established by the Lady Dunmore
but he does not refer to ordinary schools in his parish at that time.
(174) According to the minister of Lochs, a parochial school was built
there in 1759, and a Society school some three years earlier.

By the middle of the nineteenth century matters had improved
considerably, though there were still complaints that education
was not appreciated. In fact, education tended to be discouraged
(82) for a very practical reason. Back in 1811 an observer in the island
stated in his report that the great mass of the Lewis people would
not send their children to school. 'When reproached on this head
they answer "If we give them education, they will leave us."'
Seventy-two years later (1883), the Napier Commission was told
that 'Sir James (Matheson) supported and contributed to seven-
teen schools in the Island, many of which he built with teachers'

CRIME

CRIME

Serious crime is rare in the island, though it was not always so.[175]
Some light on the life lived in Lewis nearly two centuries ago is
found in the old records of the Sheriff Court of Ross County. The
first minute in the records concerns the appointment of George
Munro, Writer in Dingwall, as the first Sheriff-Substitute 'within
the Island of Lewis'. The date is 1788. Munro's commission em-
powered him to sit 'in the town of Stornoway or anywhere else
he may find most eligible at the time within the said Island of
Lewis and hold Sheriff courts there, judge, decide and determine
in all causes civil and criminal coming before him.' In those days
a case might be raised in any of the county courts. In 1788, a
regulation was made to save defenders from unnecessary trouble,
hardship and expense in travelling to relatively distant courts
where actions were raised against them; litigants had, before
Munro's appointment, been faced with a long and hazardous
journey to either Dingwall or Tain on the Scottish mainland.

The old Court Records date from 1788 and 1826 and record
a number of interesting cases. Sheep-stealing was common, but
other forms of theft less so; this is indicated by the fact that much
of the Court Records are taken up with the minutes of court
appointments. In a case concerning wrecking, Lloyd's of London
are mentioned as being represented in Stornoway as early as 1824
(174) In 1825 the defendants were fined £5 by Lord Gillespie, the
most of a ship found by them in Lemreway, in Lochs.

In a report dated 1902, a survey of crimes (offences against
the person and offences against property) revealed that Lewis and
Stornoway had good characters; considering the population num-
ber compared with the large influx of strangers to Stornoway
during the fishing season, local people emerge as more law-abiding
than the national average. Miscellaneous petty crimes were
numerous enough, however: minor assaults, breaches of the
peace and disorderly conduct, occurring mainly in Stornoway.
Much of this 'crime' was traceable to drink. The island's first fine
and only murder occurred a year or two ago.

THE PEOPLE

485 Many visitors each year, but there is nothing similar in Lewis. Hostellers who visit Stornoway can do little more than march through the town to the mail-boat, or else return to Harris by the next bus.

212 As might be expected, the reading tradition is strong, stimulating from a natural desire to learn and from the fact that the oatfield could only partly satisfy the need for mental stimulation, just to mention the need to alleviate loneliness. A century ago three books were to be found in many island homes: the family Bible, often a massive volume (had it been Catholic, *Turse of Christendoth* (*Pilgrim's Progress*) and *Cruz an Pailiteas* (Bunyan's *Grace Abounding*). As horizons became wider a public library was set up in Stornoway in 1907 (see Chapter 8); a library was in fact established three years before, before 1897, but it was not a free one. In round figures, the 15,600 people of landward Lewis (Lewis excluding Stornoway) borrow some 70,000 books annually, though of course the actual readership figures are higher, books borrowed being passed round the family and exchanged with others until the 'middle' calls again. The mobile library service was established by the Ross & Cromarty County Council in 1955 for rural villages in thirty-one school districts.

ISLAND EMIGRANTS

131 For all that the island is a tight-knit community, paradoxically it has produced many and women whose destinies are not worked out within the confines of its own shores, but at the ends of far horizons. This is typical of most Highland areas: most who leave them make a mark on other societies often greatly exceeding the size of the community they left behind. Many 'great' people are also directly descended from a crofting ancestry; minds and spirits bred in the Highlands and Islands have potential for development not always apparent on native soil but sometimes fully realised in their surroundings and conditions.

Harris and Lewis have contributed their share, and still do, to the general weal of skill, ability and initiative in all fields of human endeavour. For centuries, the export of brains was normal. Possibly the best known is Sir Alexander MacKenzie, who discovered

STORNOWAY The previous building was only an idea in 1907; it took shape when Dr Andrew Carnegie offered to contribute £1,000 towards the construction of a library, provided the town adopted the Public Libraries Act. This was done, and the Council decided to incorporate the library into a larger structure, erected at a cost of £11,000 and opened in September 1905 by Lord Rosebery. Carnegie increased his contribution to £3,500, with other large donations from public-spirited industrialists of the time (eg Coats of Paisley, who also financed school libraries in the island).

Being a seaport, Stornoway has been home to the town's livelihood. In the eighteenth century trade flourished between Stornoway and the Baltic, Scandinavia, Holland, France and Spain (see Chapter 6), and in the first half of the nineteenth century, fish was exported as far away as ports on the Mediterranean. The advent of steam killed the Stornoway sailing craft. At one time in its history, the shipyard (at Matheson's Pastur Slip, now the site of the textile mill) turned out many fine vessels. The scent of tar and pitch, the crunch of a busy grindstone, the shaping of a ship's timbers, the scanning of her planks, the driving of pins and bolts, the music of mallet and caulking-iron, the hum from the saw-pits and the rigger's adze, all made this town a centre of seamen with an interest in the bay. Then there were the schooners, brigs and barques of foreigners who put in for repairs or for merchandise. It was a time of glory that has now given way to nostalgia and has disappeared from the high seas. Ship-masters, ship-owners and crews all added colour and variety to the town as they mingled with the local population—which numbered 1,000 in 1801. Stornoway captains were world-known for their skipping: MacLeods, MacIvers, MacKenzies, Ryrie, MacLeans, Morisons, Allans. Time were the names that were once rolled off to be paired with the famous ships of the day: *Sir Lancelot*, *D. L. MacKenzie*, and *Ainsye*.

While large numbers of its sons were sailing the high seas, many in ships of Stornoway origin, the town began to take on the first shape of a port, with piers. On 9 August 1864, Sir James Matheson subscribed the instrument which took the Stornoway Harbour Commission into being. On 9 August 1866, on 22 June 1885, the Commission was incorporated by Act of Parliament. Matheson had shown a great interest in the development of the existing

COMMUNITY FROM PAST TO PRESENT

172 of the Isles, and in which the people met, though far from
173 any clergy. On the southern mainland most trace of
174 shrines and chapels seems to have been lost, so small are
175 the rings of unhewn stone that marked their sites. Little
176 was recorded by salaried clergy about the services conducted
177 there; those who approved tended to let well alone. Hence
178 written accounts have come down chiefly from those who
179 were out of touch with rural needs or ignorant of the
180 language spoken in intimacy, and whose alien training had
181 removed them from sympathy.[1] As for those private
182 chapels, erected as an observance to patrons bound them
183 to prelate, lord or king, they roundly condemned free
184 congregations.

185 Nevertheless, fragmentary records have come down,
186 such as those of Martin, who visited St. Kilda in 1697 and
187 described the little church where the people still kept a
188 fine brass crucifix and worshipped together, without the
189 presence of a clergyman. Martin's account of seamen who
190 landed by St. Kilda's fabulous isolation led Martin to de-
191 scribe its little community more fully than any other; but
192 he mentions similar worship elsewhere. Then in lonely
193 North Rona, inhabited by only five families, Martin had

[1] The science of religion is intimately sought of language in a community, as probably and particular work, the *Dictionary of the Gaelic Language* (Gaelic-English, and English-Gaelic) by Malcolm MacKinnon, D.D., 1911. This extended work incorporates all the words of three previous dictionaries, and many additions. We here make use of the people's religious tradition in pronounced age, of living usage, and of the Gaelic Bible (the Old Testament translated by Dr Stewart of Luss, and the New Testament, or parts thereof, as are given the more primitive and different sense of meaning (not the higher). See "*cuim*, a cam; shunk" or shrine—"*iomnguas*, a beginning" (a dedication); *sorm*, *fiad* or submission; "*ceu*, any, or only, a chance; . . . *ainsiu*, . . . *ainsiu*, . . . *ainsiu*, impostor of any kind . . . *lioh* . . . prayer in a church . . . *ceudsgrioba*, a beginning of a prayer, or the first part of a prayer, or words. According to the "*Gaelic Dictionary*, the title of the separate Scottish collection of Gaelic religious tradition, Carmichael's *Ordna nan Gaidheal* (Latin, *Carmina Gadelica*), is to be translated, *our Prayers*, but "*Charm* . . . or Supplication . . . of the God"!

221

122 In the last half of the 19th century, many families
123 were transferred from the district of Sig and resettled in
124 Shawbost. According to a local version of village
125 history, the Constable evicted persons from North
126 Shawbost and resettled them in New Shawbost. "The
127 people from Uig were fishermen, so they needed to be by
128 the sea. They wouldn't take a croft in New Shawbost at
129 all." According to another version, the crofts once
130 occupied all the way across from Carnan to the loch;
131 when the Uig people came, the crofts were chopped in
132 half, and the street called Bella Glas was created.

Whatever effect the Constables had on land use and
134 animal husbandry, they are now referred to as "tyrants,"
135 who went mad or committed suicide after the Crofters Act
136 of 1886.

137 Little and horses were tethered or herded within
138 easy walking distance from the township; sheep could
139 be left on the moor without much surveillance. At a
140 much earlier time another dike existed out beyond the
141 township dike. The dikes were used according to principles
142 found in grazing schemes today: the sheep were kept far
143 out on the moor, beyond the second dike, until midsummer
144 when they were moved in closer to the village. At this
145 point they were still out of the arable land of the

146 township, but on land which had been rested and which
147 thus provided better grazing. During the winter the
148 sheep were allowed past the township dike, to graze
149 along with the other livestock on the stubble of corn
150 and barley, and mineral-rich seaweed by the shore.

151 After World War II, the individual crofts began
152 to be fenced, and the township dike was no longer
153 required. The fact that sheep were still grazed
154 communally on the moor meant that everyone had to go
155 out together on a particular day rather than individually,
156 but fencing of individual lots facilitated improvements
157 in land use. Less use was made of crofts for raising
158 crops, and they could be used for grazing sheep all
159 year round.

By Repeating schemes and opportunistic

Information about the distribution of land
161 uses is provided by comparing the number of opportunistic
162 grants by the Crofters Commission for Lewis in the last
163 10 years with the number of township reseeding schemes
164 carried out during the same time (Table 171). A
165 further map supply to the Commission for an area of land
166 (opportunistic) to be sliced out of the township's
167 common grazing land and given to him for his own use;
168 theoretically, his share in the township's common grazing
169 is cut down if his application is granted.
170 [Ian p.xx—Analysis]

171 extra grazing for cattle, but by that time the cattle
172 were already on the wane.

173 The original idea was to provide an early bite
174 for the cattle, because everyone had cattle then.
175 Otherwise they would need to buy more baled hay to see
176 them through the winter.

177 Almost everyone in New Shawbost had a share in the
178 1959 schemes, about 26 altogether. Then it was mostly
179 cattle. We took turns bringing them in at night, and I
180 remember taking 33 home, with some left behind for the
181 night. The cattle were grazed over the summer, and the
182 lambs were put on from August 10 to October 10. Many
183 dropped out after the first four or five years, when they
184 stopped keeping so many cattle. When the number dropped
185 to 13 or 14, they started using the schemes for mixed
186 grazing, then allowed people to take up their shares again. When
187 we only had the cattle and lambs, we didn't need a
188 scaring; but when the mixed grazing started, we had to
189 keep down the number of sheep. Last year we had difficulty
190 with disease."

A forty-acre scheme in North Shawbost started with
192 about eighteen crofters and non-crofters participating;
193 there were 37 cattle altogether. Now only four have
194 cattle; the rest have sheep. The sheep-keepers say,

175 a crew member. Another family is called "cook," the
176 first job which a novice had to assume when he joined
177 the crew of a fishing boat. One of the last men to go
178 to the east-coast fishing is about 60 now. The men
179 came back from the fishing in time to bring in the oats,
180 barley and potatoes, and the money was used for rent
181 and purchase of various foodstuffs and other goods.
182 They usually brought enough rolls of wallpaper to cover
183 the stone-walled or wood-lined high dykh (black house)
184 for another year. Twenty pounds were good wages for a
185 season. While the men were away at the fishing, the
186 women put on from August 10 to October 10. Many
187 dropped out after the first four or five years, when they
188 stopped keeping so many cattle. When the number dropped
189 to 13 or 14, they started using the schemes for mixed
190 grazing, then allowed people to take up their shares again. When
191 we only had the cattle and lambs, we didn't need a
192 scaring; but when the mixed grazing started, we had to
193 keep down the number of sheep. Last year we had difficulty
194 with disease." [Ian p.xx—Analysis]

A forty-acre scheme in North Shawbost started with
196 about eighteen crofters and non-crofters participating;
197 there were 37 cattle altogether. Now only four have
198 cattle; the rest have sheep. The sheep-keepers say,

66 in the far north. "There were two fishing seasons.
67 For one season you went to Fraserburgh, Stornoway,
68 Lerwick and Peterhead; and then the winter fishing was
69 in England, at Yarmouth, Scarborough and Lowestoft.
70 I remember in Yarmouth we didn't like the English
71 bread, it was such a dull color; We liked the pure
72 white Scotch bread."

They lived in small huts, and the work was hard but
74 full of fun. Neighborhood girls used to go together,
75 bringing bedding and different items in large chests to
76 share in the housekeeping. Three girls worked together
77 in a crew, sleeping in a small room, and cooking a room,
78 in double bunks. Some of the huts were so small that
79 there was barely enough room for the beds and the cup-
80 boards. At night the boys would come in off the boats.
81 "You were so tired that you had being up since early
82 morning."

Yes you were always able to dance. You were treated with
84 respect; the youngsters today aren't so good." The
85 women who married non-islanders that they met at the
86 fishing were not likely to return.

87 When shipowners started hiring large scale, the girls
88 were glad enough to have work at home, even though the
89 work was hard." But many continued their temporary
90 absences from the island, working in hotels or as
91 nurses.

ONTINUED
FROM
PRECEDING
FICHE

233 were taken out to small huts in the central moorlands
233 for several months during the summer. These moorland
342 dwellings, called shellings or airidh, were tiny stone
structures, as small as seven by five feet. They had
double stone walls filled with clay, and a rounded
thatched roof. There were two doors opposite each other
in the longer walls, one of which was filled with turf
depending on the direction of the wind. A fireplace
[364] was built into one end of the hut; shelves in the stone
[362] walls held basins of milk and other items; and the major
part of the shelling constituted a grass-and-heather-lined
[361] cavity which served as a bed. The shellings were usually
clustered together near a stream, duplicating neighbor-
hoods within the village.

• 221 Ploughing and planting were finished in the spring
before the young men and women went off to the fishing,
and before the cattle were taken to the shelling. Some
families went to the shelling as early as March for a
"fresh bite" of grass. Many went out in the middle of
May, and returned at the end of July or beginning of
August.

233 "During the week, young girls or boys stayed out on
85 the shellings, depending on who was available in the
887 family; maybe old people who couldn't do anything else,
462

512 The cattle
233 knew their own shellings; sometimes
[425] they went before selling time and stuck their heads
[425] inside. They stood outside the shelling at night, and
that's how you can tell where a shelling once was, even
though the walls have fallen, by the rich green grass.
Calves were born during the summer. A hollow was scooped
233 out in the peat, and lined with turf and moss. People
[429] would stay out for four or five cows. It was like Switzerland,
[429] only we didn't have the bells on the cows. There was lots
[429] of milk, fresh thick cream and crowdie (clotted sour
[429] milk); the cows would know how to make cheese.
233 "The moor was very eerie at night, with the sound of
78 the birds. There were only a few hours of darkness
[513] anyway, and I'm sure we didn't get much sleep, but somehow
it was always fresh; it was the air, the moor air is
more health-giving. The air is different there. Ill
people benefited from the change. Sometimes a person
with TB would stay out there all summer. The air is heavy
by the sea.

305 "There was no sense of time the way there is today.
233 If you got lost in the snow or fog, you followed the cows
• 221 home. You had all summer to take home the peats, to work
829 the croft, to harvest the corn. There wasn't a world,
178 there was only ourselves. That has changed since the war.

233 As these quotations bring out, the subsidy enables
659 people to risk rearing cattle under conditions that
would otherwise make success very uncertain.

476 2. Communalism: Despite the decline in various
591 agricultural activities and the individuation of land
use, some activities persist which require mutual aid.
[484] Conditions of low geographical mobility, in which mutual
watchfulness and competitive gamesmanship have developed
(see section on "Social Marginality"), contribute to
the strong boundedness of the township network. There
is still competition over who begins an agricultural
[164] activity at a particular time of the year. No one wants
• 222 to be so early that he stands out like an over-eager
novice running risks of frost or other bad weather, but
he also shows pride in being the first to
314 harvest potatoes or bring in the peat. Almost everyone
591 cute peat, a time-consuming and back-breaking job made
476 pleasanter with a large labor force; and every aspect
of the activity--the time of cutting and bringing in,
the length of time required to cut peats, the size of
the peats when dry, the type of moss served to the work
• 221 horses, the evenness of the final peat stack--is subject
to intense scrutiny.

233 costly, that the Common Market will soon drive up milk
659 prices, and that income from the weaving has become too
484 uncertain.

476 Many tools and techniques associated with crofting
178 have disappeared: the flail for threshing oats (two
pieces of wood joined with leather); the sheepskin
stretched over wood with holes burned into it, to separate
chaff and grain; rope made of plaited heather and straw.
Each spring the byre was cleaned of its accumulated dung
[241] and ashes, and this was turned into the ground along
[429] with seaweed. Such tools and techniques remain among
[164] the older villagers as a "memory culture" which may be
• 222 mobilized under changed conditions, as when alternatives
[175] to crofting are no longer available or are too costly.
[387] However, the longer crofting is neglected, the less it
will provide an alternative strategy. This is a special
241 fertilizer for raising the land; that's why the
824 turnips are full of maggots and the potatoes turn to
[233] water." As the rushes grow and clog the drains and
streams--rushes that used to be eaten by the horses and
cattle and which are now left untouched by the sheep--
the land becomes unfit even for grazing. "I'd rather
work the land than the blinkin' loom, 'cause we tried the
potatoes, turnips and cabbage last year, and lost them
all to the maggots. You lose heart after that."

529 Whereas at other times of the year there are specific
[164] times which are considered appropriate for visiting,
574 especially if the visit includes a bottle, at New Year's
visitors may appear in the middle of the night or at
any time during the day. Some men may stay up for four
[513] nights in a row, going back home for a few hours of sleep
522 or a bite to eat before setting off again. Various pranks
[521] are played. Men climb through the windows of darkened
574 houses, or wake up sleepers by making animal sounds. One
man went around the village showing a pig's foot to women
as though it were a penis.

527 But whether lasting for one night or for five,
festivities end with the arrival of Sunday; and the usual
comment is, "Thank God it's Sunday."

The "exiles" prefer to return at such times as New
• 221 Year's, or during the summer months when the beaches are
[521] inviting and the gales absent. They remember the
[520] "characters" and other features of village life which
give it color, often forgetting the drab background out
of which the color was forged. Some villagers whose
children have married and left the island continue to live
alone in the house simply to keep the house in order for
their return. "I wouldn't close the house on them. They
come back every summer." A man thinking of emigrating

164 says, "I'll have to ask my brothers and sisters if they
[484] need, since they come back every year." Some houses
426 which are almost empty for most of the year are over-
flowing during the summer months. Often the visitors
must come in stages.

164 The "exiles" sing the old songs with vigor, drink
[484] heavily during their visit, and praise the island for
[521] that "special quality" which is unmatched by life in the
574 dirty, crowded, unfriendly city. Some plan to retire in
the village. The villagers take up the tune that their
society is eminently worthwhile. When talking to strangers,
they ask questions pertaining to this image of themselves,
such as, "Don't you think this place has something which
you will never find in a city?" "People come here during
the summer and they love it; they can't keep away. So
they must find something here. What would you do in a
city anyway? Out here you're freer."

The visitors not only bolster the self-esteem of the
[164] islanders, but provide them with a fund of gossip. "You
[484] summer visitors always turn things topsy turvy when you
574 come." Talk of the adventures of the summer visitors
helps to occupy the long winter nights of the islanders.

164 A comment frequently heard is, "We was awfully home-
[484] sick leaving." That is, he was already longing to be back
548 on the island, his spiritual home. The image of the island

273 One night of the week in which controls are imposed, by
[176] the arrival of Sunday when no one may buy or drink.
[176] The bothan was occasionally open on Friday night, and
on Monday night. "If there's anything left from Saturday
• [221] night, we finish it on Monday.") During the summer of
1971, when the days were long and filled with communal
township activities such as peat-cutting, the bothan was
open every night of the week. The bothan closed when the
man supplying it with drink suddenly died, and has not
reopened.

273 2. Functions of Drinking: If a man decides not to
571 participate in drinking, he is not praised for his self-
[176] control or his ability to abstain; rather, people say,
"What's the matter with him that he doesn't mix?" A man
goes off to the hotel or to a bothan "for a wee nip" or
"for a pint" (the pint of beer which serves as a chaser
for glasses of straight whiskey). Both phrases are
euphemisms for the huge amount of whiskey and beer which
must be consumed if a man is to satisfy the canons of
social intercourse which obtain. A man can drink alone
or, in the company of others, drink very little only at
great social cost.

"You can't go in for a casual pint in a place like
the bothan because it's a place where people mix, and
you're bound to meet old friends you haven't seen for

TRADE AND INDUSTRY

286 womenfolk, giving a ratio of only one male weaver to fifty-five
[462] families. In Lewis, male weavers were more common: one to
• 175 every twenty-five families. The making of whisky was introduced
433 about the seventeenth century. This was in addition to the old
[433] drink of home-brewed beer or ale (*lionn*), and much of it was
273 made to pay rents; it must have consumed a considerable quan-
175 tity of valuable foodstuff. However, the spread of distillation was
[433] a legitimate home industry by which the rent could be paid, in kind
[433] or by sale, was followed by legislation prohibiting all but very
[438] large stills; illegal distilling of course went on in a small way.
• 175 It was then, by a very narrow margin that subsistence was won
511 in the island some two centuries ago. Many times famine showed
that the kelp was the real wealth in the island down. The introduction of
the potato, and the interest in the fishing industry led to an in-
crease in the population, though as discussed in Chapter 3 this in
turn brought more problems. Basically, the island economy had
never been organized on a sound foundation, with the result that
winds of change blew where they would with little or no control.

A new factor in the island economy was introduced after 1750.
• 195 This was kelp-making, the cutting and burning of seaweed on the
224 shore for subsequent use in the manufacture of alkali for the glass
[224] and soap industries. The first tentative move in the island was
433 made by MacLeod of Harris in 1748, when he allowed his Irish
[433] Irish labourers to make kelp on his shores; so little was the pro-
duct's value realized at the time that he only charged them 2s per
ton manufactured. As the burning of kelp came to be understood,
and the marketable value of the product ascertained, the native
population set in. Between 1772 and 1964, about 50 tons were
produced in Lewis each year, compared with some 800 tons per
annum in the Uists; the Harris figure was 500-600 tons. The
growth of the industry began to snowball, and the Minister of
Locks, writing in the *Old Statistical Account*, states that at the
time (1796) some 50 tons were being produced in that parish
per annum. In Stornoway parish, though no figure is available,
• [221] the minister reports that kelp-burning was the principal manu-
facture, and that everyone able to fill a creel, or carry one, was
employed at it for about three months of the year. Little of it
seems to have been done in Barvas parish. The price of kelp varied

THE OTHER ISLANDS

175 Account, there was one family there, that of the person employed
162 by the owner to look after the livestock. The owner was a Nee
Mackaman who paid £4 sterling rent per annum. The land pro-
duce was corn, butter, cheese, a few sheep and sometimes a cow,
and some wild fowl and feathers.

In 1844 Rona was evacuated, its last inhabitant being, in the
175 seventh year of Queen Victoria's reign, the 'King of Rona',
Donald MacLeod, who lived in almost prehistoric conditions.
Rona was without inhabitants until 1884, when a last attempt
195 at settlement was made by two men from Neu. This was a self-
imposed exile, after a difference of opinion with the minister of
their parish; in penance, they held themselves off to Rona. In
1885 a relief boat called and found both men dead, one from
natural causes, the other from starvation and exhaustion after
nursing his friend. By the footmarks of their hut was a pot ready
for the preparation of a meal they never ate.

234 Today, man's connection with the island is maintained by the
221 annual party of Lewis shepherds who each year make the journey
to shear the sheep which still graze on the green slopes around the
open-ended village. Otherwise, only the occasional traveller now
lands there. In June 1956, North Rona with its associated rock,
185 Sulasgeir, was declared a National Nature Reserve on account
of its importance as a breeding ground for colonies of oceanic
birds—guillemots, puffins, kittiwakes, and fulmars—and for its
seal colony.

Sulasgeir

133 Sulasgeir is twelve miles west of North Rona, a lonely rock in
131 the Atlantic, bleak and grassless, and tunnelled by caves and
gullies. The only life it has ever supported is seabirds—officially.
196 Yet one of the old buildings is said to be a chapel and is called
'Tigh Beannaich' (House of Blessing). According to Nen tradi-
175 tion, Sulasgeir was once used as a prison for sheep-stealers, and
it is also said that Bernhilda, sister to St Ronan, was left on the
island to perish. Yet another tradition claims that it was at this
rock that Prince Charles Edward made his first contact with his
Scots clansmen, when the ship that carried him to Scotland was
spoken to by a Nen boat making for North Rona.

241 thirds of an area nominally under crops actually grows
240 barley and hardly be said that such crofts do not
support a family.

The means of cultivation have been either pony-drawn
ploughs in the smoother north, or else the foot-plough
(197) (cas chrom), and the straight spade in the hilly south. I saw
the almost obsolete foot-plough used on hilly ground near
Bodach, Harris, in 1950. In the smoother lands from Stornoway and Barvas northward, however, the crofts then were already laid out in parallel strips, no more than twelve to fifteen feet wide, bounded by open drains. Open drains have increasingly been converted into underground drains over which pony and plough can pass. The cattle feed on the rough pasture or on the grass about the crofts, supplemented by hay cut with a sickle from the grassy edges of the 'lazy-beds'. Quite recently, rotation grass has been sown on the arable strips, and mown for hay by the scythe.
(198) (197) It is important as a breeding ground for colonies of oceanic birds—guillemots, puffins, kittiwakes, and fulmars—and for its seal colony.

In many of the villages, cattle are still taken to the
233 summer pastures out on the moors some miles from the
311 village, to which they herd the cattle live in huts or shelings, annually re-roofed. In the congested 'Point district' (the Eye Peninsula), the cattle must go to the moor on the main island or be taken on to their owners' crofts from late May or early June to about the 10th of August, in order to clear the common grazing and allow the grass to recover. This migration takes place, of course, because
233 of the restricted area of common pasture. On the other
311 hand, pasture is plentiful in the parish of Lochs, lying all round about the village, and here the use of the shieling has been practically abandoned. In almost all villages, with the exception of those of the Eye Peninsula, there is less summer pasturing than formerly; fewer cattle are sent

233 away, and for a shorter period. The sheep wander over
311 the moors all the year round, though they hang about the
crofts when the winter is severe.

221 A comparison with mountainous Norway or the Alps
152 and their high summer pastures suggests itself; but in
Lewis altitude is almost negligible, and the shelings may
171 lie only two to five hundred feet above that of the crofts
133 beside the shore. The difference between winter and
311 summer is in any case less, now being rare and the conditions being such that even in summer the shieling pasture remains poor. Hence it is that while modern Norse and Alpine economy still maintains the summer pasture, the shielings have died out in the Highlands and are slowly decaying in Lewis. Seasonally, stock are transported over longer distances, from Highland to Lowland pasture.

Reasons for the continuance of these and other crofting
181 ways, or for their abandonment, are not of an economic
order alone: not only the remuneration received for labour,
178 but the desire for the work counts enormously. Visiting
233 a couple of distant shielings in the summer of 1950, I
311 found that two lads newly home from the Navy had come up from their village 'for a holiday', bringing rods for trout-fishing and high spirits for play. By day they fished or flirted. By night they slept in one of the two shielings, while the two laughing lasses they had come to visit shared the none too wide couch of the other shieling with the two older women there. One of these was a matron with a motherly twinkle in her eye, the other was a spinster in whose eyes there shone a memorably vivid light; she was the sister (as I found later) of a noted minister on the mainland. The bare simplicity of shieling life is traditionally softened by fellowship and a gaiety that is not beyond
(538) control. A Lowland poet once coined a famous phrase,

182 on the East Coast and in Orkney and Zetland there are
222 comparatively well-marked seasons at which the herring can be expected, Stornoway appears to lie marginally to their main migrations. Thus the amount of the catch varies and curers have been disinclined to set up large curing stations such as those which deal with the enormous influx at the height of the season on the East Coast. A partial compensation is found in the continuance of herring fishing in winter.

While fishing from rowing boats for saith, lythe and
175 ling provided much of the fish needed for home consumption,
221 with long lines in winter and spring brought cod and other
(198) white fish, sun-dried and salted, which became an important export through declining sharply after 1900 and of no importance since 1919. Lobster fishing is undertaken in small boats with two or three men from many townships, and two ponds have been stocked, one on Bernera, Lewis, and the other at Stockinish in Harris to store the lobsters. Conditions in 1935 and 1951-53 are compared in Appendix I (iii) and II (iii).

6. The Annual Rhythm of Life

221 It is appropriate here to show how fishing and crofting
182 fitted together in the seasonal calendar a hundred years
175 ago, and shortly before and after the war of 1914-18.
176 The Lewisman's year shows its relationship to the seasons,
198 with their temperature, rainfall and wind (Fig. 9). A
(286) carefully wrought changes: cod fishing declined as the herring fishing grew in importance; but the latter fell away again after the war. Partly as a result, weaving has become important, the men fitting into the idle periods between the brief peaks of spring and harvest work.

to bleed or to set bones, while some elderly woman would serve as physician and midwife. Spiritual consolation and renewal too could be found, even in the absence of monk or nun, or of priest, minister or catechist. Enough here, that with agriculture and fishing, most crafts, except metal-work, were practised in every family. The 'range of skills' was therefore wider and richer in latent art than might be supposed from those needed on a little croft today. Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

Their labours through the annual rhythm of the seasons might be classed as efforts for the man and endurance for the women (Fig. 9). Man's muscular strength and freedom of limb rouse him to efforts demanded by the thrust and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

encouraging them to rest when the men returned was fondly indulged. Much can be learned from the first (or 'old') "Statistical Accounts of the parishes of Scotland drawn up from the communications of the Ministers of the different parishes", *circa* 1790-96. Of the parish of Stornoway, where by 1790 many men had become crofter-fishers and others were at sea, the Minister wrote, "The women labour at least as hard as the men", even pulverising the ground with heavy hand-rakes (harrows being seldom used), and digging both with crooked and straight spades. That the men's debt was repaid in acts of manly service is true. A man would carry wife or sweetheart on his shoulders across a river in spate, whose rushing waters might have swept her away. But in her turn, a woman would wade into the cold sea, her coats high, bearing on her hips husband or son out to his open boat, so that he could start his night of exposure dry-shod and warm. This act of service was noted and illustrated by Burt at Inverness (about 1726), and it was common in the Lews before the building of stout piers, that is within living memory. Strong common sense, sheer necessity in fact, enforced such mutual service; but the sacrifice entailed was nerved by anxiety for those in danger, by personal pride and love. It was also true that it bore hardly on women, with their readiness for self-sacrifice and their ordeal of childbirth.

What return for their labours did the people get in the past, it will be asked, and what approach to sufficiency in a normal year? For the Island, the most thorough of the five Parish Accounts is that of Harris, with its fascinating retrospective notes (vol. x, p. 368). There the yield of a typical family share, a 'fourth' or 'farthing' land, was computed at "from four to five bolls" (which in Scotland

a night of black mistiness . . . he waded nearly breast-high" through the dangerous South Ford of Benbecula, "conscious only of the roll and the singing of waters and the rhythm of a poem he had taken down a few hours before"—"The Invocation of the Graces", so nearly lost with him! Much that Carmichael learned was given him under a seal of confidence he never broke, although he mourned the loss this meant. The confidence he inspired—which even those who knew him only in their childhood remember for life—was a source of his quiet, unfailing power.

The following begins with the runes and rites of labour, throughout the day, week and year, on land and sea and at home. Turning to the day of rest and to congregational worship, one must enquire as to the presence of the clergy, and question closely how far the people had access to the Bible throughout the centuries: were they really cut off from its riches, from its essence, as the Reformers and the Evangelicals of last century asserted with such vehemence? One can then turn to the runes and rites which opened the phases of life, from birth to maturity, marriage and parenthood, leading at last to life's close.

But no social inheritance is without its burden. Having told of the foundations of faith, something must be said in the next chapter of the negative or superstitious side of Island belief, of temptations and evils which the people could face, and of others to which they submitted in ignorance. From the evidence of faith and wisdom, or error, one must attempt some evaluation of attainment by single souls and by the community, and of the power and fullness of life in common.

(A) SACRAMENTS AND RUNES OF LABOUR, IN FAMILY, TEAM AND TOWNSHIP

788 Labour given to the winning of food, shelter and
• 221 clothing was begun and blessed by poetic, rhythmic prayers or 'runes'. The words were usually reinforced by a symbolic gesture or simple rite. By help of the runes the people sought spiritual preparation for work, invoked aid and finally consecrated the thing made for use.

221 Wherever work was rhythmic it was carried on by
461 working songs. Songs of hunting or herding recalled the
[171] hill and pasture, or praised the landscape with an exuberant flow unequalled in any tongue we know but old Irish, with which Scots Gaelic is so closely linked, or Welsh, of which the nature classics are linked to the epics of the sixth and seventh century thought to be composed in Strathclyde.[1]

788 Yet it was not these but the rhythmic prayers or runes
461 which initiated labour, stage by stage. They are paralleled
[171] among many peoples, but those of the Gael possess rare fullness of meaning and beauty of imagery, words and form. When labour was ended, the food won or the clothing made was consecrated for the use of family and friends, of the poor and the stranger-guest.

788 In the struggle for food, the sowing and reaping of corn
241 ranked highest, followed by its parching and grinding (*Carmina*, Nos. 88-92). The preparation of seed for its sowing was accompanied by its consecration, *an coisreageadh sioil*. Similarly for reaping: "Laying his bonnet on the ground, the father of the family took up his sickle and,

[113] [1] Examples of these nature poems are given in scholarly prose translation by Kenneth H. Jackson (1937 and 1950). Songs with their melodies will be found in Arthur Geddes (Ed.), *The Songs of Craig and Ben*, vol. i, 1951.

771 "The Iona Community is a Brotherhood of men within
792 the Church of Scotland seeking to find the implications of
794 the Kingdom of God for modern society. During the summer months they worship, work and live together on
621 Iona, rebuilding the ruined Abbey on a co-operative basis. Half the Brotherhood are young clergy pledged to work for two years in the difficult places of the cities (after three months in Iona), emphasising the place of the Church in the New Community that is emerging in the world. The other half are skilled artisans who desire to express their labour as a ministry within the Priesthood of all Believers and create—in the building—a microcosmic witness of how labouring is transformed when seen as a Sacrament. The Brotherhood is based on Reformation principles.
21] Several members of the Community are married. At present the artisans return to the ordinary labour market in the winter time." [1]

61] In the Iona Community, theology is linked to communal labour and the re-shaping of society; and its symbolic centre, Iona, is more than a literary name, or a historic ruin, to those who have set about rebuilding its cathedral tower, cloister and surrounding dwellings. Continuity is exemplified in its leader, the Rev. George F. Macleod, a descendant of Dr. Norman Macleod, the friend of McLeod Campbell. The significance of this Community to the theme of this chapter lies in the endeavour of its members to learn, by help of ancient native ways, new ways of Christian life in their own land. The attempt to link industrial Scotland, and lands beyond, to the Gaelic West, is a notable recognition of what Celtic Christianity, maintained and renewed by communal tradition, has yet to give the world.

[1] From the magazine of the Iona Community, *The Coracle*.

133 townships and at Islivig and Breanish, the peat is thin (or has been stripped) to reveal a
134 gravelly dirft,[1] free-draining on suitable slopes. In such places a black loamy soil has
134 been developed by cultivation; the many ditches of laxybed cultivation are not necessary
24] and, if the area is large enough, it can be worked by tractor. Such soils, in the climate
[40] of west Lewis, are eminently suitable for rotation grass, for hay or pasture, and much more could be done with them under knowledgeable management. Where shell sand has been blown inland on to peaty soils the natural top-dressing has had a remarkable ameliorating effect on texture and acidity. Such areas are all too limited, the most important are at Valtos, Kneep and Reef, and around Uig bay; smaller areas are at
134 Mealasta, Mangersta and Bosta (Bernera). The hill grazings are dominated by a thin
134 heather cover, blue moor grass and, in wetter places, sphagnum and cotton grass. Since
[23] the cattle population has been declining many older residents claim that the pastures, particularly near the townships, have deteriorated, the proportion of grass declining and coarse heather increasing. "The hills that were green when I was a boy", said one, "are now black". Neglected arable and pasture land, too, soon reverts. Rushes and flags invade the ditches between the old lazy beds and, if the ground is at all waterlogged, soon invade the beds as well. Drier ground, if not well grazed, soon reverts to heather. The limited machairs are little better; almost devoid of humus, they show little development of soil profile, only a thin grey layer of turf roots; rabbits, or injudicious cultivation readily set off wind erosion. Only where the wind has provided a natural blend of peat and machair are conditions better. Such areas are very limited.

132 The climate is in many respects severe; no local statistics are available, but some for Stornoway and Benbecula are appended. The frequency of high winds has a bad effect on both vegetation and stock, but to some extent wind counteracts excessive moisture. Near sea-level, where all the townships are situated, frost and snow are almost unknown. Thus it is exposure to the wind that limits the outwintering of stock, not low temperatures; this suggests that if pastures could be improved in suitably sheltered places far more advantage might be taken of the relatively mild winter temperatures. It is believed that the sunshine record is particularly poor in the south, where clouds can frequently be seen hanging over the mountains when the sun is shining on Bernera and the area north
[248] east of East Loch Roag. The relatively dry and sunny period which commonly occurs in
[221] May and June ought to make for a good hay harvest; unfortunately the natural meadows, such as they are, are late starters, and the custom is to cut the grass when it has gone to seed. Thus hay is often being taken in September - one of the wettest months in the year.

CHAPTER TWO

SOME HISTORICAL ASPECTS

172 Evidence of pre-historic and other early settlements in the parish is afforded by the occurence of standing stones, brochs and duns. The Callanish circle and its satellites are by far the most remarkable ancient monument in the Hebrides, and testify to the former importance of the site even though today their precise significance may not be clear. Most of the duns are now little more than circular heaps of stones, but in that at
[174] Dounc Carloway the double walls still stand to a considerable height. A later phase of
103 settlement is recorded in the place names, a very large proportion of which contain Norse
[162] elements such as -nish, -vick, -bost and -shader; it seems probable that most of the present township sites have been more or less continuously occupied since Norse times.

7.

1. [Presumably the author means "drift"--Analyst]

The minister
was cultivating potatoes and his family were eating them
175 as an example to the crofters who were still reluctant to adopt the new crop. Some 70
[247] boats were fishing; this was mainly in Loch Roag for they were small open boats greatly
[226] outnumbered in good herring seasons by boats from other parts of the kingdom. To
[251] encourage curing, particularly of white fish, the proprietor had set up two storehouses
441 to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who
[614] visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844. But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the
175 Uists, but the Loch Roag kelp was of particularly good quality and commanded more than
[221] the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear
[233] to have been inadequate to support the population. In this connection it is worth noting
[162] the change in the average stock held by each family since 1792 as shown in table 3.
[178]

Clearance and Congestion.

175 Even after the end of the tremendous boom in kelp, brought about throughout the
228 Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses,
175 yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempt-
233 ing industrial developments and agricultural improvements. The former included short-
166 lived distilleries in Stornoway, the latter involved the removal of some small tenants in order to introduce mainland farmers. For these Uig was particularly attractive, the
427 extensive mountain pasture offering good prospects for sheep graziers. The exact dates of the formation of the earliest farms are not remembered nor are they precisely recorded,
[274] but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scaliscro, with the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

175 In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual
427 crofts some years earlier. Thereafter Kirkibost formed part of the large farm of Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Strome and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as fertiliser remained a vital necessity to the small cultivators, often working the same land year after year). In 1841 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land was inadequate to support them. In 1844, of necessity, Seaforth sold the island. The
[162] population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,463 Figure 8).[1]

1. [See p. 18--Analyst]

175 It is worth noting that the rental charged for the newly cleared farm of Carnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the latter were evicted purely in order to obtain more rent. The proprietor must have been taking a long term view, looking for land improvement rather than immediate gain. By the 1870's the farm rentals had increased by 55%, those of the crofting townships by only 15%. And the latter often remained unpaid.

175 Thus, whilst the farmers prospered, the tenants became crowded in their townships
427 which were correspondingly less and less able to support their increasing numbers.
511 The crofts became so reduced that in an average year the produce of the land might keep a crofter and his family for only six months; for the rest he had to find other means of
175 support. Fortunately, after the hungry years of the 'forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole east
464 coast of Scotland and England. By the 1880's not only were most of the able-bodied young
166 men following the herring as hired men on east coast boats, but many of the women-folk,
[221] who had learned gutting, packing and kippering from English girls brought to Stornoway for the purposes, were also earning. This was summer work, and fitted well between seed-time and harvest. In the winter, small local open boats worked long lines for white fish which were dried and salted for local curers as they still are today on the
[511] Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in Lewis "which would not have been credited by those who judged of the condition of the people by the external aspect or sanitary arrangement of their dwellings".* It was this "condition of plenty" which encouraged the people to stay at home, to sub-divide their crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
[166] farming suddenly became less profitable. Simultaneously, and given extra point by the
[234] particular distress of the time, agitation for land reform, and in particular for the
[241] relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
668 resisted by force and subsequently marched on Stornoway. They were well received by the proprietors - who appear to have been unaware of the summary and inhumane behaviour of their chamberlain - and to the credit of all concerned the matter ended peacefully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of the
427 old township of Kirkibost which was resettled by crofters from Bosta, the latter being let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings were formed in Hacklate, which had been the grounds-officer's farm (but which, judging from its population, had always contained a number of cottars or sub-tenants). The grazing of Laimshader was probably returned to the Borroston crofters about 1886, having been part of Linshader farm and, in 1891, six new holdings were formed at Lundale, also part of the same farm. At the same period, under the new Act, the crofters of Crowlista, Valtos, and Kneep applied unsuccessfully for enlargements from the farms, but during the nineties the islands of Little Bernera and Eilean Kearstay were taken off Linshader farm and added to the townships of Bernera, and Valtos obtained Pabay Mor.

*Report....on the Condition of the Cottar population in the Lews. (C.5265), 1888, p.4.

Stock Management.

22/ 178 The annual rhythm of stock keeping has lost the clear definition it used to some extent to possess. The decline in summer residence at shielings has already been mentioned; most were in use up to 1914, and many were visited after the Great War, but the decline is continued during the inter-war period until practically the last visits were made between 1936 (Lundale) and 1939 (Tobson): very few shirlings have been visited since. There are one or two isolated examples of a summer visit to the pastures still surviving, but they are not carried out by regular crofters having normal grazing rights. The 147 construction, since 1908, of ring fences around the inbye and the more recent fencing of certain common grazings has further lessened the necessity of herding and co-operating regularly on the commons. The importance of fencing may be judged by the fact that it was estimated that, whereas prior to the construction of the fences there were about 4,000 sheep grazing over the Earshader - Crulivig - Lundale area, including about 2,000 from the Bernera Shielings and about 200 from Uig, there are now only about 1,500. Figure 10 indicates both the periods when the sheep are on the hill and the variation in the dates of movement. This applies mainly to the island townships, for mainland townships which are contiguous with the grazings, may keep sheep on the hill for as long as six months each year. The rest of the year is spent on the township pasture and inbye. Hacklete, Kirkibost and all but seven of the Tobson crofts are open in the winter to common grazing. When the custom was more widespread the date was not clearly stated and adhered to, now there is more variation, and November 7th or 14th (Hacklete) or 17th (Kirkibost) have become indications rather than rules, depending on weather conditions and the lifting of crops. On the mainland, ('Bernera Shore') the sheep may be brought merely nearer to the crofts rather than right onto the arable; where the pastures have been fenced separating off an area of common grazing next the head dyke of the township, as at Earshader (1908), Crulivig (1908, and 1939), and Lundale, this practice may be formalised, so that only certain classes of sheep are ever taken on the croft. The movements (from the croft to the hills is governed mainly by the weather: the eild sheep will be sent off to the hills some time in April if at all possible, and the ewes in lamb often thereupon taken into the inbye if they are not there already. During May, when lambing is fairly accomplished, the beasts able to support themselves and when the weather is suitable, the ewes with lambs are sent to the hill.

There are some places with special practices, notably Little Bernera which is closed to grazing in July, August and September. Similarly each holding may graze a certain proportion of replacement hogs upon the township common grazing of Breaclete while the other stock is on the hill: this may formerly have been a more widespread custom: it certainly has contemporary parallel in Kirkibost where some sheep remain on the township common pasture to compensate for the much reduced numbers of cattle grazing there in summer.

The individual crofter, or two or more in co-operation, keeps tups buying a new beast from a different source every three years, unlike Sutherland where it is almost universal to hire them. These are usually tethered upon the croft from August until tupping in December. This again takes place on the croft (compare Sutherland, where, since the tups are generally hired by the township, the tupping is usually done upon the hill and often entails a good deal of herding). The ewes are not generally hand fed except in emergency, though here, as in all other crofting areas, opinion is divided on the desirable extent of this practice. It is however, more general to hand feed the hogs which, indeed, may be kept under cover at night in the worst weather, even though they are on the croft 132 or (Bernera Shore) on the nearer common grazing during the day. It is clear, though, that, in spite of the occasional hard weather, there is not generally the amount of snow and frost in winter to cause that amount of hand feeding and care which is a necessity in many parts of the mainland Highlands.

*Since 1950 about 120 acres have been divided in four and individually fenced.

22/ 178 Since so much of the year is spent either upon or near the crofts it is but to be expected that greatest losses of island sheep will take place in the summer when they are far from supervision upon the hills. The contrasts with the mainland Highlands where heaviest losses, apart from those due to sudden snow falls, generally come about lambing time, when this takes place upon the hill, or soon after, in cases where the ewes and lambs are put to the hill too soon. On Bernera Shore on the other hand losses are heaviest on the hill in winter. Losses are extremely uneven in their incidence in time and from croft to croft. The cause of loss varies: there are no serious endemic diseases now, and there are few coastal cliffs - a frequent cause of loss in other places. There are losses in some boggy areas of the interior and some rugged: whether or not there are losses due to vermin particularly eagles, is a debatable point. Probably the fundamental cause of loss is lack of shepherding and adequate day-to-day oversight upon the hill.

233 There are certain special pastures that show interesting features. The Flannan Islands have sessional pasture, especially for the summer male wethers/lambs which need bringing on. There is all-the-year-round grazing for fifty sheep, which is shared by two crofters in Croidhly and one in Earshader. Unfortunately, the difficulty of getting a boat to go across has meant that for the last two years no visits have been made, and, after one or two years unattended, the animals become quite wild. Since 1949, when the Crofters Commission first made arrangements to cull the stock, fewer have been taken, they have ceased to do so on Vacassay Island, where they now each send two sheep for summer grazing. They also send one sheep each to Eiglam Ileland from 15th May to 16th August. One croft. The revenues from the sessional pasture are:

Bearsay Ileland	(16.4 acres; soumed for 12 sheep per annum)
Eilean Fir Crothair (4.6 acres; soumed for 5 sheep per annum)	
Seildeim	(1.0 acres; soumed for 3 wedders per summer)

Similarly, Vaiasay (part of Tobson), has Eilean Liongain Vaiasay which provides summer pasture for two young cattle beasts or five sheep (one per croft). One crofter in Crulivig has Eilean Ceallaidhe which is used for lambing and tupping and at least one crofter in Crulivig also grazing on Ben Sgurain, but there has been no success in the attempts to heft stock there. It is distant and unfenced; losses can be heavy.

231 Lewis is a very restricted market for livestock: the general practice in the Bernera area is to sell at Stornoway in the autumn, unlike Sutherland where it is almost universal to hire them. These are usually tethered upon the croft from August until tupping in December. This again takes place on the croft (compare Sutherland, where, since the tups are generally hired by the township, the tupping is usually done upon the hill and often entails a good deal of herding). The ewes are not generally hand fed except in emergency, though here, as in all other crofting areas, opinion is divided on the desirable extent of this practice. It is however, more general to hand feed the hogs which, indeed, may be kept under cover at night in the worst weather, even though they are on the croft 132 or (Bernera Shore) on the nearer common grazing during the day. It is clear, though, that, in spite of the occasional hard weather, there is not generally the amount of snow and frost in winter to cause that amount of hand feeding and care which is a necessity in many parts of the mainland Highlands.

427 311 127 Authority, simply moved their fences and enclosed part of the common grazing. For example the crofter at 37, instead of having only the 6.7 acres of the croft has now almost 10 acres of land, of which the remaining 3 acres have been 'peat', although a little coal may be used 195 the adjacent common pasture. Some of the crofts are in two or three pieces, and in some cases this came about in the late nineteenth century when the proprietor's wife, Lady 311 Matheson objected to the position of some of the croft houses because they were too close 127 to the standing stones. Croft houses 25 and 26, then near the stones, were moved to the other side of the village and given parts of crofts 1 and 2 for their houses. Crofts 1 and 2 were given parts of crofts 25 and 26 as compensation for the parts of their crofts they had lost. Croft 27 also lost part of its crofland when the stones too that an entrance could be made around the stones. About the same period, before the passing of the Crofter's Act (1886), when the village was still 'ruled' by the township constable, and several crofts were unoccupied, croft 21 and 28 had their houses moved to a better site. Croft 21 and 28 had their houses moved to a better site. Croft houses are at present and the surrounding adjacent area only; but it is said that the tenants of these two houses, being influential with the constable, moved part of Callanish Farm. Similarly the tenants of crofts 30, 31 and 35 divided part of croft 19; these changes have become permanent. The most recently formed croft was taken from the common pasture in 1890. Four other croft houses have been created, but two of these are holiday houses and the third has only 0.5 acres of land.

241 There are 36 working croft units with a total of 134.4 acres reputed arable. All but 4 croft units grow oats, and there are 20 acres under oats (appendix C). Of the remaining cultivated land, 9 acres are potatoes, 9 acres are sown hay. Of the rest of the land is cultivated by tractor; there are 6 tractors in the township. In the past there were several horses but now there is only one. Five crofters still cultivate by spade. The crops are sown in April, and the hay is usually harvested in August and the oats a month later according to the weather.

231 Thirty-one cows, six heifers and 25 calves are kept in the township and tethered most of the year on the croft. It is usual for the crofters without a cow to graze one of their neighbours' cows during part of the year in return for milk. There is a bull, a pure-bred horn bull belonging to the Department of Agriculture, which is kept on Callanish Farm.

233 The 5,302 acres of common pasture support an individually owned stock of 904 sheep 317 and 561 lambs. Several crofters exceed their souming, but there is no shortage of grazing. Some of the sheep graze on Garynahine township pasture. Callanish has the use of the pasture on Orasay island; each year some of the sheep (one sheep or ram 22/ per croft) are taken across by boat for a period. The breeding ewes are brought in for 232 tupping on November 14th, after the harvest is complete, and they take place in 232 April. The crofters open their gates for winter grazing from November 1st to May 10th; in addition, Callanish has a long-term agreement (which has not lapsed) in open fashion. The sheep are sheared in July, and the lambs are taken from the ewes a month later. The lambs are dipped in November and the other sheep in December. Shielings at Flodavat are known, but have been in use since 1921.

19/ 13 Communications are quite good; the village is close to a main road to Stornoway, and 149 there are four buses a day. But within the village itself many of the so-called roads are merely rough tracks, and one croft, number 29, is inaccessible by motor vehicle; it is 1/2 mile from the nearest track, separated from it by rough peat bog. This year a 149 grant from the council was made towards the cost of construction of a road to this croft; but several of the Callanish crofters who cut peat on the intervening land refused to allow a road to be built; and so croft 29 is still almost cut off from the rest of the village.

131 There are two shops in Callanish (one with a petrol pump); grocery, butchers' and fish 346 vans deliver frequently. Callanish also has a stone jetty which in the past was important. 346 There was a ferry for mail and passengers from here across to Uig and Bernera calling 346 at Linshader, which gradually declined in importance until the 1920s when it ceased to 506 call at Linshader. The ferry to Bernera finally ceased in 1940 when the ferryman (who 506 lived at Callanish Farm) left for war service. After this the jetty was still used by small 506 private boats (e.g. Callanish church serves Linshader, and many people came to church by boat until recently), but gradually it has fallen into disuse.

000 354 weather although the wells on the lower ground never fail. Mains electricity was installed 7 years ago, but on the whole cooking is still done by Calor Gas and peat. The chief source of fuel for heating purposes is peat, although a little coal may be used.

127 There are 63 registered crofts, including many subdivisions, a small-holding of 15 acres formerly the Mill, and 10 feus, all of which are worked as 54 units. The crofts 340 lie as long narrow strips in a NE - SW direction from the moorland to the sea. All are at least partly fenced, the fencing being of recent date. Some crofters are, at the moment, making use of fencing grants to enclose their land completely.

241 The only crops grown are oats and potatoes, and although a little clover mixture is sown for hay, many crofters find that the natural grass is sufficient for their needs. Vegetables are grown in the garden, but not many, as the croft houses are not interest to bother with them. Flowers rarely flourish due to the lack of shelter.

241 178 Far less of the croft is cultivated now than in the past, and the land nearest the shore, part of which was once cultivated on a run-rig system is now unfenced and used entirely for grazing, either with some permission or without. The permanent grazing has been improved by application of shell sand and chemical fertilisers and reseeded. This experiment in which almost the whole township took part has proved very successful and there are plans for further reseeding. Details of crops are given in Appendix C.

167 231 Although the tractors of which there are two in the township are used wherever possible, the spade is still used on many small patches, particularly for potatoes. Much hay is cut by mower but scythes are used to a large extent. There is still one horse in the township but it is scarcely ever used for ploughing except by its owner.

233 The total number of sheep kept in the township is 1,500 i.e. 2½ times the souming 178 which here is 2 cows and 5 sheep per £1 sterling rent. 40 crofters keep sheep but none have sufficient to make a livelihood from sheep alone. Many lambs are lost on the 231 township pasture and more lambs are lost than ewes. The age is a bit less than a year. The kept is 84, i.e. only 1/3 of that permitted. It is usual for each household to keep 1 cow and 1 calf which is sold annually; sold after 8 months when a suitable can be obtained. Breaclete has no bull, but shares the one from Callanish. Most households keep sufficient poultry for their needs but no eggs are marketed.

Shielings were still used to some extent up to 1938. Now it is not necessary as fewer cows are kept than formerly, and, in addition, the reduction in numbers of stock the common pastures close to the village are being colonised by heather.

22/ 231 The crofters' year begins at the end of March when the ditches are cleaned and the 232 land is prepared. In April the ground is ploughed, fertilised and sown with oats and 232 potatoes. The sheep are dipped and by the 10th of May must be out on the moors as the 134 crofts are then closed to common grazing. Soon after the sheep are cut on the moors 134 two or three miles from the village. After about 20 days the peats are lifted and carried home to Bernera Road by tractor where they are stacked to await the lorry which takes them to the village.

In June, the sheep are gathered into the fank for shearing and the cows are usually brought to graze on the crofts from the nearby moors. If the croft is not fenced they must be tethered. At the end of June the clover is cut, while the potatoes must be cleaned and hoed. In August the lambs are weaned and dipped. Natural grass is cut for hay and if there is any first year sown grass this may yield a second crop in September, together with the grain harvest. When the potatoes have been lifted in October the crofts are opened and the sheep are brought in for the winter. Final dipping takes place in November.

162 Out of a total resident population of 226, 56 are under 15 years and 57 are over 55 years of age. Of the resident tenants 7 are between 15 and 44 years, 16 are between 44 and 65 years and 26 are over 65 years of age. Twenty on persons are periodically 000 away e.g. students and seasonal workers and 29 are permanently away. Since 1939,

241 are usually all the potatoes. Between the road and Loch a' Bhaile and between the unmade road and Loch Shader on crofts 22 to 25 the land is probably more intensively cultivated than ever before; but grazing now overgrown with rushes and coarse grasses, especially near the cemetery give an idea of the former extent of cultivation. The working of strips nearer the sea is no longer worth the labour involved. Crofts 22 to 25 are further divided by the small Loch Shader; no. 28 however makes good use of a small alluvial flat at the head of Loch a' Bhaile.

237 Artificial fertilisers are in general use together with lime and dung. However some 178 crofts were using seaweed, in particular nos. 1A, 1B, 1C, 4, 5, and 23 - i.e. those 178 nearest to the sea. The seaweed is gathered in the sea. The Yrave Ness has been 423 trodden into the ground in the spring and apparently gives excellent results, but too much labour is involved in carrying it to crofts in the centre of the township. Forty years ago 423 each croft had rights to the "red" and "black" seaweed along the coast.

The crop acreages for the whole township will be found detailed in Appendix C (i) The area of oats for each croft varied between 0.25 and 2.50 acres whilst the maximum for sown grass was 1.5 acres. The excellent crops of hay from sown grass have been suggest to the Commission, unfortunately most of the land suitable for cultivation is already under oats and potatoes. The practice of undersowing oats was not particularly widespread whilst only two small strips of oats-rye mixture were found. One croft had also obtained good results in a small patch with seven different vegetables, whilst soft fruits are to be treated. The two sets of 'run-rig'crofts practise a fixed run, with the same crops of oats and grass on the strips.

231 In cattle stock (Appendix C) the township has 28 three year-old beasts, 2 one 233 year-olds, and 24 calves. Only 6 registered occupied crofts have no cow, two crofters have two cows each, and one crofter has two cows and two calves. The township has no 178 bull however and the nearest is at Carloway or Callanish. With a much smaller number of cattle than that of thirty years ago there is now no need to make the annual summer visit to the shielings, a practice which died out in Tolsta Chaolais between 1920 and 1930. 233 Each of 1 cow and 6 sheep per £1 rent is now apparently ignored. The approximate total of sheep for the township is 1,500 whilst for 1958 it was about 1,470. The stock of lambs was approximately 520 but most crofters found it difficult to give an accurate figure since some might have been lost on the moor during the summer. The highest number of breeding ewes for any one year was 1110, of lambs was 34, and of other sheep was 26; five crofters, however have no sheep at all. Before 1939 a shepherd was employed by the township when the harvest was complete to help with the sheep; this was usually a young boy just left school and was paid by each crofter according to the number of sheep the latter 231 sent to the moor. This has been discontinued but a levy, of 5s. per croft and 2½d. per sheep, is still made for the upkeep of the township fence. Finally, almost every crofter keeps at least a dozen poultry.

22/ 23/ 233 The movement of stock over the grazing areas is summarised as follows:

(1) From November 13th to May 1st, cattle are usually in the byre, depending on the weather, and sheep can wander anywhere. Crofts should be open to common grazing unless all the crofter's stock remains within his own croft boundary.

(2) From May 1st. to May 20th. sheep are in the outer park.

(3) On May 20th. sheep are sent to the moor.

(4) Throughout the summer cattle are in both the inner and the outer parks.

(5) On October 1st. the sheep are brought into the outer park.

(6) On November 13th. the sheep are brought into the inner park.

464 463 Details of population and employment will be found in Appendix D. It is a very striking comment on the status of crofting in this township that only four persons are

The Agricultural Year in the Carloway District.

Month	General	Land	Cattle	Sheep
January and February	Preparation of land. Bitching.		In byres - cut on fine days.	On crofts and inner common pasture.
March		Ploughing and manuring.	On crofts and inner common pasture.	FANK - dipping. Put on outer common pasture.
April	Peat cutting.	Sowing oats. Sowing potatoes. Cleaning potatoes.	Sales.	
May	Lifting peat.			
June	Peat taken to roads.	Cultivating.		
July	Little croft work until late in July or early August.	Hay cutting and drying.		
August	Bringing home peat.	Oats cut and dried.		FANKS - for shearing and weaning.
September		Grain and hay brought to stack enclosure and byre.	Sales.	
October		Lifting the potatoes.	Cattle brought into byres.	Brought to crofts and inner common pasture. Dipping and tupping.
November and December	Little croft work.		Feeding in byres; outside when possible.

51 - 100	34	29	10	7	19 (89)
more than 100	7	1	-	3	3 (14)
	100	100	100	100	100 (473)

Berners and South Uig to carry more stock than those in East Loch Roag and Carloway. The women tenants in the sole (about four crofts together) occurers some aspects of the livestock economy. If we examine cattle and sheep separately quite a different picture emerges (Table 40). As to cattle over one year old, two-thirds of the units carry but one cow, 14% have none, and only 3% carry two or more. In all districts the majority of units carry but one cow, but in South Uig and Berners a significant proportion carry two - either a second milk cow or a young beast, the latter probably for sale in the autumn. Clearly, the great majority keep a cow mainly as a walking dairy; experience in other areas confirms this and in the Point and Tolsta districts of Stornoway parish many crofts have caused to keep cattle at all since organized milk supplied became available. Sheep stocks, on the other hand, vary far more from unit to unit (Table 40). There is a marked tendency for the flocks to be bigger in the south and Bernera districts, where units without sheep are also rare, whereas in the north a quarter of the units in the Carloway district are without sheep and few have more than 50. In other words, agricultural production per working unit is greater in the two southern districts than in the north.

The management of the 500 or more sheep flocks deserves some comment, even from the non-agriculturalist. Lambing takes place in April on the crofts or on nearby common land; the ewes, with lambs, go to the hills in May, weaning takes place at the end of August and at the end of October or early November all sheep return to the croft land or near-by common pastures. The lambing percentages (80% - 90%, see appendices A(2) and C(2)) as reported to us appear optimistic, even for a good year, but this is probably because they were given to us before weaning, at least a 10% reduction of the figures given would be realistic. Except for certain South Uig flocks few lambs are sold; the

Although the crofland is individually held, individual control of the crofts only applies for six months of the year. After the harvest, the croft land reverts to common grazing and the whole township stock graze indeterminately over the crofts. Those basically the whole area of the township, the individually held crofts and the common pasture, is common land, and it is clear that the agricultural revolution with its system of enclosure has not yet fully refashioned the Crofting Area.

Before 1900, there was a third element in the crofting landscape, the shieling (Gaelic - 'airigh'). The sites of the shielings are usually on slopes commanding a view of the surrounding area near a spring or stream and usually two to nine huts belonging to the same township are grouped together on a site; isolated shielings are rather rare. In order to conserve the pasture within the township dyke for wintering and to protect the unfenced crops, the cattle were removed to the hill early in June, and the younger members of the households went out to live in small stone or turf-walled huts to tend the cattle. The milk was either carried back to the township daily or made into butter or cheese at the shieling. The distance of shielings from the crofts varied from one to five miles in Park.

The affairs of the townships are managed by the Grazing Committee, elected triennially by the township and presided over by the Clerk of the Committee. The duties of the Committee in the past related mainly to the enforcement of soumings, but are now reduced to the disbursement of subsidies, although responsibility for the maintenance of the township dyke and the care of the township bull (usually lent by the Department of Agriculture but sometimes communally owned) are also the province of the Committee.

The layout of the townships varies with the topography but the majority of the crofts are aligned in strips from the moor to the sea (figures 4 and 5). Most croft houses are built on the crofts; in former times, the majority of the houses were sited on the poorest part of the croft as all the cultivable land was required for crops, but nowadays the houses tend to be sited near the road.

The official pattern of crofting is thus one of tenants, each living on his or her croft and sharing in the rights and duties of the township. Table 1 gives an analysis of the tenants of the 215 croft crofts. It will be noted that only one-fifth of the crofts are tenanted by those in the 15-44 age group; a similar proportion are tenanted by those over 65 years of age. Absentee tenants account for 14 per cent of the total. Women form under 10 per cent of the total, but only one in seven of the women tenants is the sole (about four crofts together) occurers some aspects of the livestock economy. The intrinsic worth of the holdings can be inferred from the fact that two-thirds of the male tenants in the insurable age group take supplementary work, two-fifths of them forth of Lewis. With such a large proportion of the tenants either fully employed in ancillary occupations in Park or elsewhere it is hardly surprising that the theoretical township organization exists mainly in name alone.

Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feuars. All legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without arable or pasture land'. For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155.

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

[Sebost]

Drift is found near the shore and lapa round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, hay was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cocks foot. On the hills heather predominates.

Habost is the oldest township in Park. In 1843 Maclennan came from Shiolderinish and took what are now Nos. 9, 10, 11, 12 and 13 and Allean Tailear came from Taranesay, Harris, to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Crofthamsters' (hand-tractors) in the township but these are only heavy enough for bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed parks of about one acre. The tendency now is to increase the number of parks, cut the hay in June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

The land is heavily overstocked; the sown is equivalent to 79 cow units, and actual stock is 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in Park Deer Forest by seven of the Habost tenants. Sales of cattle are held at Garrynard in November and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 55-75 per cent being general, but many breeding ewes and other sheep have died.

The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since 1882. There have to be stalalgos on the far side of the common at Beinn Bhuidhe and below Loch na Ciste but these have not been used since 1888. Habost is one of the agricultural townships and fishing is only for domestic use; looms are to be found on only four crofts and trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Lochs. There are two small stores.

Settlement is scattered, always on elevated ground, and in many cases the new house has been built in close proximity to the old house site. All have piped water either from the well or from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Kershader]

with heather and peat on the higher areas, hay is taken off 19.25 acres. Four acres, mainly potatoes, are worked by spade but most of the cultivation is by tractor hired from Balallan or in 1958, from Habost. Lazybeds are common and in some cases are carefully renewed, but the present tendency, reaching its extreme in a field of about two acres on one croft, is toward the formation of larger, pinnphable fields for ease of tractor operation. Most cultivation is in zones (a) and (b), with little development of (c) at present. The only crops are oats and potatoes with some garden plots of cabbages, turnips and carrots. The potato main crop is generally Kerr's Pink (Golden Wonder on one croft), with a couple of rows of Sherry Blue or Edzell Blue for earlies. There is no memory of Black Oats (Avena strigosa), and here (Hordeum vulgare) has certainly not been grown since 1930, and probably not since 1909. The oats are grown exclusively for winter feed and are hand-threshed with stock and comb as the need arises; the last water mill in the locality went out of use after 1914, the last handmill in 1916; no grain has been sent to Stornoway since about 1930. Rotations are extremely irregular: some lazybeds are still cultivated with alternate crops of oats and potatoes and have heavy seaweed manure fertilisation, but most other arable areas have some sort of oats, potatoes, oats, sown grass sequence. Fertilisers used are seaware and manure (ten crofts), manure (eleven crofts) and dung (one croft), lime (ten crofts) and artificials - 'Potato manure' and sulphate of ammonia - on eight crofts. Artificial fertilisers and much of the seed are obtained through the Crofters' Agency.

The only two horses ever owned by this township were kept on croft 11 from 1936 to 1953. A plough was first introduced in 1936. When a tractor from Balallan became available for hiring in 1953, the horses were disposed of. The present soums are by cow, young beast and sheep per croft in proportion to rents and range from 3 cows, 3 young beasts, 69 sheep down to 1 cow 1 young beast and 23 sheep. Eight crofts are sed their entitlement but no croft hasless than half the souming and the deficiency is mainly in cattle, especially young beasts. On the other hand, no operative unit is entirely without cattle as manure is extremely important. Cattle are kept for domestic milk supply, and calves, having qualified for subsidy, are normally sold at 6 to 8 months. 10 acres of the common grazing were re-seeded in 1957 and the following rhythm for milk cows is developing:-

(a) As soon as the weather allows in May, the cows are put out in the park for about three weeks.

(b) Next, about 4 weeks are spent on the common grazing between the ring fence and the outer fence erected in 1957.

(c) Back to the re-seeded park for about five weeks.

(d) Return to the crofts for the winter, being let out either to the park or to the common grazings whenever the weather is suitable.

The young beasts spend much of their time on the outer common grazings. As most of the crofts beginning with one in 1938 and ending in sequence with 10, 11 and 12 probably in 1959, are less the old arrangements for township commoning from 15th October to 15th May are now decided. Habost park was also fenced for general purposes and for weaning in 1957. Prices for calves and cattle are very low and this discourages cattle breeding; on the other hand, lack of winter keep enforces an occasional sale.

The rhythm of sheep husbandry is largely independent of that of cattle:-

(a) By 20th November all sheep, except possibly the lambs, are cleared from the crofts for the tupping of breeding ewes thereon till 31st December. Every crofter now keeps his own ram, exchanging it or buying another at least once in five years.

[Kershader]

(b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular; some flocks are usually hand fed, others only rarely. In the form case theyheft near the upper limit of their home croft and remain fairly close at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average sheep carcase weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

Under-employment is a serious problem in Kershader. There are nine males classified as full-time crofters, but probably only four of these (two on one croft) are in fact in this category, and of the total of thirty males with their homes in Kershader, only fifteen of the insurable population are permanently resident. There are twenty-eight females with their homes in this township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption only)and work on the roads. Boats, one with outboard motor, are owned by three crofts. The only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person ha entered the township since 1939. The age structure of the population, too, is far from the optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907 and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard, Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

It will thus be seen that the most serious problem facing Kershader is that of stabilising the population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Kershader] [Garyvard]
common grazings - at present approximately correctly stocked - and cannot therefore provide much employment. Hence it is the standard of agriculture that must be improved. Since the land does not permit striking extension or improvement of the cultivated area, development must be directed towards improving pasture, with more re-seeding and controlled grazing similar to that already described. All this, however, is of little avail if prices for cattle, sheep and wool remain low, or at least lower than prices prevailing on the mainland. The first priority, therefore, in the establishment of a prosperous agriculture is a guaranteed market-price. Given this, it might become worthwhile to take steps to increase the carrying capacity of the crofts. It may be assumed that this would involve an all-round improvement which could give a firm basis to the economic existence of the community; until this is achieved, stability and continuity are out of the question.

GARYVARD

Gwenyth R. Page, B.A.

The landscape of the south-east coast of Loch Erisort is a sombre and rugged one. The Quaternary ice sheets left in their wake troughs now filled by the sea loch, innumerable lochs covered in water lilies, a massive area of indeterminate drainage and expanses of bare gneiss.

Garyvard is set on the fringe of this landscape on a 20 to 25° slope with the crofts aligned from the moor to the sea, on a mantle of drift. Here is the home of the MacLeods, the Mackinnons and the Montgomerys. Life beats out its regular pattern of existence during the winter months on the croft, followed by an increasing tempo and variety of work during the rest of the year. In January and February the animals must be fed on hay or lose the battle to survive. In February there are preparations for the year's tasks, making repairs and improvements to the croft. Next month will find the crofter on the land, making or clearing drains and putting fences and dykes in order. The tempo of life quickens with the year; April sees the first sheep dipping, the land turned over, potatoes and oats sown. From mid-May, the sheep leave the crofts to fend for themselves on the common grazing. The following three or four months are times of tremendous activity on the moors when the peats are cut, to be stacked later, first in fours, then in eights, so that the wind may dry them, till eventually bee-hive-shaped stacks - some four feet high - can be seen near the peat banks in August. Then begins the wearisome task of carrying the peats home, all too frequently in creels carried on the back, since the peat workings of Garyvard are on the moors up to half a mile from road. Altogether some two miles of roads are needed to prevent the villagers patronising the coal merchants of Stornoway. Two crofters, however, cut peat on their crofts, whilst others have permission to cut from Cromore or Caversta common grazings close to the road. All the while croft work continues, varying from hoeing, weeding and cutting hay to the gathering of sheep for shearing. As there are no fences between the various commons, crofters must travel from one township fank to another, seeking their own. In August the lambs are weaned. Hay making generally ends in August and is immediately followed by the oat harvest in September. By the time both oats and hay have been gathered in, the potatoes are lifted and the sheep are brought in from the common grazing about October 12th. The last sheep dipping takes place in November and is followed by tupping.

There are eleven crofts altogether, though one is divided, each portion having a legal tenant who has a half share in the common grazing. Two crofts are 12 acres in extent, the half crofts 2.75 acres only, though the acre cultivated on the common grazing by one of the latter crofters since 1923, has recently been officially recognised. Most crofts are in strips running from the sea-shore up the slope some 500 yards to the township dyke, and are clearly demarcated by fences erected just after the last war. Three crofts have additional strips whilst one croft was an extra strip belonging to another croft. The additional strips date back about 100 years to a time when the township grew rapidly as a result of evictions in southern Park. One croft is divided and worked in three separate parts so in effect there are fourteen operative units in Garyvard.

amount of time which is allotted to each activity and in the 221
pressure on the crofters to complete each chore within a relatively definite period. There are also differences in the number of non-crofting activities in which the individual can or must engage. Let us follow several crofters through the year to see what these differences are.

The Full-time Crofter. One might say the year for the full- 221 236 232
time crofter begins during the first week of January when he goes out to the hill to bring in his rams. This is the first break in the monotony of his winter schedule, but it is only a momentary break. Not until March does his season of prolonged labor begin with the first "dipping" of the sheep to rid the animals of tick and parasites. He and his wife, [476]
their children, if they are old enough, and their neighbors or hired hands, crofters from nearby townships, join forces. Several of the men go off to the hill to gather the sheep and herd them down to the "fank," a stone or sheet iron inclosure consisting of either two or three pens, a trough for the "dip," and a shearing platform. While waiting for the sheep, the remaining men and women prepare the "fank" for the day's work. One by one the sheep move through the pens until all have been picked up bodily and submerged in the medicinal bath. The women not only help their fathers and husbands at [462]
the "fank" but also prepare a noon meal for the group.

Following the dipping, the crofter turns his attention 221 241
to the soil. By late March or early April he has ploughed,

manured, harrowed, and limed his fields. Normally, he will 221 241 [463]
have a tractor to speed his work. In the meantime his wife prepares her small kitchen garden. By the time he has sown his oats and set his potatoes and turnips, the ewe sheep are 221 231
ready for lambing. Lambing begins during the last week or two of April and runs through the middle of May. This is one [462]
activity which is exclusively man's work. It is also a chore which demands an early start from individuals who are normally late risers, seldom getting started before eight or nine in the morning. Now, all day long, from early morning until late at night, day after day, the crofter or his shepherd are found on the hill watching and waiting for the lambs and their natural enemies, the crow, the hawk, and the fox. During this time, he does not neglect feeding his cattle nor finishing putting in his crop if inclement weather has hindered his progress. Then, too, he may have a cow ready to calve. His [462]
wife will then add milking to her regular household duties. Men have only recently begun to milk.

After lambing, the family must decide whether or not 221 314
they are going to take time out for cutting peat. As I have already said, it is unlikely that the man of the house will want to bother. He has enough to do caring for the sheep and 221 231
lambs and preparing his cattle for the May markets. Although 432
he could attend the local sales which are held at convenient locations around the island, the large crofter has found the mainland market of Dingwall attracts buyers willing to pay higher prices.

If May is considered a busy month, June duties are even 221 231 [132]
more pressing. Although the winter sales are over, the rainfall has begun to increase. A succession and variety of demands are made on the crofter's time. Once again the sheep must be brought down to the "fank." This time the purpose is to mark the lambs. The males, unless one or two healthy specimens are selected for future use as rams, are castrated and smeared with a dye to indicate their ownership. The females are smeared and have their ears cut to signify both ownership and age. Like the dipping, this operation requires [476]
the cooperation of the crofter and his family, the neighbors, and hired hands. Next the sheep without lambs are dipped [232]
once again and given a dose of medicine for liver fluke and a variety of diseases. At the same time, the early hay and, [241]
perhaps, the early potatoes are ready for harvesting. The end [543]
of June brings the Highland Wool Fair in Inverness. If he [233]
has Cheviot sheep, as most crofters do, the man must go to arrange for their wintering on the milder and drier east coast. Although Cheviots produce a finer wool than the more common Blackface sheep, they do not stand up to the incessant wind and rain of a Skye winter. If his wife can leave the children behind, she will accompany her husband. The old [534] [656]
function of the Fair, the sale of wool, has disappeared under government price control legislation.

It is not unusual to have the early harvest delayed 221 236
until July, but even then the mowing may have to wait because [241]
sheep must come first. On one of the dry days during the first

are put out with the flock. 236
[233]

Winter is a slow season for men, but it is not an idle 221
season. The cattle must be fed. The man fetches oats or hay 233
from his stacks and some turnips or potatoes from his storage
pits and carries the feed on his back to his cattle on the hill.
Very rarely does he keep them in a byre because to do so he
would lose the government subsidy on hill cattle. Although [232]
the sheep are now free from pests and most diseases, he must
continue to periodically walk the hill to check their condition.
Very few bother to feed the sheep in winter. Another task is [231]
the butchering of a few sheep. While not quite legal until
last year, one crofter justified his activity by asking,
"What would we eat if we didn't kill our sheep?" Once in a
while, he may also kill a steer, but unless several families
share the meat, salt beef becomes rather monotonous.

The crofter's wife keeps busy all winter. Her routine, 221
broken by helping at the fank a half dozen times a year and 462
with the harvest, continues through all seasons. As far as [231]
the actual work on the croft goes, she milks the cows, feeds [241]
the poultry, and cultivates her garden. When she is not cleaning
the house, cooking meals, making butter or cheese, caring for
the children, or looking after her husband's needs, she knits.
She also does the shopping, either from a food van or on a [432]
weekly visit to Portree. Men are as disinclined to shop as they
are to wash dishes.

The Part-time Crofter. The part-time crofter follows much the 221
same schedule and shares the same succession and variety of
chores. Indeed, some are not so much part-time crofters as 464
they are part-time employees. As such, they are successfully 182
preserving a traditional economy no longer en rapport with the
surrounding twentieth century commercial world by depending upon
economic benefits of contractual relationships to the smallest
possible degree. One fellow saw the situation this way: "We
don't need factories and the like; what we need is something
that will give us time to attend to our crofts." Others feel [829]
that if they have to abandon the traditional way of life, they
might just as well leave the island for places where greater
opportunities for social activity are joined with relative
economic prosperity.

The part-time crofter has less land than the full-time 221
crofter and less need for cultivating all of it because he 241
has fewer cattle to feed during the winter. He, therefore,
devotes less time to tilling his soil. On the other hand, 221
although he has fewer sheep, the collective flock of his town- 231
ship is almost always larger than the stock of a large croft. 476
Consequently, he spends more time dipping, marking, and shearing
sheep in cooperation with his neighbors. Hired labor plays 231
a minor role in the townships. Often the only hired hand is 464
one of their number who assumes the responsibility of shepherding
the flock. Some of the townships with club stocks, however,
have adopted the practice of paying each shareholder for his
labor out of the profits to encourage cooperation or to penalize
those who do not do their full share.

those who do not do their full share.

The year for the part-time crofter begins with the prepa- 22
ration of his fields. As a general rule both the man who spends 24
his winter working for the British Railways or away at sea, and
the one who finds summer employment near home is found on his
croft during this period. Following the example of the large
crofter some use a tractor while others continue to plough by
horse. More and more are tending to take advantage of the con-
tracting service of the Department of Agriculture and hire a
tractor and driver. Once the crops are in, the majority are
free until the lambing season. Conservative in his belief 221
that too much handling of the sheep is harmful or individually 231
faced with the almost prohibitive task of singling a small [232]
flock out of several hundred sheep, he tends to omit the March
dipping. During the lambing season, the several crofters of [476]
the township either take turns on the hill or hire a shepherd.
The first chore, then, which brings them together as a group
is the marking of the lambs and the first dipping of the sheep
without lambs. The July shearing and the statutory dips in [476]
August and November are cooperative ventures shared by all
crofters no matter what size croft they occupy.

In sundry ways, economic interests, judged in terms of 231
commercial efficiency, play a smaller part in determining the 432
economic cycle of the part-time crofter than in the case of the
full-time crofter. The part-time crofter does not think it
worthwhile to ship his few head of stock to the mainland
auction markets. He sells them locally at the tri-annual sales.

[Caversta]

Each croft is fenced but has a gate giving access to the common grazing, in which each crofter holds an equal share. The township has no specially enclosed area for fanking or other purposes and no fixed date exists on which the crofters open their gates for winter grazing. Breeding ewes are normally brought in for tupping in mid-October and November when crops have been gathered, and lambing takes place in late March or April. After dipping and inoculation with vaccines for black leg, braxy and louping ill, the sheep are put out on the common grazing in the second or third week of May.

The 642 acres of common pasture support a sheep stock equal to the sheep soum, but the overall stocking is only 88 per cent of the total souming. Two crofts only exceed their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the hoggs. Lewis Blackface sheep are the predominant breed and the wool, clipped in July, is sold to the Stornoway mills and the animals themselves are sent to the slaughter house. The 1958 loss at lambing was exceptionally high owing to a cold, dry spring preventing the growth of grass for the ewes. More than forty lambs and thirty ewes were lost by the township last winter, a number four or five times greater than the average loss.

Six cows, two heifers and four calves are kept in the township and tethered most of the year on the crofts. Calves are born throughout the summer months, but whereas early-born calves may be sold in the Autumn at six months old, those born later must be wintered to eight months until the Spring sales. The cows are served by the Department of Agriculture Highland bull at Habost, but although good prices are obtained for beef cattle, it is felt that for the family milk supply, a dairy bull would produce a better strain.

In addition to keeping stock, oats are cultivated on five holdings and potatoes on six. In most cases the land under each crop is less than half an acre and nowhere does it exceed two acres. The land has been built up into lasybeds about six to ten feet wide, separated by open drainage channels and worked by the spade. There are only two holdings where a tractor (hired from Habost) is used and the acreage cultivated only amounts to three-quarters of an acre. Conditions are not altogether suitable for mechanisation at present, for the terrain is very uneven and broken up by marsh and steep faces of bare rock.

Neither Torista nor Caversta is on a main road. The former is served by a track joining the road near Cromore, while the latter has a secondary road running as far as the township dyke, and an inferior footpath joining the main road at Garyvard. The lack of a good road within the dyke acts as a deterrent to the use of modern equipment and fertilisers. Byre manure is used on all the crofts and seaweed is brought from the shore and spread on the lasybeds. Artificial manures, used on only three crofts, must be carried over rough ground from the dyke. This lack of incentive to improve is perhaps even more marked by the fact that on one holding alone is a rotation practised - potatoes, oats undersown with clover, then hay for three or four years. Apart from this one instance, potatoes and oats are sown, perhaps alternately, on the same strips for many years. Natural grass yields the bulk of the hay and is often cut from lasybeds that were formerly cultivated. On one croft there is upwards of quarter of an acre where the old ridges can be seen to have a crescentic shape and are thought to date back more than one hundred years. A short distance beyond the township dyke is a similar stretch of land, now colonised by heather.

Peat still forms the principal fuel and, apart from one half acre patch within the dyke, is cut on the common grazing, as near the road as possible in May and June, and later brought home by creel, bicycle or tractor. Three of the six operative units still have gardens and all keep up to twenty chickens; rowing boats for line fishing, solely to supplement the larders, are also maintained.

In 1841 population records show that there were twenty-two persons at Caversta and seven at Torista. After 1881, when maximum figures of fifty-nine and nineteen were noted, there was a secondary peak in 1911 in Caversta, followed by a steady drop to twenty in 1951 and eighteen in 1958.

[Cromore]

The crofters sowed clover with their oats in 1957; the quality of most of the natural grass could be improved considerably by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofts have vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced crops of lettuce, cabbage, turnips and carrots.

The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not enforced. The crofters keep the stock which they can manage to maintain throught the winter and no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes place in April and May and often a high proportion of ewes and lambs is lost. The sheep are clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and then dipped; November is the tupping period and almost every crofter had his own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March so that they are six months old in October for the Garyvard sales. The cows are served by an Aberdeen-Angus bull from Crobeg Farm. The township gates are opened in October and the cattle remain within the bounds until May. An interesting regulation enforced by the Grazings Committee is that each family can have only one dog, and that it cannot be taken on to the Common grazing without special permission, or on fank days.

Shielings, situated on the common grazing between Calbost and Cromore, were used until the 1890's. Active land use has gradually declined; in the 1920's, much of the outrun was under cultivation and from an an air photograph, it is evident that hay was being taken on the strips above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land but this year ten crofters formed a group to enclose and improve a ten-acre plot on the common grazing; it is unfortunate that all crofters are not willing to take part. Peats are now being cut near the road between Caversta and Gravir, about three miles south- south-east of Cromore and one mile north of Gravir.

Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men who would welcome the opportunity to start fishing again. There seem little prospect of this, however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and, in fact, at low tide it is useless. So much for the hopes that it might have been used by cargo vessels bringing goods to Park.

In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by road from two mills in Stornoway and one in Airidhvruach. At present the average production is only one tweed per loom per week but the weavers could quite easily double their production. During the past two years this industry has been comparatively prosperous. Knitting is a winter pastime but only for pleasure, although one household possesses a knitting machine.

In common with the rest of Park, Cromore has a high proportion of old people. Many from the middle age groups have sought employment on the mainland, and the teenagers, many of whom have been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting with the croft work. Some younger folk are resident to care of aged parents.

Cromore is only eight miles by sea from Stornoway yet all communications with the town are by road - a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a van which is occasionally hired. Some people recalled that the only route to Stornoway was once by boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the haulage in Cromore, particularly for bringing home peats during the summer. As a result of recent additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday;

/facing p. 31/

Recent trends also point to a decline in the numbers of sheep, although more are kept now than fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 374 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are not 'officially' closed until May.

The total area of the common pasture exceeds 1500 acres, but most of this consists of hummocky, waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the animals as well as the land.

No pigs or horses are to be found in the township and each crofter keeps very few hens, normally just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

It can be appreciated that crofts of this size and quality can neither provide the crofter and his family with sufficient income, nor fully occupy the available labour force. As a result, people in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "primarily a fishing township". Today the herring fishing has disappeared entirely and only one crofter still does a little lobster fishing, sending his catch direct to Billingsgate.

There are now 45 people resident in Orinsay but an examination of their ages reveals that less than half of them are between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

As there is neither a school, post office, shop nor garage in Orinsay, there is no available occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44 are permanently away in the Merchant Navy, returning home only for holidays, while another third are seasonally away with the whalers. Similarly almost half of the females of similar age work in domestic service in Glasgow. It must be realized that most of these people working away assist their families at home, and that a large part of the croft incomes are made up of money sent home, together with pensions and other allowances. Emigration from Orinsay to other areas has continued steadily, twenty people leaving the township since the war.

On the whole, housing conditions are good, due to relatively recent construction. There is only one traditional black-house, and even this house has electricity: only one house is without it. Water supply is not so certain as wells and springs are the only source. The township lacks a telephone and a shop, but is served by travelling vans. A good road, constructed within the last decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles distant.

Like so many other crofting townships Orinsay, above all else, gives an impression of congestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginal in character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twenties'.

/p. 35/

The labor in this pastoral-agricultural economy is provided by the crofter's family, periodically aided by some or all of the families who share in the common grazing.[11] Under the direction of the father, the mother and children care for the crops and cattle. Heavy work, such as ploughing, reaping, and feeding the cattle in the winter, is left to the men. The women milk the cattle, help at the harvest by raking and stacking, and care for the garden. Although men never do any work in the house, in the absence of a son the wives and daughters are expected to fill in the gaps in man's work in addition to running the household. Inter-family cooperation centers on the handling of the sheep. Frequently, the families who share the common own the sheep collectively, as a "club stock," and share in the expenses and profits as well as the labor. The only basic pattern in the division of labor is that women never shear, and it is their responsibility to feed the group.

Formerly, the annual economic cycle was adjusted to the demands of crop cultivation and cattle breeding. Within the last hundred years, however, sheep have assumed commercial importance and now determine the seasonal tempo of labor. The old year ends and the new begins with the bringing in of the rams from the hill. In March the sheep are dipped and then the preparations are made for the lambing season, in April. From spring until autumn there is a rapid succession of duties: ploughing, planting, peat cutting, dipping and shearing the sheep, stock sales, harvesting, and similar tasks. After the

[11] Cf. Ibid., pp. 63-64, 70-74.

rams are put out in November, the pace becomes slower, the main job being the feeding of cattle.

The economy is neither a subsistence nor a self-sufficie economy for the majority. All but a few large crofters have to supplement their income from the croft with some form of outside employment or independent source of income, for example, contributions from a child or a pension. For many the croft is no more than a home. For an aged person, it provides a means of living cheaply. The rent, which is fixed by law, is only nominal, and the taxes are negligible. There is more crofting than simple economic considerations. Indeed, if it were only a matter of economy, the system would have been abandoned long ago. It is a way of life in which the individu finds meaningful patterns of interaction and an ascribed statu compatible with his aspirations. The land is more than a potential source of income. It is the ancestral home. The tie to the land is an expression of the sentimental bond of kinship.[12] Many, perhaps the majority, have spent a good part of their lives in other parts of the world working for a wage and looking forward to the day they might return to the Misty Isle. Although only the Glendale crofters are land owners, the law has given the tenants complete security of tenure and the right to bequeath the croft to a member of their family. Thus, they can return to their township and find solidarity.

[12] Cf. Ibid., pp. 64, 81.

As far as I know only one attempt has ever been made by the smaller holders to sell their cattle at the large mainland markets since the last drove left Skye in 1906. There was a feeling at the close of the Second World War among the crofters that they were not receiving a fair price at the local sales. The Scottish Wholesale and Cooperative Society, which had become interested in the Highland Problem, offered to handle the marketing. Their cattle buyer, a man of wide experience, found the Skye cattle to be of high quality and suggested shipping them to the Stirling market. This is one of the largest in Scotland has the advantage of attracting a full range of buyers. Since the cattle were not at their best after the long sea voyage, they were provided with hay and pasture for a week after arrival. Unfortunately, a disease epidemic in the South forced a postponement of the market. Nevertheless, they arrived at the auction block in good condition. The prices obtained, an average of £1 or £2 more than they normally received at the local sales, convinced the crofters that there was no advantage in selling on the mainland. Actually, if the Society had not paid the expenses of shipment and feed, the crofters would have suffered a slight loss. Those who attend the Dingwall sales say they used the wrong market.

While the man who devotes all of his time to his pastoral-agricultural occupation finds it uneconomical to bother with gathering seaweed for manure, fishing, or cutting peat, the crofter of the category we are discussing often adheres more closely to the traditional cycle. After the

lambing season, the crofter and his family go out on the moor to cut their peat for the following winter. The man uses a "tusker," a two-bladed spade, to cut the peat. His wife or his children follow behind, tossing the peats out of the ditch and building small, loose stacks for drying. After the lambs have been marked and the sheep dipped in June and the shearing finished in July, the family returns to the banks to carry the peats to the nearest road, actually a beaten cart path, in creels. They are then carted home and stacked near the door. There is a growing tendency for both the part-time and spare-time crofter to give up cutting peat. It is not because coal is cheaper or he needs time for other pressing chores. His auxiliary occupation will not permit his devoting the necessary time to this long and arduous task. He is caught between the traditional economic patterns and the money economy of which he has become a part.

The year for our part-time crofter, as for all active crofters ends in November. By then the oat and hay harvest has been stacked by the house and the potatoes and turnips stored in the ground, the wool shipped off to market, the surplus sheep and cattle have gone to market, and the rams are on the hill. Now follows a period of enforced idleness, broken by feeding the cattle. As we have seen many go away to find employment, leaving the care of the croft to their wives who have shared the work of crofting in addition to their own womanly responsibilities. We must turn to the spare-time crofter to discover just how heavy the burden of labor may depend upon the women of Skye.

222

222 COLLECTING--edible materials gathered (e.g., roots, fruits, seeds, seaweed, insects, honey, sap, syrup, eggs); techniques and artifacts employed; economic importance of collecting; organization of activities; division of products; associated beliefs and practices; etc. See also:

Collection of nonedible raw materials and salt . 31
Collection of marine fauna 226
Diet 262

241 824 (Chondrus), for example, is used as a thickener of milk to make a cheese-like mould. Dulse is also plucked.[1]

222 The type of coastal form and vegetation alters the relative importance of crofting and fishing—and the balance chosen is significant. (1) Where the coastline is smooth, and leads inland from sandy machar with its clover to sand-ameliorated 'black land' of smooth topography lending itself to ploughing, and the whole is backed by extensive pastures, the tract is relatively well-off for crofting but may be ill-placed for fishing. (2) Where the coast is either indented or salient with rocky loch-sides or steep promontory cliffs, a rolling or rocky topography, little shell sand, and (on the promontories) a shortage of pasture, it is ill-placed for crofting; but it is favourable to fishing either by virtue of sheltered sea lochs or of salient promontories, one or other side of which tends to give relative shelter to the fishing ground (chosen according to the direction of the wind, to avoid being blown on to a dangerous, lee shore). Hence the site of a settlement has had much to do with the choice and opportunities for a communal vocation, from prehistory to the present time, as we shall see.

182 241 226

103 634 175 Significant local characteristics emerge in the names of the ancient districts (inset with the Map of Vegetation, Fig. 8). In the north is Ness (Norse, 'nose' or cape); along the west is Cladach (Gaelic, a stony beach); while in South Harris the western 'Machar' contrasts with the eastern 'Bays'. 'Park', a sheep-run in the early nineteenth century, was the Norse 'East-fell'. In contrast, the parishes of Lewis centre on four churches, linked to the road-system. This radiates from Stornoway in five directions: east, NE., NW., SW., and south to Tarbert,

APPENDIX I

be high until 1948. The year 1947 was the peak year for the pr duction of Harris Tweed, with over 5,000,000 yards (of whi 3,765,000 yards were stamped, and some 1,500,000 unstampe In 1948 the production of unstamped tweed had fallen 500,000 yards but stamped tweed came to 4,380,000 yards.

Then, in the year 1948 the imposition of a 66⅔ per ce purchase tax struck the industry a crippling blow. The ri in prices of wool increased difficulties, and by 1950 few orde were being booked and men were being paid off. A few sma men who had relatively large stocks frozen by the purchase t were able to sell them off, but this minor compensation f losses was short-lived. The outlook is disquieting.

(ii) *Agriculture, Peat-making and House-building*, 1938

(a) *Agriculture.*—The estimated agricultural output show a total value of £189,100, and of this total the quantity fa to animals was valued at £103,000. This leaves £86,100 as th estimated value of crop produce consumed on the Islan Adding this figure to the gross livestock output we arrive a total valuation of the agricultural production of Lewis approximately £194,100. To arrive at the average output p croft there was deducted the farm production, estimated $\frac{1}{10}$ of the total by calculation from known crop and stoc returns. This gives a figure for crofts alone of £184,400. F dividing by 3750, we obtain an average value of the gro annual production by crofters as £49, or say £50. The inclusio of squatters' produce would add so slightly to the total figure hardly to affect the average for rural households. Outlays bein small, most of this net output may be regarded as 'net earnings

(b) *Peat.*—To this sum must be added firing and some sha in housing. The peat cut has been valued at £90,000, a average of £24 per croft; it demands much labour. As pe is freely cut by cottars and squatters, etc. (estimated at 10 or so), the average value might be given as £19 per rur household. In Stornoway the chief fuel is coal.

(c) *House-building.*—From 1920 to 1940 the Department

The estimated income from the sale of stock and produce amounts to some £66 per holding. One of my informants, an agriculturalist of wide experience, thought that the estimate was too high. He would put it at £126,000, or £55 per holding. In addition to the actual production, we must consider government subsidies and grants. 434 231 241

The most important subsidies are those on hill sheep and hill cattle. Each of these average over £30,000 annually. There are also calf rearing subsidies, marginal land grants, and several other available sources of aid which amount to some £20,000 each year. Thus, the total income for the Skye crofters and farmers is increased by roughly £80,000. Production and subsidies together give an average income of about £100 per holding. We have already seen that the crofter's income may be either a fraction of this figure or several times the average income depending upon the size of his croft. To fully understand the significance of this fact and to explore further the evidence for cultural continuity, it is desirable to inquire into the seasonal routine of the crofters of Skye. 654 231

The Annual Economic Cycle

As crofts are delimited according to size and potential income, the crofters may be classified as full-time, part-time, and spare-time pastoral agriculturalists. Obviously, all crofters who work the land will follow a similar schedule, performing more or less the same variety and succession of tasks. There are, however, significant differences in the 221

SULASGEIR

Dean Monro, in his 1549 account, refers to the vast numbers of wild fowl and mentions that the men of Ness sail there and stay for seven or eight days and bring back a boat full of dried wild fowl and feathers. The *Old Statistical Account* (1796) says: 'There is in Ness a most adventurous set of people who, for a few years back, at the hazard of their lives, went there in an open six-oared boat without even the aid of a compass.' The boat, says the *Account*, could not be pulled up out of the sea, and therefore, while some of the men worked on the birds, the others had to stay in the boat on the most sheltered side of the sheer-cliffed island. This custom of hunting young gannets (or 'guga') on Sulasgeir still continues. Under the Protection of Wild Birds Act, 1954, the gannet is protected by law, but so that the Ness men could continue their old custom, a Statutory Order was passed making a special exemption (from 31 August each year at the end of the close season) of the gannets on Sulasgeir. With North Rona, Sulasgeir is one of the great breeding grounds for British oceanic seabirds.

The Loch Roag islands

The one large inhabited island off the Lewis coast is Great Bernera, though technically it is not now an island, having been connected to the mainland of Lewis in 1953 by a bridge. It is part of the parish of Uig, as are the other islands in Loch Roag. Its population reached a peak of 730 in 1911, but has now fallen to about half that figure. Off the west of Great Bernera is Little Bernera, which in Dean Monro's time was 'inhabit and manurit', but which has had no population recorded since the 1861 Census. Monro describes it as full of rough little craigs, but with fertile earth between.

Also in Loch Roag are three islands which, now deserted, once supported families: Pabbay had 17 people in 1861, 9 in 1881, and none since; Vacsay had nine men in 1861, and none since; Orasay in 1891 had one man and one woman, but none since.

The Flannans

Belonging again to the parish of Uig is the group of islands known as the Flannans, or Seven Hunters, some twenty miles

THE OTHER ISLANDS

north-west of Gallan Head. There are seven main islands, all small, high and cliffbound, and a number of rock stacks and islets. All are uninhabited. Eilean Mhor, the largest, of 39 acres, has an automatic light. Dean Monro's description of the islands as 'nouder manurit, nor inhabit, but full of grein high hills and scheipe' still holds, for sheep are taken annually from Lewis to the grazing on the Flannans. Their name is said to be derived from the ninth-century St Flann, whose saintly influence was recognised during the centuries when men from Lewis visited the islands for their harvest of wool, wild fowl and feathers.

The Flannans were the scene of a great sea-mystery: the complete and utter disappearance of three men from the lighthouse at the turn of this century. In December 1900, the lighthouse, with its 140,000-candlepower beam 283 ft above sea level, was a year old. It had taken four years to build instead of the estimated two. All the materials had to be swung up piecemeal from the boats and hauled up the almost sheer 70 ft cliffs to the top. That month a passing ship, the *Archer*, noticed that the Flannans light was out; a message was sent to the Flannans shore station at Breasclete, Lewis, and the *Hesperus*, preparing to pay a Christmas visit to the lighthouse, got under weigh.

Its crew landed and searched the island, but found no trace of the missing keepers. In the lighthouse was an uncanny silence. The fire was dead. The clock had stopped ticking. The beds had been made up in the clean, clinical way of all sailors. And in the galley, the pots, pans and dishes sparkled their welcome to the searchers. In the lamp-room the lamp was cold. The wicks had been trimmed and the lenses polished. The logbook showed a last entry on 0900 hours, Saturday 15 December. In the subsequent investigation some theories were offered in explanation of the disappearance, but none quite fitted. The mystery remains, a haunting, unexorcised cloud hovering over the island.

The Shiant Isles

Turning to the east coast of Lewis, in the parish of Lochs are the Shiant Isles, about 4 miles off-shore, across the Sound of Shiant (Gaelic: charmed, enchanted). There are three islands in the group: Eilean an Tigh (House Island), Garbh Eilean (Rough

COMMUNITY FROM PAST TO PRESENT PT. II

On the mainland, both Lowland and Highland, an outlying reclaimable patch of arable, lying near distant, little-used pasture, frequently gave a single family the chance of a living. Such a site meant solitary toil for the man and his family; but there might be advantages such as an occasional deer from the forest, or a post as hunting 'forester' such as was held by many a Gaelic hunter-bard. In the Eastern Highlands such a high-lying croft was known as *Ruigh* (anglicised to Ry-). Traditions of poverty with individuality in isolation were handed down, for example, from one of my forebears who held such a *ruigh*, Rycorrach, one of several strung out along the 1250-feet contour in a small, high valley off Strath Spey; the last of them was abandoned only recently. Such a *ruigh* may have originally been a summer shieling, only occupied when shortage of corn-land below, coupled with new possibilities of a little profit from sheep-shearing, led to settlement there.

At the fringe of the Island's deer 'forests' of North Harris and Park, stalkers are still found in lonely lodges and dwellings, individuals often of character and worth, as they need to be; and a few isolated shepherds, such as one finds on mainland sheep farms, dwell on small islets.

But in the Isles, isolated, high-lying spots for single crofts are rare. And the clearest distinction must be drawn between the true solitude of a single, isolated cottage or croft and the sociability of a group of four or five, or even two or three, crofts, such as those of lobster fishers; for even a few families form the germ of a community, in work and in leisure.

The potentialities of co-operative practice were overlooked by agricultural reformers, excusably enough. For when new methods were required, run-rig kept back the pace to that of the slowest, virtually arresting reform. Soon

226

226 FISHING--species sought (e.g., fish, shellfish); gathering of marine fauna; fishing methods and techniques (e.g., hook and line, nets, poison); description and use of traps and weirs; special elaborations (e.g., fishing for sport); economic importance of fishing; organization of labor and division of catch; associated beliefs and practices; fishing for sport; regulation (e.g., licenses); etc.

000 is the northernmost island in the Outer Hebrides (see
161 Map B). The population is concentrated along the
162
361 coast, like a hat-brim around the great inner core of the island's heather-covered bogland, a population belt classified as "dense rural" (50-400 persons per
• [226] square mile) in a map based on the 1951 census. The pattern of land settlement reflects the importance of fishing in the economy of the island.

131 Lewis lies between 6°10' and 7°20' west longitude, and between 47°50' and 58°30' north latitude. Lewis
131 is as far north as Newfoundland and farther north than
132 Mongolia, but the temperature is mild because of the North Atlantic Drift, or Gulf Stream, which passes the
132 west coast of Scotland. The temperature averages 55°F. in summer, and 44°F. in January. A constant climatic feature of life on the treeless island is the wind, a relentless, insidious presence which often reaches gale force. Winds of 60 m.p.h. and more are common.

Rain, which comes in downpours or light mist,
[123] averages 55 to 65 inches per year. The water may be held in colloidal suspension with decomposed organic matter in the compact, spongy material called peat, or pour as rivers and streams off the island's shelf of
131 non-porous Archaean gneiss into the sea. Of Lewis'
133 total area of 437,200 acres, inland water comprises 24,863 acres.

000 24,863 acres. The value of this boggy property, as
423 far as the landlords are concerned, is determined by
427 its fishing potential. The landlords generally reside
• 226 away from their property, and brave the buffeting gales several times a year to return to fish for trout and
[463] salmon. For the rest of the year they hire river-
[685] watchers to prevent their tenants from poaching. As
[171] in Wales (Emmett 1964), the islanders continue to poach, in part as an expression of their identity as independent countrymen, a minority group in a nation-state.

161 Lewis is the most populated area in the Outer
162 Hebrides, containing 21,934 of the 32,607 Outer Hebrideans
634 numbered in the 1961 census. It is part of the County of Ross and Cromarty, whose headquarters are on the
632 mainland near Inverness. Lewis has four administrative areas called civil parishes in which births, deaths and other vital statistics are recorded. Stornoway
[197] parish is the largest, containing the town of Stornoway on the east side of the island in which many non-Gaelic speakers live. Of the other three parishes, the largest
[162] is Barvas which stretches along the west side of the
[197] island and contains 4,331 persons, of whom 94.6% are Gaelic speakers. The people of Stornoway refer to someone
[186] from the west side as a <u>siarach</u> (west-sider), a term which connotes rusticity.

175 During a huge snow-fall that occurred on
261 Lewis in the 1950's, the mobile grocery vans and other
[132] supply vehicles could not come out to the west side,
[443] and a group of men had to make an expedition into town for provisions, after which many families made certain that they always had a good supply of meal, salted
[404] mackerel and herring. Many villagers have gotten deep
[365] freezers to store beef and mutton; others say they do not trust the freezers, that a failure in electricity--which occasionally happens in this region of gales and far-away repairmen--would bring disaster if they depended
458 fully on them for keeping their meat. When the tweed
• 226 industry is going through one of its periodic depressions, more men go out more often to fish. "I've been going out every night for the last week or so. I don't have a tweed, and I won't have one for the next six weeks. I don't know what I'm going to do; maybe I'll go back to sea. Three of us caught one hundred mackerel last
[251] night. I salted my share, and didn't give any of them away. These are the hard times. We're going to need them during the next six weeks."

233 A few people raise beef cattle, depending largely
[654] on subsidies for encouragement to do so. A few are
[234] beginning to keep cows again for milk, giving as their
485 reasons that freight charges make the bottled milk too
434
648

APPENDIX II

178 2110. The acreage under potatoes declined steadily: 3940,
434 3730, 1650. Barley dwindled from 2350 acres to 1340, and
130. Turnips reached a maximum of 510 acres in 1939, but
241 were not worth noting by 1953. These crop acreages reflect
the change in stock-rearing, with the decline in the number of
178 cattle but the great increase in the number of sheep. Taking
434 the three successive totals for 1918, 1939 and 1953, cattle
numbered 13,620, 9060 and 6540 head; but this diminution
231 by more than half was chiefly due to the small number of
bullocks reared. Cows and heifers, 7650 in 1918, still stood at
about 4500 in 1953, and they are now of far better quality in
weight and milk production. The totals of sheep were successively, 78,150, 114,330, 185,860; by use of mainland rams
their average weight has increased, while the wool is rather
more abundant but coarser. Taking the Lewis Association's
equivalent of 1 cattle beast to 8 sheep, the livestock carry
increased by nearly 25 per cent; and if we add the increased
value of the cattle the livestock increase counts for very much
more. Horses, it is true, fell to 380 by 1953; as before, most
had been bought in from Uist, not bred. Hence a new charge
on agriculture, the purchase and use of the 65 tractors owned
by farmers and crofters, and their running costs, is relatively
less heavy than it would be in a horse-breeding area. The
poultry are still deplorably few: 86,460, or about 20 per croft.
[632] The Table on p. 316 sums up the conditions, apparently
somewhat stabilised for the time being, parish by parish, and
invites comparison with Chapter II, pp. 67-68.

178 (b) and (c) *Peat-making and House-building.*—While *peat-*
222 *cutting* is still important, more coal is used than formerly, and
hence the peat is valued here much as in 1938. *Housing* is
314 most important; Local Authority housing by the Burgh
struggles to meet the need of a growing urban and 'suburban'
178 population as in other towns in Britain, but with an additional
362 "remote area subsidy" to meet mainland contractors' extra
547 costs. There is little truly rural housing by the County Council
and rents are too high for the houses to be fully occupied. The

CROFTING CHANGES

of larger and more economic working units of over 30 acres of arable land is also apparent in the southern Hebrides, the west mainland of Ross & Cromarty, Argyll (mainland and islands) and Caithness.

The acreage of common grazings held per holding varies from under 50 to some 200. The crofts, as already mentioned, are in townships, of which the island has 168, half being fenced and half consisting of individually fenced crofts. During the winter most of the crofts are laid open for winter grazing by sheep of general ownership. Manure resources are mainly dung, seaweed, shell sand and of course artificials where necessary.

A new aspect of crofting in Lewis is its extension into forestry. A recent survey by the Forestry Commission indicated that under 400 acres of the land not being used for crofting were suitable for afforestation, and that these acres were made up from twenty-three different plots. At Garynahine Estate can be seen the beginnings of a real afforestation unit of some 500 acres, a scheme of the utmost significance for the economic future of Lewis and for the relationship between crofter and landlord. Too often in the past this relationship has been biting, hard and inflexible; in particular the crofter was understandably unwilling to release good land for planting trees. But the crofters of Callernish agreed that the right of usage of 285 acres of the common grazings belonging to their township should revert to the landlord, this land being thrown in with 220 acres of the Garynahine Estate. Labour comes from the affected township and others in the area.

FISHING

Early beginnings

It is the humble herring that has contributed so much to the island's economy and its history. At a very early date in history, the Hebridean fishings were worked by Frenchmen and Spaniards who must have found them rich enough to repay the long journey and weeks away from home in the cold Minch waters. It was not, however, until the end of the sixteenth century that the wealth of the Minch was really discovered, this time by the fishermen on the mainland of Scotland who copied the tricks of their trade

SINCE THE SECOND WAR

pared to make fishing their career, together with financial assistance to those who satisfactorily completed their training and who wished to acquire boats of their own. This Scheme is now run by the Highlands & Islands Development Board. The Board's participation in the expansion of the fishing potential around the island has been first-class, with commensurate results from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted the unscrupulous, those for whom the word 'conservation' has no meaning, and who are careless of the dangers of over-fishing. Illegal trawling began around the year 1894 and by now has drastically impoverished the inshore fishings to which the Harris and Lewis crofters once looked for a supplement to diet and income. The rapid adoption of efficient trawlers was attended by an increasing number of reports of their poaching within the three-mile territorial limit. Though the islanders tried many times to involve the Government's cruisers for the protection of their shores, the poaching went on, and still continues today. Even some of the violence which attended the early attempts to clear the scum from the sea, as it were, continues, part and parcel of the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring Industry Board has been converted into a fish-processing factory. This facility, of great value to the port, is run by Rolf Olsen A/S, a long-established Norwegian company with a successful background in fish processing. The company has received investment aid from the Highlands & Islands Development Board, the Highland Fund and the Stornoway Trust; the latter's interest is significant in that it is the first time in which the funds of the Trust have been invested in a private concern, to help retain Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry is the processing of prawns (scampi, or *nephrops norvegicus*). Two firms buy the prawns at the pierhead, shell, cook and freeze them,

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

A HARRIS VIGNETTE

Fourteen employees were directly concerned, with another six in the services sector.

The potential of the tourist industry is only beginning to be tapped. MacBrayne's drive-on drive-off car ferry, with a capacity of 50 cars and 600 passengers, makes two or three trips a day between Uig in Skye and Tarbert, the journey taking less than two hours. The mainstays of tourist accommodation in Harris are the Tarbert and Rodel Hotels, both well appointed and owning fishing rights for salmon and trout. Sea fishing is another tourist attraction. Crofters participate in the holiday trade by offering full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. A rough, stony track, one of the most tortuous and exciting in Britain, takes its leave from the main road over a ridge. It twists and turns in and out of gullies, over cliffsides and across the steep heather-clad slopes of the Toddum, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The seven-mile track is the only marked route, though crofters take a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village relies on its sheltered harbour with a good natural rock pier: most communication is by water, all food and fuel coming that way. In past times every household owned a boat for lobster and shell fishing to supplement both diet and finances. Today the interest in fishing has declined, as has the population. But in 1946 Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

HARRIS'S OFFSHORE ISLANDS

Scarp

Until 1972 Scarp was the most westerly inhabited island in Scotland, separated from the Harris mainland by a strait which is about half a mile across at its narrowest, coursed by strong tidal currents. The island is about three miles in diameter, rugged, especially in the north and west, with cliffs on all sides; the maximum altitude is nearly 1,000 ft. On the east side lies a tiny marginal belt of good land, machar and soil; on this green shelf, about one-third of a mile long, were all the crofts of the Scarp settlement. Many stand deserted, and abandoned lazy-beds in sites beyond the present settlement indicate a denser population at one time. The island's population-carrying capacity was severely limited by the minute amount of land available for tillage: of a total of about seven square miles only half a square mile can be used. Climatic conditions and soil type also restrict the range and quality of crops grown.

Scarp was originally settled about 1810 and was occupied by eight farming families who were reasonably comfortable. Not only did they have the island to themselves, but they had access to good pasturage on the Harris mainland opposite. About 1823 thirteen small townships between the head of Loch Resort, Harris, and Bunabhainneader were cleared, some of the displaced families coming to Scarp. Some emigration back to Harris took place in the 1840s, but when about 1868 the proprietor divided Scarp into sixteen crofts instead of the previous eight holdings, these were further divided by the people themselves, trying to accommodate their families and friends from elsewhere. In 1861 the population was 151; the peak was reached in 1881 with 213 persons. In 1951 it was 74. Communication with the Harris mainland is by boat, plying between two stone-built jetties.

The local economy was essentially a subsistence one, with self-sufficiency in such products as potatoes, turnips, cabbages, oats, milk and fish. After a break of some years lobster-fishing has recently been reinstated as an occupation. Oil lamps are the only lighting, though a few houses have piped water. The small shop

166 vision of adequate educational facilities in remote spots becomes
871 increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size. [162] The last of the native Scarp population left the island in November 1971: two families totalling seven people. The island [178] has now attracted the attentions of a hippie community.

Scalpay

*175 Scalpay Island, on the east side of Harris, was formerly occu-
361 pied by two or three tacksmen in succession before being 'crofted
429 out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some sub-division of the available land. The 1861 population was 388, but [162] the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

178 Island Scalpay is in fact one of the few places in the Highlands
621 and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its small-[131] ness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours. [162] Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is [241] not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

• 226 The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-three boats, twelve of which are ringnetters of over 40 ft. Native
505 enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on [441] occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots Lewis and Harris

184 share their characteristics. So to gain a sense of pro-
105 portion from the start, we must map the location of Scots countrymen, their numerical importance, and their types [128] of grouping. Let us begin with the first of these three aspects, their regional location (Fig. 2).

[102] The base map on which the data are plotted shows the boundaries dividing the hill masses of the Highlands and
102 Southern Uplands from true 'lowland'. This hill country
13 is mostly covered by rough pasture (left blank on the map)
311 within which lie strips of 'Isolated Arable' with other improved land in the valleys and along the outlying coastlands (shown in black). This hill country includes the Scottish Isles, with the exception of Orkney, which falls [241] rather into the category of 'lowland'. It is largely devoted to sheep farming and crofting, or left to grouse and deer. [427] The lowland area from the Orkneys to the Tweed and Solway is devoted to mixed and dairy farming with lowland types of small-holding, except, of course, for 'Industrial Regions', which include most of the urban area of Scotland.

• [226] Within the 'three-mile' territorial limit from the coast lie the inshore waters, in which local fishing was once important, and might again become so; these are left white on the map (Fig. 2). By contrast to their narrow extent on the East Coast, their width is notable in the Northern Isles and on the West Coast.

102 The problem set in making this map is to show two
13 different worlds, as it were: the Highland and the Lowland.
184 The two are rarely envisaged together, and much confusion of thought and policy results. To master the map, the
128 reader may scrutinise first one part, the Highlands (cover-ing the other with one hand), then the other part, the
182 Lowlands (in the same way): thus each will appear clearly in turn. Both can then be envisaged together.

CH. I ENVIRONMENT AND LANDSCAPE

182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are concerned. Economically the crofters' 'living space' is
311 the narrow interrupted belt of improved land (shown black) [241] which is generally fronted by the sea and its inshore waters, and is backed by the Crofters' Grazings (enclosed by line [427] C on the map). Some 700 crofting townships or com-[361] munities are found in Zetland, the North-west mainland and the Western Isles, each with its Common Grazing; the line C also encloses a small area devoted to other grazings. Deer forests predominate on the eastern, mainland, side of the line. On the remainder of the hill country are to be found the hill-sheep farms, with other small farms and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
621 team on land formed the communal units contained within

Key to use of Land and Sea
(Highland, Island and Urban Areas)

1. The dotted line C .... C encloses the Crofters' Grazings, mainly 'Commons'.
2. Black areas: strips of 'Isolated Arable' within the rough pastures of the Highlands and Southern Uplands (left blank).
3. Horizontal ruling: open sea, outside the 'three-mile' belt of 'inshore fishing' (left blank).
4. Vertical ruling: urban and industrial regions.

Key to Size of Labour-Teams of Farms and Small-Holdings
(in the Lowlands)

The symbols show the average number of employees per team in each county.

(1 symbol = 100 teams)

(a) Per Mixed and Dairy Farm
— 2·2 to 3·8 (3·1)
◆ 4·1 to 5·6 (4·9)
■ 6·4 to 8·2 (7·1)

(b) Per Full-time Small Holding
• 0·7 to 1·0 (0·85)

(The numbers in brackets are the averages for Scotland.)

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

226 the township; and to each were allotted the rights of the
241 common grazing and the fishing grounds. For more than
a century the croft has been held individually, though in
423 the townships the common grazing is still held in common.
621 Beyond these 'homely' limits lie wider horizons, in the
past those of seafaring and of droving or the chase, and
632 today of fishing and gillieing at home, or of ocean journeys,
[178] urban occupations or colonisation.

In the Lowland regions each symbol represents 100
182 holdings. For (A), 'mixed and dairy farming', the par-
184 ticular type of symbol shows the average number of workers
241 employed on a farm-holding in each county. On each
farm the employed workers form what may be called the
'Labour-Team'. A team may be 'small', 'medium' or
'large'. The Scottish averages of these three types (indi-
cated in the inset key to the map) are roughly three, five
and seven workers per team. Four 'casual' workers are
counted as equivalent to one 'permanent' worker, but
farmers' wives are excluded. Under (B), for the same
Lowland counties and areas, full-time small-holdings are
[593] shown separately. The Scottish average of less than one
full-time worker employed, most often a son or daughter
of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of
farms and small-holdings in Scotland, true agricultural
[162] land-holders number 68,000, of which fully one-third hold
part-time holdings (like the Island crofters), one-third
'full-time farms', and rather fewer (one-fifth) hold 'full-
time small-holdings'. The remainder accounts for other
types of less importance. The farms predominate in terms
of improved land, full-time employment, and of course of
[311] production. As to area, farms cover 80 per cent of agri-
[464] cultural land. The farmers employ nearly 90,000 workers,
[162] [refer to map p. 16 -- analyst]

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 that the spade and foot-plough (*cas chrom*) were used for
114 double the area ploughed. From Monro and from the
311 precise Statistical Accounts of the eighteenth century, it is
[241] clear that pony-drawn ploughs were usual in the smoother
[127] parts of Lewis. In North Harris are 'abundance of
[136] Deir'. We must not forget here that 'faire' and fertile
are comparative terms for the West. "Lewis is faire and
weill inhabit at the coste, ane fertile and fruitful countrey,
for the maist part beire [barley], with 4 Paroche Kirkes."
[226] There is "ane castell callit Stornoway . . . with 3 salt
loches, very fine for take of herrings . . . [and] infinite fresh
water loches. In the Lewis there are 8 waters with take
of salmont. . . ." There were also "Whales . . ." In
"a cove 2 fadoms deep at the ebb sea, uses Whytuns
(whitings) to be slain with huiks", there were "very many
haddocks and Men with their wandes sitting [as today]
upon the Craiges of that cove, and Lades [boys] and Women
[136] also. . . . In this Ile there are many Sheip for it is very
guid for the same. For they lay furth ever one mures
and glens and never enters in a house and their wool is
bot anes in the zeire pluckit off them in some fauldes."
[236] In Zetland wool is still plucked, not sheared.

The description of reclamation is specially worthy of note: "In this countrey all is peit mossland at the Sea cost, and the plaice where he wins his peitts this zeire [year] . . . there he sawes his corne the nixt zeire, after that he guidds it weill with Sea ware" [*i.e.*, improves or
[245] manures it with seaweed]. On "Ellan Colm Cill [an islet apparently on the east coast south of Stornoway at the mouth of Loch Erisort] Macloyd of the Lewis has ane faire Orchard, and he that is Gardener has that Ile [rent] free. . . ."

175 Around the coast of Lewis no absolute limit is set to
185
311

175 the eighteenth century these 'black houses' would be
342 replaced by houses of stone and lime, and a few of those
361 survive.

Of the fort built by Cromwell on the Point, no signs
172 remain. For tactical reasons, the best site would seem
174 to be the neck of the Point, from which the guns of the
712 fort could defend the houses, stores and quays. The irregular building line near the point marked T, a Town House at a later period, may correspond to the
175 northern angle of the fort. The fort appears to have been standing when the original drawing was made for the
712 engraving in the Old (or First) Statistical Account of Stornoway, *c.* 1793.

By the time Wood drew his plan in 1820, houses on
175 the Point no longer looked exclusively on to the axial
361 street. The main alinement of interest came to be the shore, marked by a properly built quay. Today, the Point Street houses have fallen into decay but many older houses still stand in fair repair along the 'Beach' or Quay.

Thirdly, from the nineteenth century, until 1914, two-
175 storey, flatted tenements, hotels and houses of middle-class
361 people were built upon a grid that followed upon the old
34 field plans. In an alternative plan, proposed about 1820 but not adopted, a diagonal vista opened out to the Established Church, built in 1794 on rising ground. The modest Seaforth Lodge which had stood across the harbour was replaced in 1850 by Stornoway (or Lews) Castle, its pseudo-Tudor style designed to please the new improving landlord, Sir James Matheson, who had purchased Lewis in 1844. Presented to the people on the break-up of the Leverhulme Estates in 1925, a new technical school has
175 taken it over. A few villas also grew up on outlying roads.
361 Thus, a mere village in 1801, and among the smaller burghs
• 226

175 of Ross and Cromarty, with populations of from 1000 to
342 2300 in 1841, Stornoway leapt ahead by 1851, growing
162 with the rise of the fishing trade. Including the literally
• 226 floating population of fishers, its numbers exceeded 4000 in the summer of 1921, though falling below this in 1931 when the census was held in the spring.

175 Still another stage, a fourth, seemed in sight when, in
226 1918, the first Lord Leverhulme made his bid to centralise
361 the scattered, failing fishing industry of the Island at Stornoway. A canning factory was started (south of the area shown on the plan), only to be dismantled before its completion, then recommenced and again dismantled at "Leverburgh", South Harris. New housing commenced. When this great venture closed and population stagnated, the grandiose proposal to reopen the diagonal vista on Wood's plan and centre it on some great new building, remained a dream. The failure of Leverhulme's great enterprise and its hopes led to discouragement for some years. Yet it is possible that the vision of change given to the Island may have contributed to a renewed capacity for enterprise, individual and communal.

175 Later extension had to await the growth of the Harris
342 tweed industry, and the erection of spinning-mills to
361 provide yarn for the rural hand-weavers. The town has
[288] extended beyond the plan in two main directions: to north-east with villas and housing schemes and to ESE. with the great new mills where kippering sheds were numerous from the mid-nineteenth century until after 1919.

361 Although Tarbert is a shopping centre for Harris and
366 has its spinning-mill, Stornoway has no rival on the
Island. The adequate depth of its harbour, combined
[162] with its position and access from sea and land, have given

162 weaving and fishing, the fall in population would probably
[167] be small, if any, in 1941. This fall in the total figure was
[168] not so much a decrease in the number of families as in the number per family. The Island was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

162 Since 1931 there had been no real decrease: Lewis is
178 a land of house-building, not of ruin and abandonment;
361 of increase of holdings, not diminution, and even of agri-
[650] cultural improvement. No doubt 'artificial' causes were at work: first, loans, grants and unemployment insurance
[593] and assistance—once known as 'the dole'—and, secondly,
[888] the money sent to elderly parents and dependants at home by young folk in Glasgow or abroad, or savings brought
• 226 back by the young people themselves. Yet there is some fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it
[241] was not only the elders who had returned to the Island, but
[286] men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

167 The emigration which took place from 1949 to 1951
[464] followed directly upon the losses and the unemployment
[651] in the Island's Harris tweed industry. This crisis resulted from the imposition in 1949 of a Purchase Tax on hand-
[162] woven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

175 usually corresponded to six imperial bushels). The stock
434 was "four milch cows, three to perhaps four horses, and as many sheep on the common as the tenant has luck to rear". Although such estimates, especially of crop yields, are apt to err on the favourable side, a comparison with the same writer's statistics of stock (and rental) shows that this estimate gives only a little over the modern average per family in Harris, and allows an average sheep flock of one score ewes.

175 The briefer Statistical Accounts of Lewis indicate the
434 average stock per family, suggesting comparisons both with
434 the present, and with an earlier time (Chapter II). In 1790
422 the cattle and horses, though small, were greater in number per family than now. In Lewis there were eight head of cattle per rural family, compared to 2·5 today; there were one or two ponies per family (according to the topography and ploughland of the parish) instead of an average of only one horse to five or six families today; the small family sheep-stock was similar; and there were also some goats,
175 say, one to every second family. In addition to these
• 226 resources, there was fishing; and the number of boats in Stornoway parish, giving one boat to four families, is a guide for the rest. Fishing, with net-making, was a predominant occupation in all parishes by that time, and boat-building was significant too.

175 As to changes, fishing had grown in importance since
433 about 1720, and kelp-making added an important new
434 resource. But one may doubt if the Island supported an appreciably larger live-stock in 1790 than seventy years before; one must rather assume smaller shares per family,
[182] for population had increased. A basis for agricultural security was an adequate balance of sandy machar to 'black', peaty, clay land; and the area of machar, a limited

175 and still more to pay arrears, was "the rugged Hag,
241 Poverty, that would resist both King and Government".
427 We may guess that MacAulay passed a hint to the tenantry
451 that (in a good Gaelic idiom) they had better 'disremember' details of arrears: and this they did.

175 Of the four names on the deposition quoted, one or
551 two may have been surnames, others the patronymics of
613 kinsmen. As is still the custom, clansmen knew one another
[198] by names of many kinds. Stature or colour was used to distinguish a 'Big John from a little one, a fair from a dark, or a pale from a swarthy; occupations such as smith or caird (artificer, not necessarily travelling tinker as now) were
[241] used, and so were nicknames. Of the eighty-one crofters
or fishermen burghers in Stornoway, fourteen were Mac-
• [226] Kenzie and other mainland surnames, such as Fraser and Gunn, Matheson and MacLennan, also showed their descent from the immigrants brought in when MacKenzie of Kintail founded the burgh to encourage fisheries after 1611. Each held a single holding, usually rented at two shillings sterling.

175 To conclude, rentals about 1715 show (1) the character-
241 istic equalitarian grouping of small peasants as fellow-
427 workers in the hamlet-farms still held directly from the
631 superior, Seaforth; (2) the eighty-one small burghers of Stornoway; and (3) tacksmen, responsible for the larger part of the Island rent, but under whom we know that the labouring peasantry, though without the local independence of the others, also continued to dwell and to work together. The tacksmen were to pass away, as many of them had originally come, at the desire of a mainland lord, and the lord, in his turn, was to leave; but the small peasantry of immemorial stock still hold and work their land.

(c) FARM-TEAM AND BOAT'S CREW

175 The strictly equal division of rent on each joint farm
241 shows the equality of sharing among its workers by 'run-
427 rig'. By this system, periodic pooling and redivision kept
476 the land in convenient blocks, a wet part here and a dry one there, all shared out to give each man an equal chance
423 whatever the weather might bring. Such sharing was not mere static division of goods: it was the means for co-operative work, in ploughing and harvesting, or cutting peats, on land, and in manning a boat for the fishing.

175 For ploughing, two or three men were needed—one
241 leading the horses (walking backward and singing his en-
476 couragement), a second to hold the plough and perhaps a third to turn the sods; but four ponies abreast were needed to haul the plough, and each tenant possessed only one or two. In addition, the plough might be preceded by an instrument to clear the ground, a 'reestle', requiring two horses and one man. A Gaelic proverb notes the selection needed in the horse team, and one disabled by age could be replaced as leader by another. Ploughing was necessarily co-operative.

175 The rockiness and hilly ground of Uig and Lochs
241 diminished the usefulness and, no doubt, the number of
[182] ploughs, but the importance of their fishing was some compensation for poor agriculture. In 1790 there were
[134] ninety ploughs in Barvas parish, where they were no doubt of ancient usage: a ratio of one plough to five families, or
• 226 one per joint farm. To judge from the smoothness of Stornoway parish, ploughs were probably used there in a similar ratio.

175 While some jobs were done by no more than two people,
476 —as when a ridge or 'lazy-bed' was put in order, the

175 at midsummer came joyous departure to the shielings.
796 Michaelmas at the end of September was a festival of horsemanship, when the ponies, rested and well fed, could race madly along the machar. As long nights brought in the winter, Hallowe'en came on 31st October, and on the morrow the solemnity of All Hallows (*Samhain*). On 11th November came St. Martin's Day, and in December Christmas once again.

175 When the Islesmen put out to sea, prayers were chanted
782 to Father, Son and Holy Spirit and to the Disciples, "the Fishers of Men". While some of these might be individual (*Carmina*, Nos. 117-120), others were chanted by the skipper at the helm, as celebrant, the crew giving the
(178) responses (No. 121). As self-sustained community life
(779) weakened and customs were endangered, this prayer was encouraged by a few clergy, Catholic and Protestant. At
175 the start of the season's fishing in Eriskay, Fr. Allan Macdonald went out in the boats and chanted a rune taught
• 226 to him by elders, the men responding.[1] One of the 'Ocean
788 Blessings' or prayers recorded by Carmichael (No. 119) is found in Bishop Carswell's *Liturgy in Gaelic*, of 1569, and is quoted by Martin as "a form of prayer used by many of the islanders at sea after the sails are set".[2] Most of Carswell's *Liturgy* was translated from that of John Knox, but not this prayer, of which the earlier and later-recorded version are the same, except for one revealing difference.

(178) [1] In so doing, 'Father Allan' may have been restoring a pious service of an older school of Gaelic priests trained upon the College of Lismore, an island in Loch Linnhe. Lismore was the birthplace of Carmichael, and in the home of his Protestant parents the young priests were hospitably received.

[2] *Foirm nan Urnaighthe* (ed. M'Lauchlan), 240, and Martin, 1703 (edition of 1934, pp. 186-189). A new text of Carswell is in preparation by the Scottish Gaelic Texts Society.

175 As recorded by Carswell (and Martin), this prayer,
• 226 after calling upon the Trinity, tells that the Three-in-One,
788 ever living, guided Clan Israel through the Red Sea,
773 brought Jonah to land from the belly of the great ocean beast, and led Paul and his companions from the torment of the sea; after these three stanzas it closes with a general supplication. As heard by Carmichael three centuries after Carswell, the first three stanzas are identical, but they are
(539) followed by the culmination. Recalling the hour "when the storm poured on the Sea of Galilee . . .", the poem goes on, "Be Thou, King of the elements, seated at our helm, And lead us in peace to our voyage's end. . . ." It is significant that the Reformation Liturgy includes the story of Clan Israel's flight from their enemy whose drowning forms the climax of the tale, and the absurd miracle of the whale—a late interpolation in the convincing original Hebrew poem on Jonah's voyage,[1]—but that it omits the Christian climax, of the storm allayed by Christ, the Helmsman of peace.

(539) Another fishers' rune (No. 120) concludes, "To whom trembles the voice of the wind? To whom become tranquil strait and ocean? To Jesus Christ, Chief of each saint, Son of Mary, Root of Victory." These blessings, though they refer to the Old Testament, dwell lovingly on the New. Their thought is of the fishermen friends, Peter, Andrew and John, of the Baptist and of Christ's mother, of Saint Martin and later apostles to the Gael, and the Archangels, and of Christ, Rock of rocks (*Carraig Ail*), and the Trinity.
226 These bring strength in danger, peace after strife with the
778 elements, remembrance of the poor, and fellowship to the crews. Peace and strength pervade the "Dawn Prayer of

[1] R. G. Moulton, *Modern Reader's Bible* (reissue, 1935, pp. 1423-1424; cf. Note to Matt. xii. 40, p. 1696).

788 Clanranald"[1] and echo in the opening benediction of
• 226 Alexander Macdonald's "*Birlinn* of Clanranald", without which his 'Galley', for all the glory of its strife with storm, would never have won its place in the heart of the seafaring Gael.

788 As for journeys over sea, so for those over land, "Tra-
484 versing corries, traversing foresta, traversing valleys, long and wild . . .", the traveller or pilgrim, the drover or emigrant, leaving home and his friends, would have their prayers. They would accompany him on the first steps of his way with cheer and laughter or with tears, as those have told me who remembered my grandfather's leaving
(539) his home in Strath Spey more than a century ago. These journey-blessings were spoken by the traveller: "Life be in my speech, sense in what I say . . .", or by those to whom he was dear. (*Carmina*, No. 116; *Guidheachan Turais*, Nos. 266-276.) In these prayers, bodily travel and spiritual quest are sustained on the mountain-track by the strength of home-ties and fellowship, and by the hospitality of Christians on the path ahead.

788 When family and neighbour-team were closely knit,
574 their own harmony drew the stranger in. "The Rune of Hospitality", threaded together from old fragments by the Rev. Kenneth MacLeod, breaks out into the refrain of the lark as she sings to the listening heart of the host:
(539) "Many, a many, a many a time, Comes the Christ in the stranger's guise!"[2] Hospitality is truest when its sacrifice—so real in a land of poverty—is given as a duty but with a smile!

[1] *Songs of the Hebrides*, vol. i, pp. ix-x.

167 left the Island. Yet after 1931 many returned, owing to losses and unemployment both in British towns and over-
(288) seas. When emigrants began to come home the 'Harris'
178 tweed industry had spread to Lewis and offered increasing
(464) employment. Some men still fished in family-owned
(464) Island boats, and others as paid hands (on boats from
• 226 the East Coast), though losses and unemployment were suffered.

178 Inter-war changes were hastened not only by movement
177 beyond the Island—an influence at work for three or four
493 generations before—but by mobility within it. In 1919 a small mail car made its way daily from Stornoway along
(205) each of the five main roads, with an occasional passenger. When crofters crossed the Island to Stornoway they went on foot or took the pony and cart at a slow walk: it was a day's journey. Ten years later, Ford vans, bought second-hand, ran daily to Stornoway from every township. Frequency, ease and relative cheapness of movement came late in an Island with no railway: the mobility of the motor for marketing and shopping brought rapid change.

178 'Hand-loom' weaving had become an important, if
286 precarious, resource, important because of the capital
(433) invested and the labour employed, yet precarious because
(462) of its dependence upon name and sentiment, not only upon intrinsic value. In Harris many women had spun and woven for sale for over a generation before 1914, mostly weaving pure hand-spun yarn, and they continued to do so. For many years before 1914, an occasional weaver was to be found in villages in Lewis too, generally weaving a handspun weft upon a mill-spun warp. By 1939 it was estimated that there were about 1200 looms in the Island, chiefly weaving mill-spunyarn, most of it spun in the two principal Stornoway mills. A carding mill

(c) THE OUTLOOK: 1939-54 AND SINCE

458 How then can the situation be assessed, as it was before
178 the outbreak of war and since then? By 1939 twenty years had been partly lost; for the after-war years of the 'Lever-hulme boom' were followed by discouragement and poverty. During that time one might have hoped for half
(423) a generation of reconstruction and progress. On the other hand the sore question of dividing the farms was settled, so bringing raiding to an end. Congestion on the existing crofts is less than it was, owing to this fact, and to the
(166) provision of feus. The poverty of many breadwinners who had migrated to the cities first cut down the amounts remitted to their Island dependents, then drove them home.
(433) A croft, or even a garden site, and the opportunity of building a good house there made life still worth while,
(746) when other employment had failed. Unemployment relief, though tempting some to idleness, gave a respite
286 which many utilised to make a fresh start. As fishing
• 226 waned, many had taken advantage of the easy beginning offered to learn a new trade—weaving. This has made many feel that the living to be found on the Island is better than alternation of 'wage-earning' with unemployment, in Glasgow or abroad. They believe the situation
(311) of the Island community to be hopeful. While the land remains little better than before, many, even of the younger people, still care for the Island life among their own kin. Given a clear lead, these could reorganise themselves, and undertake the developments needed in fishing, weaving and reclamation. The homes are sound, 'good neighbourhood' endures, and given fresh opportunity, the community could awaken to new life.

178 During and since the war, co-operative marketing was
44
476 I.L.H.-U 289

464 For a year or two after the war many men and women
(288) returning from the Services, the sea or the factories found
(179) employment in the flourishing Harris Tweed industry. This included work in the spinning mills and hand-weaving at home—work in which the male weaver was helped by
• (226) his family in jobs such as bobbin winding. Few fishermen
178 dared to sink capital in new boats and gear, and risk losses
(462) such as those sustained after 1920. Few women wished to return to the hard, uncertain work of gutting. The whaling station, built on West Loch Tarbert before 1914 and open for a short time between the wars, was reopened in 1950, and employed some 30 men for 18 months before it closed
(241) in 1952. Crofting was lightened by some mechanised
(722) cultivation. The war-time construction of air-fields had ceased, though some harbour-work and road-making was
(654) assisted by government grants.

In 1949 the Harris Tweed industry, now the Islanders' main source for earning, was crippled by the imposition of
288 a 66⅔ per cent purchase tax on hand-woven Harris Tweeds.
651 Parliament decided that as a non-utility product, its export
648 sales alone could be exempt from tax. Viewing the
(433) position of the tweed industry in Britain as a whole, there were strong arguments for the extension of the tax to
(171) Harris Tweeds: the high-grade industry of the Scottish Border or the manufactures of the West Riding should not be subjected to unfair handicap. At the same time the crippling of a handicraft practised by peasant or artist favours mass-production to the loss or ruin of traditional and experimental workmanship or design to which, in the end, the mass-production is an unacknowledging debtor. The obvious economic handicaps of Island hand-weaving
(439) may surely permit some latitude. The export trade in
(458) Harris Tweed, in which the imponderable 'sentimental

175 reclamation, which Dean Monro has described as he saw it.
311 Technique and economic return must be balanced against
185 the factors of nature. Although natural conditions are
[182] difficult, they may not form a complete explanation of the relative arrest of reclamation in the nineteenth century; for here separation from the agricultural advances of the Lowlands by barriers of mountain and sea caused the retention of unprogressive methods until the wave of agricultural improvement had spent itself by the middle of
[178] last century. To this cause must be added other influences
[171] contrasted to those leading to peasant advance in the rest of Western Europe: the political history of the Gaeldom after 1745, the revolution in land tenure and in the social life of the upper classes, the commercial, industrial and imperial development of Great Britain. All these factors help to explain the contrast offered to the Lews by western Denmark and western Norway, lands in which the soil and climate are comparable to those of the Island. Yet reclamation is proceeding, as on skinned land at Ness, where plots of ground have been steadily broken in by pick and by spade or plough.

• 226 Settlement and agricultural land are placed around
[361] the coasts with their fishing grounds. In spite of what was often said—that the Lewisman is and has always been
[311] primarily a fisherman—fishing alone is not enough to
[241] account for this distribution, for the agricultural conditions on the whole are also best along the coasts, or were so for early settlers. As Stevens remarked, the light sandy 'machar' lands are there, and the fringe of partially improved soil close by; drainage is, on the whole, better, while shell-sand and sea-ware are to be had for manure.
241 The sea-ware also serves still as fodder, while one or two
824 sorts are sometimes cooked for human food; carragheen

241 (Chondrus), for example, is used as a thickener of milk to
824 make a cheese-like mould. Dulse is also plucked.[1]

222 The type of coastal form and vegetation alters the relative importance of crofting and fishing—and the balance
182 chosen is significant. (1) Where the coastline is smooth,
241 and leads inland from sandy machar with its clover to
• 226 sand-ameliorated 'black land' of smooth topography lending itself to ploughing, and the whole is backed by extensive pastures, the tract is relatively well-off for crofting but may be ill-placed for fishing. (2) Where the coast is either indented or salient with rocky loch-sides or steep promontory cliffs, a rolling or rocky topography, little shell sand, and (on the promontories) a shortage of pasture, it is ill-placed for crofting; but it is favourable to fishing either by virtue of sheltered sea lochs or of salient promontories, one or other side of which tends to give relative shelter to the fishing ground (chosen according to the direction of the wind, to avoid being blown on to a dangerous, lee shore). Hence the site of a settlement has had much to do with the choice and opportunities for a communal vocation, from prehistory to the present time, as we shall see.

103 Significant local characteristics emerge in the names of
634 the ancient districts (inset with the Map of Vegetation,
175 Fig. 8). In the north is Ness (Norse, 'nose' or cape); along the west is Cladach (Gaelic, a stony beach); while in South Harris the western 'Machar' contrasts with the eastern 'Bays'. 'Park', a sheep-run in the early nineteenth century, was the Norse 'East-fell'. In contrast, the parishes of Lewis centre on four churches, linked to
[491] the road-system. This radiates from Stornoway in five directions: east, NE., NW., SW., and south to Tarbert,

[173] [1] Pulling dulse (*Rhodymenia*) is one of the 'delights' of Iona as told in a poem long attributed to Saint Columba!

511 coat, was thought to be supernatural. The fishing, too, is
• 226 of good standard: a typical annual catch including 1700
511 salmon, 5000 sea-trout and 1800 brown trout; and it was for this, as well as for the shootings, that the moors pertaining to the different shooting or fishing lodges and hotels
137 were bought at Lord Leverhulme's sale. The absence of
233 foxes was important to sheep-rearing before the introduction of guns, and is still a favourable factor.

5. *Sea-fishing*

226 Fish have always contributed to the diet of the Islesfolk,
178 whether they fished from coracles or boats, or with 'lang wands' from the shore as they still do, and as they did in
[262] the days of Dean Monro and, no doubt, right back to
[433] neolithic times. The relative importance of fishing and
[241] agriculture, however, has always varied according to place and time.

182 Fishing in modern and historic, and also in prehistoric,
226 times—to judge from the kitchen middens of Uig—has always flourished more where there were deep sea-lochs;
241 and settlement resulted, even though rocky hillsides made
[178] ploughing difficult or impossible. Conversely, agriculture has offered better opportunity on smooth coasts with a
[172] variety of soils, though fishing was poorer there. Thus the men of Stornoway Bay and Eye, of eastern lochs and of the Harris bays, like those of Loch Roag on the west, have long been partly fishermen. In the extreme north, too, men of Ness—with the chance of choosing their fishing grounds on the north, west or east of the island and with their little rocky port giving shelter, of a sort, from south-
[461] west gales—were good fishermen; they are good seamen
[829] still. "The fishing of the Barvas folk" is an old gibe,

182 meaning that the men of that village, and its immediate
• 226 neighbourhood, were the last to put to sea and the first to
241 return. The Barvas folk could retort that they would
have been fools to do anything else on a straight exposed
[829] coast; and that anyway their pony-drawn ploughs were
[461] of more use than the foot ploughs of the rocky south.
A form of provender taken indirectly from the sea was the sea-birds and eggs from the sea-cliffs and islets like Rona, north-west of the Butt. This helped to support a few families in St. Kilda and on the rocky Shiant Islands south-east of Harris.

175 Fishing remained backward and primitive, however,
226 until the nineteenth century. After developing in a
promising way, it was checked before the First World
[178] War, and fell into decay during and after it. Decay has,
504 of course, been widespread. In 1935 the chief ports of
501 the East Coast, from Leith with Granton northward by Fraserburgh to Wick—a round dozen—had still an average of 250 to 300 vessels, 3000 in all. These were chiefly of steam or motor auxiliary power and valued (with fishing gear) at £2,750,000. Orkney and Zetland, too, had each their 300 boats. The whole West Coast, however, from Stornoway to Ballantrae, had only 2000 boats, valued at less than one-tenth of the fleet of the East, and worth only a fraction of this, to judge from prices in the open market. Nearly 400 boats were still on the register for Lewis and Harris (Stornoway district) and another 300 for the rest of the Outer Isles. But fewer put to sea each year, even from Stornoway itself.

182 A major drawback to herring fishing in the Stornoway
226 district is the uncertainty in the movements of the herring shoals. On the Clyde, moreover, herring can be sent fresh to the city but further north they must be cured. Whereas

182 on the East Coast and in Orkney and Zetland there are
• 226 comparatively well-marked seasons at which the herring can be expected, Stornoway appears to lie marginally to their main migrations. Thus the amount of the catch varies and curers have been disinclined to set up large curing stations such as those which deal with the enormous influx at the height of the season on the East Coast. A partial compensation is found in the continuance of herring fishing in winter.

226 While fishing from rowing boats for saith, lythe and
[178] mackerel still supplies food for home in summer, fishing with long lines in winter and spring brought cod and other white fish, sun-dried and salted, which became an important export though declining sharply after 1900 and of no importance since 1919. Lobster fishing is undertaken in small boats with two or three men from many townships, and two ponds have been reopened, one on Bernera, Lewis, and the other at Stockinish in Harris to store the lobsters. Conditions in 1935 and 1951–53 are compared in Appendix I (iii) and II (iii).

6. *The Annual Rhythm of Life*

221 It is appropriate here to show how fishing and crofting fitted together into the seasonal calendar a hundred years ago, and shortly before and after the war of 1914–18.
[182] The Lewisman's year shows its relationship to the seasons,
[175] with their temperature, rainfall and wind (Fig. 9). A century wrought changes: cod fishing declined as the
[178] herring fishing grew in importance; but the latter fell
[286] away again after the war. Partly as a result, weaving has become important, the men fitting into the idle periods between the brief peaks of spring and harvest work.

461 Men's work can be roughly estimated as either light,
462

[NEXT CONTINUED ON PAGE 22]

361 in solid black, and the third in hatching (Fig. 11). First,
174 upon the little peninsula or 'Point' which protects the inner fishing harbour of the river there grew the nucleus
361 of the town, with its Castle upon the rocky islet now con-
• 226 cealed by the steamer pier. Sheltered from the waves by the peninsula and from enemies by the Castle, MacLeod's
504 galleys and the early fishing fleet must have congregated in the inner harbour. Protection from storm was specially needed until, in the nineteenth century, a quay was built, with space for marketing and handling the herring.

174 Inland from the Castle was the little church of the burgh,
361 dedicated to Saint Lennan (L). The little town can be imagined stretching inland from the church, its dwellings
[346] built along the 'Point Street' axis, until it met the track, road or street crossing the neck of the Point. The largest church of Lewis proper, now in ruins, stood apart from the burgh, at the south-west extremity of Eye Peninsula. Until trade developed, the backs of the houses would have been turned to the shore. To north, on the landward side from which cattle would come, the market developed.

175 Secondly, in the seventeenth century, thatched houses
361 were strung out along Point Street and the shore for the Gaelic settlers, the fisher- and craftsman-crofters brought
342 here to found a burgh and commercialise fishing. During

361 Buildings on John Wood's plan of 1821 are shown in black and radial
174 streets then proposed by pecked lines. Existing buildings are shown hatched. The harbour development plan of 1946 (pecked lines) is shown by courtesy of the Stornoway Pier and Harbour Commission; it is now in execution.

L = site of St. Lennan's. T = former Town House. TH = Town House.
× = site of Castle. + = modern churches.

(Based on a British Admiralty chart with the permission of the Controller o, H.M. Stationery Office and of the Hydrographer of the Navy.)

The minister
was cultivating potatoes and his family were eating them
175 as an example to the crofters who were still reluctant to adopt the new crop. Some 70
244 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly
226 outnumbered in good herring seasons by boats from other parts of the kingdom. To
251 encourage curing, particularly of white fish, the proprietor had set up two storehouses
441 to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, wh
619 visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 184 But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the
175 Uists, but the Loch Roag kelp was of particularly good quality and commanded more than
221 the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear
233 to have been inadequate to support the population. In this connection it is worth noting
162 the change in the average stock held by each family since 1792 as shown in table 3.
178

Clearance and Congestion.

175 Even after the end of the tremendous boom in kelp, brought about throughout the
228 Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses,
175 yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attem
233 ing industrial developments and agricultural improvements. The former included short lived distilleries in Stornoway, the latter involved the removal of some small tenants in
166 order to introduce mainland farmers. For these Uig was particularly attractive, the extensive mountain pasture offering good prospects for sheep graziers. The exact date
427 of the formation of the earliest farms are not remembered nor are they precisely recorc but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalisero, with
274 the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual
175 crofts some years earlier. Thereafter Kirkibost formed part of the large farm of
427 Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Stoome and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as
175 fertiliser remained a vital necessity to the small cultivators, often working the same land year after year). In 1841 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land wa inadequate to support them. In 1844, of necessity, Seaforth sold the island. The
162 population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine tha in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,463; Figure 8).[1]

1. [See p. 18--Analyst]

[Garyvard]

407 Only a fraction of the total arable land is cultivated by tractor and this is divided among seven crofts. In spite of an emphatic statement by one of these cultivators to the effect that he will never use it again, the use of the tractor will increase as soon as the pioneers are able to prove to their neighbours its capabilities and as soon as the lazy-beds are joined together, an improvement which has already taken place in Habost. The main objection to the use of the tractor by the disappointed user was the inevitable one that the yields were smaller than in former years when he had used the spade. The answer to this was given by one of the other pioneers, who thought that time saved could be devoted to some other profitable occupation, for example, weaving. Six of the crofters practise a five-year crop rotation, sowing potatoes
242 first, followed by oats under-sown with clover which for the following three years is cut for hay.

An interesting experiment has been that of the improvement of two acres of common grazing land by the road on the west side of the township, by nine of the crofters working together during the evenings. The work began early in Spring when 6 tons of lime, 10 cwts. of mineral phosphates and 8 cwts. of compound fertiliser were spread evenly over the land. The grass seed was sown in July, the most favourable time for sowing since there is less danger of a drought than earlier in the year, and more convenient too, in that the sheep had been gathered for shearing and 250 of them were available to be driven back and forth over the land to tramp the seeds in. In theory this land should be ready for grazing next Spring, but in practice it will be ready in November. It is planned to re-seed twelve acres in all.

231 Most crofters have a cow to provide milk for their own needs. The Black Poll bull at Gravir
234 is preferred to the other township bulls since its progeny command higher prices. Sales are held
432 in the district twice per year, once on the old lake-level on the east side of the township, and once
435 at Balallan. Prices for calves are normally better in Spring than at the Autumn sale, nevertheless prices offered tend to be low. Even so, it is usually to the advantage of the crofter to part with the animal rather than bear the cost of taking it back to the croft and wintering it there. Naturally there is some bitterness that the middlemen who buy these animals will sell them at much higher prices on the mainland at Dingwall. Sheep are normally sold in Stornoway to the butchers but also at the local sales.

241 Crofting is not in itself a lucrative form of employment and in most households there is at
434 least one other source of income. A majority of the crofters have regular employment, two
463 working in quarries or on the roads for the County Council, another is postman, three are weavers,
464 another both weaver and contractor, while yet another works in Antarctic waters aboard a whaling factory ship for eight months of the year. Weaving is undoubtedly the most lucrative of the an-
[288] ciliary occupations, though the weavers are suffering at the moment from the slump in the Harris Tweed Industry which is also affecting the prices for wool. Contracting is also a paying proposition for one or two persons only, since the amount of freight is obviously limited.

241 Most crofters own a small rowing boat and it is not uncommon to see half a dozen nets set to
226 catch mackerel and other demersal fish. There is not one large fishing boat, however, partly
501 because of the scarcity of fish near the coasts, and partly because of the isolation of the area and
[228] the subsequent difficulty in marketing. The Fleetwood trawlers are regarded as pirates in the Minch, and one has to its credit the destruction of two long lines - the sum total of the tackle belonging to a local boat. To have eighteen pounds worth of gear lost in one night is ruin to a crofter-fisherman. Lobster fishing has died out at Garyvard though it could be quite extensively practised.

361 The main road from South Lochs to Stornoway through the village has obviously had a profound
491 effect on the township. The sites of the old 'black houses' have been abandoned when new houses have been built, in favour of sites conveniently near to the road. The Road Age has greatly
[241] limited man's capacity for carrying goods. This is well illustrated by the fact that the majority of crofters in Garyvard use artificial fertilisers, whereas they are scarcely used at all in Caversta where the road ends about 50 yards from the nearest house.

[Caversta]

241 Each croft is fenced but has a gate giving access to the common grazing, in which each crofter
231 holds an equal share. The township has no specially enclosed area for fanking or other purposes and no fixed date exists on which the crofters open their gates for winter grazing. Breeding ewes
[121] are normally brought in for tupping in mid-October and November when crops have been gathered, and lambing takes place in late March or April. After dipping and inoculation with vaccines for black leg, braxy and louping ill, the sheep are put out on the common grazing in the second or third week of May.

231 The 642 acres of common pasture support a sheep stock equal to the sheep soum, but the overall
235 stocking is only 88 per cent of the total souming. Two crofts only exceed their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the
[236] hogg. Lewis Blackface sheep are the predominant breed and the wool, clipped in July, is sold to the Stornoway mills and the animals themselves are sent to the slaughter house. The 1958 loss at lambing was exceptionally high owing to a cold, dry spring preventing the growth of grass for the ewes. More than forty lambs and thirty ewes were lost by the township last winter, a number four or five times greater than the average loss.

Six cows, two heifers and four calves are kept in the township and tethered most of the year on
[121] the crofts. Calves are born throughout the summer months, but whereas early-born calves may be sold in the Autumn at six months old, those born later must be wintered to eight months until the Spring sales. The cows are served by the Department of Agriculture Highland bull at Habost, but although good prices are obtained for beef cattle, it is felt that for the family milk supply, a dairy bull would produce a better strain.

241 In addition to keeping stock, oats are cultivated on five holdings and potatoes on six. In
244 most cases the land under each crop is less than half an acre and nowhere does it exceed two acres.
246 The land has been built up into lazybeds about six to ten feet wide, separated by open drainage
247 channels and worked by the spade. There are only two holdings where a tractor (hired from Habost)
407 is used and the acreage cultivated only amounts to three-quarters of an acre. Conditions are not altogether suitable for mechanisation at present, for the terrain is very uneven and broken up by marsh and steep faces of bare rock.

[191] Neither Torista nor Caversta is on a main road. The former is served by a track joining the road near Cromore, while the latter has a secondary road running as far as the township dyke, and an inferior footpath joining the main road at Garyvard. The lack of a good road within the dyke
[235] acts as a deterrent to the use of modern equipment and fertilisers. Byre manure is used on all
222 the crofts and seaweed is brought from the shore and spread on the lazybeds. Artificial manures, used on only three crofts, must be carried over rough ground from the dyke. This lack of incentive to improve is perhaps even more marked by the fact that on one holding alone is a rotation practised - potatoes, oats undersown with clover, then hay for three or four years. Apart from this one instance, potatoes and oats are sown, perhaps alternately, on the same strips for many years. Natural grass yields the bulk of the hay and is often cut from lazybeds that were formerly cultivated. On one croft there is upwards of quarter of an acre where the old ridges can be seen to have a crescentic shape and are thought to date back more than one hundred years. A short distance beyond the township dyke is a similar stretch of land, now colonised by heather.

Peat still forms the principal fuel and, apart from one half acre patch within the dyke, is cut
374 on the common grazing, as near the road as possible in May and June, and later brought home by
[172] creel, bicycle or tractor. Three of the six operative units still have gardens and all keep up to
244 twenty chickens; rowing boats for line fishing, solely to supplement the larders, are also maintained.
[501]

In 1841 population records show that there were twenty-two persons at Caversta and seven at
[501] Torista. After 1881, when maximum figures of fifty-nine and nineteen were noted, there was a
161 secondary peak in 1911 in Caversta, followed by a steady drop to twenty in 1951 and eighteen in 1958.
142

to import grain to feed his clansmen.[72] Other local exports included wool, hides, tallow, furs, goats, sheep, butter, cheese, and "Skye Champagne" (whiskey).[73] How the trade was carried on is uncertain. In 1630 it was said that the inhabitants traded with Glasgow, but a navigator's handbook written in 1599 asserts that the lack of trade with the Hebrides was due to the ignorance of most navigators about the seas.[74] By 1695, all the previously mentioned products were being sold or bartered at the semi-annual fair at Portree.[75] No doubt the drovers were bringing in various mainland goods. There were also some peddlers from Morayshire who had settled on Skye and travelled through the Islands.[76] In 1750 a government officer who visited the island claimed that until 1700 the people had ferried their exports across to the mainland at Glenelg and then went by horse to Inverness where they obtained their merchant goods for the year.[77] Trade by sea with Glasgow was said to be relatively recent.

Fishing. In terms of subsistence, fish were more important to the Skye folk than their stock.[78] The seas, lochs and rivers

provided a plentiful supply of numerous varieties of fish, including herring, cod, ling, mackerel, salmon, trout, oysters, mussels, whelks, cockles, and limpets. Lobsters were also plentiful, but they were not taken from the sea. Herring was the most important of all. It alone was taken in nets. During the summer, fresh herring was important in the diet. Beginning in September, the people preserved and dried the herring without salt, which was almost impossible to obtain because of the high tariff and the lack of custom houses. The fish were simply gutted and hung in pairs on a heather rope strung across the house. The peat smoke was no doubt a factor in their keeping all winter. Shell fish were gathered along the shore by the women. In addition to being of some importance in the diet, shell fish were used to cure many forms of sickness. All other fish was taken by anglers, using raw fish for bait. Most fish was eaten fresh. The cuddy provided oil for the lamps. Generally, fishing was restricted to the summer months.

Commercially, the seas were not exploited by the local inhabitants.[79] Indeed, the fishing industry was late in developing all over Scotland. The political unrest of the times and the general economic depression of Scotland tended to suppress the industry until the seventeenth century. However, some enterprising fish curers from the royal burghs and many foreign fishermen found the Hebridean seas profitable, especially from the sixteenth century on. The clansmen profited from the

175* 226

enterprise of these fishermen who were active on the west coast.[80] In 1586 the royal burghs complained against the excessive tariffs imposed on fishermen by the leading men of Skye, the general hindrance of the people, and the theft of boats and gear. Similar complaints continued through the early seventeenth century. The chiefs insisted they had a right as heritors to impose duties. In 1622 the Island chiefs agreed to desist from stopping, impeding, molesting and oppressing fishermen, to protect them from harm by their clansmen, and to be answerable for their people. It made no difference. The people probably gave the English, French, and especially the Dutch, who were the main competitors in the Hebrides, as much trouble.

The Skye inhabitants had a deep regard for the sea.[81] Fishing was surrounded with many prescriptions. A quarrel on the coast, in particular if blood were drawn, would send the herring away for the season. Any landing place which freed them from the dangers of the sea was not to be defiled. Many carried a piece of turf with them when at sea. Upon putting to sea, the ship was always blessed, by invoking the Holy Trinity for protection and safe conduct. Prayers were also said when a sail was hoisted. Some took special care to turn a ship sunwise. These practices show a curious amalgamation of the early Druidical worship and Catholicism. Norse influence is apparent in all activities regarding the sea. The

511 attachment to the land, or his attachment is not strong enough
427 to offset his desire for material rewards.[19] Regionally, a possible exception in the United States is to be found in the Southern Appalachians, where the majority have a net annual income of less than $500.00.[20] These mountaineers, significant are largely of Irish and Scottish derivation.[21] The Skyeman who leaves in his youth returns in his old age, if he can. We may logically ask what opportunities exist on the island for employment which might enable the Sgiathanach to raise his standard of living without forsaking the land.

Fishing

226 Fishing, it will be remembered, was once a traditional
181 and functional activity in the economic cycle of the Sgiathanach but as far as the Skyeman was concerned, it was no more than a supplement to crofting. It was fine to be able to bring home some fish to be smoked or salted for the winter. The wages earned as a hand on an east coast vessel during the summer months were also welcome. Beyond this, he did not care to become involved with the sea as an occupation. His attachment to the land was too strong.

The new proprietor was no better placed than Seaforth to change the fundamental causes of recurrent poverty and distress. But at least he had funds to ameliorate his tenants' lot and to allow experiments in land reclamation and industrial development. Existing sheep farms were extended and others formed. Land reclamation went forward hand in hand with industrial experiments such as distillation of paraffin from peat and brick and tile-making. A programme of road building was begun (the first roads beyond Stornoway were begun in 1791, but there were only 45 miles of road by 1836). In Uig the results were very obvious. Further clearances took place particularly from Timsgarry, Carnish (21 tenants), Reef (22 tenants), Garynahine, Dun Carloway. The small tenants of Valtos and Kneep were only saved from eviction by the intervention of the Fisheries Board, for they were important places for white fishing. By the 1850's, although the population of Uig was more than double that in 1755, and 60% greater than in 1800, it was crowded into little more than half the area. Emigration enforced by clearances reduced the population of Bernera and South Uig by nearly 500 between 1851 and 1861.

No other part of Lewis saw so many farms; nowhere else did the small tenants suffer so much from eviction. That was not all. Those who remained undisturbed were deprived of some of their traditional grazings and access to the rest was sometimes restricted. Moreover they had to make room for many of the evicted families in their own townships, thereby further increasing the problem of congestion caused by the rapid natural increase of population. Thus, for example, about 1825 there had been 22 families in Valtos and Kneep. By about 1880 there were almost 100. But, during the same period these townships were deprived of their island grazings - Pabay, Vacsay, Floday and Wiay - formerly used for wintering cattle - and of part of their hill grazings (the traditional shielings). Use of the hill-grazings was restricted, too. Thus, for example, only one day was allowed to pull heather for ropes; if men were away fishing or for other reasons, could not attend on that day, they risked punishment by going on any other. Such stories could be multiplied many times.

In the Bernera district, by the 1850's, only Tobson, Bosta and Breaclete (on the island) and Earshader and Crulivig (on the mainland) were left for the crofter families. Moreover their traditional summer grazings, which lay south east of the Deer Forest which was formed out of the Scaliscro sheep farm about 1850. Apparently their use of the old shielings was tolerated until 1878, after which date they were directed to the area north of the present road and which they have continued to use until the present day. Thus the shieling huts shown in fig.5 all post-date 1878; the area in which they lie may have been part of the West Earshader tacksman's holding. The date of discontinuance of that tack is not known but the house, now empty, was for long occupied by squatters and the old lasy beds around it still form part of a large squatter holding.

It is noteworthy that almost all the clearances were in the Bernera and South Uig districts and this is reflected in population changes between 1841 and 1851, shown in table 4.

The cleared areas included extensive hill and mountain grazings and some of the best wintering ground, including all the machairs except Valtos and Kneep. The East Loch Roag and Carloway districts were less attractive to the new farmers; as is so commonly the case in Lewis, their rough grazings lay on gently sloping low plateaux and were consequently ill-drained and of poor quality. About 1852 Dun Carloway was let as a tack but was never successfully farmed and was soon returned to crofter-occupation; it may never have been wholly cleared of crofters. Garynahine, at the southern end of East Loch Roag, next to Linshader, was also turned into a farm about 1852. Here the hill grazing was more extensive and, though seriously reduced by a crofter settlement scheme c. 1936, it remains

175 It is worth noting that the rental charged for the newly cleared farm of Carnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the latter were evicted purely in order to obtain more rent. The proprietor must have been taking a long term view, looking for land improvement rather than immediate gain. By the 1870's the farm rentals had increased by 55%, those of the crofting townships by only 15%. And the latter often remained unpaid.

Thus, whilst the farmers prospered, the tenants became crowded in their townships
175 which were correspondingly less and less able to support their increasing numbers.
427 The crofts became so reduced that in an average year the produce of the land might keep
511 a crofter and his family for only six months; for the rest he had to find other means of
175 support. Fortunately, after the hungry years of the 'forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole east
464 coast of Scotland and England. By the 1880's not only were most of the able-bodied young
[166] men following the herring as hired men on east coast boats, but many of the women-folk,
who had learned gutting, packing and kippering from English girls brought to Stornoway
[22] for the purposes, were also earning. This was summer work, and fitted well between seed-time and harvest. In the winter, small local open boats worked long lines for white fish which were dried and salted for local curers as they still are today on the
[511] Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in Lewis "which would not have been credited by those who judged of the condition of the people by the external aspect or sanitary arrangement of their dwellings".* It was this "condition of plenty" which encouraged the people to stay at home, to sub-divide their crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
[166] farming suddenly became less profitable. Simultaneously, and given extra point by the
[226] particular distress of the time, agitation for land reform, and in particular for the
[241] relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
668 resisted by force and subsequently marched on Stornoway. They were well received by the proprietors - who appear to have been unaware of the summary and inhumane behaviour of their chamberlain - and to the credit of all concerned the matter ended peacefully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of the
427 old township of Kirkibost which was resettled by crofters from Bosta, the latter being let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings were formed in Hacklete, which had been the grounds-officer's farm (but which, judging from its population, had always contained a number of cottars or sub-tenants). The grazing of Laimshader was probably returned to the Borroston crofters about 1886, having been part of Linshader farm and, in 1891, six new holdings were formed at Lundale, also part of the same farm. At the same period, under the new Act, the crofters of Crowlista, Valtos, and Kneep applied unsuccessfully for enlargements from the farms, but during the nineties the islands of Little Bernera and Eilean Kearstay were taken off Linshader farm and added to the townships of Bernera, and Valtos obtained Pabay Mor.

*Report....on the Condition of the Cottar population in the Lewis. (C.5265), 1888, p.4.

175 427 Thus, towards the end of the nineteenth century, the proprietors were obliged, by pressure of population within, and of public opinion without, to made some concessions to their small tenantry. It may be relevant to point out that this was a period of falling agricultural prices and declining farm rentals; indeed the time was not far off when some farms would not find tenants at any rental:

TABLE 7

Farm:	Rental at c. 1875/80	Rental at c. 1885/90	
Mealasta	£130	£85	
Mangersta	£132	£95	
Ardroil & Carnish	£285	£245	
Timsgarry	£108	£80	(1)
Linshader	£349	£278	(2)

Notes: (1) Small reduction for enlargement to Glebe.
(2) £22 reduction for Laimeshader and Grimersta Lodge.

125 226 The crofters of south Uig were in particular difficulty at this time for here fishing declined earlier than elsewhere but the townships remained greatly overcrowded. In 1910 [161] Breanish and Islivig had 14 cottar families, (most of them sharing crofts with the official [162] tenants), and three of squatters, i.e. on the common pasture. Here fishing had almost ceased and the people were almost entirely dependent on their crofts or on employment away [231] from home. In Valtos and Kneep there were 21 cottar families; they had 31 cattle and sheep flocks. Here, too, fishing was on the decline. It was perhaps because of this that 288 commercial weaving was developed in South Uig earlier than in most parts of Lewis. As 175 early as 1900 Uig was classed with Harris, by the local committee of the Congested Districts Board, as producing a superior quality of tweed. Two 30 gallon iron pots were sent out so that enough wool could be dyed at one boiling to obviate irregular colouring in any [653] one tweed. The C. D. B. also made grants for roads, footpaths and "marine works". Amongst the latter the pier at Valtos (1899) was an attempt to resuscitate local fishing, but it came too late.

175 The Congested Districts Board was the first government agency with funds at its 653 disposal to aid the crofting townships. One of its largest grants went in aid of the Carloway Road (or Pentland Road as it is now known). This scheme arose out of an abortive proposal for a railway from Loch Carloway to Stornoway. It was thought that this could enable trawlers and other large fishing boats to land their catch for quick transport to Stornoway and so to the mainland whilst the fishing vessels returned to sea with minimum 175 delay. The road, an excellently engineered one, is still not properly surfaced. A more effective C. D. B. - aided scheme was the resettlement of crofters on Mangersta Farm, 657 the rent of which had fallen to £70 and which the proprietors were willing to break up. 427 Thirteen new buildings were formed here and the first harvest was taken by the new settlers in 1911. The crofters' rent was fixed at £73 and the C. D. B. paid £566 in grants [241] to purchase the sheep stock and improvements, and towards the cost of fencing. About the same time the Board paid a grant to the township of Garenin for fencing a substantial enlargement to their pasture, obtained off Dalbeg. Here, and at Reef farm, small-holding resettlement schemes were vetoed by the Crofters Commission whose experts regarded the areas as unsuitable. Both have since been re-settled by crofters.

231 summer, were last used for cattle six to eight years ago by people in Brenish, but none are in use today. These shielings were at the western foot of Mealisval, only about a mile from the township. The Brenish 'distant' shellings, about six miles to the south-east of the township across the mountains, were not used after about 1920, while the adjoining Islivig shellings were last used in 1922. Mangersta may have had its original shielings to the east of Loch Melavat about a mile south of the township, but after obtaining the enlargement from Mealasta farm, until about 1939, shellings were used in that area.

314 No peats are cut on the crofts; the peat-cutting areas for all three townships are near the road and in no case far from the township. The common pasture near the crofts bears 241 evidence of former cultivation, but it is at least fifty years ago since crops were grown on it. At this time the townships of Islivig and Brenish were over-populated with many cottars living on the crofts and all possible land on the crofts was already under cultivation. Today, less than half this 'old arable' is being cultivated, and in several cases the land is used solely for hay and grazing.

342 There are now no thatched houses inhabited in the townships and most houses have kitchen and other extensions added. Some crofters have built concrete two-storey byres 312 of modern design. In Brenish, where the hills to the east provide a good catchment area and the Brenish river a good source of supply, all the crofts have their own private piped water supplies, while in Islivig and Mangersta most crofts now have, or are getting, a 377 water supply. All croft houses are supplied with electricity from the grid.

226 Commercial fishing has long ceased and as there are only three boats there is now very 501 little fishing for domestic use, the principal use of the boats being to ferry sheep to the off-shore islands. Weaving is an important occupation. There are seventeen weavers - 286 nine in Brenish, two in Islivig and six in Mangersta, and during 1959 they were kept busy; 461 in 1958, however, few orders were received. Weaving cannot be said to bring in a steady [634] income here, and some of the weavers, and others, find additional employment outside the township - this includes four men at the hydro-electric scheme at Gisla, three at Mangersta Ministry of Civil Aviation station, three at Aird R. A. F. station and at least 407 one in the Glen Valtos quarries. In addition, one man owns at tractor which he hires 448 out, and one, owning a lorry and van, does haulage work. Altogether, out of a total of twenty-seven men under sixty-five who do work, all but three (one just out of school and one a semi-invalid) have other employment in addition to their crofts.

162 The total population for the three townships is one hundred and twenty-one residents, and fourteen permanently away from home. Of the residents, twenty-eight (or 23%) are children of, or below, school age, forty-seven (39%) are in the 15 - 45 age group, 15 (12%) are in the 45 - 65 age group, and 31 (26%) are over 65. Of the resident tenants, thirteen are over 65, twelve under 45, and five between 45 and 65.

181 The relatively young population may help to account, together with the better soils, for this area giving an impression of a fairly prosperous crofting district compared with some of the others in Uig. Amalgamation of crofts into larger units has also gone further. The use of a tractor or horse for ploughing, extensive use of artificial fertilisers, the sowing of grass seeds and the sale of sheep for meat, all seem evidence of a group of people who are determined to make the most of their limited resources.

233 One enterprise, that of the Aird Bheag sheep farm, deserves special mention. Four crofters (three from Brenish and one from Islivig) have purchased from the Uig shooting estate about 2,000 acres of land on the Aird Bheag and Aird Moire peninsulas, five miles south of Mealasta. Here they are running a flock of about five hundred sheep. There is

464 his little spare time. In addition there are a few croft holders with periodic employment. It is noteworthy that the incidence of employment bears no direct relationship to the size of croft holding - there is not, for example, a preponderance of holders of small crofts taking permanent employment. *

162 However, the croft holders are not the only source of labour: Appendix C(4) shows 464 that there is a total force of fairly regular labour for the crofts amounting to 147, or rather less than half the total resident population. Of these, 78 undertake regular employment, 24 have employment on occasion, and thus only 45 are full-time, of whom 25 are 388 over 65. The forms of employment are indicated on Appendix D(2): weaving, with 49 persons regularly involved, is by far the most important single source of full-time employment, the only other being fishing (24 persons). Estate work (mostly gamekeepers, 226 ghillies, etc. at Grimersta Lodge) gives regular employment to ten persons in the townships of the Shore. No other form of employment accounts for more than three residents between 15 and 65 years of age; the category 'casual' covers a variety of unskilled labour and there are five non-employable invalids.

288 About 50 households, out of 130, have looms. Yarn is distributed by the Stornoway 283 producers for weaving on commission; they collect, finish, and market the cloth. Hand spinning has all but died out and such yarn is more likely to be used for handknitting than for weaving; at least one lady supplements her income in this way. There is some evidence that Bernera weavers receive less work than those more accessible to Stornoway; the reason for this may lie partly in individual contacts between weavers and producers, and partly in the particular skills of particular weavers but transport is an important factor. Such a small isolated group of weavers does not justify frequent journeys by the Stornoway vans; in fact most yarn is put out, and tweeds collected, by a weekly carrier.

Note: Not all the boats returned were necessarily engaged in regular fishing. Nor is the value of the catch shown necessarily attributable entirely to Bernera.

* Editorial Note: this is an inevitable result of the rigid structure of crofter land holdings. See Part I, page 30 and table 12. The age of the crofter, and his family circumstances are decisive.

South Uig and Park seem to suffer in the same way even though the larger producers, mostly mills, endeavour to distribute weaving equally to all districts. The weavers' earnings vary from individual to individual, according to the amount of work they get, and also from year to year according to the fortunes of the trade, especially of the American export trade. A good weaver, in a good year, might earn from £400 to £500 but an average weaver, in an average year in Bernera, probably earns between £250 and £300, whereas in the Carloway district (more accessible to producers based in Stornoway and Shawbost), the comparable figure is around £400. Most weavers try to maintain connections with several producers and this difference in earnings may be between those who obtain additional work for 'small-producers' (i.e. tweed merchants who do not spin their own yarn), and those who do not.

Fishing has greatly declined since the late nineteenth century (table 31), neither white fish nor herring are of any significance, nor do Bernera men contribute significantly to the island's economy by working on east coast boats, as was formerly the case. But Bernera has become one of the most important centres of Scottish lobster fishing, the value of landings having increased from £583 in 1937 to £4,949 in 1956. There are six locally owned lobster boats and others use the facilities at Kirkibost. The vessels generally have seven to a crew (c.f. the usual five in Sutherland) and work the whole length of the Atlantic coast and out to the Flannan Islands and St. Kilda. They carry 100 to 160 lobster pots and may also catch ling; crabs are almost entirely ignored because they are difficult to transport to the distant, mostly English, markets.

One very important factor in the present prosperity of the Bernera lobster fishing is the Kirkibost lobster pond. This was built by a local crofter in the 1920's. It was closed during the war, and was afterwards taken over by the Crofters' Supply Agency, though the original proprietor is still employed whole-time in looking after the pond and re-fishing the lobsters. There is naturally some loss of fish in the pond, and when high prices are being obtained at Oban the local fishers feel rather disgruntled at their less favourable market here. Hence, if there is a good catch, say over 2,000 lbs to a boat, and reasonably good weather prevails, the lobsters may be taken straight to Oban where up to twice the local price may be obtained. The C.S.A. pay 2s 1d per lb than Oban because of the cost of the upkeep of the pond, and the wages for two men with their boat. There was an experiment in flying lobsters direct from Lewis to Billingsgate, but the cost was too high. The problems of isolation here are very severe for the lobsters have to be sent by Machrayne's steamer and by British Railways upon which there are no cold wagons reserved for the small quantities in question - a hazardous course for a highly perishable cargo.

Conclusions.

This part of Uig, therefore, has had a long and complex history of human settlement, exploitation, and adaptation. Much of the more recent part of this history is vividly remembered and still plays a part in the making of modern decisions. The sense of kinship and a common past is an important cement of society, for where natural resources are so limited a mystique of other than a material type is necessary if society is to retain its self-respect. However, the natural resources are indeed so limited that economic self-improvement is extremely difficult. The egalitarian tendencies of Gaelic society and crofting legislation are not now sufficient to resist the tendencies of the times and to prevent some of the crofters making adjustments in their holdings, but unfortunately there is insufficient good land to allow much adjustment without a drastic reduction of population which would be equally damaging to the well-being of the local society. It seems unlikely that alternative sources of employment could easily be found - the isolation within Lewis, the isolation from markets of Lewis itself, and the lack of local resources have combined on previous occasions to defeat plans for development. Weaving is the most important means of supplementary livelihood, but it is too vulnerable to politics and fashion; fishing is greatly decayed from its former dominating position; only agriculture remains locally, and perhaps the greatest possibilities there lie in better standards of cultivation (especially drainage and fertilisation), a better standard of animal husbandry, and more reseeding. But whatever developments are undertaken will need careful selection and encouragement: results cannot be hurried but nevertheless something must be done soon if the local society is to maintain itself. This great and paradoxical element of the "crofting problem" is as important here as elsewhere in the seven "Crofting Counties".

full-time crofters; 19 males have other regular employment and two have periodic employment. 8 crofters are aged over 65. It seems that the most successful combination of employment is weaving and crofting; weaving is carried on in twenty of the holdings. Lobster fishing in the evening is still popular but regular small-boat fishing has disappeared: one crofter took up regular fishing when weaving was slack in the autumn of 1958.

Of a resident population of 125, 32 males and 32 females are between the ages of 15 and 64, these representing the effective labour force. Thirteen persons are temporarily away and 16 permanently away whilst at least 46 have emigrated since 1939 and 6 have immigrated. Thus the number that have emigrated is nearly three times the number that are merely permanently away. With a population of 125 and an effective labour force of 64 to work 35 operative units Tolsta Chaolais would seem to be far from a dying township.

If not exactly progressive the township economy seems stable and moderately prosperous, in spite of the fact that the settlement is rather inaccessible, for the roads which join the Carloway-Breasclete road are both very steep and have bad corners. To add to the apparent isolation there is only one Post Office-shop in the village but most commodities are bought from vans. A reallocation of the smaller crofts to younger, more ambitious tenants at the deaths of the older tenants could reduce the number of operative units to about 25. Admittedly, little can be done with the rougher terrain, and although cattle stocks could be increased there would be the added problem of sufficient winter feed. With better drainage more land could be taken into cultivation - especially between the two lochs, an area largely wasted at the moment - whilst weaving might supply a surer source of income, especially in the winter. Tourism on a small scale might be a further possibility for the coastal scenery is very fine and the immediate setting of the village is very attractive. It would be more realistic however for Tolsta Chaolais to find future prosperity within its own boundaries.

[Se-forthhead] [Shieldernish] [Habost]

suppression of the original townships opposed to six today. As a result, many lazy-beds, now given over to natural grass, are being gradually encroached on by heather and juncus. Out of the present population of twenty-three, one is permanently away and two have migrated since 1939. There is a more healthy population structure, with a large number of males between 15 and 44, due to a large family having returned home and six children, five of school age.

In Seforthhead and Shieldernish all settlement is below the road and house-sites are on slight elevations. At Seaforthhead is the reputed hunting lodge of the Seaforth's,'Seaforth Castle', now ruined, but still showing signs of abnormal size and arrangement. When first settled, communication was by ferry (1820). Now a cart-track, deeply rutted, to Eisken Lodge gives access to the Tarbert-Stornoway road two-and-a-half miles away.

SHIELDERNISH

Shieldernish, also consisting of three crofts, is better situated on the Park and South Lochs road. The three houses are situated on a well-drained northerly slope, half-way between the road and the shore, but the three crofts are on better land and greater accessibility has led to better management and new ideas.

Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put together to permit ploughing by horse or tractor. One croft grows neither oats nor potatoes, preferring to enclose two one-acre parks, re-seed them, cut the hay in June, and wean the lambs on the aftermath. By next year, this crofter hopes to have enclosed and re-seeded a further acre and will then use the three in rotation. The other two crofts grow both oats and potatoes and one is also sowing down. The crofts average fourteen acres in size but although gentle slopes are extensive, the major part of the crofts is in permanent pasture. The total stocking of the Shielderniah crofts is below the souming. Fishing is now only for domestic use though there is a small jetty on No. 1. Part-time weaving is performed on two of the six crofts.

The future pattern would appear to progress to more grazing and less cultivation. Two out of the six crofts - both at Seaforthhead - are worked from outside the township and this isolated township, being difficult of access and having little cultivable land, is better suited to grazing. Shielderniah appears more suitable for enclosing parks for fattening lambs, as soils are deeper and slopes gentler, making the use of a tractor feasible. More could be got out of the crofts especially with fertilising and re-seeding for hay and pasture and growing fodder crops for wintering. It is hoped to fence the common securely, and then stock will be renewed - a great necessity. Daily communication with Stornoway also means that Shieldernish is better placed than Seaforthhead for a flourishing settlement. The crofts are certainly of a workable size - provided part-time work, such as weaving, is maintained, along with the grants from the Crofter's Commission.

HABOST

Rachel A Hirst

Habost is scattered around a small bay on the south shore of Loch Erisort. Settlement stretches for over a mile encroaching on three small hills separated by wide, well-drained valleys which soon rise to the dominating Craigeal (225 feet). Slopes are varied but tend to flatten out at about 100 feet near the road and on this flat, most of the cultivation takes place. Nearer the shore, slopes are much steeper and on the hills there are bare rock faces and thin soils.

[Habost]

Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, here was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cocks foot. On the hills heather predominates.

Habost is the oldest township in Park. In 1843 Maclennan came from Shieldernish and took what are now Nos. 9, 10, 11, 12 and 13 and Ailean Tailear came from Taransay, Harris, to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Craftmasters' (hand-tractors) in the township but these are only heavy enough for bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed parks of about one acre. The tendency now is to increase the number of parks, cut the hay in June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in Park Deer Forest but these are Habost sheep. Sales of cattle are held at Garyvaird in November and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since before 1852. There used to be shielings on the far side of the common on Beinn Bhuidhe and below Loch na Claise but these have not been used since 1888. Habost is one of the agricultural townships and fishing is only for domestic use; looms are to be found on only four crofts and trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Lochs. There are two small stores.

Settlement is scattered, always on elevated ground, and in many cases the new house has been built in close proximity to the old house site. All have piped water either from the well or from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

Summary. The bulk of the population, as tenants of the land-owning chief or subtenants of the tacksmen and joint tenants, were clustered in hamlet-like farming settlements to exploit the arable, grazing and pasture land by individual and co-operative effort. The land suitable for cultivation was divided into infield and outfield, as the Norwegians still do. Each man had a concurrent right to the whole farm. Periodically, the shares, known as rigs, long strips, were redistributed by ballot among the holders. The remainder of the farm was used communally under a system of stinted rights. The environment and the land forms restricted the arable areas to the coast and a few internal glens. Hence, the settlements were coastal.

The crops were oats and barley, with some rye and a little flax. The stock was cattle, raised for export as a means of paying the rent and securing a limited number of necessities, and a few sheep which were kept to provide wool for clothing and occasionally meat. There were also horses and goats and, probably, pigs.

The techniques of land use were rudimentary and laborious. Most of the land was prepared with a foot plough. The cumbersome four horse plough was also used on better land. Co-operation was essential for the horse plough and an accessory for the foot plough. The yields were small, and periodically

1

On one of the crofts along the strand are the ruins of two curing houses, where the fish were salted and dried. Ling, cod, skate and halibut were cured and sold to local merchants for export. "The same as they do in Iceland this very day. That was the main industry. Then the English came with their steam trawlers; they ruined the fishing here, and then went west to Iceland and the Faroes. In Iceland they get fined for poaching, but here the trawlers often ignore the three-mile limit. But the fishing was the mainstay here, before the Harris Tweed came along."

One man returned from sailing in 1932 and bought a boat for L24. He had 32 lobster pots, and made L7 one June by selling the lobsters at a shilling apiece. Another man, who returned from the United States in 1934 because of the depression, bought a share in a 14-foot boat. It was made in Ness, at the northern tip of Lewis, and cost about L14. He and his partners went out every night possible; the fish provided an important part of their income. The boat was sold in the 50's. "It wasn't being kept up anyway." Around World War II there were as many as twenty boats; men fished at night, after a day's work. Today there are four 12-foot boats in Shawbost, each shared by four or five men. The boats are used intensively for fishing during certain times of the year,

but not as often as in the past. In the past boats were in danger of being smashed by the strong seas and winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the turf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Several nicknames reflect this history. One family is known by the nickname "Strachan," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

175 228 464 [551] a crew member. Another family is called "cook," the first job which a novice had to assume when he joined the crew of a fishing boat. One of the last men to go to the east-coast fishing is about 60 now. The men [221] [241] [434] came back from the fishing in time to bring in the oats, barley and potatoes, and the money was used for rent and the purchase of various foodstuffs and other goods. [353] They usually brought enough rolls of wallpaper to cover the stone-walled or wood-lined tigh dubh (black house) [434] for another year. Twenty pounds were good wages for a season. While the men were away at the fishing, the [452] [571] remaining members of the family lived on credit from the local shops, and depended on the good will of their neighbors.

175 701 706 505 Many men joined the armed services, and were especially sought after by the Navy and the Merchant Service. In 1900, there were 2,500 Lewismen in the Naval Reserve.

175 228 484 [571] [435] Around the turn of the century, until the first world war and the growth of the weaving industry, the girls used to "follow the fishing." "Everyone came to the boat to see you off. You could go all the way to Aberdeen for 12/6 on a special fish-worker ticket." The girls went from the south of England to Shetland in the far north.

000 175 228 [221] in the far north. "There were two fishing seasons. For one season you went to Fraserburgh, Stronsay, Lerwick and Peterhead; and then the winter fishing was in England, at Yarmouth, Scarborough and Loucester. I remember in Yarmouth we didn't like the English [262] bread, it was such a dull color. We liked the pure white Scotch bread."

They lived in small huts, and the work was hard but full of fun. Neighborhood girls used to go together, bringing bedding and different items in large chests to share in the housekeeping. Three girls worked together in a crew, and there were as many as six sharing a room, in double bunks. Some of the huts were so small that there was barely enough room for the beds and the cupboards. At night the boys would come in off the boats. "You were so tired from being up since early morning; [577] [178] but you were always able to dance. You were treated with respect; the youngsters today aren't so good." The women who married non-islanders that they met at the fishing were not likely to return.

175 288 464 When the weaving started on a large scale, the girls "were glad enough to have work at home, even though the work was hard." But many continued their temporary 175 464 166 357 absences from the island, working in hotels or as

from the enterprising Dutch. Dutch fishing-busses were constantly off the island coast as early as the reign of James V. In 1594 the Hollanders made their first recorded visit to Lewis; they had a licence from Scotland's James VI which allowed them to fish outside a limit of twenty-eight miles.

It was, indeed, partly the success of the Dutch fishings which attracted the Gentlemen Adventurers of Fife, backed by the King in their unsuccessful endeavours to colonise Lewis. James VI's son, Charles I, was similarly enticed by the Minch, proposals being put forward for the purchase of Lewis by the Crown and for the formation of a new corporation, under English auspices, which would develop the island's fisheries. The corporation, founded in 1633, was the 'Company of the General Fishery of Great Britain and Ireland' and its main seat of operation was to be in Lewis. As Lord Seaforth was owner of the island at the time, he was invited to join the company's board, so that he could, with his influence, 'keep the islanders in awe'. One of the fishing stations set up in the Hebrides was on the island of Hermetray in the Sound of Harris. Martin Martin, writing of this island at the close of the same century, says that he saw 'the foundation of a house built by the English, in King Charles the First's time, for one of their magazines to lay up the cask, salt, etc, for carrying on the fishery, which was then begun in the Western Islands; but this design miscarried because of the civil wars which then broke out.' The scheme indeed fell flat (in 1640), and though Charles II tried to revive it on a commercial basis, lack of capital caused it again to come to nothing.

Where were the islanders in all this activity to develop the fishings around them? Strangely, there was a definite disinclination to fish until the Dutch, by their example, illustrated how fish could become a new factor in their economy. Lord Seaforth was vitally interested on his own account. When he acquired Lewis (in 1610) he set about establishing what amounted to a principality quite independent of recognised authority; and in contravention of the laws and privileges of Royal Burghs, he set up Stornoway as a fishing port, introducing a number of Dutch fishermen to prosecute the fishings in the Minch. In 1629, the Commissioners of Royal Burghs complained to the Privy Council

of Lord Seaforth's conduct in this matter. They alleged that he 'draiv in hither an number of strangers who daylie resorts to and fra Holland to the Lewes and continent next adjacent (the Ross mainland presumably) and has caused them be answered of all such commodities as these bounds affords, as nameli with fishes and beeves quhilkis with the hyde and tallow, with manie utheris commodities they transport to Holland.'

To satisfy the Royal Burghs, Seaforth had some of his Dutch friends sent away. But several Dutch families remained in Stornoway until the outbreak of hostilities between England and Holland in 1653.

In Harris, similar efforts were promoted by Captain Alexander MacLeod, who in 1779 bought Harris, together with St Kilda, for £15,000 from the commissioners acting on behalf of General Norman MacLeod. The latter had, in 1772, inherited from his grandfather both the chiefship of Harris and a debt on the property amounting to some £50,000. Captain MacLeod, who skippered the East Indiaman *Mansfield*, did much to stimulate better conditions in Harris, and advocated the generation of a fishing industry. In the face of opposition and ridicule he showed by practical example what could be done to make a success of the herring fishings, introducing a number of east-coast fishermen with Orkney trawls to teach the inhabitants, and reaping a good harvest from the fishings off Rodel, despite the dismal auguries uttered by the Harris-folk. He improved the local harbour accommodation and erected a storehouse for salt, casks and the like, he built a factory for spinning woollen and cotton thread, and twine for herring-nets; he advanced money to those fishermen who were interested for the purchase of boats and gear; and he provided them with rent-free cottages with a ground-patch on which they could grow potatoes. He built roads between the village of Tarbert and the two jetties he made there, and he erected a schoolhouse and an inn. But all this hard work to put Harris on some realistic economic basis came to little. The native population were slow to appreciate the potential income lying about them.

The potential of the sea was of course eventually realised, particularly where the fishing grounds were favourable, Stornoway

and its neighbourhood becoming the centre of the growing industry. In 1793, the Lewis Parish contributors to the *Old Statistical Account of Scotland* indicated that upwards of 183 boats were fishing off the island. In Uig no less than 275 netmakers were recorded, showing that the fishing industry was prosecuted with some measure of enthusiasm. 'All the people dwell in little farm-villages and they fish in the summer season. The women do not fish; but almost at all times when there is occasion to go to sea, they never decline that service, and row powerfully.' In the parish of Barvas in the eighteenth century some 9,000 Scotch pints of oil were taken each year from dog-fish livers and sold to Stornoway merchants at from 6d to 8d per pint; it is related that the tenants of Ness were able for a long time to pay their rents with the oil proceeds. Cod and ling were the principal fish caught by the men of Lochs, an annual average of 24 tons being cured and sold in Stornoway. Generally, other fish caught were consumed locally.

Loch Roag on the west of Lewis proved to be about the best fishing ground; in 1794 about '90 sail' from all parts of the United Kingdom were at the herring fishing there. At one time Loch Roag-cured herring was exported exclusively to Sweden. The minister of Stornoway, contributing to the *Old Statistical Account*, gives figures showing the quantities of fish shipped from the port from 1791 to 1796. During these six years some 14,000 barrels of herring were exported to the Continent, and 20,000 sent for consumption in Britain; some 350 tons of cod and ling were destined for Continental markets. Herring, cod, and ling were thus pursued during the following years with growing vigour, though the inshore white fish took favour. The herring fishing did not make great strides, mainly because to the middle of the nineteenth century catches were confined to the inland sea lochs; the people for the most part were not familiar with deep-sea fishing, and their boats and nets were not suitable for it.

Indeed, when Sir James Matheson bought Lewis in 1844, he gave scant attention to the potential in the fishings round his island. Though he expended considerable amounts in securing a regular steamer communication between the mainland and the island, and spent over £2,000 in building a quay at Stornoway

for the steamers, he thought that any improvements in connection with the fishing industry should be paid for largely by the fish-curers themselves—though he did spend about £1,000 on constructing fish-curing houses. Why Sir James, with his experience of business, should have taken this attitude is not clear; certainly the fishing industry could have been given just the right impetus with his interest, personal and financial. As it was, the industry was left to develop on its own lines, with odd injections from time to time.

Fluctuating prosperity

That the potential in the fishing grounds of the Minch was enormous was realised before 1850 by fish-curers from the Scottish mainland. But deep-sea-going boats were needed, and so new designs were called for. James Methven of Leith, a pioneer of deep-sea herring fishing, sank capital into the development of a large class of boats known as the 'Anstruther build', or in the islands as 'Eanstrach'. These craft served the islanders well, and Lewis prospered, as did Stornoway. In the five years 1870 to 1875, for example, the average number of barrels of herring cured at Stornoway for export was some 80,000. From 1875 to 1900 the average Stornoway district catch of white fish, much of it caught by local boats and some of it cured at Carloway, was worth over £100,000; it was sent to Ireland and the Clyde. After 1900, fresh-trawled fish replaced the cured and the market fell away. In 1921, the market value of cured fish from Stornoway was about £500, ½ per cent of the 1900 value.

The herring fishing held its own, against the decline of the white fish. Stornoway, as Lochboisdale in the Southern Isles, became for a while one of the world's most important fishing ports. Prosperity was in the air; even when the fishings did eventually fall away, there still remained, decades later, the whiff of past success among the neglected curing sheds, the hangdown boats in the quays, and the silent kippering houses. From 1917 to 1935, the annual landings of herrings (in crans) varied from 25,486 (in 1934) to 221,519 (in 1927). In that year, a record one, it was reported that 'even landsmen could hear the roar of herrings in Loch Erisort. So dense were the shoals that their progress in the

228 *175 [433] water could be heard on shore.' Yet cash returns were poor: demand was falling off as foreign markets organised their own fleets, and the Scottish fishing industry as a whole was not commercially efficient. In 1936 landings were 40,829 crans; in 1937, 31,969.

From about 1850, Stornoway had begun to see the nucleus of what was to be a great fishing fleet in its harbours; but it had

[501] A 'Zulu', a type of old fishing wherry used in Lewis at the turn of this century

something of the sort much before then. A pamphlet on the fishing industry published in 1790 tells us that the trade of the Stornoway merchants began to grow after the Union of the Parliaments in 1707, when Scottish herring were first admitted to the English colonial market. 'Some twenty-five or thirty years ago, all the fish they caught were carried for them to their port of destination by hired vessels. Now they can show in their own harbour, in the fishing time, upwards of thirty sail of stout handsome vessels, from 20 to 70 tons burden, all their own property.'

[501] Towards the turn of the nineteenth century, the number of

FLUCTUATING PROSPERITY

herring boats belonging to Lewis was about 165, reaching a peak of 197 in 1889; the number of boats used for cod and ling fishing reached a peak of 704 in 1895. The figures, however, fluctuate considerably from year to year. The main reason for this was probably that these boats were not personally owned, but largely belonged to fish-curers and businessmen, to whom the boat crews were in debt, having received capital advances from them and from the State for boats and gear. Crews who had bad luck at the fishing had their boats impounded and sold to recover the amount of the loan. Many boats were also wrecked, for navigation in bad weather is still difficult even in these days of advanced directional aids. 228 • 501 175* 501 228 175* 452 [502]

The state loans to fishermen are worthy of note here, because they foreshadowed a similar scheme in the 1960s. They were made under the Crofters Holding Act 1886. Section 32 of the Act authorised the Fishery Board for Scotland to make advances, by way of loan, to persons engaged in the prosecution of the fishing industry, whether crofters or others in crofting parishes. For new boats, the maximum sum advanced was £312. The loans carried an interest of 3½ per cent; repayments of principal and interest were over a period of from four to ten years. Loans for the improvement of existing boats were also advanced, varying according to the condition of the boat or other circumstances affecting the necessary security requirements. New boats were mortgaged to the Fishery Board. 228 175* 452

Ninety-three Lewis fishermen received loans totalling some £12,000, and a sum of £18,000 was distributed in loans throughout all the crofting counties. In a report issued in 1901, it was indicated that these ninety-three Lewis fishermen had repaid about 82 per cent of their principal and interests, but in other counties the repayment percentage was under 60 per cent. The Lewis figure would have been higher were it not for the loans made to the Barvas fishers, on which the repayment figure was only 24 per cent. When borrowers failed to observe their part of the contract the Fishery Board seized the boats. Many of these loans were originally made to aid a deserving class of men in adverse circumstances and surroundings. To achieve the high overall percentage of repayment (some indeed managed to pay

• 228 452 *175 off all their debts) much hard work was called for, as well as skill in locating herring shoals. The seasonal migration of herring is still a puzzle to marine biologists; it contributed to many a Lewis fisherman drawing a blank, to his ruin, while his neighbour came home flushed with success.

228 *175 435 The financial values of the fishings of the island, particularly Lewis, are some index to its fluctuating prosperity. In a *Guide for Scotland*, intending visitors to Stornoway were told that the annual figures for herring exports were, in 1860, some £60,000; for cod and ling, £13,600; smoked haddocks were valued at £1,600; lobsters at £1,396. Herrings caught in Harris and Lewis in 1889 were valued at £57,071. Two years later, the figure was £90,738, but after that year it steadily declined to reach a little over £20,000 in 1894. Increasing again, the catch in 1898 was valued at £128,707. There was a subsequent decline, picking up a little at irregular intervals, which continued until the effective demise of the industry just before the second world war, that is so far as Lewis was concerned. These catches of valuable herrings were not made solely by Lewis boats; the catches of many stranger boats, from the east of Scotland, must also be taken into account, to leave about 20 per cent as direct return to the island.

In 1938, the total catches of herring amounted to £98,000 for fresh fish and £162,400 for cured herring. This catch was obtained by 111 steam-drifters, five of which were locally registered at Stornoway, and some motor-boats, of which one-third were strangers. Harris has never been particularly prominent in the herring-fishing industry; shell fishing has been more profitable. In the years just before 1900, the average annual value of shellfish caught in Harris was £2,306, only £500 below the Lewis figure. The Harris proportion of the aggregate herring and whitefish returns in the same period was just over £17,000, compared with the Lewis figure of £1,137,000.

228 *175 [433] [435] *Since the second war*

Just before the second world war, Stornoway Fishery District furnished some 10 per cent of the Scottish cure of herrings, which averaged well over half a million barrels in 1937 and 1938, valued at about £1,500,000. Of demersal (sea-bottom) fish, the District

SINCE THE SECOND WAR

furnished less than 1 per cent of Scottish landings. The war's aftermath brought too many changes for the island to cope with. Markets had disappeared; food habits had changed; capital was scarce; and many ex-servicemen saw the writing on the wall for fishing as a full-time activity. Also, many sea-going crofters of the pre-war fishing fleet were now dead, memories on fading photographs. Nor had the Western Isles fisheries ever fully caught up with those of the main fishing bases of Britain and the east coast of Scotland. Hence the decline of the herring fishing hit them hardest of all. Today, Stornoway District is handicapped geographically, by distance from the markets; historically, by its late entry into the industry; and economically, in that it failed to participate in the trend towards the centralisation of the industry in share-holding companies within easy reach of London. 228 175

In the old days of sail it was easy for men to combine the two occupations of crofting and fishing. When in the early years of this century power replaced sail (the first motor fishing boats went to work in 1907) and the steam drifter took over from the sailboat, the whole nature of the fishing industry changed. Modern boats and gear had to be acquired if the work was to be profitable. But the islesmen, partly because of lack of capital, partly because of the lack of suitable anchorages and harbours, and partly because the combination of crofting and fishing had created a seasonal tradition incompatible with the use of expensive boats (which needed to be kept continually at sea if they were to pay at all), were unable to adjust themselves to meet the new challenges. In the inter-war years they had no option but to carry on as best they could in their old traditional role. The resultant decline meant that when opportunities did arise for fishermen generally in the form of grants and loan schemes (introduced in 1945 by the Fisheries Division of the Scottish Home Department and subsequently by the White Fish Authority and the Herring Industry Board), the bulk of the men living in the isles were unable to take advantage of them: they lacked the necessary qualifying experience in handling modern boats and equipment, as well as confidence in fishing as a full-time occupation. By 1959 there were only twenty-five boats of 40 ft or more in length based on Hebridean ports. Lewis had only six full-time crews; Harris had five. 228 501 178

228 This lack of a local fleet fishing in the Minch and associated
501 waters on a full-time basis has inevitably brought reluctance on
178 the part of Government bodies to invest capital in, say, harbour
(654) improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

228 The first vital step to do just this was taken in January 1959
429 when the MacAulay (Rhodesia) Trust announced the introduc-
452 tion of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an
228 energetic and successful fisherman'. This pioneering venture
452 directly assisted three young men in Kirkibost, Bernera, to acquire
654 one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

[TEXT CONTINUED ON PAGE 109]

pared to make fishing their career, together with financial assist- 228
ance to those who satisfactorily completed their training and 452
who wished to acquire boats of their own. This Scheme is now 654
run by the Highlands & Islands Development Board. The Board's participation in the expansion of the fishing potential around the island has been first-class, with commensurate results from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted 685
the unscrupulous, those for whom the word 'conservation' has no 226
meaning, and who are careless of the dangers of over-fishing. 175
Illegal trawling began around the year 1894 and by now has (185)
drastically impoverished the inshore fishings to which the Harris and Lewis crofters once looked for a supplement to diet and income. The rapid adoption of efficient trawlers was attended by an increasing number of reports of their poaching within the three-mile territorial limit. Though the islanders tried many times to involve the Government's cruisers for the protection of their shores, the poaching went on, and still continues today. Even some of the violence which attended the early attempts to clear the scum from the sea, as it were, continues, part and parcel of the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring 228
Industry Board has been converted into a fish-processing factory. This facility, of great value to the port, is run by Rolf Olsen A/S, (648)
a long-established Norwegian company with a successful background in fish processing. The company has received investment aid from the Highlands & Islands Development Board, the Highland Fund and the Stornoway Trust; the latter's interest is significant in that it is the first time in which the funds of the Trust have been invested in a private concern, to help retain Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry is the processing of prawns (scampi, or *nephrops norvegicus*). Two firms buy the prawns at the pierhead, shell, cook and freeze them,

228 subsequently despatching them to various dea

according to the amount of barilla (its great competitor, a carbonate of soda made from plant ashes) which found its way into the British market. When the American war interfered with the imports the kelp price was as high as £22 per ton. Prices began to decline about 1810, and from 1822 successive reductions in duties on salt and barilla resulted in the decline and demise of the kelp industry. As a consequence great distress appeared in those districts which had founded their whole economy on seaweed.

The weeds of most value to the industry, because they yielded most salts, included *laminaria digitata, laminaria bulbosa, ascophyllum nodosum* and *fucus serratus*. One ton of kelp yielded an average of 8 lb of iodine, with certain quantities of chloride of sodium, chloride of potassium, and carbonate of soda. When subjected to special treatment and distillation, 2-3 cwts of sulphate of ammonia, and several gallons of naphtha, paraffin oil, and volatile oil were also derived.

The fishing industry, discussed in the previous chapter, took over where the kelp-making industry left off and became another king-pin in the island economy. By the end of the last century it seemed set fair for continuing prosperity. In 1900, harbours were being planned and built with State aid in Uig, at Carloway, Ness and Tarbert. Then 1914 came, and with it sweeping changes in international trade. Island fishermen were left workless with wrecked and rotting fishing boats. In twenty years the number of Scotland's fishermen was halved; the remainder were all but ruined. The islanders' fate mirrored this pattern.

Yet another significant source of income for island families for almost 200 years came from the men in military service, who either sent money home or returned home with their gratuities and pay. In the wars of the last century many enlisted in the Highland regiments, the Navy and the Merchant Marine. Even today, the income from this external activity is not insignificant.

EIGHTEENTH-CENTURY ECONOMY

Information and statistics about the economy of the island in the middle of the eighteenth century are to be found in Walker's *Economical History of the Hebrides or Western Islands of Scotland*; his MS is in the British Museum.

but their negligence even in ye article appears from their sending out annual above 2000 of wool out of the country unmanufacture.'

Harris was rented at £600. Exports were some 100 tons of kelp (£325), and the value of 250 black cattle exported alive, with 100 salted, was £445. Small quantities of cheese, wool, and the skins of sheep, otters and seals were exported. Grain was neither imported nor exported.

The plough, which is used here, and in most places of the long island, is of a very peculiar construction. Its length is but 4 feet 7 inches, and is drawn by four horses abreast. It has but one handle by which it is directed; the mold board is fastened with two leather thongs, and the soke and coulter are bound together at the point by a rim of iron. Beside kelp, there is little else manufactured, except a little coarse woolen yarn, and some blanketing, which they send yearly to Glasgow. They raise a little flax of which they make some coarse linen for their own use, but import all the fine linen which they consume. In the year 1756, an American vessel in distress was obliged to put out three hogsheads of lintseed in Harris, which was sown and afforded crops of lint which were above double the value of the usual crops. The east and west of Loch Tarbert in the Harris are every year revisited by the herring shoals. During the five years from 1743 to 1747, the west loch was the principal seat of the herring fishery. About thirty vessels from 18 to 40 tons, belonging to Campbelltown, Greenock, and Irvine, were completely loaded each of these years at this place.

With even a modest amount of business taking place, it was a natural step to establish commercial facilities. Stornoway men who once acted as agents became shopkeepers. The increase in the use of money attracted banks. During the Seaforth ownership of Lewis, the island had its own currency or notes, designed and printed from plates in the same style as the modern banknote. The wording ran: 'I promise to pay on demand to the Chamberlain of the Lewis or Bearer ONE POUND Sterling at the Counting Room here.' The notes carried a date and were signed by the proprietor, J. A. Stewart MacKenzie. It is not known for certain how long the notes remained in currency, when they ceased to be used, or even whether they were officially acceptable. At one time, as rare items, they fetched high prices from collectors. A number were

SEA ROUTES

trappings of nineteenth-century civilisation, however, they grew to depend on items brought by sea. Imported food, clothing, wood, metal domestic utensils and the like were slowly assimilated as indispensable everyday articles. But there was relatively little export in return; then as now, any transport operator struggled with the fact that traffic was one-way and the freight charges must pay for the double voyage. Though the fishing industry and later the Harris Tweed industry were, around the turn of the century, to do much to determine and stabilise shipping developments, both passenger and cargo services were always facing loss rather than profit.

On the social side of the picture, the regular call of ships to the island, to Stornoway in particular, was a welcome, quickening sign that the island was significant in some way to the outside world. The ships brought visitors who made the island, and the Hebrides in general, better known to other prospective travellers. The exposure of the island and its folk to the gaze of the mainland led to a wider knowledge and understanding which without doubt brought improvements in social welfare and a basis for economic development. When many islanders found it necessary to go to Glasgow and the south for work, the ships of the Minch served as a firm link with home, to which they returned whenever they could. This feeling for home is still manifest today in the Lewismen in Canada who charter an aircraft to Prestwick each year so that they can holiday on the island. Since 1900 or so, passenger traffic has been two-way : emigrants, migrants, visitors and business travellers. When the fishing industry was in its heyday, the ships carried hundreds of fisherfolk across the Minch to ports as far south as Great Yarmouth to 'follow the herring' round the shores of Britain and back to the Minch again. Traffic today is still considerable, with the air-link with the island being used to its capacity.

In a community where Sabbath observance is an integral strand of religious belief, ministers have on occasions tried to preserve the Mosaic sanctity of the Sabbath Day by restricting the movement of ships in Stornoway harbour. In deference to local feeling the Stornoway steamer has always docked for twenty-four hours over Sunday, to leave port for Kyle just after midnight.

TRADE AND INDUSTRY

834 useful crofting ancillary which, unlike many others, is soundly
387 based on a definite commercial demand. Various industries use
the extracted acid for some 150 products. The Scottish alginate
industry, the second largest in the world, is based on the process
of E. C. Stanford, who discovered alginic acid in 1883, though
today modern methods are used. Far raw materials it has turned
to the old kelping shores of the Hebrides and Northern Isles. On
the island it has a factory at Keole on Loch Eriboll, a site chosen
for the easy access afforded to puffers; the factory receives the
weed, dries, mills and bags it, and the beats then carry 200-ton
loads to Girvan. The factory itself involved some £350,000 of
1935 capital layout and has a capacity of 120 wet tons per week—4
wet tons producing 1 dry ton. About a dozen Harris and
1939 Lewis crofters gather the seaweed crop, the most useful type being
Maidderweak or rockweed (*ascophyllum nodosum*), from the
shores at Loch Eyisort, East Loch Roag and Bernera in Lewis,
Husinish and Scarp in Harris, and Loch Seaforth. Where there is
1949 road access the weed is cut by sickle and loaded into a lorry, but
more often it is cut at low water to be floated with the incoming
tide and rafted to Keose, hauled by motor boat.

249 A product of the land not readily associated with the Hebrides
is bulbs. Bulb-growing deserves a mention, however, if only be-
1935 cause the experiment to see whether it could become a commer-
cial possibility in Lewis was abandoned out by the children of Lionel
(Nen) Junior Secondary School. The MacAulay (Rhodesia) Trust
made an investment of £150 to cover initial expenses, and success
followed. When the original project was completed it was ex-
tended, sales bringing the school a useful sum. But an attack of
disease brought production to a standstill in 1966.

312 Another small industry is the aerated-water plant at Ness,
which is operating with reasonable success, and could do better if
• 226 imports of aerated waters from abroad were reduced. A number
of recent surveys made in the island have found great interest in
such activities as shellfish processing in Harris to produce semi-
preserves, using mostly cockles and mussels. Local knitting already
has a name for its products and a potential for extension on a
1976 commercial scale; this latter project in late 1966. Some forty years
ago knitting specialists went to Lewis to investigate the possibilities

A HARRIS VIGNETTE

Lands were not allowed to become waste; in 1710, a Roderick 614
Campbell in North Uist was paid to come north and settle in the 1725
island of Ensay, Sound of Harris. 1727

It is regrettable that of MacLeod's rents was paid in 731
money rather than produce, for it emphasises the great value of
the cattle trade in the Highlands, in which Harris played a not in-
significant part—that is, compared with neighbouring Lewis. It
was sound economy for the Highlands, and far in advance of the
liberation of the so-called 'improvers' of a later age. The rents of the
MacLeod estates were collected by chamberlains, and part of the
work of Malcolm Macleod, the chamberlain for Harris at the
beginning of the eighteenth century, was the ferrying of Harris
cattle to Skye. In Rodel, MacLeod had a 'keeping house', which
provided cattle and rooms for the chief while in Harris; there
was also a brew-house.

To introduce more efficient communications and to interceo- 614
nect all the small holdings on the lands of the estate, a boat was 1725
chased for a Lauchlan MacLean in 1705; he was empowered to 505
maintain a regular ferry between Harris and Skye. This also
operated between the mainland of Harris and the populated
islands in the Sound, such as Berneray, Ensay, Killegray and 614
Pabbay. In 1730 the estate was Presbyterian, and MacLeod 1795
had the burden of providing both suitable residences for the
ministers and the lesser servants. As mentioned earlier, the
Rev Aulay MacAulay, the great-grandfather of Lord MacAulay,
the English writer, was once minister in Harris.

The first half of the nineteenth century saw great changes in 614
the ownership of the various islands comprising the Outer 795
Hebrides. MacLeod of Harris retained Harris until the end of the 425
eighteenth century, when it was purchased by a cadet of the
family, a son of Sir Norman MacLeod of Berneray, for £15,000.
This son, Captain MacLeod, who had made a fortune in the Far 228
East and ploughed some of it back into his native soil, was the
man who introduced fishing as an industry to the Harris people.
In 1834 the Harris estate passed to the Earl of Dunmore for
£60,000. Dunmore sold north Harris to Sir Edward Scott in
1868 for £155,000. In 1919 Lord Leverhulme bought south
Harris and St Kilda for £36,000.

ISLAND LIFE

Research into markets and rope-co-operative effort, into better 467
use of the land with the application of subsidies and grants, are
scheduled for the Western Isles Crofters' Union.

228 •

Fishing as an industry, although now receiving the necessary
shot in the arm by the establishment of the nucleus of a local
fishing fleet, is still bothered with the perennial problem of poach-
ing. The Minch remains one of the great fishing areas of Britain,
but, it is argued, its fertility is forever being depleted by fishing
inside the three-mile limit. This limit was originally chosen because
it was the effective range of a cannon ball about two centuries
ago. Fish, however, when they choose their spawning grounds are
unaffamoured by twentieth-century artillery, paying
far more attention to the nature of the sea-bed, which varies as
much inshore as it does offshore.

POLITICAL ORGANISATION

In 1918, the Outer Hebrides became a separate Parliamentary 631
constituency known as the Western Isles, a recognition of their
distinctive character and of the many islands off the Scottish
west coast of Scotland. Before this constituency came into being,
Lewis formed part of the County of Ross & Cromarty for Parlia-
mentary purposes in Lewis and its own islands of Harris, the
Taransay, Scalpay and the isles in the Sound of Harris were in-
cluded in Inverness-shire.

For the purposes of local administration, however, Lewis still
forms part of Ross-shire (part of Ross & Cromarty), with its centre
at Dingwall, the Ross & Cromarty county town; while Harris,
North Uist, South Uist, Benbecula and the Barra Isles belong to
Inverness-shire, and are administered from far-away Inverness.
The Lewis association with Ross-shire is a historical one. When 1715 •
the boundaries of the Earldom of Ross were changed in 1661, 1
Lewis went with Ross as part of the possession of the Lords of
the Isles. The present districts recognised for administrative pur-
poses do not in fact greatly differ from the divisions, or parishes,
set up about the beginning of the Christian era in the north
century, the Lewis-parishes being Stornoway, Barvas, Uig and
Lochs. The County Council attends to finances, education, roads,

LIFE TODAY

LIFE TODAY

As in other Highland areas, some of the island's problems have 114
become so deeply entrenched as to be intractable. They have been
the raison d'être of many commissions and committees of in-
quiry that their existence is now almost forgotten by the island-
—if indeed he ever understood their nature. Some results have 631
been seen, such as the Crofters Act of 1886 which gave High- 1785 •
land crofters security of tenure, perhaps the most valuable 1407
measure of the last century or two—for another all things have
not progressed so well since that date; at any rate not so fast that
crofting, for instance, is now seen to be an economic form of
land use of any value to the Highlands, particularly and nation at large.
Highlanders have been virtually ignored by successive central 657
governments, or least, remunerate seems to qualify a topic for
the office 'pending'. If they yet to be fully realised that the
island, with other Highland communities, is part and parcel of
the area governed in Westminster from London and Edinburgh,
and merits as much attention to its welfare as other European
governments, such as Norway, give to their remote mainland and
islands.

As usual, charity and self-help begin at home, and one of the 178
most commendable, if not the most, efforts in the field of 2491
agricultural revolution of recent years which is changing one-
brown moors to lush green pastures: reclamation by re-seeding.
This revolution is still going on. Lewis crofters in particular are
showing the way, with other Highland crofting districts lagging
out. The change in the Lewis scene is being emphasised by the 1785
planting of shelter-belts of hardy trees and the first of the new 1315
plantations of timber-producing trees. These show the promise of
the future; a lively future for a lively community. The fishing in 1928 •
dustry also has a future, brighter on the horizon than it has been
for many a poor year. The Harris Tweed industry, the staple 1808
industry of the island, is showing ability to retain pre-war 1884
interest of the market. And tourism, once a perfunctory and
casual affair, promises to emerge as a further source of
economy. There are, in addition, many small pockets of native
initiative and enterprise which, given sufficient encouragement

LIFE TODAY

CH. III THE ISLAND HOME

of Ross and Cromarty, with populations of from 1000 to
2300 in 1841, Stornoway kept ahead by 1871, growing
with the rise of the fishing trade. Including the basically
369 floating population of fishers, its numbers exceeded 4000
in the summer of 1921, though falling below this in 1931
when the census was held in the spring.

Still another stage, a fourth, seemed in sight when, in
1918, the first Lord Leverhulme made his bid to centralise
the industry, establishing a fishing port of the Island at
364 Stornoway. A canning factory was started (south of the
area shown on the plan), only to be dismantled before its
completion, was 95 miles north of the mainland, at
"Leverburgh", South Harris. New housing commenced.
When this great venture closed and population stagnated,
the grandiose proposal to reopen the Lewis visits on
Wood's plan and centre it on some great new building,
remained a dream. The failure of Leverhulme's great
enterprise and its hopes led to discouragement for some
years. Yet it is possible that the vision of change given
to the Island may have contributed to a renewed capacity
for enterprise, individual and communal.

Later events had to await the growth of the Harris
tweed industry, and the erection of spinning-mills to
provide yarn for the rural hand-weavers. The town has
extended beyond the plan in two main directions: to
north-east with villas and housing schemes and to ESE.
with the great new mills where kippering sheds were
numerous from the mid-nineteenth century until after
1919.

Although Tarbert is a separate burgh of Harris and
the island's second town, it is still the port of call for the
Island. The adequate depth of its harbour, combined
with its position and access from sea and land, have given

CH. III CLANSHIP

175 seldom agreement as to which of these three types brought
the people to Lewis, or wrought the greatest change in the
54.5 tacksmen declined by the end of the eighteenth century.
697 Buchanan wrote in 1793: "The greatest tackesman in Lewis
is the Laird's ground officer"; but he found that the
Island was for the most part inhabited by tenants holding
directly from Seaforth, who "easily perceived the folly,
as well as the inhumanity, of leading out the people on his
Island to dangerous tackesmen, for the purpose of raising
fortune to themselves on the ruins of the unfortunate
subtenants". At a later date a former Governor of Hong
Kong, John Stewart Macleod of Calgary, held
otherwise. To the Napier Crofters' Commission in 1883,
he said: "Till the beginning of this century the greater
part of the Island was held by tacksmen, generally speaking
men, who got in some cases from their subtenants in money,
produce, and labour, what nearly paid their rents." These
tacksmen were those of the seventeenth century. Early in
the century, "when Mr. Stewart-Mackenzie married the
Hon. Lady Hood, daughter of Lord Seaforth, and took the
management of the estate into her hands, Lord Hood, along
with the middlemen, and let the land direct to the crofters.
1232 This, no doubt, was a step in the right direction, but it
had given a hopeless blow to the class of tacksmen
who looked after his people, and who was industrious in
farming . . . and stock-breeding, was beneficial to the
people, though in some cases they may have been petty
tyrants." He might no doubt have added that they could,
if need be, stand between a bad factor and the crofters.

• 1278 When they lost their tacks, some of these 'middlemen'
turned to the prospering industry of herring fishing and helped to supply
capital and enterprise as curers; their successors were
active beneath the shelter of the peninsular area of Point Street,

COMMUNITY FROM PAST TO PRESENT PT. II

175 the last of these in outlying villages after 1918. When
Matheson purchased the Island in 1844 he left the fishing
594 industry to the curers, and turned his attention before
695 most fishermen could speak and write English, the local
1278 curers were best fitted to take action not only in marketing
but in approaching the Government to aid the construc-
tion of piers and harbours. On the whole, their long ties
with place and people, coupled with education, made them
useful leaders of a community, and, in the aftermath, enabled
to adapt life to a changing economy. Here and there one
or two small farmers survive, a little apart from the main
township. Aided by a grant from Highland Scots
changing times by combining with their inheritance a same
selection of new elements.

Looking beyond the Island to the mainland, the time is
approaching for a fair assessment to be made of the historic
parts of chief and landlord, factor and tacksman. Not only
is there an enlarging body of documentation, but a growing
175 understanding of communal strands in tradition and of
174 changing social economy seen in relation to geographic
184 factors of place and region. Lewis, the Gaeldom, cents
178 points out that the landlord would keep benefits to rent i
1882 Kintyre,[1] and the heartland of tradition in the Hebrides.
In the Island, one must remember the fundamental opposi-
tion, yet the recurrent reciprocities of chiefs and people.
These, and not only individual differences in character and
conduct, explain the differences of experience and opinion
1829 quoted above. The people's belief, so frequently given
to me thirty years ago, that it was bad factors, not the
landlord, who taced and harried them unjustly, expressed
an idealistic faith in a Lordship of Lewis, based on tradition
1565 and history. For lordship begins with the imposition of

1. A. McKerral, *Stat. Hist. Rev.*, 1947.

COMMUNITY FROM PAST TO PRESENT PT. II

175 rent averaging 31s. in addition to which there were over
475 1000 cows kept on the cottar class and 500 horses of the
1000 squatter class.[1]

Lastly, Sir James trained no successor to follow up or improve upon his enterprise. At his death in 1878 Sir James was succeeded by his widow, and, nearly twenty years after, she was followed by a nephew and his son. But the expenses of Stornoway Castle and its burdens, accompanied by lower rents, weighed down the new proprietors. In 1918 the estate was sold to Lord Leverhulme, who shortly afterwards purchased Harris too, with a view to 1278 • his great schemes of fishery development.

(c) FISHERIES: 1750-1914

175 For the greatest expanding industry of the northern
174 Highlands, Matheson had done comparatively little even
178 at Stornoway. In 1882, a former Factor (Mr. Mackenzie
of Calgary) stated that he had constantly asked for aid
to the fisheries, especially by the building of harbours,
pointing out that the landlord would reap benefits in rent:
1649 But Matheson had replied that the fishermen and fish-
curers, the people engaged in the trade, should do this work
for themselves. By the end of the nineteenth century
being planned and built with State aid in the north, west
1839 and south-east of the Island (at Ness, Carloway and Uig,
and Tarbert, Harris). In 1900 the Islanders possessed
150 herring boats, and in that year five boats from the
Stornoway District sailed for the first time to Yarmouth,
1113 and two to Lowestoft. Lewis fishermen were known for
their skill and enterprise.[2]

1. Royal Commission on Crofters and Cottars in the Outer Hebrides and Other Parts of the Highlands and Islands, 1883, and the recommendations by the Scottish Housing Advisory Committee, Report on Rural Housing in Scotland, 1937, pp. 50-6, 72-77.

2. Board Report (1901).

ECONOMIC CHANGES: 1750–1919

175 real hopes that prosperity could be maintained. In 1914
226 war came, followed by sweeping changes in international
• trade. These changes left the Island fishermen workless,
170 and with wrecked and rotting boats. In twenty years the
(439) number of Scotland's fishermen was halved, and the re-
mainder all but ruined. For guidance, past progress and
past losses should be reviewed, in order to see what
measures can be taken to restore prosperity.

121 For the slow growth of a native fishing industry, two
175 factors were to blame: the poverty of environment, to-
226 gether with the unsettled state of the Isles, and also, it
182 seems, the jealousy of urban interests. These were repre-
226 sented, to 1603 and even after, by the Royal Burghs, and
from 1707 by the British Parliament. The Royal Burghs
certainly developed Scottish trade and industry through
their own ports, but they feared competition, and opposed
any direct contact of other ports, such as Stornoway, with
foreign fishers and traders. From the days of the MacLeods
(418) this difficulty had hampered regional development. It
was in spite of royal prohibition that Seaforth encouraged
Dutch curers to settle, an arrangement interrupted by war
with Holland in 1653 and 1665. Curers from Caithness
and the East Coast were encouraged to replace the Dutch-
men, and from time to time through the succeeding century
efforts were made from the south to form fishing com-
panies, and in the Island to encourage local fishers to profit
from example in the catching of herring and of ling, hake
and cod.[1] The people fished for food, with fishing-rods
from the shore, and in frail boats in the lochs, and if they
(418) could, they also sold a surplus. Fish were not only taken
direct to Glasgow, but sold at home, first to Scots and foreign
and later to British boats, of which ninety visited Lochs in

[1] W. C. Mackenzie, 1919, p. 64 ff.

121 1794, for instance, their crews not only fishing but also
175 buying from local fishers. Islanders could easily earned
• 226 a pittance as pilots, for until the charting of these rocky
coasts navigation was most dangerous.

175 The herring industry was in the hands of 'adventurers'
226 (who 'ventured' their capital), and the Islanders benefited
little. The British export was aided by a bounty which
(477) helped to capture the Continental market; but, as Adam
(439) Smith pointed out, no bounty was given to the small, open
boats suitable for the north-west lochs. Thus the operation
of the Salt Duty after 1707 and of the bounty system from
175 before 1745 until 1786, illustrates two of the recurrent
226 blights upon "Public Administration" in the Isles. As Day
256 wrote, their interests have had to suffer "either deliber-
ately, for the benefit of other parts, or other classes in the
kingdom, or inadvertently from ignorance".[1] Although the
bounty system was widened to include small boats after
1786, the Salt Tax remained until 1817.

To overcome difficulties, the British Fisheries Society
was founded with Government support in 1786. Although
Stornoway then seemed too far afield, the Society's concen-
tration upon larger settlements foreshadowed Lord Lever-
(311) hulme's principles after 1918. At Ullapool, Tobermory
and Lochbay (Skye), and at Wick, quays and stores were
constructed and dwelling-houses built, with croft land and
grass for a cow, to be reclaimed. Although concentration at
Wick led to the sale of the three western properties about
1842, the Society had done some good work in the West.
The chief difficulty of the West Coast north of the Clyde
area and south of Stornoway District remained: the lack
of a well-marked seasonal migration of herring.

[1] J. P. Day, *Public Administration in the Highlands and Islands of Scotland*, 1918.

ECONOMIC CHANGES: 1750–1919

175 From the Napoleonic Wars to 1914 the amount of
• 226 herring cured on the West Coast of Scotland rose and fell.
251 In 1810–14 the East Coast cure was half the West Coast
455 cure, but the peace of 1815 brought the capture of the
Continental markets and the East Coast herring export
leapt up. It averaged 500,000 barrels from 1830 to 1870,
a million from 1880 to 1900, and one to two million barrels
(439) until 1914. With the decline in the export to the Plantations, the West Coast export fell, to rise by 1890 and reach
a peak from 1900 to 1914. Thus, although no more than
from a tenth to a fifth of the East Coast yield, that of the
West Coast had risen greatly.[1] Of this, the Stornoway
cure formed the major part.

175 The chief early type of catch, of white fish (cod, ling
226 and hake), was developed too, and swelled to a peak by
1900, then dwindled and fell. The average Stornoway
District catch of white fish for a dozen years to 1900 was
valued at over £100,000, much of it caught by local boats,
and some of it cured at small 'creeks' (*e.g.* on the west of
the Island, on Loch Roag, notably at Carloway). The
cure, a strong coarse food, was shipped to Ireland and the
Clyde; but after 1900, fresh trawled fish replaced the
cured. From £100,000 before 1900 the value fell to below
over £10,000 in 1912–13, £1000 in 1920, and half that in
1921–4 per cent of the value in 1900!

Thus the herring fishing became the most important
to the Islanders, at first by employment on East Coast boats.
(477) Later they purchased boats and gear for themselves, helped
(452) principally by advances from Island and East Coast banks,
(452) which, in 1900, alone had £1,000 by 'Small Loans'.

[1] *Fishery Board for Scotland*, Table 25 (1938), and Table 23: 6000 barrels in 1790–92; Buchan in 1870–71: 100,000 in 1912, and 160,000 in 1913. For fuller comparison with Table 25, about 25 per cent should be added to quantities, as explained in the notes to the Tables, on the 'cantick', and final reduced, or 'bungarded', state of barrelled herring (listed in Table 23).

175 though also by State loans. The efforts of the Island
• 278 fishermen in the sixty years from 1880 to 1939 can be
471 summed up in the values of their boats. From 1880 to
458 1900 values rose by one-half, but had fallen somewhat
before the war of 1914–18 (to £20,000). Immediately after,
the purchase of steam drifters at Stornoway and the fitting
their herring boats with motors by the fishermen had
tripled the value (close on £70,000 in 1920). But markets
fell almost at once, and losses continued. By 1938 the
Island fishing fleet was valued (or overvalued) at a quarter
that figure, and was worth less than the fleet of sixty years
before.[1]

(9) THE CROFTERS ACTS, 1886–1919: TOWNSHIP, LANDLORD AND STATE

175 Centuries of cattle-keeping having left the grass moors
234 in good condition, the profits of sheep-farming rose after
1770 with the price of wool for manufacture. Protected
from foxes by modern guns, and handled in large flocks,
the newly introduced Cheviot and Blackface sheep and
(178) lambs could graze in their thousands. In many estates the
introduction of additional sheep, with the crofters' cattle,
was tried and worked; but in others the people were
175 ruthlessly evicted. Although offset by many acts of wise
234 economy and generous aid, evictions were too frequent
427 during the next half-century, and they engendered growing
bitterness.

Whereas in other Isles, and on the machar of Harris,
the small joint tenantry and subtenantry were evicted in
(113)

[1] Figures 1848–53 quoted from J. P. Day, *Public Administration*, 1918; 1888–1900 from Appendix K, Report, 1902; 1912–1938 from *Fishery Board for Scotland* Tables (Table E-1B, 1912–40, and Table 13 and A.1, 1938).

159 stubborn and suspicious; he never believed it. He realised
423 that the backwardness of the Island arose from lack of
opportunity, and that opportunity he would do his best
433 to provide. Wherever he went he found the same story
—things half attempted, nothing done." Leverhulme, one
felt in 1919, wanted to do all he could for the Islanders.
A greater man would have wanted to work not only for,
but with, the Islanders. Then, even if the fisheries had
been ruined, as they were, by forces outside his control,
he would have shared a moral victory, not shared and
suffered economic loss, with moral defeat.

In the Isles for centuries before, a family and well-tried
174 friends were valued above all other things. What was more,
183 this was still true in the Island at the time both of the elder men and
(108) the women he found at home, and of the absent men, at
war. The foundation for this friendly life was a plot of
159 land and work to do, a home and the leisure to enjoy it.
433 Leverhulme, too, valued these things in his own way. He
461 cared for human homes and gardens, and had proved it at
Port Sunlight and elsewhere. A pioneer of industry and
efficiency, he pled for 'a six-hour day' and leisure after-
wards, and he had done much to realise the ideal in his
own works. Moreover, he was not without respect for
spiritual values, freedom, and a congregation's right to
choose their pastor.[1] All these things should have helped
to gain him, too, sympathy with Island life, and up to a
point they did so.

159 It is clear that Leverhulme had considered the possi-
423 bilities of improving the local fisheries, village by village;
and an engineer had reported on possible harbour improve-
• 278 ments at Ness, Barvas, and elsewhere. But he came to the

[1] Leverhulme (1927), p. 211; and Leverhulme (1st Baron), *The Six-Hour Day and Other Industrial Questions*, 1919.

BETWEEN TWO WARS, AND AFTER

159 conclusion—undoubtedly a sound one—that the most
433 effective action for commercial fisheries (as then known)
• 228 must be taken at one Island centre, Stornoway. As a
direct result he considered how to feed the growing town,
in particular how to give its children fresh milk. He saw
the farms round Broad Bay ready to be turned to high-
class dairy farms, if capitalised, and for this purpose they
were swiftly scheduled in his mind.

"The early days were happy ones"—wrote his son—
433 "but they were not to last for long. He encountered the
first obstacle on his path in the late summer of 1918, when
423 the Scottish Board of Agriculture declared its intention to
(417) take over the few crofting farms in the Island for crofts."[1]
By this declaration the Board spoke for many Islesmen in
the Forces. The voices of Servicemen, not those of either
a Government or a philanthropic millionaire, counted over-
(177) whelmingly, on the Island and beyond. When the war
was over and the men came home, many set about examin-
ing their boats and fitting them up with motors, and in a
few months the evening's departure for the fishing from
Stornoway had lost some of the picturesqueness of the old,
stately procession of sail moving out to the Minch at
sunset, but had gained in efficiency as the motorised boats
went puffing out to find the shoals, sure of return without
delay after the catch was hauled in. Yet fishing was still
precarious: there might be no catch, and even if there
were, prices were a gamble. Hence many a cottar-fisher-
man wished to ensure a home for himself and applied for a
croft, with his eyes on the farms. Farms were few, and
not enough to go round more than some 10 to 15 per cent
of squatters and cottars. Still, a promise is a promise:
the farms were there, why not have them and be done with
it? Knowing this feeling in the Island, aware of its support

159 in the country, and foreseeing that the only sure way to
423 avoid irritation, friction and law-breaking was to grant
the farms and have done with it, the Secretary of State for
433 Scotland and the Board felt that they could not withdraw
the Government's promise of land. The Secretary for
Scotland, Mr. Munro (later Lord Alness), spoke with
knowledge as a Highlander. A general promise of small-
holdings had been made to all Scotsmen in the Services,
and could not easily be set aside at the wish of one man,
then approaching the age of seventy, however well-inten-
tioned, wealthy and in earnest. Yet Leverhulme declared
that while he would relinquish farms on the west side of
Lewis, his schemes could not go on unless he retained
the farms on Broad Bay to supply fresh milk for Stornoway.
If the farms were divided, he said, he must close the whole
scheme forthwith.

159 Of his earnestness Leverhulme left no doubt. He not
423 only planned but set up a retail agency, Mac Fisheries, and
he purchased drifters and trawlers, the Mac Line, to fish
433 far afield and bring the catch to Stornoway, there to be
• 228 transhipped by his own carrying service. He set about
building model dwellings in Stornoway itself, each with
its quarter-acre allotment. 'Work and Wages' from
capitalised fisheries were his offer, in further token of
which, road-making and other wage-providing work was
(178) begun. Until 1920 the farms remained undivided. The
159 drifters, for their part, could only wait for the expiry of
their leases, or for the transactions by which their leases
423 would be foreclosed and compensation awarded. Prices
of stock were high at the time, and the valuation would
433 correspond to these. Hence tenants felt they could afford
427 to wait. Meantime crofters' stock wandered over their
farms—whether because of the wilfulness of the stock or

CONTINUED ON NEXT FICHE

Lord Leverhulme's fisheries

The era of Lord Leverhulme, the soap magnate, is well documented; a complicated story and not yet told in full. The confrontation of a dynamic industrialist from England with the deep-thinking crofter of Lewis has formed the subject of much speculation, particularly with regard to the non-success—rather than failure—of Leverhulme's schemes for the island. Leverhulme bought Lewis in 1918. He had visited the island about twenty years before and had no doubt thought that with proper direction and adequate capital much could be done to bring it out into a fresh, lively economic air, profitable both to himself and the inhabitants. He was a visionary; but he was also a practical man, with great successes in the commercial world to prove it. In 1919, contracts were placed with Sir Robert MacAlpine Limited to begin operations in Stornoway: excavating, levelling and building in preparation for the new town and its factories. The Leverhulme Syndicate bought deep-sea trawlers in Aberdeen, Hull, Fleetwood and other ports, and also retail fish shops in many towns on the mainland. This side of the enterprise was known as The Mac Fisheries Limited, and the island developments were under the direction of the 'Lewis & Harris Welfare & Development Company Limited'.

Leverhulme's main idea was to establish Stornoway as the centre of a great fishing and fish-processing industry. As he put it, acre for acre the seas surrounding the Hebrides were infinitely richer than the land. He maintained that in any programme for the improvement of the islanders' economic position, fishing must become their primary if not their only activity. Such, however, was the land hunger of returning ex-servicemen that his attentions were almost wholly given over to trying to persuade those wanting crofts that they would be, materially at least, better off in his canning factories. But farms were broken up to satisfy the demand for land until the time came when Leverhulme felt he had to abandon Lewis. The Board of Agriculture and the Scottish Office were also principal actors in the play, mostly on the side of the land raiders who squatted on farm land in the island so causing the farms' eventual fragmentation into small units of economic insignificance. When he pulled out of Lewis to go south to Harris,

When he pulled out of Lewis to go south to Harris,

LORD LEVERHULME'S FISHERIES

he offered—such was the character of the man—as thanks for the '98 per cent support' he got from the people of Lewis, to each Lewis crofter his own croft as a free gift, and the Lews Castle, together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and concentrated his efforts in Obbe, now called Leverburgh, in South Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. Rocky obstacles were blasted away; numerous buoys and beacons were set up to guide vessels into harbour; new quays were built; and kippering sheds, and other buildings necessary for packing and curing herring were erected. Among his other undertakings in Harris were the provision of a mill for making tweeds, and he bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until the introduction of the fast ferries which now link the mainland (via Skye) with the Outer Isles. Some 10,000 cars cross each year from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate industry. It provides employment for only small numbers, but is a

and he was unable to make plans or promises for the future. Meantime, it should be said, the Island herring catch and prices fell rapidly (the catch by 50 per cent and prices by 60 per cent from 1920 to 1921). As a result, crofts now seemed more precious than ever to the applicants.

With what Leverhulme regarded as 'almost indecent haste', the Secretary for Scotland proceeded to fulfil the promise to divide the farms. Most of the farms remaining were divided into some fifty crofts, of ten acres or so with outrun, supplying little more than 10 per cent of the landless men. The Manor dairy farm, near Stornoway Castle and town, though raided by a few men, was retained to contribute to the town's supply of milk, along with two or three smaller farms close to Stornoway (Melbost, and Stoneyfield with Holm). Leverhulme felt that his offer to Lewis had been turned down, and he then concentrated his efforts upon Harris.

At the extreme south of Harris (midway along the south-west coast), in the 'Hope' or natural harbour of Obbe, Leverhulme built new piers. He transferred the machinery of the canning factory and the kippering sheds he had commenced to build at Stornoway. He started to build houses, a number being provided on generous terms; and "at the people's wish", the settlement was renamed Leverburgh. With the transference of his energy from Lewis to Harris, Leverhulme's "optimism and determination were intensified", wrote his son. They were not to last long. After a visit to the Congo in 1925, Leverhulme died suddenly in Brussels. How far the new plans might have succeeded had Leverhulme lived, his son has commented, "remains uncertain". What is certain is that the second Lord Leverhulme toured Harris, visiting the works on hand and examining the accounts. No doubt he also

weighed the estimated expenditure necessary to complete the unfinished projects, and their prospects of success, comparing these with similar conditions on the East Coast and at Fleetwood, and with the trend of prices. His decision was to close the venture, and Harris was sold. The skeletons of the works were left to rust beside the quay, while the wreck of a coal steamer was left unsalvaged, to break up slowly upon the rocks outside, a symbol of a lost enterprise.

2. *An All-Round Policy for Sea and Land*

From the 'start' in Lewis, the first Lord Leverhulme had shown his vision and grasp as a planner. Survey preceded plan, and decisions were swiftly put into action. Why then had abandonment and failure followed? Personal factors have been over-stressed. 'Crofters' have been accused of stubbornness, the Scottish Office of procrastination and Leverhulme of impatience or obstinacy. Stornoway shopkeepers have also been apportioned their share of blame; and while all of them welcomed the advent of Leverhulme as sure to bring money through the crofters' pockets to their own tills, it is possible that, later on, some of them did prove Devil's Advocates, having come to fear the rise of competition by co-operative or other large-scale concerns, should the town expand at a rapid rate. Stressing other factors of character and incompatibility, one popular Scots author went so far as to praise the Lewis crofter for preferring a spiritual life with poverty on a croft, to easy work and high wages in a town. There runs a story, well vouched for, which might seem to confirm this. After Leverhulme had held forth upon 'work for wages', in a township where there had been pressing

applications for shares in the division of a farm, but
Leverhulme now felt sure of his success, an old c
spoke up slowly: "My Lord, what the crofter wan
Contemplaition". Now, fondness for contemplati
found not only among crofters as they age, but a
older fishermen all round the shores of Britain, ever
mellows in the Isles especially. Yet, as Leverhulm
for himself, there was abundant activity among m
their prime, as they strove to refit their boats on
return. In 1919 hope, not contemplation, was their
vailing mood: hope for an active, fisherman's life.

With all these hopeful human factors on the si
common effort at the start, why then did differenc
view-point come to be accentuated, not harmonised
'incompatibilities' lead so soon to friction, deadloc
breakdown? Surely one basic fact remains. In 191
when Leverhulme framed his policy and made his
the Scottish fisheries, to judge from pre-war years,
still expect to hold high place in providing for a
market in herring and white fish. True, the value
Island cure of white fish had fallen from £100,000 in
to one-tenth, £10,000, in 1913; but Leverhulme sa
since fresh fish were now demanded, his capitalisat
equipment with accelerated transit of the catch should
quick recovery. The herring trade had been act
Stornoway up to the eve of the war; and althou
Islanders had made leeway following the introduct
steam and of larger motor drifters, Leverhulme th
he saw an opportunity to capitalise the industry, pro
'work for wages'. This forecast was wrong. Con
tion declined, and the market fell. Not only so; th
portion contributed by Scots fishermen to the sh
market declined even more.

In 1919, when the men came home to Lewis they could still see reasons for hope. They found a strange proprietor, known first for his outstanding—some said ruthless—business ability, and only secondly for his philanthropy. They heard his plans and were inclined to listen.

Yet, remembering their pre-war losses and the notorious fluctuations of prices and employment in the fisheries, they wished for a policy of insurance, as it were; so, if their home lay near a promised farm, of which they had long meant to claim a share, they claimed this forthwith. Only too soon after, in the early years of Leverhulme's adventure, the fall in total sales and prices of fish brought immediate loss to the keenest and hardest working of the fishermen, and to their financial backers in Stornoway. These losses warned others of the uncertainties of fishing. Now the fall in the fishing industry is not so much as mentioned in the biography of Leverhulme; nor do we remember a word of it in Leverhulme's speeches. One finds no data to show a substantial endeavour by the Scottish Office to co-operate with Leverhulme in framing policies either to change the trend of European markets or to make local adaptations to combat downward trends. The Fishery Reports certainly record the losses, year by year. As for the Island fishermen, they shared the feeling expressed by other Scots fishermen, that the old markets across the North Sea, eastward to what had been St. Petersburg, could and should be reopened, not closed 'for party reasons' by 'English politicians'. Although ostensibly Leverhulme ignored it, he cannot really have been unaware of the effect of the downward trend of the fisheries upon his own prospects of success, and upon the hopes and confidence of the fishermen. Having been so outspoken upon the shortcomings of Government with regard to local

schemes, and knowing how much local fishing depended upon international policy, particularly the resumption of trade relations with the chief customers of the past, Leverhulme, one feels, should have dealt no less outspokenly with these. The removal of trade barriers lay not in the hands of the Scottish Office or of Scots officials (however internationally minded these might be as private citizens), but in the hands of Ministers of Cabinet rank and leading financiers, of whom Leverhulme himself was one.

In brief, the Scots fisheries suffered after the war as neither Leverhulme nor others had foreseen when first he laid his plans for the Island's prosperity. It seems clear that had this major change been squarely faced by Leverhulme and Government alike, in 1920, 1921 or even later, they could never have fallen apart about a relatively minor issue, that of the farms. Both sides turned their faces away from this disquieting factor of the Baltic markets, though both knew it to be fundamental to the success of Scots fisheries and the Island's future. Had they faced it together frankly, then, even if powerless to effect a remedy, their sincerity might have prevented a deadlock upon a secondary matter.

To Leverhulme, given his large scale of expenditure and return, the division of a few farms formed a minor issue. But to a number of ex-Servicemen, 'crofters' without a croft, the division meant a home and relative stability. Moreover, what was merely a matter for personal decision to Leverhulme, was a lifelong issue to many people brought up in congestion on the wrong side of the boundary fence. Meantime, milk from Easter Ross was available in Stornoway, at town if not at country prices. Lastly, further possibilities of land-development lay open to Leverhulme, though not so readily to the unaided people. In reading

(c) House-building. — From 1920 to 1940 the Department of

647 Agriculture advanced loans for the erection of 760 new houses
654 and the repair of 220 other houses. This, with the erection
746 or repair of 40 steadings, may be taken as the equivalent of
1000 houses in the 20 years of peace, of which three-fourths
362 were new. Rural building was at its height in the early 'thirties,
but 1938 was a typical year. Taking the value of each house
356 as £600 and subtracting half for imported materials, we may
assume that for 50 houses built that year the labour given
431 produced an output of £15,000. In addition, some house-
building and repair was done without State aid, for which a
362 guess of £15,000 may be made. Such sums may not appear
356 large, but they correspond to the enduring fulfilment of a prime
[435] need, a 'real wage', of importance when compared to rents
and costs elsewhere. Of the expenditure on house-building
in Stornoway burgh during 1938, the value may be assessed as
£10,000, of which £9000 was for Local Authority housing.
Most of the total was produced by local labour.

(iii) *Fishing Industry—Net Output and Earnings*

434 (*a*) For 1938 the total catches, prices and quantities of
fresh cured fish landed in Stornoway District show a value of
• 228 nearly £100,000 (£98,000) for the herring catch, and of £162,400
for the cured herring. Our problem is to estimate what fraction
of these sums may be included in the net output of the Island
[127] industry proper. The Fishery Board's *Statistical Tables* and
Annual Report extract the produce brought in by local boats
from the total, separating it from that due to 'strangers', and
so permitting a fairly reliable estimate, checked by local enquiry.

228 Of the herring taken, nearly 80 per cent were caught in the
summer fishing, June to August (*Annual Report*, p. 13). The
501 week of maximum local activity in herring fishing for Stornoway
District may be taken to be characteristic of this pre-war period
(Table 8). There were then 111 steam-boats engaged; and as
only five were locally registered (at Stornoway itself), the
remaining 106 were strangers. There were also 66 motor-
boats engaged and though 81 motor herring-boats are locally

• 228 registered at the various 'creeks', obviously all cannot have
501 been engaged; moreover, some strangers are invariably present,
for which a guess of one-third would probably be conservative.
The two sailing-boats were, of course, local.

Now, the average net tonnage of a drifter or a good East Coast motor-boat approached 40 tons, almost double the average tonnage of a local motor herring-boat (20 tons), and the catch was much in this ratio. During such a week and period, the total net tonnage of the 106 stranger drifters was thus about 106 × 40 tons, or say 4000 tons. That of stranger motor-boats may have been, say, 22 × 40 tons, or 800 to 900 tons, but the local tonnage was only 44 × 20 tons, another 800 to 900 tons, or, say, 1000 tons in all. This formed a fifth of the 'stranger' total of close on 5000 tons. As the Stornoway Fishing District includes Harris which provided a third of the herring fleet, there remained only some 600 tons for Lewis, barely an eighth of the stranger tonnage. A fifth, say, of the tonnage probably means less than a fifth of the catch but a still smaller fraction of the sums paid for it, for the cream of the prices is skimmed by the boats first in, generally the bigger
[434] and faster of the fleet. If we set against the catches probably due to the Harris boats, the catches of the winter fishing (about 15 per cent of the year's total), we shall still err on the safe side in estimating the annual catch due to boats from Lewis proper as no more than a fifth of the total (worth nearly £100,000), say £20,000.

228 To complete the estimate we add the curing of all herring
brought into the District, almost all of it done in Stornoway.
434 The difference between the value of the total catch (£98,000)
and the gross value of cured herring (£162,000) is £64,000;
but from this is deducted £26,000 for the imported barrels,
salt, etc. This leaves an increment of £38,000 for the District
curings, or, say, £35,000 for Lewis alone.

The landings of white fish (£13,600) and shell-fish (£6500) totalled £20,100 (Table 17). Of that, white fish valued at £4700 were brought into Stornoway port by East Coast 'great liners' (Table 13), but the remainder was caught by local

• 228 boats; value, £15,400. Of this, the greater part came into
Lewis creeks (Table 17), making £10,000 for Lewis.
434 Finally, we may add a round figure for whole or part-time
occupations associated with the fisheries, including what
accrues by the visiting fleet and its business, of, say, £20,000.
This gives a total net output approaching £85,000 from
fisheries for a typical year just before 1939.

[462] We now turn to an estimate of the earnings of fishermen
and of the women engaged in curing. To some extent these
figures overlap, for the value of the net output includes the
wages of fishermen and women; but the sums earned on
'stranger' vessels—reduced now to some £3000—and the
wages earned by women gutters and curers in East Anglia
[434] (about £10,000) are additions to Lewis income. Some of this
was, no doubt, sent home in the form of postal orders, etc.,
causing a further overlap, but much of it was probably sent
in the form of notes or brought home in cash. In order to
show the real net earnings of rural Lewis, these are separated
from the output shown in the first column ((A, i) on p. 314)
and are tabled under "Earnings by Crofting and Associated
Rural Occupations only" (A, ii).

[127] (*b*) *Fishers' Earnings.*—As no figures of local earnings are
separately published, estimates must be based upon the colla-
tion of the Fishery Board's *Annual Statistical Tables* and
[178] accompanying *Annual Reports* with careful local enquiries. By
1938 the fishermen on Stornoway District herring fishing
vessels were reduced to about 350 men and boys in the summer
season, of whom only a few worked in autumn and winter.
Their earnings included the earnings of share owners of boats
and of nets, and of those without shares, the latter being only
a fraction, say a quarter, of the total. Nearly 100 District
men still worked on 'stranger' (East Coast) vessels at the
summer fishing and rather fewer at the East Anglia autumn
fishing. The sum so earned may have been a third or more
of the earnings on District vessels. Altogether the total net
earnings from herring fisheries received by all fishermen from
Lewis proper came to little more than £8000. By 1938 the

• 228 average wage for the summer season dropped to about £25.
434 The number of women engaged in gutting and packing
(and kippering) herrings varies from year to year. In 1938 1000
228 were engaged locally in summer, most of whom also went to
434 East Anglia. As always, the greater part of the wages was
462 earned in the summer and the remainder in the East Anglia
(autumn) fishing season. The net average earnings per worker
of the Scottish gutters and packers were estimated at £16 at the
Scottish summer fishings and £17 at the East Anglian fishing
(*Annual Report*, p. 12). This figure included 'arles' (*i.e.*
earnest money), but excluded travelling expenses. The
Stornoway District earnings averaged £16 at the local summer
fishing but only £15 at the East Anglia fishing. The latter is a
small return to place against the skill of the worker and
the discomfort she endures. The women work in small teams
together, and their efficiency is partly due to their comradeship.

228 Figures for catches have already been given as approaching
434 £20,000 for herring and £10,000 for white fish and shell-fish.
While the net earnings derived, after subtracting the working
expenses of boats and outlays for gear, were very much less
than this gross sum, a substantial part should be counted as
equivalent to earnings (Statistical Table 21).

Summing up the total net earnings, we arrive at the follow-
[462] ing for Lewis proper. The women's total net earnings may be
taken as £25,000. We add to the probable earnings of the men
at the herring fishing an allowance for their profits from other
catches, making a total of say £15,000.

178 The industry was still declining here as elsewhere in
228 Scotland. About 1930 the earnings of hired hands alone
434 reached £30,000 and that of women twice as much, say £60,000.
Besides this was the important sum earned by men with share
of boats. The local white fish and shell-fish catches were also
[656] considerably higher at that period. As to the future, much
will depend on what can be done to rehabilitate the local
industry by compensation for losses incurred in war, and by
assurance that government policy will encourage local fisher-
men to embark on their enterprise without the risk of the

178 crippling losses suffered after 1914–18. A beginning has
certainly been made. The Herring Industry Board's scheme for
• 228 'Queen of Scots' kippers will help the Minch fishing. It will
434 not necessarily help the ports of Stornoway or Tarbert, because
herring can be landed at mainland ports and treated there or else
taken by road to the Moray Firth, kippered there, and still qualify
under the scheme. The Scottish Agricultural Organisation
Society has aided the marketing of lobsters to good purpose.

(iv) *Other Sources of Income earned in the Island*

114 It is to be hoped that members of the Lewis Association
814 may ascertain these, perhaps in collaboration with University
research workers. This, in turn, might instructively be col-
lated with the imports and exports of the Island, which are
recorded and ascertainable with a precision impossible for a
similar area on the mainland. Thus the facts would throw
light on the economy of other crofting districts.

(v) *Allowances, Pensions, Unemployment Assistance and Remittances*

657 With regard to money received by the crofting communities
434 of Lewis from other than 'productive' sources, figures have
436 kindly been made available regarding three sources, namely, (*a*)
729 Allowances made to members of the Forces and their depend-
434 ents, and Pensions, (*b*) Unemployment payments, and (*c*)
Money Orders and Postal Orders. The yearly periods for which
figures are available are close enough to permit of reasonable
comparisons. Among other sources, Bank Drafts form an in-
[508] significant fraction of monies received by crofters from outside
the Island. It is impossible to say how much cash is brought
[441] home by men paid off from the Merchant Service and other
employment, or how much may be sent through the post in the
form of notes, whether registered or unregistered. The amount
is known to be large, however, and an estimate based on the
number of insured employed, and other figures, would be of value.
A token figure is suggested in a note to the concluding Table.

APPENDIX II

(iii) *Fishing Industry* (1953)

434 228 The renewed Russian contracts for herring have meant
• loading of Baltic shipping at Stornoway with barrels of herring
[439] cured both in Stornoway and Ullapool. Catching power in
Scotland generally is hardly enough to meet this contract.
Thus, while the numbers of boats continued to decline after the
war, leaving only one steam and 33 motor drifters (over 30 feet
keel) registered by 1953, the fishermen employed rose to 610,
of whom some 520 were crofter-fishermen. Many worked
much of the year; on the other hand, most of the winter catch
went for 'oil and meal' at about 50s. per cran instead of the
top price of over 80s. For local boats a figure of £30,000 is
suggested for the catch of herring, say £10,000 for white fish,
[178] with £5560 for shellfish. For "curing and associated income"
the pre-war figures may be doubled.

(iv) *Other Sources of Income earned in the Island* (1953)

434 In mid-1953, of just 5000 registered for the Island as
465 employed—and other than the self-employed, *i.e.* the farmers
and crofters, the hand-weavers and the boat-sharing fishers—
1130 earned by the three industries first named, the rest by
other trades and professions, 3870 in all. The unemployed
numbered 1180. Analysis of wage-rates would throw light on
[657] total earnings. As to unemployment, the fact that, like crofters
and many fishers, hand-weavers count as 'self-employed'
means that when out of work they are not covered by un-
employment insurance, and have to be helped, at low rates, by
public assistance.

(v) *Allowances, etc.* (1953)

434 Turning now to Remittances, to the manifold categories of
657 Pensions, National Insurance and National Assistance, and to
Unemployment Benefit (a small item), the Table B, 1953-54,
436 shows the totals kindly furnished for this study, with £1,017,110
729 for all Lewis and an estimated £977,010 for rural Lewis.

The minister
was cultivating potatoes and his family were eating them
as an example to the crofters who were still reluctant to adopt the new crop. Some 70
174 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly
[447] outnumbered in good herring seasons by boats from other parts of the kingdom. To
327 encourage curing, particularly of white fish, the proprietor had set up two storehouses
252 to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who
visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in
141 cattle, dried fish and other products. The absolute power of the clan chieftain seems
[614] to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844.
But it was kelp, more than fishing, that helped to support the people of Uig in the late
135 eighteenth and early nineteenth centuries. Lewis made little kelp compared with the
• 132 Uists, but the Loch Roag kelp was of particularly good quality and commanded more than
[227] the average price. Further, many people from Uig migrated seasonally to make kelp in
Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear
[233] to have been inadequate to support the population. In this connection it is worth noting
163 the change in the average stock held by each family since 1792 as shown in table 3.
[178]

Clearance and Congestion.

175 Even after the end of the tremendous boom in kelp, brought about throughout the
228 Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the
land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses,
175 yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempt-
233 ing industrial developments and wage-earning enterprises. The former included short-
146 lived distilleries in Stornoway, the latter involved the removal of some small tenants in
order to introduce mainland farmers. For these Uig was particularly attractive, the
427 extensive mountain pasture offering good prospects for sheep graziers. The exact dates
of the formation of the earliest farms are not necessarily on record nor are they precisely recorded,
[274] but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalisclo, with
the extensive grazings (now partly occupied by Bernera summer pastures) east of Little
Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of
Mealasta Island, which suggests that a shieling farmer was already installed in that
district. About 1838 all the small tenants were cleared out of Mealasta, six families
being put into Breanish; the remainder are said to have been sent to America.

175 In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual
427 crofts some years earlier. Thereafter Kirkibost formed part of the large farm of
Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite
Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Stome and
Drovernish) in the early nineteenth century, and a tacksman was installed at west
Earshader. Further east the small tenantry were cleared from Ceanhulavaig and
Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as
fertiliser remained a vital necessity to the small cultivators, often working the same
land year after year). In 1841 the Chamberlain of the Lews suggested to the Select
Committee on Emigration that some 6,000 persons should emigrate because the land was
inadequate to support them. In 1844, of necessity, Seaforth sold the island. The
[162] population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that
in the following ten years it would increase by 16%, and that by the turn of the century
would reach almost 30,000. (Uig 4,463 Figure 8).

[See p. 18--Analyst]

233 hundred and thirteen - but most crofters had from forty-five to one hundred and twenty.
Wedders are sold at two-three years old when the omitton is said to be at its best.

231 Parts of the common pasture - usually the machair, are set aside for wintering hogs
but the usual practice is to keep as many as possible on the croft. The scum as a whole
[429] is not enforced but shares in the wintering parks are adhered to. For example:- Timsgarry
Glebe is leased to Crowlista and one share entitles a crofter to winter twenty-five hogs
on it. In Ardroil one share allows one cow or four yearlings or eight sheep or eight hogs
[232] on the machair - in practice it is the best hogs that are sent. The minister at Timsgarry
who is much interested in sheep husbandry, has bred a heavier sheep with longer legs by
crossing the Hebridean blackface with Swaledales and these seem to be doing very well;
the minister is more attentive to his sheep than are many of the crofters, but some local
crofters are showing interest in this crossbreed. The lambing percentage, so dependant
upon the winter and spring weather, was about 80% in 1959 and this was regarded as good.*

Enquiries show that some crofts in each township far exceed their souming but
because others carry no stock the four townships are understocked according to the total
soum, here expressed in cow units. Sheep stocks in Timsgarry approximate to the sheep
soum, Crowlista is overstocked by 130%, while the other townships are understocked.
[239] Some of the figures used for sheep stock were approximate or estimated. Nearly all crofts
keep some poultry and surplus eggs may be sold to the grocery vans.

The rhythm of work on the croft during the year is shown on Figure 16, overleaf.

241 Part of the hill common west of Crowlista was cultivated until the beginning of the
175 present century, at which time the township was overcrowded with two or three houses on
[361] each croft. A similar area west of Carnish was cultivated and old lazy beds, now grassed,
are to be seen on slopes south of the road in Ardroil, in the valleys of Ambuinn Thoraghain
and Alit a'Gharaidh and on the Borranish peninsula. The ruined shieling huts for this area,
still to be seen around and beyond Loch Suainaval were in use until 1934 - '35. (Figure 5).

464 Ancillary employment is sought by all but nine of the thirty men under sixty-five in
these townships and the wives of two of the 'full-time crofters' have regular employment.
• 228 There is no commerical fishing by local boats though the Bernera lobster boats are seen
frequently off Uig Bay. The ruined curing house and piers at Crowlista, and the 'port'
shown on the O.S. map near the site of the clachan in Carnish, point to the former
importance of fishing.

288 At present the weaving of Harris tweed from yarn supplied by the Stornoway mills is
more lucrative. There are two looms (plus one other weaver) in Carnish, two in Ardroil,
three in Timsgarry and two (plus one other weaver) in Crowlista. All these looms were
in use and two tweeds woven a week bring in a useful income but the supply of weaving is
irregular. The future security of these weavers depends on the prosperity of the Harris
tweed industry.

464 Mitchels's sand and gravel quarry at Carnish provides employment for from three to
316 ten men. Five men from Ardroil and one from Carnish are employed there at present.
312 The Aird R.A.F. station draws most of its civilian employees from Aird Uig but two
371 Ardroil men work there. One Crowlista man is employed at the hydro-electric scheme
[162] site at Gisla and this work will last for another year or two. Employers recognise the
particular needs of their crofter employees and 'days off' are allowed for sheep fanks
and other necessary work.

* The minister's ewes gave 103%.

[Fig. 16, see page preceding p.38--Analyst]

175 the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundred
317 and eighty separate arable plots. The lotted crofts at Reef were cleared in 1842 to provide
342 land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarted
• 229 by the Fisheries Board because Valtos and Kneep were then good centres for the white fish
[50] industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for one
464 hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty
fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity
of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in
1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period.
Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters
and in 1908 an attempt was made to do this, but agricultural experts advised against it, on
the grounds of poor water supply, scarcity of arable land (only ninety-three acres old arable)
and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in
1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the sheep
[233] farm was only carrying a stock of one hundred and seventy sheep - less than half the crofters'
sheep stock in 1959.

427 Tables 15 - 18 summarise the more significant points of the economy of the Valtos
178 peninsula. Table 16 illustrates the fact that the economy is in decline. Only two-thirds of
the total possible units are being worked. Many of the crofters have abandoned their crofts
[167] and the younger generations are unwilling to take over. Of those remaining to work the
crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

TABLE 16

Crofts and Crofters

427

669 for crofts in Tongue, a township north of Stornoway, took
423 the law into their own hands, seized one of the fields of the adjacent farms, and threatened to take the remainder. It is easy to understand that when a man has come home from the war to his sweetheart, and after being promised a site on which to build a home (even a black house for a start), with a plot for potatoes, and 'a cow's grass', a year's vain delay may breed impatience! Leverhulme motored to the township, and with his customary vigour and persuasiveness spoke of his plans for 'work and wages' to be concentrated at Stornoway. He again declared that if the farms were divided this would cripple his schemes, and work would stop at once. The majority there agreed to fall in with his plans; in any case, only a
159 minority could find crofts on the farms. Leverhulme felt
433 that he had carried his point. He forgot not only that his oratory deserved applause and had won it for its own
669 sake, but that the people could not lightly afford to say 'no', if this meant immediate stoppage of wages. It was the after-thoughts on the morrow and in the following months, rather than agreement at the moment, that signi-
[228] fied. In 1920 herring fetched a fair price, the herring fishery prospects were encouraging, and work was resumed for a time. Yet one raid having begun and "the die having been cast, lawlessness spread rapidly". Leverhulme stopped expenditure, and obtained an interdict against the
[423] 'raiders', though he did not prosecute. After further parley, the Secretary for Scotland agreed to suspend
[654] division for ten years, and in 1921 Leverhulme resumed
159 operations. "Unfortunately very soon afterwards", wrote
433 his biographer, owing to "the general industrial depression which followed the boom in trade after the war", Lever-
458 hulme felt impelled to close down work for the time being,

exists at Tarbert and another was erected in 'the Bays' district by Leverhulme. Leverhulme also appears to have introduced 'Automatic' hand-looms into Lewis. Today as in the past, the weavers possess a little croft or a feu, a cow, and a few sheep on the outrun, and perhaps a small boat.

Commercial fishing and weaving cannot, however, be satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with efficiency. Thus in the North Lochs fishing 'creek' (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but none of the seven large herring fishing boats (still registered in 1930) had been fitted with motors after 1918; they were idle and rotting, and by 1938 only one was still registered. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to Stornoway. Light passenger cars bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, merchant seamen at home and young men on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

2. *Unemployment and the Island Budget*

In the past, the storms of the Atlantic washed up on the Island shores the wreckage of world commerce; and

problem remains that Island se

178 developed through the township Grazing Committees by
476 the Scottish Agricultural Organisation Society and its
44 associated Crofters' Agency. Lime and fertilisers were
[654] purchased, and wool and other products sold, co-oper-
atively. The co-operative marketing of lobsters, taking
[228] advantage of fluctuating London prices, has led to the
reconstruction of ponds for storage. By these and other
[654] means, government assistance is utilised but not squan-
dered; earlier initiative in agricultural organisation is
reinforced; and communal tradition is revived, linked
to personal responsibility through the crofters' lifelong
knowledge of one another.

178 As to the future, all agreed that unless the Harris Tweed
288 industry flourished, with work at reasonable wages, the
villages would be abandoned by the young, perhaps with
[829] no return such as hitherto on 'retirement'. Many young
people are content with life in the townships, provided
they can get a living there, though not all, for they are
somewhat divided; and work elsewhere, even in the mills
of Stornoway, is a counter-attraction.

178 Social life is undergoing changes which operate both
597 for and against the retention of the young. On one hand,
538 household interchange of conversation, song and story,
the *ceilidh*, has declined. On the other hand, one found
178 that, as regards religious prohibitions, and in spite of the
nervous tension expressed in 'Revivals', the young have
771 won greater freedom. Near one village a Nissen hut,
577 handed over to the Home Guard, was also used by young
[535] people for monthly dances. When I asked a young crofter
invalided from the Navy whether the Elders of the Kirk
made no protest, he replied that they had, but had to give
it up: "They see that we won't stand for it"! This
would have been unthinkable during the First World War,

185 construction of the Island must rest upon the improvement
311 of the land": and secondly, that by this means "it was
114 imperative to revive the traditional community spirit, the essential feature of Hebridean civilisation". Those words still hold good. Yet the land itself is too barren and the soil too poor to provide a living for many by export of
439 fresh agricultural produce to the mainland. Only a local market could pay a fair price for most of the products of
159 intensive small-holding. Judging from the free, untram-
433 melled trade before 1914, Leverhulme held that fishing could be set upon a commercial basis in the Isles; and
228 there could be few better judges of commercial possibilities
438 than this keen industrial thinker and organiser. If he was right, as surely he was, to begin with, then the local market to be created, or rather enlarged by growth of population and prosperity at Stornoway, could have purchased the fresh milk and eggs, the fresh greens and fruit, raised on enlarged small-holdings and marketed co-operatively.

181 A final comment remains to be made. The community
476 spirit of Scots fishers from Berwickshire to Barra has gone far to make co-operation among the men of the crews a living thing. 'Work for Wages' offered little outlet for this, indeed it virtually suppressed it; and 'co-partnership' on the Port Sunlight model was a very different matter from the co-partnership of a crew. Even if at that time it had been proved impossible to organise free co-operation in fishing, co-operation in small-holding townships might have kept the communal spirit alive, for later renewal at sea.

114 It is not easy to assess the after-effects of Leverhulme's
433 activity. Leverhulme certainly helped hundreds of families by the provision of wages for the building or rebuilding of roads and other works, of which some were completed

TABLE 47

Population of Gig Parish 1901 - 1959

	(a)				(b)	
1901	1911	1921	1931	1939	1951	1959
3,000	2,900	2,700	3,104	3,770	2,750	2,900

(a) National Registration, not strictly comparable with decennial Census figures.

(b) Our own survey count.

Figures of principal owners and families from the mainland and overseas. Thus we found, in 1959, the population of Gig was [illegible] than in one year since 1851. Nevertheless it has still double that reported by Webster in 1755, before the potato, kelp and fishing led to inflation.

These changes have not affected all parts of the parish at the same time, nor to the same extent. The position is summarized in table 48 and figure 45. Summarise by [illegible] seem a good drop of the truth, such as would by [illegible] be individual history and the two are alike. Township figures are given in Appendix 2.

TABLE 48

Changes in the relative distribution of population 1841 - 1959

For details by township see figure 45.

	Proportion of the total in each district in the year				
	1841	1911	1931	1951	1959
South Hay District	32	32	33	28	27
Dornoch District	16	15	13	18	18
East South Hay District	17	23	23	21	21
Gallowgate District	35	30	31	34	34
	100	100	100	100	100

South Hay, in 1841, had more than half the population of Gig, despite the rainy/inaccessa. Its now little more than a quarter, and is still declining more rapidly. In Aird and Crosdale, for example, where there were 121 persons in 1951, we counted but 71 in 1959. Gallowgate has grown from 1,000 in 1841 to 1,000 in 1951 and 1,000 in 1959. Dornoch Bay Reserve Store has slightly increased their share of the population of Gig, since 1841, although the total number has fallen from 500 to 420. Clearances seem to have had the same depopulating effect in Dornoch as they had in the south, and fishing contained prosperous [illegible] in the Gallowgate District, which has grown from 1,000 in 1841 to 1,000 in 1951 and 1,000 in 1959. Crofts, tenants, landlords, has resulted in population gain remarkably. Many go away to find work but few leave for ever. The development of inland fishing has helped.

17 or summer pasture for the tenants of Lossy and Garrish respectively, townships on the north shore of the loch. In 1770, there were four tenants in Earnhaber, but their place of origin is unknown. In 1850, five tenants are recorded, two of them from Gig. In 1851 there were 18 tenants. Then the growth of population in Lewis during the second half of the eighteenth century may well have been the main reason for the colonization of one of the least potentially attractive districts of the island.

From Figure 1, which shows most of the thirty-four accepted places south of Loch Shiel about 1828, it is evident that colonization had extended south into the mountainous area. The sections, which stand in the district in 1819, may have increased the population already there as early as 1800, for many of these families came from Harris. The numerous sheilings in South Park suggest a different community. It is possible that South Park was never populated from the interior, but from the south.

During the period 1818 to 1841, when the greater, Donald Stewart, and his brothers had a lease of South Park, most of these settlements were cleared (Fig 2). In addition, between 1838 and 1841, 18 tenants were cleared from Aird, Crosdale, Clatter, Sandiegarrow, Gallowgate, Dornoch, Bunwrangh and Ugine were removed, in all about 430 people. Some 27 families were sent to Cromarty and Ardnamurchan, where most in Tulloch and The Ross Reserve in Dornoch Bay, and Gallowgate, Dornoch and Ugine were settled in the townships in North Park. Marriage in 1838 had a tenancy, in 1850, 22 were recorded, in 1851 the population was 1,000 and overcrowded crofting land of Park, but the township stay the share of Lord Brilliant Gilbert in Gerrycard were well established. The Black cows township from Cromarty to Grestir, first settled about 1800, was greatly expanded, and Park made of Gerrycard became a sheep grazing and a small tenantry.

In 1844, the Seaforth family, which had held Lewis for three centuries, sold the island to Sir James Matheson. The estate management soon wrought great changes in the landscape. Until 1850-51, the estate was a mixed economy, a system observed by Webster in 1755, with a tacksman and subtenants, cultivated in small patches what arable land had been reclaimed, such share. Rent was paid in cattle, produce, the crofts, or individually held land, data from 1800-51, when the tacksman was dispossessed, the present crofts were formed at this period. The settlement pattern associated with crofting was established, and the increased acreage of land under cultivation and the number of cattle made to be individual crofts.

In 1858, Lamroway was once again made available to crofters, most of whom came from the fishing townships where population pressure was building up. After the disastrous potato famine of 1846 - 1851, the population of Lewis was 31,000 in 1851 and 29,000 in 1861. Lamroway was a very popular settlement. In the same period, the Isle of Harris was cleared for sheep. Crofting development of the fishing industry brought a period of prosperity and the population increased rapidly in the fishing townships of the Minch coast. The property was such that one-quarter of the cotters built houses on the inland crofts, and their stock-keeping on the common was interrupted because of the demand for fishing crews. About 1884, the system whereby each boat was tied to a crofter-fisherman's holdings, also attracted men and prentisses against the catch, was discontinued. When this system was ended, the crofters had to pay for the boats, and the fishing was left to the Herring Commission investigating the poverty of the population found that the crofters were worse off than the serves as those promising during the potato famine forty years earlier. It was during this period that the Park Deer Raid occurred. Park became a Deer Forest in 1883 at the end of the greater's lease. In 1886, as a demonstration of their grievances, a large number of crofters from the Park and neighbouring Aird and Crosdale shot 1,000 of the deer and killed about 50 men. Some of the men, it was said, were shot in the back while fleeing. A few good fishing seasons remedied this unhappy situation and the population of the fishing townships rose to a peak in 1911.

281 Sum of croft: 5 acres arable, 10 in crop, 2 in sown grass), 18 acres meron and
282 rights in Common Grazing to carry:-

Income		Expenses	
Sale of cattle, 5 calves, 18 ewes and 2 wethers	224	Rent, cess, service of bull, grass, oat, potato and turnip seed, manure	38
Sale of wool, 18 fleeces	18	Hire of bull	10
Subsidies on cows, calves and cropping	141	Land feeding	49
	383	Net profit	286

In order to work such a croft efficiently, the family would need one tinker required with the particular tenancy studies, the number of crofts would have to be reduced to almost one third of present total. Considering Park and Aird, the agricultural units would have to be reduced to half of their present number but this latter figure is only approximate as it was based on general evidence. It is clear, however, that small 100 viable agricultural units could be maintained on the present crofting area of Park.

From a detailed study of the agriculture of Park one can only conclude that the present crofting situation is not the most efficient use of the available resources. Agriculture is the chief trade, crofting economic, and such reorganization would have to be coupled with the development of a non-crofting sector of the island economy, particularly the fishing industry. The physical basis for a fishing industry are discussed in the next section. The social implications of such a development are considered in the final section. A detailed effort could be made to the spheres of recreation and education. Finally, we must be considering the existing non-adjacent pieces of certain crofts. A reduction of the sheep stocks, with an emphasis on quality instead of quantity, and the improvement of dairy cattle, surrening the problem of the tainter-sheep raids, are policies which could be followed with profit.

ANCILLARY OCCUPATIONS

In most crofting areas, ancillary employment is necessary to compensate for the low craft income. Some near-subsistence crofters, that is, those without a livelihood have never been characteristic of crofting areas except in times of privation. At the time of the abolition of rin-rig, most crofting areas had a greater population than the land could support, and a subsistence level, and as a result, on many potatoes, crofts were created smaller than the optimum size it seems to be the opinion of the survey. Since the abolition of rin-rig, the population of the crofting areas has fallen to a level sufficient because of the demand for fishing crews. About 1884, the system whereby each boat was tied to a crofter-fisherman's holdings, also attracted men and prentisses against the catch, was discontinued. When this system was ended, the crofters had to pay for the boats, and the fishing was left to the Herring Commission investigating the poverty of the population found that the crofters were worse off than the serves as those promising during the potato famine forty years earlier. It was during this period that the Park Deer Raid occurred. Park became a Deer Forest in 1883 at the end of the greater's lease. In 1886, as a demonstration of their grievances, a large number of crofters from the Park and neighbouring Aird and Crosdale shot 1,000 of the deer and killed about 50 men.
